WISLEY COMMON:

169. Report from the Select Committee on Wisley Common; together with the Proceedings of the Committee, and Minutes of Evidence, 877

FIRST

REPORT

FROM THE

SELECT COMMITTEE

ON

HUNGERFORD BRIDGE

AND

WELLINGTON-STREET VIADUCT;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
10 *May* 1869.

Tuesday, 23rd February 1869.

Ordered, THAT a Select Committee be appointed to inquire into the Roadway and Viaduct proposed to be made on the Thames Embankment from Hungerford Bridge to Wellington-street, Strand, and whether the Site might not be more advantageously occupied by some Public Building; also to inquire whether any, and if so what, controlling power over Public Works in the Metropolis is vested in and exercised by any Government Department.

Tuesday, 2nd March 1869.

Ordered, THAT the Select Committee do consist of Seventeen Members.

Committee nominated of—

Lord Elcho.	Mr. Beresford Hope.
Mr. Layard.	Mr. Buxton.
Mr. William Cowper.	Viscount Bury.
Lord John Manners.	Captain Dawson-Damer.
Mr. Bentinck.	Viscount Sandon.
Mr. Sclater-Booth.	Mr. M'Clean.
Mr. Tite.	Mr. Alderman Lawrence.
Mr. William Henry Smith.	Mr. Dilke.
Mr. Gregory.	

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Thursday, 11th March 1869.

Thames Embankment.—*Ordered,* THAT the Petition from St. Paul's, Covent Garden against Abandonment of proposed Roadway, be referred to this Committee.

Tuesday, 23rd March 1869.

Thames Embankment.—*Ordered,* THAT the Petition from the Vestry of St. James, Westminster, for delay of Roadway until further inquiry has been instituted as to its necessity [presented 19th February], be referred to this Committee.

Tuesday, 6th April 1869.

Ordered, THAT it be an Instruction to the Committee that they have power to inquire and report as to all the lateral Communications intended to be made with the Embankment Roadway.

Friday, 9th April 1869.

Ordered, THAT it be an Instruction to the Committee to inquire and report specially to The House whether any Public Buildings now existing or that may hereafter be erected on the Thames Embankment Site, are likely to be injuriously affected by the Metropolitan District Railway, or by any other Railway or Railways now in progress or sanctioned by Parliament on the Embankment; and, if so, whether it would be possible, in the construction of the Railways, to guard against such injury.

Monday, 10th May 1869.

Ordered, THAT the Committee have power to report their Opinion and Observations, together with the Minutes of Evidence taken before them, from time to time to The House.

REPORT - - - - - - - - - - - - - - - p. iii

MINUTES OF EVIDENCE - - - - - - - - - - p. 1
APPENDIX - - - - - - - - - - - - - - p. 137

PALL MALL

FIRST REPORT.

THE SELECT COMMITTEE appointed to inquire into the ROADWAY and VIADUCT proposed to be made on the THAMES EMBANKMENT from HUNGERFORD BRIDGE to WELLINGTON-STREET, STRAND, and whether the Site might not be more advantageously occupied by some Public Building; also to inquire whether any, and if so what, controlling power over Public Works in the Metropolis is vested in and exercised by any Government Department; and who were instructed that they have power to inquire and report as to all the lateral Communications intended to be made with the Embankment Roadway; and who were further instructed to inquire and report specially to The House, whether any public buildings now existing, or that may hereafter be erected on the Thames Embankment Site, are likely to be injuriously affected by the Metropolitan District Railway, or by any other Railway or Railways now in progress or sanctioned by Parliament on the Embankment; and, if so, whether it would be possible, in the construction of the Railways, to guard against such injury;——HAVE made progress in the matters to them referred, and have come to the following RESOLUTIONS, which they have agreed to report to The House.

1. THAT land between the Charing Cross Railway and Waterloo Bridge, amounting to $9\frac{1}{4}$ acres, has been reclaimed from the river by the formation of the Thames Embankment on the northern side of the river by the Metropolitan Board of Works.

2. That the total expenditure upon this work will amount, at its completion, to 1,800,000 *l.*

3. That its cost is defrayed out of the London Coal and Wine Dues; in other words, by a tax upon the inhabitants of the metropolis.

4. That no public money has been contributed towards it, but that previous to the commencement of the undertaking the Metropolitan Board of Works had to pay 27,000 *l.* to the Crown and to the Conservators of the Thames for rights of foreshore, the Crown at the same time obtaining possession for ornamental, building, or other purposes, of $4\frac{3}{4}$ acres of valuable land reclaimed from the river.

5. That the land reclaimed between Charing Cross Bridge and Waterloo Bridge is suitable as a site for public buildings; but by the Act 25 & 26 Vict. c. 93, this land is to be reserved as recreation or ornamental ground, and is not available for the erection of such buildings.

6. That the land adjoining the reclaimed land is private property, which, if purchased by the Government, might also furnish a suitable site for public buildings, without involving the necessity of encroaching upon the reclaimed land reserved by Statute for recreation and ornamental ground.

7. That the owners of this property may turn it to the best advantage by erecting thereon whatever buildings they may think commercially most valuable and productive.

8. That

8. That thus the general architectural effect of the Embankment will now mainly depend upon the character of the private buildings so erected.

9. That many of the buildings on the private property adjoining the reclaimed land are now of a very inferior character.

10. That if public buildings were erected on the reclaimed land, they would be a great ornament to the metropolis, and would also act in a great measure as a screen against any possible disfigurement of the locality by the chance erections of private speculation.

11. That the First Commissioner of Works has made a suggestion to the Committee for the erection of a public building, such as a Museum of Natural History, on this site; and that he has stated that many men of science and others who were opposed to the removal of the Natural History Museum to Kensington, approve of the suggested Embankment site.

12. That Sir Roderick Murchison, Professor Owen, and Professor Huxley have given evidence in favour of the transfer of the Natural History collections of the British Museum to this site, in preference to the proposed site at South Kensington, and that Mr. Cole has also given evidence in the same sense.

13. That the Natural History Museum, if erected in this locality, would be as much in the great centre of population as if it remained in Bloomsbury, and that it would possess facilities of approach by river, rail, and the Embankment roadway, such as the British Museum does not possess, and would be easily accessible for the population south of London, now without any museum.

14. That the occupation of a portion of this site by the Natural History Museum might be combined with terrace-walks and open ornamental ground.

15. That by the Act 25 & 26 Vict. c. 93, the Metropolitan Board of Works are under an engagement to construct a roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, Strand, at an estimated cost of 230,000 *l.*

16. That this roadway will run partly on an embankment, partly on a viaduct, and will occupy $1\frac{1}{4}$ acres of the land reclaimed.

17. That the formation of this roadway intersecting the reclaimed land would render the erection of any public building on this site impossible.

18. That, looking to the arterial communications of the metropolis, this roadway would not give an approach to the Embankment from the districts lying west and north-west.

19. That the wants of these districts would, in this respect, be best met either by a direct approach to the Embankment from Charing Cross through Northumberland House, or by a curved line of roadway from Charing Cross, skirting Northumberland House and gardens.

20. That in the event of the Carey-street site being retained for the New Law Courts, the roadway between Wellington-street and the Embankment would not relieve the traffic of the Strand between Carey-street and Wellington-street; and that in the event of the New Law Courts and buildings being erected, either in whole or in part, on the Thames Embankment to the east of Somerset House, the roadway from Wellington-street to the Embankment would be little or no convenience to persons proceeding from the Law Courts to Westminster.

21. That whether the New Law Courts be erected on the Carey-street or Thames Embankment site, a carriage approach to the Embankment roadway and Metropolitan Railway from the Strand, in the direction of Essex-street, would be most convenient and indispensable for the arterial communications of the metropolis.

22. That, looking to the convenience of the metropolis, money expended on approaches to the Embankment roadway from Charing Cross, and from the Strand, in the direction of Essex-street, would be better applied than in the making of the roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, Strand.

23. That

23. That in the event of the Natural History Museum or any other public buildings being erected on a portion of the reclaimed land, a carriageway might easily be formed behind it, if such communication were hereafter found to be necessary, from both sides, connecting the Strand with the Embankment roadway, and there would also be no difficulty in making footway communication with existing streets.

24. That, taking these things into consideration, your Committee are of opinion that the Metropolitan Board of Works ought to be relieved from the formation of the intended roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, and that so much of the Act 25 & 26 Vict. c. 93, as applies to the formation of this roadway, should be repealed.

25. That your Committee consider the suggestion to erect a Natural History Museum in this locality, and to combine with it terrace-walks and open ornamental ground, is deserving of the favourable consideration of Parliament, as best meeting the requirements of all parts of the metropolis, both north and south; and that in the event of any such building being erected in this locality, due consideration should be shown for all private rights.

26. That your Committee, while making this last recommendation, have not taken such evidence as would enable them to express any opinion on the probable cost of applying the sites in question to the erection of such a building.

27. That Mr. Walker, Superintendent of the Metropolitan Police, has stated in evidence that a carriage approach from Parliament-street, by Derby-street, to the Embankment roadway is necessary to relieve the traffic at Bridge-street going from the Thames Embankment roadway to the Houses of Parliament and the West of London.

10 *May* 1869.

PROCEEDINGS OF THE COMMITTEE.

Tuesday, 23*rd March* 1869.

MEMBERS PRESENT:

Lord Elcho.	Mr. Alderman Lawrence.
Mr. William Cowper.	Mr. Sclater-Booth.
Mr. Tite.	Mr. Bentinck.
Mr. Dawson-Damer.	Viscount Bury.
Mr. Gregory.	Mr. William H. Smith.
Mr. Beresford Hope.	Viscount Sandon.
Mr. Dilke.	Mr. M'Clean.

Lord *Elcho* was called to the Chair.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 6*th April* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Beresford Hope.	Captain Dawson-Damer.
Mr. Alderman Lawrence.	Mr. W. H. Smith.
Mr. Tite.	Mr. Dilke.
Viscount Sandon.	Mr. Buxton.
Mr. W. Cowper.	Mr. M'Clean.
Mr. Layard.	Viscount Bury.
Lord John Manners.	

Sir *John Thwaites* examined.

[Adjourned till Monday next, at Twelve o'clock.

Tuesday, 13*th April* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. Buxton.
Mr. W. Cowper.	Mr. M'Clean.
Mr. Tite.	Lord John Manners.
Mr. Gregory.	Mr. Bentinck.
Mr. Dilke.	Mr. Beresford Hope.
Captain Dawson-Damer.	Mr. W. H. Smith.

Instruction of the House to the Committee of the 11th instant, read.

Mr. *John Taylor*, Mr. *Hawkshaw*, Dr. *Percy*, Mr. *Gregory*, Mr. *Fergusson*, Mr. *W. Bridges Adams*, Mr. *Bazalgette*, and Mr. *Fowler*, severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 19*th April* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. M'Clean.
Mr. Tite.	Mr. Buxton.
Mr. W. Cowper.	Mr. W. H. Smith.
Mr. Alderman Lawrence.	Mr. Beresford Hope.
Viscount Sandon.	Viscount Bury.
Captain Dawson-Damer.	Mr. Dilke.
Mr. Sclater-Booth.	

Sir *John Thwaites* and Right Hon. *A. H. Layard*, M.P., severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 26*th April* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. W. H. Smith.
Mr. Tite.	Mr. Buxton.
Viscount Sandon.	Mr. M'Clean.
Mr. Alderman Lawrence.	Mr. Gregory.
Mr. Beresford Hope.	Mr. Sclater-Booth.
Lord John Manners.	Captain Dawson-Damer.
Mr. Dilke.	

The Rev. *H. White*, M.A., Mr. *Bidgood*, and Mr. *Pennethorne*, severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 3*rd May* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. Beresford Hope.
Mr. W. Cowper.	Mr. Tite.
Mr. Dilke.	Mr. Buxton.
Mr. Alderman Lawrence.	Mr. W. H. Smith.
Lord John Manners.	Viscount Bury.
Mr. W. H. Gregory.	

Mr. *Cole*, C.B., Professor *Owen*, Sir *Roderick Murchison*, Professor *Huxley*, Mr. *Waterhouse*, Mr. *Hooper*, Mr. *Edgar Bowring*, C.B., M.P., and Mr. *Creasy*, severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 10*th May* 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. Beresford Hope.
Mr. W. Cowper.	Mr. Tite.
Mr. W. H. Smith.	Mr. M'Clean.
Mr. Buxton.	Lord John Manners.
Mr. Alderman Lawrence.	

Mr. *Waterhouse* further examined.

Mr. Superintendent *Walker* examined.

The Committee deliberated.

Resolutions proposed by the Chairman considered.

" *Resolved*, 1. That land between the Charing Cross Railway and Waterloo Bridge, amounting to 9¼ acres, has been reclaimed from the river by the formation of the Thames Embankment on the northern side of the river by the Metropolitan Board of Works.

" *Resolved*, 2. That the total expenditure upon this work will amount, at its completion, to 1,800,000 *l.*

" *Resolved*, 3. That its cost is defrayed out of the London Coal and Wine Dues; in other words, by a tax upon the inhabitants of the metropolis.

" *Resolved*, 4. That no public money has been contributed towards it, but that previous to the commencement of the undertaking the Metropolitan Board of Works had to pay 27,000 *l.* to the Crown and to the Conservators of the Thames for rights of foreshore, the Crown at the same time obtaining possession for ornamental, building, or other purposes, of 4¾ acres of valuable land reclaimed from the river.

" *Resolved*, 5. That the land reclaimed between Charing Cross Bridge and Waterloo Bridge is suitable as a site for public buildings; but by the Act 25 & 26 Vict. c. 93, this land is to be reserved as recreation or ornamental ground, and is not available for the erection of such buildings.

" *Resolved*, 6. That the land adjoining the reclaimed land is private property, which, if purchased by the Government, might also furnish a suitable site for public buildings, without involving the necessity of encroaching upon the reclaimed land reserved by Statute for recreation and ornamental ground.

" *Resolved*, 7. That the owners of this property may turn it to the best advantage by erecting thereon whatever buildings they may think commercially most valuable and productive.

" *Resolved*, 8. That thus the general architectural effect of the Embankment will now mainly depend upon the character of the private buildings so erected.

" *Resolved*, 9. That many of the buildings on the private property adjoining the reclaimed land are now of a very inferior character.

" *Resolved*, 10. That if public buildings were erected on the reclaimed land, they would be a great ornament to the metropolis, and would also act in a great measure as a screen against any possible disfigurement of the locality by the chance erections of private speculation.

" *Resolved*, 11. That the First Commissioner of Works has made a suggestion to the Committee for the erection of a public building, such as a Museum of Natural History, on this site, and that he has stated that many men of science and others who were opposed to the removal of the Natural History Museum to Kensington, approve of the suggested Embankment site.

" *Resolved*, 12. That Sir Roderick Murchison, Professor Owen, and Professor Huxley have given evidence in favour of the transfer of the Natural History collections of the British Museum to this site, in preference to the proposed site at South Kensington, and that Mr. Cole has also given evidence in the same sense.

" *Resolved*, 13. That the Natural History Museum, if erected in this locality, would be as much in the great centre of population as if it remained in Bloomsbury, and that it would

would possess facilities of approach by river, rail, and the Embankment roadway, such as the British Museum does not possess, and would be easily accessible for the population south of London, now without any museum.

"*Resolved*, 14. That the occupation of a portion of this site by the Natural History Museum might be combined with terrace-walks and open ornamental ground.

"*Resolved*, 15. That by the Act 25 & 26 Vict. c. 93, the Metropolitan Board of Works are under an engagement to construct a roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, Strand, at an estimated cost of 230,000 *l.*

"*Resolved*, 16. That this roadway will run partly on an embankment, partly on a viaduct, and will occupy 1¼ acres of the land reclaimed.

"*Resolved*, 17. That the formation of this roadway intersecting the reclaimed land would render the erection of any public building on this site impossible.

"*Resolved*, 18. That, looking to the arterial communications of the metropolis, this roadway would not give an approach to the Embankment from the districts lying west and north-west.

"*Resolved*, 19. That the wants of these districts would, in this respect, be best met either by a direct approach to the Embankment from Charing Cross through Northumberland House, or by a curved line of roadway from Charing Cross, skirting Northumberland House and gardens.

"*Resolved*, 20. That in the event of the Carey-street site being retained for the New Law Courts, the roadway between Wellington-street and the Embankment would not relieve the traffic of the Strand between Carey-street and Wellington-street; and that in the event of the New Law Courts and buildings being erected, either in whole or in part, on the Thames Embankment to the east of Somerset House, the roadway from Wellington-street to the Embankment would be little or no convenience to persons proceeding from the Law Courts to Westminster.

"*Resolved*, 21. That whether the New Law Courts be erected on the Carey-street or Thames Embankment site, a carriage approach to the Embankment roadway and Metropolitan Railway from the Strand, in the direction of Essex-street, would be most convenient and indispensable for the arterial communications of the metropolis.

"*Resolved*, 22. That, looking to the convenience of the metropolis, money expended on approaches to the Embankment roadway from Charing Cross, and from the Strand, in the direction of Essex-street, would be better applied than in the making of the roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, Strand.

"*Resolved*, 23. That in the event of the Natural History Museum or any other public buildings being erected on a portion of the reclaimed land, a carriageway might easily be formed behind it, if such communication were hereafter found to be necessary, from both sides, connecting the Strand with the Embankment roadway, and there would also be no difficulty in making footway communication with existing streets.

"*Resolved*, 24. That, taking these things into consideration, your Committee are of opinion that the Metropolitan Board of Works ought to be relieved from the formation of the intended roadway from the Embankment below Charing Cross Railway Bridge to Wellington-street, and that so much of the Act 25 & 26 Vict. c. 93, as applies to the formation of this roadway, should be repealed.

"*Resolved*, 25. That your Committee consider the suggestion to erect a Natural History Museum in this locality, and to combine with it terrace-walks and open ornamental ground, is deserving of the favourable consideration of Parliament, as best meeting the requirements of all parts of the metropolis, both north and south; and that in the event of any such building being erected in this locality, due consideration should be shown for all private rights.

"*Resolved*, 26. That your Committee, while making this last recommendation, have not taken such evidence as would enable them to express any opinion on the probable cost of applying the sites in question to the erection of such a building.

"*Resolved*, 27. That Mr. Walker, Superintendent of the Metropolitan Police, has stated in evidence that a carriage approach from Parliament-street, by Derby-street, to the Embankment roadway is necessary to relieve the traffic at Bridge-street going from the Thames Embankment roadway to the Houses of Parliament and the West of London."

Question, That these Resolutions be reported to the House,—put, and *agreed to.*

Ordered, To Report, together with the Minutes of Evidence and Appendix.

MINUTES OF EVIDENCE.

Tuesday, 6th April 1869.

MEMBERS PRESENT:

Viscount Bury.
Mr. Buxton.
Mr. William Cowper.
Captain Dawson-Damer.
Mr. Dilke.
Lord Elcho.
Mr. Beresford Hope.
Mr. Layard.
Mr. M'Clean.
Lord John Manners.
Viscount Sandon.
Mr. William Henry Smith.
Mr. Tite.

LORD ELCHO, IN THE CHAIR.

Sir JOHN THWAITES, called in; and Examined.

Sir *J. Thwaites.*
6 April 1869.

1. *Chairman.*] I BELIEVE you are Chairman, are you not, of the Metropolitan Board of Works?—I am.

2. How long have you been chairman; since its first commencement?—I have been chairman nearly 14 years; since 1855.

3. The Metropolitan Board of Works grew, did it not, out of the Metropolitan Commission of Sewers?—Yes, we succeeded that body.

4. The Metropolitan Commission of Sewers was appointed by the 11th & 12th Victoria, chapter 112, and the Metropolitan Board of Works was established by the Metropolis Management Act of 1855, namely, the 18th & 19th Victoria, chapter 120; that is so, is it not?—That is so.

5. And have you been chairman from that time; from 1855?—Yes.

6. From its first start as the present Metropolitan Board of Works?—Yes.

7. There have been subsequent Acts passed, have there not, amending the Metropolis Management Act of 1855?—Several.

8. What is the chief Act that has in any way altered the constitution or the powers of your Board?—The Act of 1862.

9. That is the 25th & 26th Victoria, chapter 102, is it not?—Yes.

10. I see by a Report which you have laid before Parliament, that the duties of the Metropolitan Board of Works under the Metropolis Management Act, 1855, were to execute works to prevent sewage passing into the Thames, to control the construction of sewers by vestries, to regulate the naming of streets and the numbering of houses, to make improvements, to control the line of buildings in streets, to purchase and lease lands, to borrow on mortgage, to make parks, to preserve open spaces, to construct works on the banks of the Thames, to set back any buildings projecting beyond the general line, to sanction the formation of streets of less width than 40 feet, and to levy rates?—Yes, and generally to carry out such works as might be necessary to facilitate the traffic of the metropolis.

11. You have under this Act very considerable powers, have you not?—Yes.

12. Very considerable powers of assessment?—Yes, unlimited powers.

13. Are your powers of assessment limited only by your own discretion?—They are limited only by the want of capacity of the ratepayers to pay.

14. That is to say, as long as the ratepayers do not rebel you have the power of assessing them?—Quite so.

15. Is there any appeal against these very large powers which you exercise under these Acts, or anything more than the general redress which the courts of law have open for any one?—No; there is no appeal except the ordinary appeal for re-election.

16. There is no appeal to any other Board?—Only the re-election of members.

17. An appeal would not lie to any of the courts of law?—No.

18. How is your Board constituted; it is an elective Board, is not it?—It is.

19. It is composed, is not it, of representatives of the City of London, and of various vestries and parishes under the Act; certain vestries send two members, certain other vestries send one, and certain districts and combined districts send a member each; is not that so?—That is so.

20. These members are elected by the vestries, are they not?—They are elected by the vestries and district boards.

Sir *J. Thwaites.*

6 April 1869.

21. Is the chairman elected by those representatives so sent by the vestries and the district boards to the Metropolitan Board of Works, or is he appointed by the Crown?—He is elected by the representatives.

22. The chairman is paid, I suppose?—Yes.

23. How often does this election by the vestries of members of the Metropolitan Board of Works take place?—They are elected for a term of three years. Our Board is constituted of 45 members, or, with myself, 46; one-third, that is, 15 members, goes out every year, so that, in point of fact, they are elected for three years.

24. Is the chairman elected every three years, or permanently?—Permanently.

25. Is there a permanent deputy chairman?—No.

26. Is there a permanent secretary?—No; the Board has, for convenience, and for my own relief, appointed a deputy chairman of committees, of which there are five or six.

27. May I ask what is the salary of the chairman of the Board?—£. 2,000 a year fixed by the Act.

28. Is there any salary attached to the office of deputy chairman?—None.

29. The secretary, I presume, is paid?—Yes.

30. How is he appointed; by the Board or by the chairman?—He is appointed by the Board; all our officers are appointed by the Board.

31. And he is paid out of the general rates?—Yes.

32. The chairman's salary is also paid out of the general rates, I suppose?—Yes, out of the general rates.

33. And nothing comes out of the public funds for that purpose?—Nothing.

34. You have said that there is no appeal, and no control whatever exercised by anybody over the proceedings of your Board, save such redress as the courts of law have open for anyone: in the original Act, constituting the Board, namely, the Act of 1855, 18 & 19 Vict. c. 120, was not there a clause by which all sums of money expended by the Board in any public work amounting to 50,000 *l.* required the assent of the First Commissioner of Works of the Crown before they were so expended?—Yes.

35. And was not there, either in the same clause or some other clause of the same Act, a further provision that the expenditure of any sum of 100,000 *l.* or upwards required the sanction of Parliament before the Board of Works could so expend that money?—Yes.

36. That clause has been struck out, has not it?—Yes.

37. At present, as you say, there is no control over the Board in that respect?—That is so.

38. When was that clause struck out?—In 1858.

39. By an Act which amended the former Act?—Yes; by an Act, intituled "An Act to enable the Board to carry out the Main Drainage and levy Rates for that purpose."

40. Can you state to the Committee why that provision in the original Act was struck out in 1858?—It was struck out in consequence of the Board being brought to a dead lock by the vetoes exercised under the Act of 1855.

41. In what case had there been a dead lock, and by whom had this veto been exercised which brought about the dead lock; was it by the Commissioner of Works, or Parliament?—The Commissioner of Works.

42. What was the occasion on which the Commissioner of Works exercised this veto?—Sir Benjamin Hall was then the First Commissioner of Works, and he had the power to reject any plan for the main drainage of the metropolis which did not in his judgment meet the requirements of the case, and from the 1st January 1856, up to March, I think, 1858, we had constant controversies with Sir Benjamin Hall as to the main drainage of the metropolis.

43. Controversies arising out of what; out of differences as to principle?—From a difference of view as to the mode in which the main drainage should be carried out. We presented to him for his approval under the Act three distinct plans, all of which he rejected, and we were delayed in taking any action in reference to the main drainage of the metropolis until the year 1858. Sir Benjamin Hall, in order to embody his own ideas, referred the drainage of the metropolis to what he was pleased to call "three independent engineers." They produced a plan——

44. Forgive my interrupting you; were the plans you had submitted, plans which had been drawn up by your own engineer?—They were plans prepared by our own engineer.

45. Who was your engineer at that time?—Mr. Bazalgette.

46. The same gentleman who is the engineer now, and who designed the Embankment?—Yes; Sir Benjamin Hall referred to three engineers the duty of preparing a scheme for the main drainage of the metropolis. A scheme was accordingly prepared and sent to us.

47. Who were those engineers?—Mr. Simpson, Mr. Galton, and Mr. Blackwell.

48. Is that the Mr. Galton who is now at the War Office, or his brother?—Captain Galton.

49. Who is now at the War Office?—Yes. That scheme we carefully examined. One of the principal objections to the scheme prepared by the three independent engineers appointed by the First Commissioner of Works was, that it involved an open cutting, in point of fact, a river, with a very slight fall indeed, for the sewage for some miles. The consequence of such an arrangement would have been to endanger the public health, and we felt such an objection to it that, under no circumstances could we admit that that was the proper principle of draining the metropolis, the object of which was really to improve its sanitary condition. The next objection we had was, that on working out the cost by taking out the quantities, we found that it involved an expenditure of nearly 11,000,000 sterling; that was the second, and what we deemed to be a fatal objection to the scheme proposed. We were unable to convince Sir Benjamin Hall of the difficulty, but a change of Government took place; the Thames was in a very bad condition in the year 1858, and a determination was arrived at by the then Government (Lord Derby's Government), in accordance with which Mr. Disraeli, as the Chancellor of the Exchequer, introduced a Bill removing those vetoes which had so perplexed the Board and hampered its free action as a representative body. Parliament removed those vetoes in 1858, and in less than 14 days from the Royal Assent being given to the Bill, steps were taken and plans were being prepared for carrying out the main drainage of the metropolis. Therefore it is quite clear that no system of check, such as you have suggested, could be practically applied to a representative body like ours.

ours. It would be always bringing them into conflict with the authority which had the veto. The Board are responsible to their ratepayers, who subscribe the funds, and that is the only body to whom they should be responsible.

50. Did this Bill, which took away the check existing under the original constitution of the Board, meet with any opposition in Parliament on the part of Sir Benjamin Hall or anyone else?—I do not remember any opposition.

51. You have mentioned this one dead lock arising out of the question of drainage; did any other dead lock arise between you and the Commissioner of Works on any other point?—I think there was also a sanction necessary by the First Commissioner for the re-naming of the streets. There were little difficulties felt with reference to re-naming the streets, and that veto also was removed at the same time that this larger veto, if I may so describe it, was removed by Parliament in 1858.

52. All veto was removed then, and no veto of any kind at present exists?—No.

53. Will you kindly state how the connection of the Metropolitan Board of Works with the construction of the Thames Embankment first arose?—When we were considering the question of constructing the Low Level sewer, which, apart from the Thames Embankment, must have been constructed along the Strand, Fleet-street, and other streets of that character, where there was a heavy traffic in a narrow street, with lofty buildings on either side, it became a very difficult matter to determine whether a sewer of the capacity which was really required for draining that district could with safety be carried along the Strand, and so on, apart from the inconvenience the public would have suffered from the obstruction of the traffic. It then occurred to me that I would see Mr. Cowper, who was the First Commissioner of Works, and talk the matter over with him, and see whether it was not possible to combine a Thames Embankment with the formation of the Low Level sewer.

54. That was in the year 1860, was not it?—I think it was the year 1860; thus avoiding the serious interruption to the traffic of the Strand and Fleet-street, and other streets connected with them, and also avoiding the danger and consequent cost of constructing the sewer along this line of roads. I had a long conversation with the First Commissioner, who very courteously and cordially entered into the difficulties I pointed out, and I believe he suggested that probably the best mode would be to appoint a Committee of the House to investigate this matter, and that I should give evidence before that Committee to the purport of that which I had stated privately to him. It was then suggested that Mr. Locke, the engineer, one of the Members for Honiton, would be a very suitable person to move the Committee. The First Commissioner of Works, however, finding, in a subsequent conversation with Sir Joseph Paxton upon the subject, that he took it up very warmly, wrote a note to me, stating that Sir Joseph Paxton had taken the matter up very cordially, and that he was willing to move the Committee. He did move the Committee, and evidence was given before that Committee by myself, by our engineer, and by several other parties whose interests would be affected by the proposed Embankment; and, after the report of that Committee, a Royal Commission was appointed, which investigated the whole question.

55. The Commission reported strongly in favour of the Embankment, did it not?—The Commission reported strongly in favour of an embankment, and subsequently another commission reported in favour of a southern embankment; then a Bill was introduced, I think, in the year 1862 by Her Majesty's Office of Works to carry out generally the recommendation of the Commission, and to clothe the Metropolitan Board of Works with the necessary powers to carry out the Thames Embankment in connection with the construction of the Low Level Sewer, and those powers were given to the Board. But there was a considerable difference of opinion existing between Her Majesty's Board of Works and our Board with regard to the mode in which the reclaimed area of the Thames Embankment should be dealt with; we had a very strong idea that an embankment being made of the character of that which has been carried out, with a roadway of 100 feet wide, it would be a discreditable state of things to leave ragged walls, such as those which any honourable Member of the House can observe in passing up or down the river without any screen or covering whatever. Our notion was that a portion of that reclaimed land should have been built upon so as to screen the present unsightly condition of the Embankment, and that buildings of some architectural pretension should have been put upon the Embankment, in order to make it what it ought to be, and somewhat to correspond with what I may hope the House will deem to be a creditable retaining wall, built by the Board. However, a different view prevailed in the Committee, and it was determined that the whole of the ground in question should be given up to the public.

56. That was a Committee of the House?—That was a Committee of the House.

57. That was what is called a Hybrid Committee, was not it; half the Members were nominated by the Committee of Selection?—Yes; half the Members were nominated by the Committee of Selection.

58. And counsel were heard before that Committee?—Counsel were heard; but that opinion prevailed, and we had simply, therefore, the duty to carry out the Embankment and to lay out the ground so reclaimed, and to plant in such a way as to make it as ornamental as we could, leaving the condition of the wharves just as we found it. Then, with regard to the Commission, I am bound to say, in consequence of what has occurred in the House, that, so far as the Commission was concerned, we started with the impression that it was the strong desire of the Government that there should be some communication from Somerset House to the Embankment.

59. When you speak of what has occurred in the House, do you mean recently?—Yes; in recent discussions we believed it to be the desire of the Government that there should be a communication from Somerset House to the Embankment, thus giving a direct communication from Somerset House to the Houses of Parliament; but all we had to do as Commissioners was to indicate by a line where a road might be formed, and I certainly was under the impression, and I believe my colleagues on that Commission were under the impression likewise,

Sir *J. Thwaites.*
6 April 1869.

wise, that some portion of the land would be utilised for building purposes, and that a road might be carried in front of the houses without being at all unsightly, or without raising the difficulties which have now occurred. However, the Committee taking the strong view that all the reclaimed ground should be given up to the public, left that roadway in all its naked deformity. We therefore had no means of screening that necessary rise to overcome the difference of level of some 26 feet, except by planting it out as we might best be able; I state that in justice to the Commission of which I was a member. Had we known at the time that this road must be made at an inclination of one in 50 to overcome this difference of level of 26 feet, we should have suggested some mode of covering it and shielding it by a block of buildings or otherwise; but we did not know it until Parliament had clothed the Board with the necessary powers and the bill had become an Act, and we only suggested that as the best mode of getting access from Somerset House to the Embankment, supposing such access to be desirable.

60. Then I understand that the Commission, of which you were a member, which consisted of yourself, Alderman Cubitt, Sir Joshua Jebb, Captain Galton, Mr. Burstal, Mr. H. A. Hunt, and Mr. M'Clean, recommended certain approaches to the Embankment?—Yes.

61. Amongst others, did they recommend this roadway which is at present under discussion, or a line of roadway in that direction?—Yes, from Wellington-street to the Embankment.

62. From Wellington-street to the Embankment below Hungerford Bridge?—Yes.

63. But I gather from your evidence, that had you and the other Commissioners known at that time that the Committee would subsequently limit the powers of the Metropolitan Board of Works as to the uses to which the ground so reclaimed was to be put, they might have made a different recommendation as to that line of road, or the way in which that road was to be constructed?—Clearly, that is my impression.

64. But *quâ* the Metropolitan Board of Works with regard to this roadway, the Metropolitan Board of Works, as I gather from what I have heard and read, and from your evidence, have had nothing to do with the laying out of this line of road; they are a mere executive to carry out the reports of Committees and Commissioners, and Acts of Parliament?—Clearly, we are following the direction of the Act of Parliament, the line being drawn from Wellington-street to the Embankment; of course the formation of the road would be a matter under our control, but the difficulty of mastering the 33 feet rise from the one point to the other still remains.

65. That is to say, a certain line of roadway has been given to you to form upon reports of Committees and Commissioners, and you exercise your own discretion as to the most efficient, the cheapest, and in every respect the best way of constructing that road; in that respect you have a discretion?—In that respect we have a discretion; but of course we are tied up to the two points where the road should commence and where it should end.

66. At the present moment you have no discretion as to the formation of a road in that direction; that is ordered by the Act of Parliament?—Yes.

67. You have the same discretion, as regards the construction of the road, that I presume you had as regards the construction of the Embankment; but I should like to ask you as regards any commission or committees, or any Government office or officer, whether any discretion was left you, or whether you were at all hampered as to the form that the Embankment was to take, the nature of the wall, its architectural features, and its construction?—None, whatever; we were simply bound by a line. The Commissioners recommended a certain line, which is generally known as "Mr. Walker's line."

68. That line you followed?—That line we followed; but the form and the material to be used in the Embankment wall was a matter entirely within our discretion.

69. You have made it of granite?—We have made it of granite.

70. You might have made it of concrete?—We might have made it of concrete or of brick.

71. You might have made a wall of any design that you chose, ornamental or otherwise?—Clearly.

72. In fact, if it is a success as to its material, as to its design, and as to its construction; and if it is to be an ornament to the metropolis, as far as the ornamental part of it and its construction goes, that results from the action of the Board of Works, and not from the action of any Committee of this House, or of any public officer connected with the Government?—Clearly.

73. All that you were restricted to as regarded the Government and Parliament was, that you should not sell the reclaimed land, let it, or erect any building, ornamental or otherwise, between the road and the land, which previously existed unreclaimed?—No buildings could be erected there at all.

74. Upon the reclaimed area?—No, it must be laid out, and dedicated to the public as an open space.

75. That was the only restriction upon you as regarded the Government or Parliament?—I would say with regard to the estimates in connection with the provisions of the Bill, we are not responsible for those, because they were framed by engineers appointed by the Office of Works. I speak of the estimates for the Thames Embankment and the new street; we are not responsible for those estimates.

76. You are not responsible for the estimates for the Embankment?—No; of course in passing the Bill through the Committee, evidence had to be given as to the probable cost. That evidence was so given, but we were not responsible for the figures used.

77. That is to say, the Committee and the Government ordered this work to be done upon certain estimates; you had to get the work done as cheaply as you could; and whether those estimates turned out to be correct or not, depended upon the contracts taken?—They were not our estimates.

78. Whose estimates were they?—I believe Mr. Pownall was one of the surveyors and engineers who advised the Office of Works.

79. Have the estimates turned out correctly?—No.

80. Has the cost been less than the estimate?—No.

81. You say the estimates were framed by Mr. Pownall?—I believe Mr. Pownall was one of the surveyors employed.

82. I am told by one of the Members of the Committee

Committee that Mr. Pownall was merely a surveyor employed to estimate the cost as regards the value of the property?—I have no doubt that some engineer advised the Board of Works as to the cost of the Embankment.

83. You do not know who?—No; some engineer.

84. You say that the cost was not less than the estimate; I presume it was greater?—Yes.

85. Can you state to the Committee what the difference was between the estimate as given in by, whoever it was, on the part of the Government and their engineer, and the actual cost of execution of the work?—I have not the figures of the actual cost; I remember that the estimate was 1,000,000 *l.* for the Embankment, and 1,000,000 *l.* for the new street; both these estimates will be greatly exceeded, undoubtedly.

86. How much have you spent already?—I am not able to speak as to the exact figure, but I will fill it in when I correct my evidence.

87. Can you speak roughly. Have you spent two millions and a-half already?—I would rather supply the figures afterwards.

88. From what you see, from your own knowledge of the way in which the works are progressing, do you think that that estimate will be exceeded by one-third?—I would rather not express an opinion at this moment.

89. But you will put in figures to illustrate that point?—Yes; the cost has greatly exceeded the estimate; for one reason, because there was a special provision in the Act that the Board should not have the power to take the freehold of any of the properties affected, but they were simply under the liability to compensate the parties for the deprivation of their water right. That has worked very unsatisfactorily, as far as the Thames Embankment is concerned, because we have had cases which have been referred to juries and to arbitrators, in which we have been cast in compensation for the mere deprivation of water right more than the value of the fee, and now the parties, though we have so largely compensated them, are enjoying the advantage of those freeholds; not, it is true, as wharves contiguous to the river, but as buildings connected with a splendid roadway of 100 feet in width, and probably they will be of more value now than they were originally as wharves. That was one item of increased expenditure. There was another item, namely, the value of the Crown interest on the foreshore. We assumed, naturally, that that value was a nominal value, and that, beyond a mere award of a few pounds, we should have the consent of the Crown formally given to the utilisation of the land so reclaimed from the bed and soil of the river; but, instead of that, our impression was dislodged by an award of 27,000 *l.* For what we were under the impression was a nominal right of the Crown, we had to pay 27,000 *l.* to the Crown, part of which I believe went to the Thames Conservancy Board.

90. Was that for foreshore alone?—Yes.

91. What portion of the foreshore was that?—On the Northern Embankment. The same question arose as to the Southern Embankment, where there were claims put in first by the Archbishop of Canterbury, secondly by the Thames Conservancy Board, and thirdly by the Crown.

92. What have you had to pay there?—The payment must be on the same principle as that on the northern side. What amount each of the claimaints will have is a question they must settle among themselves.

93. I will ask you, afterwards, some questions about the private rights, but I should like now to have clearly, if you can give them to us, the original estimates for this Embankment under three headings: Roadways; buildings that have to be purchased, or rights compensated for; and the expenses of the construction of the Embankment itself, both the estimated and the actual cost; you will be able to put that in?—I will put it in.

94. I should like to have the actual cost up to the present time, and the sum that will be required to complete the Embankment; because I believe there are sundry ornamental works still to be added, such as lamps, groups of statuary, and so forth, are there not?—Yes; we shall have no difficulty in estimating the sum still required.

95. By "roadways," I mean the different approaches to the Embankment?—Yes.

96. These ornamental additions, bronze or iron lamps, and groups of statuary, are entirely the result of the action of the Metropolitan Board of Works, are they not?—Clearly.

97. If they are ornamental, the Board will have the credit of it; if they are not, the Board will have the discredit of it; no independent officer has seen, or is responsible for them?—Clearly not.

98. I mean by "public officer," Government officer?—Yes; nor do I see under what law or by what right they should see them.

99. And at the present moment no officer and no other public body has any control over what you may put up on the site?—Clearly not; nor do I see by what right they should.

100. Does the Metropolitan Board of Works possess the power to purchase property adjacent to the Embankment, with a view to the arrangement of the frontage?—No.

101. Whence does the Embankment fund come; is it raised by a rate upon the metropolis, or is it derived from the coal and wine dues, or from both?—From the coal and wine dues.

102. There is no rate upon the metropolis for the purpose at all?—No.

103. Is there any contribution at all from the public Exchequer for the construction of this work?—Not a shilling. Although it is in the form of coal and wine dues, it is, in point of fact, a tax upon the inhabitants of the metropolis.

104. Coal and wine dues are, in fact, as much a tax upon the inhabitants of the metropolis as the octroi in France, on all provisions coming into the City of Paris, for instance, is a municipal tax upon the people living there?—Clearly it is upon the same principle.

105. Does all wine that comes into the metropolis pay dues, or does wine that is in transit remain in bond and escape dues; are these wine dues only paid upon wine consumed in the metropolis?—I think it is upon all wine imported into the metropolis.

106. All wine imported into the metropolis, whether it is subsequently exported or not, pays dues?—I think so. The fund derived from that source is a very small portion of the whole; it is only about 10,000 *l.*

107. The main portion of the tax, I suppose, results from the coal dues?—Yes.

108. Do you know what proportion is derived from the coal, and what from the wine dues?—I think the wine dues are not more than 10,000 *l.*,

Sir *J. Thwaites.*

6 April 1869.

109. What is the total annual result of these coal and wine dues?—Between 300,000 *l.* and 400,000 *l.* a year.

110. And the wine dues are not more than 10,000 *l.* out of that amount?—I believe so.

111. I suppose the coal is not brought here for export; the coal brought here is nearly all consumed?—There is a drawback for export.

112. With regard to this roadway, as laid down by the Commission in the first instance, you proposed a deviation yourselves, did you not originally?—Yes.

113. Will you describe by these maps which way the roadway was to run, as originally laid down by the Commission of which you were a member?—From Wellington-street.

114. From what part of Wellington-street?—By the dark dotted line (*pointing to the map on the wall*).

115. That is higher than the red one?—Yes; the centre line was the one recommended by the Commission.

116. I see that the dotted line differs from the red line throughout, more or less?—Yes.

117. And that was the line recommended by the Commission?—Yes.

118. It ran nearer to the Strand than the present red line, which is the line you are to execute by the Act of Parliament, and it had a different lateral communication from your present red line; its lateral communication was at Buckingham-street, whereas your present red line has a lateral communication at Villiers-street?—I do not think there is much difference in that respect.

119. There is no communication on your present plan laterally with the Strand by Buckingham-street, the red line has only a communication at Villiers-street?—I think you must not reason from the dotted line on that map; it is simply put there for the purpose of indicating the line of that street; I think the communications would be nearly as ample by our present arrangement as by that.

120. Looking over the Act of last Session, under which you are supposed to work, I see that that Act recites the communications which were proposed to be established, and it repeals those and substitutes others; is not that so?—No; I think we are now within the line of deviation fixed by the original Act.

121. Yes, but I refer to the lateral communication; we will take it then roughly that the original roadway, as laid down, was the dotted line?—Yes.

122. That you did not execute or attempt to execute?—No.

123. Why was that line abandoned?—When we, empowered by the Act, came to consider the best mode of carrying out the recommendation of the Commission this consideration occurred to us.

124. You mean the original Act, not the Act of last Session?—Yes; it occurred to us that it would be more convenient for the general traffic if that street were to open out at the corner of the Strand than if it were to open out in Wellington-street, partly in that recessed portion of Wellington-street, and partly through these projecting buildings. But that plan, as well as the plan proposed by the Commission, you will observe, passes through the burial-ground of the Savoy Chapel. Strong objections were urged by the representatives of the Savoy Chapel that we should keep the roadway as far as possible from the chapel, and do as little damage to the grave-yard through which we had to pass as possible.

125. May I ask if the map on my left over the fireplace indicates the line which you proposed, touching the corner of the Savoy and passing through the grave-yard?—Yes.

126. Would that have required a return to Parliament for powers, or was it within your lines of deviation?—It was within the lines of deviation. A deputation waited upon the Metropolitan Board, headed by Mr. White, a clergyman, pressing upon the attention of the Board the desirability of moving that line from the corner of the Strand down to the point which is indicated upon that larger map.

127. That is the red line?—Yes; they urged, first, that it would avoid all interference with the graveyard of the Savoy Chapel; and, secondly, that it would avoid any inconvenience of and unsightliness to the chapel itself. Representations were made to us, that the avoidance of the chapel, and the avoidance of the graveyard, would be a very desirable matter, and we therefore, having regard to that fact, and also to a communication from the Home Office, in which certain reasons were urged, among others the fact that Her Majesty herself had a very strong interest in this Savoy Chapel, considered that it was desirable on that and many other grounds to avoid it.

128. The Savoy Chapel was burnt down recently, was not it?—It was.

129. And rebuilt solely at the cost of Her Majesty?—It was so. We therefore turned our attention to forming a street from Wellington-street, as indicated upon that large plan, and thus avoiding any interference with the Savoy, and forming a direct communication, according to our obligation in the Act of Parliament, to give a communication from Somerset House to the Embankment proper. That roadway so formed would be, in the first part of it, near Hungerford Bridge, at an inclination of 1 in 57, and in the upper part it would be 1 in 40.

130. A portion of that would be on embankment and a portion on arches, would it not?—A portion would be upon embankment, and where it rises to an inconvenient height, it is proposed to be put on arches.

131. What proportion of the whole length, from Wellington-street to Hungerford Bridge, would be on arches?—About one-third.

132. The upper third?—Yes; I should say so, speaking from recollection, because it has to rise 33 feet.

133. I see that, in your own intermediate plan, which you say was stopped in consequence of objections raised by the Home Office, with reference to the Savoy burial-ground, you had a road taking a crescent form, enclosing, between the roadway on the Embankment and this roadway under discussion, a spot coloured green: I have heard that you proposed some crescent buildings somewhere; was it part of that scheme?—It was part of that scheme. It was proposed to have a crescent, in order to improve the appearance of the roadway and effect the requisite change of inclination without making it too obtrusive; and this (*pointing to an elevation*) gives some idea of the form of the crescent. A design of that kind was considered at the time, without, however, our having formally agreed upon the elevation. That was drawn by our architect, Mr. Vulliamy, and it will give the Committee an idea

idea of the views of the Board at the time, and how they proposed to screen this objectionable approach to Wellington-street.

134. The object of this row of buildings, this crescent, was, you say, to screen the roadway, with reference to which you used the word "objectionable"?—It was to lessen the inconvenience, of course, and the unsightliness of that roadway, and also to screen the buildings at the rear.

135. Then, although you had complete plenary powers to construct that roadway in the way that would make it most ornamental, you still considered that it would be necessary to screen it, and that it would be unsightly and objectionable; besides which, you also considered it necessary to have some screen as regards the buildings in the rear, which at present are unsightly, and were, I suppose, built so, because the public has no control over them?—It is so.

136. That scheme of yours, which included these buildings, fell through, in consequence of the objections with regard to the Savoy Chapel, and your line coming out at that corner of the Strand; but was the portion of it in which you proposed a crescent and a screen objected to?—There was a very strong objection raised to this crescent road, and it was ultimately referred to a Committee. In consequence of some political crisis at the time I believe the action of the Committee was stayed and no further progress was made. There was a very strong opposition to this crescent road, partly, of course, from the owners of property at the rear, who alleged that their prospects would be interfered with by the covering of their properties, and indeed it was our object to cover them. They very naturally objected to having a block of buildings put in front of their houses.

137. Was there any objection on the part of the Government?—I am not quite sure.

138. What form did the objection take?—There was an objection raised in the House.

139. Was there a petition against the Bill?—There were several petitions against the Bill.

140. You required a Bill then, and you went to Parliament for a Bill to enable you to make this crescent road, with crescent buildings?—Yes, we required to be released from the restrictions of the previous Act.

141. When this Bill was brought before the Committee were objections raised by the proprietors of the houses that would be so screened?—The Bill was before a Committee, but I believe the Committee never reported upon it. I do not exactly know what the course of things was. There were some financial Bills before Parliament at the time, and this Bill was obliged to be withdrawn; but I question very much whether it would have been carried even without that. There was a very strong objection to it. We did our best to overcome the difficulty cast upon us by Parliament.

142. That plan of yours having failed, you were thrown back upon something like the original line, as laid down by the Royal Commission, and you came before Parliament last Session, did you not for a Bill to execute that work?—Yes.

143. With regard to the opposition that was raised, I should like to ask you one more question; who was the chief opponent before the Committee, or whom did you find in any way the chief opponent to your plan of a crescent?—I am not quite sure. Do you mean in the House, or before the Committee by petition?

144. Both; in every way?—I think Mr. Beresford Hope took a very strong view, if I remember rightly, against this crescent.

Sir J. Thwaites. 6 April 1869.

145. Mr. Beresford Hope took an artistic view of it, and objected to it artistically?—I think it was a substantial view that he took.

146. Was there any other opponent; did any other proprietor oppose it?—I think there were several petitions against the Bill.

147. The three main proprietors are the Duke of Northumberland, the Marquis of Salisbury, and Mr. Drummond, who owns the Adelphi-terrace, I think; and the Duke of Norfolk.

148. Did they all oppose this Bill, do you know?—I believe petitions were presented against the Bill by all the owners.

149. So this Bill was abandoned, partly through the opposition, you say of those private owners, who considered that it would interfere with the value of their property, and partly through an accident that happened to some financial Bills that were passing through Parliament; Parliament being up, I think you said: was it the prorogation, or the dissolution, or anything of that kind?—I suppose it was too late to get the financial Bills through, and apart from the financial Bills this power became of no use to us.

150. Who took charge of this Bill of yours?—Mr. Tite.

151. The Government had no charge of it?—No; the financial Bills were in the hands of the Government.

152. What was the date of this intermediate scheme?—1867, I think.

153. I think if you look upon that map, it says 1866?—I think it was both 1866 and 1867; we were in Parliament in both years.

154. Your intermediate plan having failed, you fell back upon a plan more nearly resembling the plan laid down by the original commission, and for that you got an Act last Session, did you not?—Yes, after receiving the representations from the Home Office as to the objections entertained by Her Majesty to that line, we abandoned it.

155. The combined objections led to your abandoning that plan, and falling back upon the plan laid down by the commission originally?—Yes.

156. Can you state to us your exact position with regard to this roadway at present; an Act of Parliament was got enabling you to make it; why was that Act necessary if your powers of deviation by the original Act enabled you to deviate so far as that?—An Act of Parliament was necessary, first for the additional funds, and secondly to extend the period for the compulsory taking of the property.

157. And to a certain extent to alter the approaches?—No, I think the original lines of deviation were maintained in the subsequent Act.

158. The original lines of deviation would have enabled you to take that line without going to Parliament?—Yes.

159. Will you kindly state your exact position as regards this roadway at the present moment, and the steps that have been taken with reference to it?—The general design for the road is that which appears upon that plan (*pointing to the plan upon the north wall*); you will see that it commences nearly at the Hungerford Bridge, rising 1 in 57.

160. Those dotted parallel lines that we see there represent the Hungerford station, do they not?—

Sir *J. Thwaites.*
6 April 1869.

not?—Yes, the first portion of the road rises by a gradient of 1 in 57.

161. Is that from the Embankment?—It will commence, I think, very nearly opposite Villiers-street. It is level at Villiers-street.

162. I see between the blue of the river, and the yellow of your road something not coloured; that is a landing pier, is not it?—Yes.

163. So that it would strike off opposite the landing pier?—Yes, you may take it as being level at Villiers-street; then it begins rising 1 in 57, probably for two-thirds of the line, and then the gradient is 1 in 40 up to Wellington-street.

164. In the direction of Whitehall-place, is it on the level, too, or on a rise; it is a gradual rise, I suppose?—That is nearly on the level. I have completed my answer with respect to the steps taken as to this roadway. The Board in pursuance of its duty under the Act, had the road laid out by the engineer, and served notices on all the parties whose property would be taken or affected, except two, and they have received four claims. Notices have been served upon all but two, and we have received out of the list of those who have been served four claims. The Commissioners of Her Majesty's Works and Public Buildings have property there, and they have not been served, nor has the Duchy of Lancaster been served. Those are the only two owners of property who have not received legal notices of the intention of the Board to take their properties.

165. How many notices have you issued?—I should think about 11.

166. And four have sent in claims?—Yes.

167. Mr. *Layard.*] When you speak of the Commissioner of Works, do you not mean the Commissioner of Woods and Forests?—I have it here, "The Commissioners of Her Majesty's Works and Public Buildings."

168. *Chairman.*] You mean those who manage the property of the Crown?—Yes.

169. That is the Commissioner of Woods and Forests?—Yes.

170. And the Duchy of Lancaster have not been served?—No; the four claims made in answer to the notice served by the Board are, first, the Thames Plate Glass Company, 5,500 *l.*; H. and E. Willoughby, 8,000 *l.*; F. J. Clark, 14,999 *l.*

171. Mr. *Tite.*] That is the auctioneer?—The auctioneer and surveyor. There is also a claim from Mr. David Mocatta, 4,375 *l.*

172. *Chairman.*] Making a total of how much?—£. 32,874. Then there are some claims not sent in, of which we have received notice. I may state with regard to claims, under the Lands Clauses Act, that when once a notice is sent in, stating that you require a property, it then becomes a matter of contract between the parties; and the owners of property served with the notice can compel you to proceed to take the property, so that you have no escape, when once you have served a notice, from the claim of the owner of the property.

173. Who settles the question in case you dispute the claim; is it settled by arbitration?—By arbitration or by a jury.

174. It does not follow that because a person claims 16,000 *l.*, he must get it?—I should think Mr. Clark, who seems to take an active part in this matter in opposing us, would be very glad to be released from his claim, which is very high, more than 14,000 *l.*, he would probably prefer remaining, but that is a matter we have not the power of determining; he can go to a jury if he likes.

175. Where is Mr. Clark's property; is it in Wellington-street?—Yes, in Wellington-street. We generally find that those who are the strongest against an improvement when a claim is sent in, if any arrangement is proposed by which their property may be avoided, are the most disappointed people in the metropolis; whether that may be the case here or not we cannot say.

176. Mr. *Layard.*] What is the total amount of the claims sent in?—£. 32,874.

177. *Chairman.*] Might other claims be sent in; there is no limit of time, is there?—No, there is no limit; in an ordinary way we should write and ask them to send them in, but at present we have rather nursed the matter, having regard to the action of this Committee.

178. The present position of affairs, then, is this: that under the Act of Parliament you have a certain work to execute, and you have served certain notices for that purpose, and the result is, that the Board is liable to the persons so served for sums of money, making a total of 32,874 *l.*?—£. 32,874 for claims sent in, and there are seven claims which have not been sent in, and there are two proprietors to whom we have not sent notices. Immediately when I ascertained the intention of your Lordship to move for a Committee we stayed any proceeding for giving notices; but, unhappily, the other notices were already served.

179. Am I to understand that the Board has incurred no other liabilities than those you have referred to; that is to say, you have entered into no contract for the construction of the road?—No, except that we have arranged with the contractors of the Metropolitan District Railway to deposit their spoil in the course of this road, in order, first, to save themselves the expense of cartage; and, secondly, to save us the cost of carting in material to raise the road up to a sufficient height.

180. Is that in the form of a contract; would there be any pecuniary liabilities attaching to the Board in consequence of that?—Just at the time when your Lordship gave notice of this Committee I directed the solicitor not to take any further steps to complete that contract, although it had been arranged and the draft exchanged; the contract itself is not entered into, and therefore we are not under any pecuniary liability.

181. Was the road begun?—Some small portion, I believe, was done, but nothing of any moment.

182. Was it done by your board, or was it merely that under this agreement which was not signed, and is not legally binding, the Metropolitan District Railway Company had done something?—They had deposited some material.

183. What has been done, has been done by the Metropolitan District Railway Company?—Yes.

184. Are the works of that railway stopped, or are they still going on?—They are stopped as far as this part is concerned; they are going on in other parts of the Embankment.

185. The earth they are bringing out is not deposited there any more?—No.

186. Are you working in harmony with the Metropolitan

Sir J. Thwaites. 6 April 1869.

Metropolitan District Railway Company?—I can scarcely say that we are. Unhappily we have been frightfully delayed in our works. The Thames Embankment itself would have been open 12 months ago, but for a difficulty which the Metropolitan District Railway Company felt themselves under. I believe it does not arise from any indisposition on the part of the railway authorities, but really the difficulty has arisen from the condition of the money market, and the difficulty of raising funds. They have now a Bill before Parliament, it is a financial Bill, to authorise them to raise the necessary stock to carry out their undertaking; and so far we are entirely in accordance with the railway company, and we are doing all we can to help them to get their Bill through, but we have had serious differences with the railway company, and have meditated an application to one of the courts to compel them to carry out their works; but it is something like coining shillings without silver. If they have no money, no court can compel them to do what is impossible without money.

187. The Metropolitan District Railway Company obtained their Bill after the passing of the Thames Embankment Bill, did they not?—Yes, and at the time that their Bill was before Parliament we pointed out through our counsel, Mr. Phinn, the difficulties that would be likely to arise, in fact, just the condition of things that has arisen, and asked for certain powers to control the railway company, and to force them on with their works. But the Committee of the House was so anxious that the company should proceed with their works uncontrolled, that they would consent to nothing of the kind; they simply fixed them to the statutory period for finishing their works; that is, five years. There was, therefore, no control over them. We cannot touch them till the five years have expired.

188. You say that you pointed out through your counsel, Mr. Phinn, the difficulties that would be likely to arise; what difficulties?—The difficulty of the railway works not proceeding at the same time as our works, and the probability that the Board might have finished the Embankment when the railway company had not even commenced its works, and thus the public might be deprived for a considerable time of the benefit of this Embankment, for which they have paid so large a sum.

189. The difficulties you then anticipated have arisen?—Yes.

190. The Board had no power to compel the railway company to commence its works, or to prevent their interfering with your own works?—None whatever. The special clause inserted in the Act is something to this effect: that the Embankment and road, especially having regard to the Blackfriars Bridge end of the Embankment, should be so constructed as might best suit the formation of the railway, as might best suit the Embankment, and as might best suit the gas company's works and dock.

191. In what Bill was that?—That was in the Metropolitan District Railway Act. The consequence of it, as might naturally be supposed, has been that the construction of the Embankment has suited nobody. First, it has not suited the railway people, because they have no funds to go on with their works. Secondly, it did not suit the gas company, because they were anxious (without charging them with any improper act) to have as broad a *locus standi* as possible for compensation, and, therefore, they naturally objected, and we were left in this condition; we could please nobody, and our hands were tied with regard to passing in front of these gas works, where special arrangements had been made to give the gas company an inner dock.

192. What was the date of this Bill for the railway?—1864.

193. And the date of your Thames Embankment Act was 1862, was not it?—1862.

194. This question did arise before the Committee as between your Board and the railway company; did the Board of Works or any Government officer take any part in the matter?—No, I think not.

195. Therefore, as regarded any public, by which I mean Government officer, you were left to settle this matter as best you could in the interests of the public with the railway company, before a Committee of the House of Commons?—Yes; we were just in the position of Liverpool or Edinburgh, or any other town applying here; they simply make their application, and defend their rights.

196. Is this difficulty which has arisen between you and this other body, who have equal powers with yourselves, confined to the part of the Embankment between Hungerford Bridge and Wellington-street, or does it extend to other parts?—It extends from Westminster Bridge to Blackfriars, and from Blackfriars up to Cannon-street along our new street.

197. Is it the case that between Blackfriars Bridge and the Temple there has been great difficulty between the railway company and the Metropolitan Board of Works, as to the form of construction of the Embankment and the railway?—Very great difficulty.

198. I believe the Embankment, in order to save the ratepayers cost, in respect of making compensation for the loss of water frontage, was to be constructed between the Temple and Blackfriars Bridge on arches, or a portion of it, at any rate?—Yes.

199. The Metropolitan District Railway Company obtained a Bill to go along the same line, and their Bill empowered their railway to go on Embankment, did it not?—Yes.

200. And, therefore, you had to try to come to some arrangement with this other body, which had as great powers as yourselves, and you had great difficulty in coming to such an arrangement?—We had very great difficulty.

201. Have you come to such an arrangement now?—We have with the railway company, but the gas company still stand upon their rights.

202. The whole of it is to be constructed upon embankment now, is it not?—The arrangement is to construct a solid embankment, with a roadway 100 feet wide, on the Embankment. The original plan of constructing it on arches, with an inner dock, limited the roadway to a width of 70 feet at that point. We were very anxious to give a uniform width to the roadway, and therefore we were very anxious to have it on solid embankment instead of open, as was originally contemplated, for the sake of the inner dock, which we proposed that the gas company should have, for the purpose of lessening the compensation to them. The railway company had power to construct their line right through this inner dock, thus diminishing the area of waterway, and making it almost impossible for the people to get in their barges and turn them,

Sir *J. Thwaites.*

6 April 1869.

as they would have been able to do if the inner dock, as originally proposed by us, had been left untouched. Hence arose the desirability, if possible, of getting over the difficulty by putting a solid embankment at that spot, and having some mechanical arrangement for lifting the coal over, instead of the coal barges passing into the inner dock through the arches, and the coal being there lifted on to the wharf.

203. Has this state of things, as between the railway company and the Metropolitan Board of Works, required the Board of Works to pay more for compensation?—No doubt, it will cost us a considerably larger sum to carry it out all on solid embankment than it would to have carried out our original plan.

204. What difference do you suppose it will make?—I am not able to state at this moment.

205. Does the railway company pay any of that?—The railway company will pay a portion of it under the agreement.

206. Is that by an agreement come to under the Act of Parliament, or by a private agreement come to since?—An agreement between ourselves.

207. How long has that delayed the opening of the Embankment?—I should think that the whole of our Embankment would have been opened more than a twelvemonth back but for this.

208. And how long will it be before the part we have just referred to is opened?—I should think a twelvemonth.

209. That is to say, there will have been a delay of two years in opening it?—That entirely depends upon the action of the railway company; if they proceed with rapidity it might be opened in twelve months.

210. At present what is the probability as to the time when that part will be opened?—It would be much longer than twelve months at their present rate of progress; but we hope that, if they obtain the financial powers for which they are applying to Parliament, and raise the necessary funds, they will put a much larger force upon that part of the work, and get it done very much quicker.

211. When do the railway company's powers expire?—In July, I believe.

212. July this year?—Yes.

213. Are they now coming to Parliament for a renewal of those powers?—Yes.

214–15. Do you know for what time?—They obtained last Session an extension of their powers until 1st August 1870, and they are bound to open the railway on the Embankment 1st January 1870.

216. So that if they were to obtain powers for an extension of time for another three or four years, they might delay, if they had not funds, the opening of your Embankment for that time?—Clearly; but we are agreeing to withdraw our Petition against this Financial Bill upon the understanding that clauses shall be inserted providing that immediately they have obtained the power to issue the special stock they want, they shall issue that special stock, and that they shall devote the first funds they obtain to the finishing of this particular work. That is the only remedy we have.

217. As guardians of the interests of the public with reference to this roadway, do you not consider yourselves morally bound to come before Parliament when this railway company applies for these powers, to point out the state of things existing, and to insist on Parliament, as far as you can, forcing the railway company to complete their works within a given time; in fact, as short a period as possible?—We have so determined, and we have petitioned the House.

218. You have petitioned?—Clearly; and our intention has been to appear by counsel, for the purpose of representing the delay that has occurred, and what, if the period be extended, would be the further delay that might occur.

219. The Bill has not yet gone to a Committee, has it?—It has not. I am not sure whether it is in Committee to-day or not.

220. As to the other part, which more immediately affects the roadway now under discussion, the same difficulty has arisen there between you and the Metropolitan District Railway Company, has it not?—Yes; from Blackfriars Bridge up to Cannon-street.

221. I mean on this side; between Waterloo Bridge and Hungerford Bridge?—Yes; the same evil exists all along the Embankment.

222. If there had been no district railway to interfere with you, would the roadway there have been opened by this time?—The whole of it would have been opened twelve months ago.

223. There is the same probability of delay there, resulting from the same cause, as between Blackfriars Bridge and the Temple?—Yes, precisely.

224. Is it the case that they dig up your roadway after you have made it?—They will touch the road in certain portions; other parts of the line will be constructed in the rear, and will not interfere with the roadway; but they will so affect the roadway as to prevent its being used as a carriage road.

225. You say that they touch a portion of the roadway; so that actually the roadway which has been completed by you is dug up and temporarily destroyed by them. Of course they are bound to make it good again?—Yes; we have not formed the road completely yet.

226. But the substratum of the road?—Yes.

227. I suppose they likewise interfere with the other part of the land?—Yes, they interfere with the surface first by their stations, and secondly, by a series of ventilating shafts along the line.

228. How many stations have they?—Two, I believe.

229. Was the earth, which this railway company are now carrying away, brought by you to fill up the foreshore?—Yes; a large portion of it. I do not think they are carrying it away; they are depositing it now at different points of the Embankment, as directed by us.

230. What use will you make of it?—Instead of having the ground all laid out upon the level, we shall raise it at different points, and plant it, so as to give it a more ornamental appearance.

231. You propose to make it undulating by means of this earth which is taken out by the railway company?—Yes.

232. You say that they have two stations; is that exclusive of the station at Westminster Bridge?—Yes.

233. Is one of those two stations near to Hungerford Bridge?—One is near to Hungerford Bridge, and the other nearer the Temple.

234. At the corner of Essex-street?—At the bottom of Arundel-street.

235. And the other is at the bottom of which street?—Near Villiers-street.

236. I see a grey line on the map, which goes from the railway bridge further to the east than the Charing Cross Station; what is that?—That is what is called the Hampstead Junction line.

237. Is that authorised?—I think that is suspended, and I think their powers to take land have expired; I think it is a dropped line.

238. Are you aware of any other railway that is applying to Parliament this Session for powers over the Embankment?—No, none.

239. Then, practically the result of all this is, that, as regards the public, this work, which you have constructed with a view to relieving the traffic, and for general convenience of the metropolis, I mean the roadway, has been delayed, certainly, two years, and possibly it may be delayed a longer time than that, in consequence of a Committee of the House of Commons having given powers to a railway company, over which you have no control whatever?—I do not know that it is the fault of a Committee of the House of Commons; it results from the inability of the railway company to raise the necessary funds; the only thing we have felt in the matter is that the Committee should have given us power over the railway company to compel them to go on with their works at the same time as we were going on with ours.

240. Have you any control over the character of the stations built along this line or the ventilating shafts?—To a certain extent the Board have a discretion as to the area of the ventilating shafts, but the railway company have the power under their Act to form stations, and ventilating shafts, and so on.

241. As to the design of these stations, that rests entirely with the railway company?—Yes.

242. They might be utterly inharmonious with your Embankment wall?—Yes, and I think they probably will.

243. From what you have seen you have reason to believe that they will be?—Yes.

244. Now with reference to the road, you have said that you considered it objectionable in appearance; do you consider it to be a road of primary necessity with a view to the traffic of the metropolis; I refer to the road in question; the road and viaduct from Hungerford Bridge to Wellington-street?—No doubt it is desirable to have some communication from the Strand to the Embankment, other than the lateral streets would afford. The difficulty in approaching by those lateral streets is the unsatisfactory gradient.

245. Would you give us the gradients of those streets; I see you propose lateral approaches at Craven-street, Villiers-street, and Adam-street; these are the three lateral approaches from the Strand?—Yes.

246. Beginning with Craven-street, what will the gradient of Craven-street be?—The gradient of the first portion of Craven-street will be 1 in 36 from the Strand.

247. One in 36 is a very easy gradient, is it not?—Yes, that is not an objectionable one.

248. I should like to get some standard to go by; 1 in 30 is the Parliamentary gradient, is it not, for roads crossing railways?—I think it is.

249. Can you tell us the gradient of St. James's-street?—The steepest gradient in St. James's-street is 1 in 24.

250. Do you know the gradient of Cockspur-street, by King Charles' statue?—No.

251. Is there anyone here from your office who can tell us?—It is 1 in 73.

252. Craven-street is 1 in 36?—The first portion of it is; the second portion, about one-third of the street, is 1 in 186, that is, nearly level; and from that point there is a uniform gradient; from the end of Craven-street to the new roadway on the Embankment, the gradient would be 1 in 36.

253. I believe the Parliamentary gradient for occupation roads crossing railways is 1 in 25?—It is very much less than that in many cases, I believe.

254. Mr. *Tite.*] The Parliamentary gradients are 1 in 20, and 1 in 30; for a high road it must be 1 in 30?—This is 1 in 36.

255. *Chairman.*] Do you propose dealing with Craven-street in such a way as to widen the street at all?—No.

256. Or to alter it, and to make its gradient uniform throughout?—No.

257. You propose not to touch it, but only to make it an access to the Embankment roadway?—That is all.

258. Mr. *Cowper.*] Will you state clearly where these different gradients that you have mentioned are; does the 1 in 36 begin on leaving the Embankment on the reclaimed land, or is it on the existing street?—This rough sketch will show it (*handing in a sketch*). The 1 in 36 is from the end of the old street (that is Craven-street) to the roadway on the Embankment.

259. *Chairman.*] And the rest is that easy gradient which you mentioned?—Yes.

260. There are three gradients; we will take them one by one; will you explain where they begin and end?—Starting from the Strand, about two-thirds of Craven-street is 1 in 36; one-third is 1 in 186, or nearly level.

261. And then we come to what?—Then we come to a gradient from the end of the old street to the new roadway on the Embankment of 1 in 36.

262. The same as the commencement of the street?—Yes.

263. Will you explain the gradients of Villiers-street in the same way?—Starting from the Strand, it is 1 in 17.

264. For what portion of its length, the greater part?—Yes, rather more than half; and from that point to the end of the street approaching the Embankment is 1 in 58.

265. My recollection of the street is, that the steep part, that is the 1 in 17, extends nearly from the Strand to where there is a tunnel under the railway?—Yes; it is nearly two-thirds of the length of the street, and the other portion is 1 in 58, and then continuing the gradient from the new street down to the Embankment roadway it is 1 in 105.

266. Then where the street ends, in that case it is much less of a gradient than in Craven-street, that is on the new ground?—Yes.

267. You have another access I see marked there, namely, Adam-street?—Yes.

268. Do you propose to make any change in Villiers-street?—No; no change.

269. You leave it entirely as it is, as to width and gradient?—We simply open the end.

270. Do you propose any access from Buckingham-street?—No.

271. Villiers-street, yes?—Yes.

272. Buckingham-street, no?—No.

273. York-buildings, do you propose any access

Sir *J. Thwaites.*

6 April 1869.

access there, or is Adam-street the next?—Adam-street is the next; we propose to have steps there for foot-passengers.

274. You proposed no access to the roadway between Villiers-street and Adam-street?—No; and at Adam-street it is not to be a carriage-way. The gradient in Adam-street, in the first length from the Strand, for about half the length of the street, is 1 in 56, and the second half is 1 in 387.

275. That would only be a footway?—That is the gradient of the street; then from the street to the roadway would be 1 in 10.

276. That would be a footway with steps?—Yes; we are obliged to descend by means of steps.

277. Am I to gather from what you now state, that as regards these other streets, Buckingham-street, York-buildings, and Robert-street, there would be no access of any sort or kind for either foot-passengers or carriages to the roadway on the Embankment?—No.

278. Foot-passengers will not be able to gain access that way?—No.

279. Is that from the action of the Metropolitan Board simply, or is it in consequence of any understanding you have come to with the proprietors of the streets, or any conditions existing anywhere which for the persons in those streets from any access being made through them?—I think the only condition imposed on us with regard to these streets, is with reference to the property of the Marquis of Salisbury, that his streets should not be opened up, but that iron gates should be put at the end, and that we should only give access for foot-passengers.

280. So that under that arrangement, as far as you are concerned, persons living at the end of Buckingham-street, close to the Embankment, in order to get on to the Embankment would have to go up Buckingham-street to the Strand, to go along the Strand till they came to Villiers-street or Adam-street, and to turn down one of those streets to the Embankment. If they wanted to go by carriage they would have to go further, because Adam-street is only to give access for foot-passengers?—Yes; I have the gradients of all those lateral streets. You will see how far they are suitable for carriage traffic. Take Cecil-street for example; you have in the first part of the street a gradient of 1 in 25. Then you have a drop of 18 feet to the Embankment, and from that point to the roadway you would have a gradient of 1 in 14, which is quite unsuitable for carriage traffic.

281. I see that by the original plan of the Commission and the intermediate plan of the Metropolitan Board of Works, it was proposed to use Buckingham-street, and to give a carriage access apparently to the roadway from the Strand by Buckingham-street; why was that abandoned?—Arrangements were made with what was called the Hampstead Junction Railway, the line indicated by that blue mark upon the plan, to dispose to them of a portion of land over which we have control at the end of Villiers-street, in order to enable them to form their station and a junction with the Metropolitan District Railway. That would render it necessary to have an opening in Buckingham-street, by raising the ground, but that has been abandoned now and an opening is made from Villiers-street.

282. What part of the ground would have been raised for that purpose; the ground in Buckingham-street itself, or the reclaimed ground?—The reclaimed ground would have had to be raised.

283. What gradient would that have given, do you know at all?—The first part of Buckingham-street is 1 in 14; the next portion (nearly one-half), is 1 in 27; and from the end of Buckingham-street to the roadway on the Embankment is 1 in 76.

284. Taking Buckingham-street; the first part of Buckingham-street is marked as being very narrow there; it leads to Duke-street?—Yes.

285. That is the part where the gradient is 1 in 14?—Yes.

286. Then Duke-street is a tolerably broad street, is not it; do you know what the gradient of Duke-street itself is, from where Buckingham-street cuts it to John-street?—I do not. I should think the greater portion of it is nearly level.

287. I think John-street, Adam-street, and Adelphi-terrace, are nearly upon the level?—There is a rise at that point (*pointing to the plan*).

288. There is a steepish descent, is there not, from John-street, to Duke-street and Villiers-street?—Yes.

289. I see that Cecil-street was originally intended by your intermediate plan to have communicated with the Strand; why was that abandoned?—It was intended to have a communication between Cecil-street and the Crescent-road, with a gradient of 1 in 30.

290. Was that only intended for foot-passengers?—For general traffic.

291. Are you sure of that?—I think the gradient would prevent very heavy traffic; it would have been 1 in 30.

292. What part of it is 1 in 14?—From the end of Cecil-street to the roadway on the Embankment.

293. Is that according to your intermediate plan?—From the end of Cecil-street to the main roadway on the Embankment would be 1 in 14.

294. According to the intermediate plan, or the present plan?—According to the present condition of things.

295. And it is too steep for carriages?—There is a drop of 18 feet at the end of Cecil-street to the Embankment; you would have to overcome that in the distance from Cecil-street to the roadway, and that would involve a gradient of 1 in 14.

296. What is the width of this opening which you do not propose to increase, the opening of Craven-street on to the roadway?—I have not the figures here of the width of the street; but it is comparatively a narrow street; I am told it is 30 feet.

297. Do you know what the width of Villiers-street is?—Twenty-eight feet.

298. Is that 28 feet carriage-way?—No, it is carriage-way and footpath; it is between the houses.

299. What is the carriage-way?—I should think, perhaps, 24 feet, or I would rather say 18 feet.

300. That is Craven-street. Now, with regard to Villiers-street?—I have just given Villiers-street; the width is 28 feet in Villiers-street between the houses, and the inclination of the first part of Villiers-street approaching the Strand, is 1 in 17. Of the remaining portion of the street, the inclination is 1 in 58, and from the

the end of the street to the roadway on the Embankment, would be 1 in 105.

301. Lord *John Manners.*] We have all the gradients; what we want is the width of the narrowest part (that is the most convenient way to take it) of all these streets?—The carriage-way of Villiers-street is 15 feet.

302. What is the width of Buckingham-street? —Buckingham-street is very narrow at the top. I believe it is 31 feet between the houses in the lower part. The upper end of Buckingham-street is 16½ feet in width.

303. That is a mere footway at the present moment, is it not?—There is room for one carriage, I believe.

304. *Chairman.*] Now, what is the width of Adam-street?—Twenty feet between the houses; the carriage-way is 13 feet.

305. Salisbury-street?—Salisbury-street is 24 feet between the houses, with a carriage-way of 13 feet.

306. Cecil-street?—Thirty-seven feet in part; but Salisbury-street is contracted at the upper part.

307. Is there any carriage-way into Salisbury-street at all?—Yes.

308. What is its width in the narrowest part? —The narrowest part of Salisbury-street is 14 feet wide; it is a little cut; I suppose there would be just room for one carriage to pass. The top of Cecil-street is 19 feet wide.

309. You have said that you consider it desirable that this line should be made; what is that with a view to; to any special description of traffic, or the general traffic of the metropolis?—I have scarcely stated that it is desirable that this line should be made; I have stated that it is desirable that some means of communication should be obtained from the Strand to the Embankment.

310. I should like, with a view to the public convenience, and the necessity of this line of route, to ask you what traffic you think really will go over it. We will cross over, if you please, to the other side of the Thames. I see there is a circus in the Westminster Bridge-road, called St. George's Circus. From that point lines branch off in every direction; one goes along the Westminster Bridge-road, over Westminster Bridge, and up Bridge-street; would any person, finding himself at that central circus, and wishing to go to Belgravia and that district of London, use the new line of road communicating with Wellington-street?—No, I should think not.

311. If he were going to Covent Garden Market would he use this line of road?—No, I should think not.

312. In the one case he would go over Westminster Bridge, and in the other case he would go over Waterloo Bridge, would he not? —Yes.

313. Waterloo Bridge has a toll; but I suppose the question of tolls may be eliminated altogether from this discussion, for it is hardly to be presumed that for all time there will be tolls on the bridges in the centre of this great metropolis; and therefore questions of great permanent improvement ought not to be bound by tolls which may not be permanent?—No; and I hope will not be permanent.

314. Would this same person, finding himself at St. George's Circus, if he were going to the Temple, go along this line of road?—No.

315. He would in that case go over Waterloo Bridge?—Yes.

316. If he were going to Ludgate-hill, and Smithfield, and the Metropolitan Market, would he go along this line of road?—No.

317. He would go in that case over Blackfriars Bridge, would he not?—Yes.

318. If he were going to the Mansion House and that part of the city, he would not go over the Embankment or along this line of road; he would go over Southwark Bridge, would he not? —Yes; I do not think any of the southern traffic could possibly use this line of road.

319. On the other hand, the northern traffic going to the south from Belgravia, Westminster, Covent Garden, and that district would go over Waterloo Bridge, and that from the Temple also. The traffic coming from the district of Smithfield and Holborn and the neighbourhood, down in the hollow between Ludgate-hill and Fleet-street, would go over Blackfriars Bridge, and all the Mansion House and City traffic would go over Southwark Bridge. None of that traffic would use this line of road?—No; I think the advantage of this roadway would be, that it would tend to facilitate all parties having business to transact at Somerset House getting direct communication with the Houses of Parliament and the Government offices. But when you have regard to the distance by that line, as compared with the Strand route, I think very little saving would arise from using this particular roadway.

320. Practically, it would resolve itself into this. I think you said that the Government urged the construction of this road, and they wished to have an opening from Whitehall-place; so that, practically, the main result of the making of this line of road would be to put Somerset House and the Government offices in Downing-street, the Horse Guards, and Whitehall-place into more direct communication than would be afforded by going round by the Strand and Charing Cross?—Whitehall-place will be opened.

321. Assuming that the Government offices remain always at Somerset House, and where they now are at Whitehall, and so on respectively, it would be of a certain use to the Government officials, who intercommunicate, to have that line of road?—Yes.

322. Another body, to whom it might be of service, might it not, would be the lawyers, assuming that the Law Courts are removed from Westminster and constructed at Carey-street?—Yes.

323. Those of them who are Members of the House of Commons, in going to the House of Commons Committees, or to Westminster, for any other purpose, instead of having to go along Carey-street, which is at the end of Essex-street, on the other side of the Strand, and then coming round by Charing Cross, would be able to come to the corner of Wellington-street, and turn down Wellington-street, and so by this inclined road to the roadway on the Embankment, which is to come out at Westminster Bridge; is not that so?—No doubt.

324. In that way they would avoid going round by Charing Cross?—Yes; but they would have the means of going by Essex-street on to the Embankment roadway.

325. On the other hand, supposing the Law Courts remain at Carey-street, you propose, do you not, eventually making an access by Essex-street to the Embankment?—Yes.

Sir *J. Thwaites.*

6 April 1869.

326. What is the gradient of Essex-street?—The first portion from the Strand, about rather more than one-third, is 1 in 17. The larger portion of the street is 1 in 179.

327. What is the length of the portion that is 1 in 17?—Rather more than one-third.

328. That is to say, of the street itself, irrespective of any new ground?—Yes; and the gradient from the end of Essex-street to the roadway on the Embankment would be 1 in 20.

329. I presume that if Essex-street were to be made a great access from that part of London to the roadway on the Embankment, you would have to buy the houses in Essex-street, widen it and level the roadway; the gradients being now what you have told us, there would then be no difficulty whatever in making one of the best roads in London of it, would there?—By taking down the houses on both sides, no doubt we could make a very good street of it.

330. What is the width of Essex-street now?—Thirty-nine feet.

331. Lord *John Manners.*] Is that in the narrowest part of Essex-street?—No; the top is narrower. It is 24 feet at the top, and 39 feet at the lower part.

332. *Chairman.*] There is no carriage-way now down to the Embankment, clearly, because there never was anything to drive to?—There is a drop of 12 feet 3 inches at the end of the street.

333. That property marked green at the bottom of Essex-street is the property of the Temple, I imagine?—Yes.

334. Do you know at all the gradient from where Essex-street stops to where that line touches the yellow?—The fall is 12 feet 3 inches, and if Essex-street were extended to the roadway the gradient would be 1 in 20 there.

335. I have heard it stated with reference to a plan which had in contemplation the building the Law Courts on the Embankment site instead of at Carey-street, part of which plan embraced a broad road for carriages on the site of Essex-street; that there would be no difficulty whatever in constructing a communication between the Embankment roadway and the street, at a gradient of 1 in 30; do you believe that there would be any difficulty in that?—You mean with the reconstruction of Essex-street?

336. Yes?—It would involve the taking of the houses on both sides of Essex-street.

337. This plan assumed the taking of that property for the Law Courts, but I have heard it given in evidence that 1 in 30 was the gradient of that part of the road. I understand that you see no reason to doubt that that would be possible; it is a new question of expense in buying the houses and making the roadway, but there is no constructional difficulty?—I should think, so far as the gradient goes, a reasonable gradient might be obtained by an entire reconstruction of the street.

338. You will be able, perhaps, at the next meeting, or at some future time, to put in the gradients of those streets which I asked you for, namely, St. James's-street, and Charing Cross, because I have had a note put into my hand which says that the gradient of St. James's-street is 1 in 22. I do not say whether it is right or not?—The gradient of Charing Cross-road, from Spring-gardens to Whitehall-place, is 1 in 73, that is towards the statue.

339. What is it beyond that, higher up?—I do not know, but I will add two or three well-known examples.

340. Supposing the Law Courts are built at Carey-street, the great object would be to relieve the traffic of the Strand as much as possible, would it not?—Yes.

341. All the lawyers, even supposing this line of road were constructed, going from their courts at Carey-street to the Houses of Parliament, would have to travel along the Strand to Wellington-street, would they not?—Yes.

342. At Wellington-street they would meet the traffic going east and west along the Strand, they would meet the traffic, which is very considerable, going to and from Waterloo Station, and they would meet the traffic coming down the steepish incline by the Lyceum Theatre, so that *quà* Wellington-street the block, if there is any block, at the corner of Wellington-street now would be increased by the lawyers coming round the corner and finding their way by the new street to the roadway on the Embankment. At any rate, that portion of the traffic would not be relieved by the construction of this road?—The lateral traffic would not, but the through traffic would.

343. It would not be relieved as regards the distance from Carey-street to Wellington-street, to begin with?—No.

344. Because that is a piece common to all the traffic along the Strand, so that the traffic of the Strand so far would not be relieved; but whereas now they would have to go on from Wellington-street round by Charing Cross, they would then turn aside by the new street to the Embankment roadway. There can be no doubt that between the Houses of Parliament and Wellington-street there would be a relief, but on the other portion of the route there would be none?—Exactly.

345. Do you think we may reckon for certain, assuming that the Metropolitan Board of Works is not bankrupt, and still continues to exist and to go on with metropolitan improvements, that when the Law Courts are built on the Carey-street site, supposing they remain there, you will open up Essex-street?—I should think there must be a communication made from Essex-street ultimately.

346. You look upon that almost as a certainty?—I should think it is almost a *sine quâ non.*

347. Now for the persons who find themselves at the corner of Wellington-street, and have to go to the Houses of Parliament, which in actual number of yards would be the shortest route to go by, the present line along the Strand and down Whitehall, or to turn down Wellington-street through this new roadway and along the Embankment, coming out at Westminster Bridge; you can have that measured and ascertain which would be the shortest?—The new route would be the longest if I rightly understand which route your Lordship is comparing.

348. I will take the case of a lawyer again; assuming that a lawyer has to go to the House of Commons, and that he has the choice of two ways from Carey-street, he can either go along the Strand, the West Strand, and along Whitehall to the Houses of Parliament, or he can go along the Strand so far only as Wellington-street, down Wellington-street, along the new roadway, and then where the roadway branches out to Whitehall-place, or the Embankment, he can

can turn either way; I want to know whether the new roadway would be a shorter route to travel by than along the Strand?—I think it would be shorter.

349. Do you know how much?—I do not.

350. For convenience and facility of access from the Law Courts on the Carey-street site to the Houses of Parliament, would it not be the preferable route for a person to take to go by Essex-street, assuming Essex-street to be opened and to be made a proper thoroughfare, and to go along the Embankment, or else, there being a Metropolitan station at the bottom of Essex-street, to take the Metropolitan Railway there, which has likewise another station at Westminster?—I think, apart from the question of railway communication, the choice would be to take the Essex-street access to the Embankment, and to follow the line of the Embankment.

351. So that for the lawyers the probability being that Essex-street will be opened sooner or later; that is the line they would take, and not this new roadway?—I should think so.

352. Clearly, if there was any question of the transfer of the Law Courts from the present site to that near the Temple it would be a matter of certainty?—Yes.

353. It would be certain, that, instead of taking the new road, they would take the Embankment?—Yes.

354. Or take the railway, which has a station at Essex-street and another at Westminster?—Yes.

355. What is to be the cost of this roadway up to Wellington-street. It is put down in your report as 230,000 *l.*?—Yes; a little less than that.

356. What does that include?—The formation of the road and compensation to all parties whose property is taken; it would be rather less than 230,000 *l.*; that was for the line indicated on that map, taking some valuable houses in the Strand.

357. It would be less than 230,000 *l.*?—Yes; perhaps 200,000 *l.*

358. That includes the construction of the ornamentation, planting, laying out, and everything?—Yes, everything.

359. We have this in evidence, I think, that the traffic going to the south would not take advantage of this road; that the traffic going north in the main to the great hives of the metropolis would not take this line, but that the officials would, and possibly, if the Carey-street site was retained for the Law Courts, some lawyers might, in going to Parliament, take advantage of it. Now, according to the present plan, that great portion of the metropolis that lives in Tyburnia, that lives in Belgravia, that lives in St. James's, and that lives in St. George's parishes will have no access whatever to this Embankment, will they, except through Villiers-street, the gradients of which you have given us, or through Craven-street?—That is so, except round by Whitehall.

360. I mean they will have no new access?—No.

361. You assume, do you not, that some day the Mall will be opened up into Cockspur-street; there is at least a possibility of such a thing?—I can express no opinion upon that.

362. You can express an opinion upon this, perhaps. Is it, or is it not true that the Metropolitan Board of Works, with a wise provision as regards the future, in constructing their own office, the pretty building they have erected at the end of the Mall, have constructed it setting the front back with a view to a possible future opening up of the Mall into Cockspur-street?—No, not with that view.

363. It so happens that it will fit in with the opening up of the Mall?—The result was the widening of that passage undoubtedly, to the great convenience of the public.

364. Your office having been built in a direct line with Carlton-terrace, it would not interfere with the opening up of a direct line into the Mall?—Taking down the hotel, and the solicitor's house at the corner of our passage, and taking a portion of Sir John Lefevre's garden, would give you access at once to the Mall, no doubt.

365. The Metropolitan Board of Works felt the necessity so strongly of finding a direct access for the traffic from the great districts of London, that I have referred to Tyburnia, Belgravia, St. James's, and St. George's, to the Embankment, that they brought a Bill into Parliament proposing to take Northumberland House, did they not?—Yes.

366. And to form a direct roadway from Charing Cross, close by King Charles's statue, to the Embankment, as we see on that plan?—Yes.

367. That was resisted, and fell through?—It was so.

368. I presume the Metropolitan Board of Works has not got more 230,000 *l.* than they know what to do with; is that the case?—No doubt.

369. Assuming that you had 230,000 *l.*, and that you wished to expend it in the way that would give the most convenient communication for the metropolis in general, taking broad views of the traffic of the metropolis in connection with the Embankment roadway, would you construct this line of road?—No, I think not.

370. You would prefer greatly a road communicating from Charing Cross to the Embankment roadway, would you not?—Certainly.

371. Northumberland House would be a very expensive house, even if it could be taken, because there are associations attached to it, and some persons admire its architecture, and think it desirable to keep it. You found that objections were raised to your proposal of taking it?—It is the cheapest approach to the Embankment to go through Northumberland House.

372. But objection was raised to that in the House?—Very strongly.

373. So strongly that that line of approach was abandoned; but it does not necessarily follow that the line of approach to the Embankment roadway should be straight?—Not necessarily.

374. Is it not often the case that a curved line of road gives a very good access, and looks better than a straight line?—There is no objection to a curved line, but there is a great objection to coming into a narrow part of the Whitehall-road, where there is an incline from the statue; and the difficulty of approaching the Embankment by that incline will be very considerable, meeting, as you would, the traffic from Parliament-street; whereas if the line is made directly through Northumberland House you get on to the higher ground.

375. Where do you say there would be a difficulty in the curved line?—I mean if you were to curve round Northumberland House, instead of passing through it, you must bring the entrance

Sir *Thwaites.*

6 April 1869.

of your roadway lower down, into the narrow part of the Whitehall-road.

376. Why should the gradient there be different from what it would be if you went through Northumberland House?—It is different, as a matter of fact.

377. I assume that a new roadway is to be made?—I speak of the existing road, and the approach to the Embankment from it.

378. At present there is no road there of any sort or kind?—You are aware that there is an incline from the statue coming in this direction, and that then you get into the narrow and inconvenient part of the road. It would be very inconvenient to make the approach road terminate at that point instead of where it is indicated on that map.

379. Granted; but might it not open where yours ceases, at the corner of Northumberland House, and sweep round Northumberland House and garden. That line of road which is now marked by a bit of paper attached to the map on the wall, would give access, would it not, to the Embankment for those districts to which I have referred, without interfering with the Duke of Northumberland's property, further than the very smallest possible corner of his garden?—It would.

380. And the effect of the roadway being made through there probably would be, that the block of houses, and all the property behind, would have to be altered and re-constructed, and necessarily very much improved, facing, as it would, this big road; so that it would practically be a great benefit to Northumberland House, as regards the views from the back part of the house?—Yes.

381. It is a very slummy part of London now, is it not?—It is, behind the gardens.

382. The probability is, that if you made the road there, it would cease to be slums?—No doubt it would increase in value.

383. Putting all questions of cost aside, looking at the question as regards the public, and assuming that a sacrifice were made by the Duke of Northumberland of the very small portion of land required (it would really be no sacrifice, because it would lead eventually to a great improvement of his property), it would be an immense gain, would it not, to the public to have such an access to the Embankment?—Apart from the question of cost, it would be the next best thing to our own projected line, direct through the property of the Duke of Northumberland. But with reference to the cost of the one, as compared with the other, I should think that the cost of the curved line would certainly be more than double the cost of taking the Duke's house. The increased expense arises from the fact that you are obliged to cut diagonally all those houses, or portions of houses, in the Charing Cross or Whitehall-road, for nearly the whole length of that street. You must begin by taking the National Bank, and all these are very valuable shops down to Craig's-court.

384. Is the National Bank the new pretty building?—Yes.

385. Would that have to go?—Yes.

386. Have you had that measured?—Yes, we could not avoid taking it.

387. Under your own plan, I see that you not only take Northumberland House and its garden, but you take a portion of the property coloured light black, to the south-west of Northumberland House, which is property of that very description which you say is so very expensive?—Yes; but we avoid the bank.

388. You save the bank?—Yes; and if you curve your line, you are cutting diagonally parts of several houses and premises which are very valuable.

389. At what do you estimate the cost of Northumberland House?— I think, for Northumberland House and the other properties at the rear, and the properties at Charing Cross, altogether it is 460,000 *l.*

390. Do you really think that the cost of that curved line through these back properties, which have now no frontage at all, would be 900,000 *l.*?—Yes, I am quite sure it would, and you would have no return in that case; whereas, if you take the Duke of Northumberland's house, you get a large area, which would be very valuable for building purposes.

391. Have you had any estimate made of this plan through Northumberland House?—Yes, I have, by the architect.

392. And of the curved line?—Yes; I was under the impression that it might be made at a less cost, but I found that the number of properties cut through by the curved line made it very expensive.

393. That is to say, in respect of compensation?—Yes.

394. Do the Board of Works speculate. I mean, do they buy blocks outright adjacent to a road they are making, make the road, and then reconstruct those blocks with improved houses, which they sell, probably, at an enhanced price, and by that means diminish the general cost of the improvement which they have undertaken?—Yes; that principle is the prevailing one with the Board of Works in carrying out these improvements.

395. And you have found that principle work satisfactorily?—Yes; instead of making compensation to persons whose properties are affected by our works, we take a larger area than we require for the street we are making, and let the land on either side for building purposes, and as soon as it is covered with houses we take it into the market and sell the ground rent.

396. The Board does not build the houses itself?—No, we do not build.

397. But you let the land you have so acquired for building purposes?—Yes.

398. Do you sell it or let it on building leases?—We let it on an 80 years' building lease, and as soon as the ground is covered we take it into the market and sell the ground rents.

399. Is this property lying south-west of Northumberland House, where the curved paper goes, part of the Crown property?—I do not know.

400. Mr. *Cowper.*] Scotland Yard must be Crown property?—Yes; no doubt some portion of it would be Crown property.

401. *Chairman.*] It appears that a great portion of it would be Crown property. Upon a plan which I have had put into my hand there is a line which runs from near Charing Cross north of the Admiralty, a little above that passage which goes to Spring Gardens, to Northumberland House, nearly in a straight line, and that line is the line of the Crown property, so that really a very large portion of that curved white-paper line would be on Crown property; apparently

apparently two-thirds of it?—It would appear to be so according to that.

402. Lord *John Manners.*] Do you buy Crown property cheaper than any other?—I am sorry to say that our experience is quite the contrary.

403. *Chairman.*] Is it difficult to get?—We pay more for Crown property than for any other property we purchase.

404. Can you give us accurate estimates of the cost of these two plans, putting a fair value—that is to say, what a jury would consider the proper value of Northumberland House, and taking the cost of the curved line?—It would take some little time to fill up the estimate; it involves some delay.

405. It could be done within the next fortnight or three weeks, I suppose?—To make a reliable estimate we must ascertain the occupation of each part, because if anything besides what we wanted was under the same occupation we should be obliged to take those adjoining premises too; that might involve taking the shops in front. That is an inquiry which would occupy a considerable time.

406. Supposing that it were to cost double this present line, as regards the improvement of the metropolis, as a mere question of approaches to the Embankment, I suppose you are clearly of opinion that the money would be better spent on the one that cost double than on the other?—I think it would, because clearly this is a necessity. It is quite clear that there must be an approach to the Embankment from Charing Cross, and it is quite clear that on the eastern side of the Duke of Northumberland's house no such approach can be made by reason of the gradients.

407. Sooner or later you think that either on the Duke of Northumberland's, or on this other property, which is partly Crown property and partly private property, such an approach must be made to the Embankment?—I think so.

408. So much for the approaches. Now with regard to the actual site itself; what is the actual extent of this reclaimed land; let us have first the whole extent between Waterloo and Westminster Bridges?—About seven acres, I think, speaking off-hand. I have not the figures before me.

409. Let us take what you have got, beginning where your line of roadway joins the Embankment from there to there (*pointing to the plan*), what is the extent of the whole of that; the rest belongs to the Crown?—About seven acres; I think that is the extent of this part coloured green.

410. And what would the proportion be to the east of Hungerford Bridge?—I should think about six acres.

411. That is ground which you originally thought ought to be laid ornamentally, either in gardens or in buildings of an ornamental character?—That is a statutory obligation upon us at present.

412. It is a statutory obligation upon you at present to lay out that ground as ornamental ground, and you are debarred from building upon it?—Yes, entirely.

413. That statutory obligation extends how far from the Embankment road: I do not mean this new road?—Over the whole of the ground coloured green.

414. There is a block there that is not coloured at all, but left white near the bridge; why is that ground white; who does it belong to?—A portion of that belongs to the Board.

415. Which portion?—Near to the bridge, where I pointed out that an arrangement was made with the Hampstead Railway for the formation of their station.

416. Why is not that coloured green too?—Because it is not under the same condition as the other portion.

417. Is that reclaimed land?—No, I think a portion of that is ours.

418. Is all that coloured green reclaimed land?—Yes.

419. Now with regard to the white block to the south-west, whose is that?—We have power to build on that.

420. On the whole of that ground where your red line runs you originally contemplated, if you had not been debarred by Parliament, building houses or other buildings of an ornamental character?—Yes.

421. Are you now debarred from that?—Yes.

422. It would constitute a very fine site for any public building, would it not?—It would be one of the finest sites in the metropolis.

423. And you have about six acres there?—About six acres, I should say, from the bridge.

424. This roadway would bisect diagonally this same site, would it not?—It would.

425. It would render it as a site for public buildings of no further use, would it not?—It would very much diminish its value.

426. I gather from your evidence that the cost of this road would be 230,000 *l.*?—About 200,000 *l.*

427. What do you reckon as being the value of this site, that is, of these six acres of land?—That is rather a speculative question at present.

428. Let us speculate?—£. 150,000 an acre.

429. That is 900,000 *l.*?—Yes.

430. We will assume this speculation to be well founded in fact, if this Act of Parliament which Parliament in its wisdom has ordered the Board of Works to execute is executed, there will be this double effect according to your evidence, that 230,000 *l.* will be spent upon a roadway which you say will be objectionable in appearance, which is not of any great value as to the general traffic of the metropolis, and that it will not perhaps utterly destroy, but greatly diminish, the value of a site which you estimate for public purposes at 900,000 *l.*; is that so?—That is so.

431. That is the broad practical result of the Act of 1868, unless Parliament this Session were to step in and stop the proceeding, is that so?—That is so undoubtedly; supposing always that Parliament takes off the restriction at present on the Board, of not building over that land.

432. Supposing the land was available for building purposes?—Yes.

433. In my question I merely assumed the possibility of the value of this land, which you estimate at 900,000 *l.*, being diminished to a great extent, because even if this roadway were to be made, a certain portion of it, that which is coloured green, between the roadway and the river, though a very narrow slip, might be available for building or other purposes?—Yes.

434. And, therefore, *pro tanto*, the loss, as regards the value of that land, would be diminished for building purposes?—No doubt.

435. Because a certain amount would be available for building?—Yes.

436. But, as regards any great public building,

Sir *J. Thwaites.*

6 April 1869.

if the roadway is constructed as at present laid down upon that land, coloured green, any such idea is entirely out of the question?—No doubt; with regard to the class of building which might be put upon that land, supposing it were required for a large public building, the formation of this roadway would greatly diminish the value, if not entirely destroy its capacity to receive a large building; but at the same time, supposing the restrictions were taken off, whether the roadway were formed or not, the land would let for building purposes for a very large sum.

437. We will assume that the roadway is made, then the part coloured green, between this roadway and viaduct, and the Embankment roadway will have to be laid out, according to the Act of Parliament, in ornamental grounds; you cannot build upon it?—No.

438. What is the depth of it?—That is 100 feet which is now being pointed to.

439. The red is not 100 feet at the narrowest part, is it?—No; the stone coloured part is 100 feet.

440. What do you propose to do with that portion which is coloured green to the north-west or to the north on that map?—It would have to be planted and laid out according to the powers of the Board.

441. As to the level of that, what would be the height of the roadway opposite that green part?—That is one of the difficulties in the formation of this roadway, that you must leave in a hole a portion of the ground to the rear.

442. It is rather a difficult thing to lay out that portion coloured green which you say you would have to lay out ornamentally, because practically there is a hole between the high ground of Adelphi-terrace and the high ground of the roadway?—Practically it can be filled up there, because the height of the road would not prevent our filling it up without interfering with the houses in Adelphi-terrace, and others, but when you pass that point the road rises to a considerable height.

443. But you cannot build upon that ground?—No.

444. Is that 100 feet which you have given us to be the width of the top of the roadway?—Including the footpaths.

445. What portion will be taken up by the slope of the Embankment on each side, to give you 100 feet at the highest elevation of your roadway; what will the width of the base of that road be?—The new road will be 60 feet wide.

446. That green part would have to be planted and made the best of, but it would be practically a hole; I want to know what space the base of the Embankment would cover, because, being on earth, it requires a certain slope to stand?—No doubt.

447. How much of that green part would be covered by the slope of the Embankment?—More than two-thirds, I should think, would be on solid, and the upper part would be on arches.

448. What I want to ascertain is, the upper part of the road being 60 feet wide, how far the base of the Embankment would extend into the green towards the yellow road?—It would be more than double the width of the road.

449. That of course would leave so much less of the green for planting, or any other ornamental purpose?—You could plant on the slope. Supposing that we got no relief from Parliament, and were obliged to construct this road without having any building screen, such as we have suggested here, we should plant it out, and lessen the unsightliness as much as possible.

450. You would have a wooden screen?—We should plant it.

451. You say you can build on the white part; how does it happen that you have power to build upon that and not upon the green; is that white part reclaimed land?—Yes, it is reclaimed land.

452. Mr. *Cowper.*] The clause applies to all reclaimed land; I think there is some mistake about that?—I will inquire into it; I think the green must be extended; that is my impression.

453. Is not that land, coloured white, included in this 26th clause of the 25 & 26 Vict. c. 93, which states that "All the land to be reclaimed from the River Thames on the south of certain streets," which have been described, "and not required for streets or roads, nor otherwise specifically appropriated by the provisions of this Act, and lying between an imaginary line drawn from the eastern boundary of the houses on the east side of Cecil-street to the Embankment roadway on the east, and the Crown lands on the west, and the Embankment roadway on the south, together with the lands to be reclaimed between the southern side of the approach road, shown on the plan marked C., shall for ever hereafter be vested in and maintained by the Board for the use of the public, as places of recreation or ornamental ground"?—I am not quite clear whether that refers to the white piece; I cannot tell unless I refer to the map signed by the First Commissioner.

454. *Chairman.*] Will you kindly ascertain that by the next meeting of the Committee?—I will do so.

455. In getting this Bill for the Embankment, and making the arrangements for carrying it out, had the Board of Works any communication with the owners of property along the line; had you to negotiate with them before you commenced your works, or was the negotiation irrespective of the Metropolitan Board of Works; was it a matter conducted by Parliament, and had you merely the construction of this work?—The original Bill was introduced by the Office of Works, and I believe certain clauses were inserted, giving special privileges to certain owners of property on the bank of the river. The Act was simply handed over to us to carry out; we had no control whatever over the parties.

456. Would you point out those clauses, if you please, and state to us what those privileges are?—The 25 & 26 Vict. c. 93, s. 53, has reference to the land of the Duke of Northumberland.

457. Will you read that clause?—"Except with the previous consent in writing of the Most Noble Algernon Duke of Northumberland, his heirs, sequels in estate, or assigns, the Board shall not take any more land belonging to the said Duke, under the provisions of this Act, than is requisite for the formation of the following streets, not exceeding 60 feet in width; that is to say, a street in continuation of Whitehall-place."

458. That goes through a part of the Duke of Northumberland's property?—Yes; the special provision is, that the Board shall not take more land than is absolutely necessary for the area of the street; the result is, that the building frontages created at great cost, by the outlay of the Board, would be in the possession of the Duke of

of Northumberland. The Board would not, as is usually the case, have power to build upon the adjacent land they might take, or upon the spare land, and to sell that to recoup themselves for the formation of the street.

459. Would the Duke of Northumberland have the power of doing so?—He has the power.

460. He is not restricted, but the Board is?—Yes; he restricts us to take only so much as is required for the formation of the road.

461. Mr. *Cowper.*] The Duke has no power of building on land that is taken from him, of course?—There are two restrictions; one is, that the land taken from the Duke for the formation of this street should not be built upon, so as to have no house to interfere with the prospect of the Duke; and the other is, that the Board shall not take more than they require for the purposes of the Act; and therefore my statement is strictly correct with regard to the powers of the Duke, to retain the building site, the frontage, in point of fact, for the purpose of building.

462. The Duke might build upon the land you did not take, but he could not of course build upon the land you did take?—Clearly; but there was a restriction upon what we could take; our usual course is to take sufficient land to enable us to build houses on either side of the street, or to let the land for that purpose.

463. *Chairman.*] And you were restricted from that in this case?—Yes.

464. So that the advantage of the frontage on either side of your roadway would remain to the proprietor of the land?—Yes.

465. Is that clause in this Act of Parliament a usual clause inserted in similar Acts?—It is quite an exception; when we are the promoters of a Bill, we never insert it.

466. Have you in any other cases had such a restriction imposed upon you?—We mostly have a struggle with the Crown, but they are the only parties who usually insist upon clauses of this description; there is generally a demand by the Government Departments having the control of Government property that we should only take what we require.

467. In other parts of London your practice is to recoup the ratepayers to a great extent for an outlay upon an improvement by taking more land than you require and building upon it?—Yes.

468. But as regards the Crown, and as regards the property to which these clauses refer, the ratepayers cannot be recouped; you must suffer?—We always suffer in such a case.

469. Mr. *Cowper.*] Supposing that the Act had given you power to build upon the land you took from the Duke of Northumberland, must you not necessarily have given him larger compensation for the injury done to his property which you did not take?—We find the result of this special legislation to be, that when the amount of compensation is to be ascertained before a jury or an arbitrator the parties always plead this special legislation; they say, "Whatever may be the case as regards the Lands Clauses Act, here Parliament itself has surrounded us with all these privileges, and therefore we must have special compensation."

470. The point to which I wished to direct your attention was this: if you had had a power of building upon the property you took between Northumberland House and the river you would necessarily have destroyed some of the advantages now attending upon Northumberland House, and therefore it would have been only fair and just that you should have given the owner of Northumberland House more compensation than you would require to give if you erected no buildings between Northumberland House and the river?—That would be a question of degree.

471-2. Mr. *Layard.*] But that proceeds on the assumption that there are no buildings between Northumberland House and the river now, whereas there are buildings between Northumberland House and the river?—If we took a portion of land from the Duke of Northumberland at the rear of his Grace's house, and took it for the purposes of the Act, and were to build high houses so as to intercept his view, it would aggravate the compensation we should have to pay; there is no doubt of that; that is one question. But then there is a separate and distinct question as to the Duke of Northumberland and other large owners of property on this line claiming, or rather having conferred upon them by Act of Parliament, the right to this building frontage which we have created. Instead of the Board having the benefit of reletting the land which we do not require in front of a fine roadway connected with the Thames Embankment, a roadway of 100 feet in width, which would be very valuable indeed, that is reserved in this case to the Duke of Northumberland, and in other cases to the Marquis of Salisbury.

473. *Chairman.*] By what clause is that?—By the 54th clause there is a reservation for the Craven estate.

474. What is called the Craven estate is not Lord Salisbury's; there must be another clause for the Marquis of Salisbury?—Yes; Section 60 in the same Act gives a privilege to the Duke of Norfolk, and section 61 relates to the Adelphi estate, and section 62 to the Marquis of Salisbury's estate.

475. Mr. *Cowper.*] Do you remember that when this Act was in Committee the counsel who proposed these clauses on behalf of the proprietors argued that the removal of the river frontage and the substitution of a road frontage was a great disadvantage to them, and not the advantage which you at present assume it to be, because they objected to the traffic that was to go between them and the river?—There is a great deal of fallacy in that argument, because it is quite clear that the major part of this property is property not exercising its rights on the waterway. As regards the Marquis of Salisbury's property, for example, with the exception of a very small portion consisting of wharves, where the deprivation of the water right would be a serious matter, the substitution of the roadway for the river would be a positive improvement instead of lessening its value.

476. That is your opinion; but was not the argument I have stated urged before the Committee?—That was the statement; I do not know what the argument would be.

477. *Chairman.*] Did not the proprietors between Westminster Bridge and Hungerford Bridge use that argument, and resist the Embankment on that ground; and was not it in order to obviate that opposition that plans were drawn by Mr. Pennethorne, which were laid before Parliament embodying a proposal that the Embankment roadway should branch off into White-

Sir *J. Thwaites.*
6 April 1869.

hall-place, or pass through Lord Carington's house; that was so, was not it?—Yes.

478. But that was overridden?—Yes; that was a separate question.

479. But it was the same principle; there was a resistance to the roadway on similar grounds in principle by the proprietors on this side of Hungerford Bridge?—Clearly; and not only was the whole of the reclaimed land given up to the Crown, but the Board were put to a very great expense in building an outer wall, which was to be subject to the sanction of the First Commissioner, and was built in proper orthodox style, I hope.

480. Mr. *Layard.*] Practically, can you tell us what there was between the end of Northumberland House garden and the river before the Embankment was constructed. Northumberland House garden abuts upon Scotland-yard; on the other side of Scotland-yard there were buildings, wharves, and so on?—Yes; those were taken, and that property we have now to dispose of.

481. Was that the property of the Duke of Northumberland?—Yes; some of it was.

482. *Chairman.*] Did the Duke of Northumberland's property extend to the river?—Yes; in places it did.

483. Lord *John Manners.*] All these questions were discussed before the Committee, were they not; and counsel were heard on both sides?—Yes.

484. And the Committee came to a decision which was subsequently embodied in an Act of Parliament?—Yes, that is so.

485. *Chairman.*] What is that land, which is not coloured, to the south of the branch to Whitehall; is it Crown land?—That is the land to be given up to the Crown; the wall will be, and is, I believe, built close up to the 100 feet roadway, and all the gardens connected with these private houses in Whitehall Gardens will be extended to it.

486. It was to be given up to the Crown under the Act, was not it?—It was to be given up to the Crown under the Act.

487. Without any conditions of any sort or kind?—The only condition was that we should build a very expensive wall there.

488. Has the Crown the power to build private houses, or do what it likes there?—It has, no doubt.

489. How many acres of land did the Crown gain there?—I should think it must be quite six or seven acres.

490. What is the value of that?—The value for building purposes, supposing you could build upon the frontage, would be equal to that of the other land that I have referred to.

491. The value of that was created by this Embankment?—Yes.

492. That white property is the property of the Crown?—It is now.

493. What was it before this?—The foreshore.

494. What was the value of the foreshore, when there was no embankment, in its then state?—It had no value, I should think, as a foreshore.

495. No value at all?—No.

496. Its value, then, was the result of the Embankment?—Certainly.

497. And you had to spend a great deal of money in order to make that Embankment, which rendered this white piece of foreshore, now the property of the Crown, valuable, which up to that time was valueless; what value would you put upon it now?—It is impossible to say; it would be most valuable to us for building purposes. I will take it from Mr. Shield's valuation on behalf of the Chancellor of the Exchequer.

498. The portion of six acres to the east of Hungerford Bridge you valued, roughly speaking, at about 900,000 *l.*—Yes.

499. This portion is about five acres. Is that from its situation, as being nearer the Houses of Parliament and nearer a better description of houses, more or less valuable than the portion to the east of Hungerford Bridge?—I should not think it is more valuable; you would have the difficulty, of course, that in raising your buildings there you would be excluding the houses at present existing.

500. Do you think that you might roughly put it at 100,000 *l.* an acre?—One can scarcely deal with that land, disregarding the interests of the owners of the houses which would be affected if you were to put up a row of buildings there. Even now, notwithstanding that the Board are compelled to build a very handsome wall at the end, and to lengthen the garden walls, separating each of the gardens, we have actually had claims sent in by the Crown tenants for compensation for being deprived of the benefit of the water access. It is quite true that, in some cases, an old door, which had probably not been opened for the last 40 years, existed at the bottom of the garden, where persons might have taken a boat. However, although we have given them the advantage of all that ground and the removal of all the mud banks in front, which might greatly have annoyed them, yet we are now dealing with claims made by tenants of the Crown for diminished value.

501. Have you had any awards made upon those claims?—Yes, we had one on Mr. Horsman's, another on the Duke of Buccleuch's, and there is one now unsettled of Sir Robert Peel's.

502. How much had you to pay?—In the Duke of Buccleuch's case it was quite 8,000 *l.*

503. And in the other case?—In Mr. Horsman's case it was 8,000 *l.*, I think.

504. In Sir Robert Peel's how much was it?—That is not yet settled.

505. As regards the value of this land, it comes to this, that that white piece of land which has been reclaimed was in a state of foreshore; it was the property of the Crown, but comparatively valueless, but that, through the construction of this Embankment, this same valueless land has been made very valuable; we will not say whether it is worth 300,000 *l.*, 400,000 *l.*, or 500,000 *l.*, but it is of a value, going into hundreds of thousands of pounds?—Yes.

506. And the Crown, or those who represent the Crown, obliged the Metropolitan Board of Works, or rather the ratepayers of the metropolis, through the Metropolitan Board of Works, to pay 27,000 *l.* for the right of making this Embankment, which has rendered this property of the Crown, that was comparatively worthless, as valuable as you have stated it to be?—That is so. At the same time, I am bound to say, on behalf of the officials connected with the departments concerned, that they have simply done their duty. My protest is against the principle. I think Mr. Gore and the officials have only followed out that which it was their duty to follow out.

507. My

507. My question was not directed against the mode of administering the Crown revenues, but it had reference to the principle of justice as between the Crown and the ratepayers of the metropolis. An embankment of this kind, constructed along the great river of the great metropolis of a great kingdom, can hardly be looked upon really as a mere municipal affair, can it?—No, I think it is a semi-Imperial matter.

508. But the semi-Imperial funds have contributed nothing whatever to this Embankment?—Nothing.

509. It is the ratepayers of the metropolis, who, through the coal and wine dues, have paid the whole of the cost of this Embankment, amounting to 2,000,000 *l.* or 3,000,000 *l.*, or whatever the ultimate sum may be?—Yes.

510. And as regards any Imperial funds, the only way in which Imperial funds appear is, that the ratepayers have been further obliged to pay 27,000 *l.* to the Crown, in order to improve the Crown's property?—Yes.

511. And about 15,000 *l.* compensation in awards to the tenants of the Crown?—That is a small portion; there are other claims.

512. By "small," you mean that 15,000 *l.* is a very small item in 3,000,000 *l.*?—I mean that we have already paid about 16,000 *l.* in claims, and spent 6,000 *l.* or 7,000 *l.* upon a wall; and there are other parties along the line who may claim still.

513. So that it does not at all follow that the claims on the part of the tenants of the Crown will be limited to this 15,000 *l.* or 16,000 *l.*?—No.

514. Lord *John Manners.*] You do not mean that these gentlemen claim as tenants of the Crown more than they could claim if they were their own tenants, or the tenants of anyone else?—I do not say that they are doing anything more than they might do if they were the tenants of John Smith. I only say that we have given them a large piece of ground, and built an excellent wall at the end, and lengthened the garden walls, and yet they claim for diminished value.

515. *Chairman.*] That is a matter of opinion upon their part; they might prefer an access to the river, even though it is an incommodious access, to what you consider an improvement?—Yes, clearly.

516. Mr. *Cowper.*] May I ask did the Board pay compensation for that portion of the foreshore which is situated in front of Whitehall Gardens?—I think that that was included; there was a general measurement of all the reclaimed land, and I believe the payment applied to the whole. But we paid 27,000 *l.*, whether it was upon a diminished area or including the whole.

517. I mean to say that when the Crown got the reclaimed land, I presume it did not also get anything for the foreshore for the same land; therefore, you had to pay the Crown, either in form of compensation for the foreshore, or in the form of reclaimed land?—I am unable to say whether that portion in front of Whitehall Gardens was included in the original measurement for which we paid 27,000 *l.* or not, but we did pay 27,000 *l.* whatever it was for.

518. Does not the Act of Parliament state that the lands which are to be given to the Crown are not to be considered lands in respect of which money compensation is to be paid?—That is so.

519. *Chairman.*] With regard to the other portion upon which other proprietors abut, I mean the portion affected by this roadway between Hungerford Bridge and Wellington-street, are there any other clauses either in the Act of last Session or in the 25 & 26 Vict. c. 93, to which you wish to refer for the purpose of showing how the Board is tied down and bound?—I will lay before the Committee all the sections imposing restrictions on us or conferring special privileges on the proprietors. The first section which I would refer to is section 26 of the Act of 1862: "All the land to be reclaimed from the River Thames on the south of the streets fourthly and fifthly hereinbefore described, and not required for streets or roads, nor otherwise specifically appropriated by the provisions of this Act, and lying between an imaginary line drawn from the eastern boundary of the houses on the east side of Cecil-street to the Embankment roadway on the east, and the Crown lands on the west, and the Embankment roadway on the south, together with the lands to be reclaimed between the southern side of the approach road, shown on the plan marked (C) hereinafter referred to, leading towards Norfolk-street, Surrey-street, and Arundel-street, shall, for ever hereafter, be vested in and maintained by the Board for the use of the public as places of recreation or ornamental ground, and the expenses incident to such maintenance shall be deemed to be expenses of the Board in the execution of the Act 18 & 19 Vict. c. 120, and all parts of the metropolis shall be deemed to be equally befited by all sums so expended by the Board." Then the 28th section, "No house or building shall be erected upon any part of the lands to be acquired or reclaimed, as aforesaid, situated between the River Thames and the Gardens of the Societies of the Inner and Middle Temple respectively, other than any such porters' or gardeners' lodges, alcoves, or other buildings of a like nature, of only one floor each, as are from time to time, whether before or after the passing of this Act, approved by the First Commissioner of Her Majesty's Works and Public Buildings, by writing under his hand." The 53rd section referring to the Duke of Northumberland, says, "Except with the previous consent in writing of the Most Noble Algernon Duke of Northumberland, his heirs, sequels in estate, or assigns, the Board shall not take any more land belonging to the said Duke, under the provisions of this Act, than is requisite for the formation of the following streets, not exceeding 60 feet in width; that is to say, a street in continuation of Whitehall-place, and a street in continuation of Northumberland-street, such streets to be made respectively in the direction shown on the plan (A), hereinafter referred to, or within the limits of deviation shown on such plan; and except with the previous consent in writing of the said Duke, his heirs, sequels in estate, or assigns, and of the said Board, no building shall be erected upon the lands taken from the said Duke, his heirs, sequels in estate, or assigns, for such streets, or upon the lands coloured green upon the plan marked (A), signed in duplicate by the Right Honourable William Cowper, one part whereof is deposited in the Private Bill Office of the Honourable the House of Commons, except any buildings for making necessary fences on the sides of such streets, or for accommodating the public with fountains or covered resting places, or for public monuments,

Sir *J. Thwaites.*

6 April 1869.

such buildings or monuments not exceeding 19 feet in height above Trinity high water-mark." The 54th, providing for the continuation of Craven-street is, "The Board shall appropriate and set apart so much of the land to be acquired by them under the powers of this Act, lying southward of the Craven-street Estate, belonging to William George Craven, Esq., as shall be necessary for the formation of a public street of not less than 60 feet in width, in continuation of Craven-street, up to and to communicate with the new street fourthly herein described, and such land shall not be used for any other purpose." The 60th section, giving special protection to the Duke of Norfolk, is, "Opposite the Strand Estate of the Duke of Norfolk, the north side of the approach road, and the approaches therefrom to Surrey-street, Norfolk-street, and Arundel-street respectively, shall be constructed on the line, and in the position shown on the plan marked (C), signed by the Right Honourable William Cowper. The Board shall not exercise any powers of compulsory purchase in respect of any estate, right or interest of the Duke of Norkolk in the Strand Estate, except so far as may be necessary for the construction of the said approach road and approaches. No buildings shall be placed on the reclaimed land between Somerset House and the Middle Temple, southward of the said approach road on the said plan, except the walls or arches of the Embankment or of any roads or approaches to be made on the said land, and except any public stairs or landing-places, fountains and covered resting places for public use or public monuments. All the land between the present southern boundary of the Strand Estate and the north boundary of the said approach road, and the freehold and inheritance thereof, shall, upon payment or allowance to the Board of the value thereof, vest in the Duke of Norfolk by force of this Act, and be held by him as part and parcel of the Strand Estate. The Duke of Norfolk shall have power to build up to the line of the footways on the north side of such approach road, and on both sides of the approaches to Surrey-street, Norfolk-street, and Arundel-street respectively, and have free access to the said approach road and approaches. The compensation to be paid to the Duke of Norfolk by the Board for the value of or injury to his property, and the sum to be paid by the Duke of Norfolk to the Board for the value of the land so hereby vested in him, shall, in case of dispute, be settled in the manner prescribed by this Act. Throughout this Act the expression 'the Duke of Norfolk,' means 'Henry, now Duke of Norfolk,' and every future owner in possession of 'Arundel Estates,' and every guardian or guardians of the said Henry Duke of Norfolk, and every future owner during his minority; and the expression 'the Arundel Estates,' means the estates for the time being settled or conveyed to the uses of an Act of Parliament passed in the third year of the reign of King Charles the First (whereby certain estates were settled upon the heirs male of Thomas Earl of Arundel and Surrey), and in the possession of the Duke of Norfolk for the time being; and the expression 'the Strand Estate,' means such parts of the Arundel estates as are situate in the parish of St. Clement Dane, in the county of Middlesex." The 61st clause relating to the Adelphi Estate is, "The Board shall not take by compulsion under the powers of this Act any other part of the Adelphi Estate in the parish of Saint Martin-in-the-Fields, belonging to or claimed by George James Drummond, than such as shall be required for the making of the roadway and footpath of the street in this Act described between Whitehall-place and Wellington-street; and the land reclaimed under this Act from the River Thames, and lying between the Adelphi Estate and the northern side of the line of that street, shall be subject to the like restrictions and provisions in respect to buildings and other matters which might occasion injury or annoyance to the adjoining property, or the owners or occupiers thereof, as are, under the Act of the eleventh year of the reign of King George the Third, intituled, 'An Act to enable certain persons to inclose and embank part of the River Thames adjoining to Durham-yard, Salisbury-street, Cecil-street, and Beaufort-buildings, in the county of Middlesex, enacted, and as are now in force in respect of that part of the Adelphi Estate which immediately adjoins thereto, and was inclosed and embanked under that Act; and the same land so lying between the Adelphi Estate and the northern side of such line of street, and the fee-simple and inheritance thereof in possession, shall, upon the completion of the same street, or of that portion thereof which shall pass in front of the said Adelphi Estate, or on the completion of the Embankment by this Act authorised, which event shall first happen, and on payment of the balance, if any, which, under the arbitration hereinafter referred to, will have to be paid by the said owner to the Board, vest in the owner of the said Adelphi Estate; and the amount of compensation to be paid by the Board in respect of any land purchased, and for any damage done to the said Adelphi Estate by the execution of the powers of this Act, to which the said owner may be entitled, under the provisions of this Act, and also the value of the said land so to be vested in the owner of the Adelphi Estate, shall be settled by arbitration, pursuant to the provisions of this Act; and the sum or sums awarded in respect of the value of the land to be so vested, and in respect of such compensation, may be set off one against the other, and the difference shall be paid by the owner to the Board, or by the Board to the owner, as the case may be: Provided always, that no building shall be erected between the lands so vested in the owner of the said Adelphi Estate and the River Thames other than the walls or arches of the Embankment, or of any roads or approaches to be made on the said land, and except any public stairs or landing-places, fountains, and covered resting-places for public use or public monuments." The 62nd, prohibiting building in front of the Marquis of Salisbury's estate, is, "No house or building shall be constructed without the consent of the Marquis of Salisbury, his heirs, sequels in right, or assigns, upon any land now lying between, or which shall or may, after the reclamation and inclosure of the bed and foreshore of the river, lie between Cecil-street and Salisbury-street, and the houses on the southern ends thereof, on the north, and the River Thames on the south, other than the walls or arches of the Embankment, or any roads or approaches to be made on the said land, and except any public stairs or landing-places, fountains, and covered resting-places for public use or public monuments; but the said Marquis, his heirs and assigns, and his

and

and their lessees, and tenants of houses and premises in Cecil-street and Salisbury-street respectively, shall have full and free rights of communication, and access and egress, at all times, to and from the land so to be reclaimed and inclosed as aforesaid; and the Board shall provide and construct such convenient means of communication therewith as may be necessary for giving to the Marquis, his heirs and assigns, and his and their lessees and tenants, such access accordingly." The 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, and 78th sections, which impose various restrictions in reference to Crown land, vest all the reclaimed land in the Crown, and give the Crown lessees a right to lease the reclaimed land adjoining their holdings for the remainder of their respective terms. The 71st section is: "Whereas two copies of the aforesaid plans and sections (which copies are hereinafter called the Crown plans) have been prepared, on which certain parts of the bed or foreshore of the River Thames up to high-water mark, belonging to or claimed by Her Majesty as part of the hereditary land revenues of the Crown, are coloured blue; and other parts of the same bed or foreshore in front of Somerset House, and of the buildings in Cannon-row, commonly called the Board of Control, respectively are coloured green; and other parts of the same bed or foreshore in front of certain land belonging to the Commissioners of Her Majesty's Works and Public Buildings, incorporated for the purposes of 'the Westminster Bridge Act of 1853,' are coloured red, and on which Crown plans the line of the roadway and street authorised by this Act on the said parts of the said bed or foreshore, coloured blue, green, and red respectively, is confined between red and black lines, and the line of the Whitehall Yard-street authorised by this Act on the said bed or foreshore coloured blue is confined between red lines; and whereas the said Crown plans have been, or are intended to be, forthwith signed by the First Commissioner of Her Majesty's Works and Public Buildings, and by one of the Commissioners of Her Majesty's Woods, Forests, and Land Revenues: Be it enacted, that one part of the said Crown plans so signed as aforesaid shall be deposited among the Records of Her Majesty's Court of Exchequer, and the other part thereof in an office of Land Revenue Records and Inrolments, as soon as conveniently may be after the passing of this Act (if not so deposited previously to the passing thereof); and it shall not be lawful for the Board in the construction of the said intended roadway and street respectively to make any deviation from the levels defined in the sections shown on the Crown plans, nor from the limits of deviation defined by the said red and black lines respectively on the said Crown plans, without the consent in writing of the First Commissioner of Her Majesty's Works and Public Buildings as regards the bed or foreshore coloured green and red on such plans, or of one of the Commissioners of Her Majesty's Woods, Forests, and Land Revenues for the time being as regards the bed or foreshore coloured blue on such plans." The 72nd section is: "The Board shall, at their expense, before opening to the public the parts of the intended roadway which will be constructed on the bed for oreshore coloured blue and green respectively on the Crown plans, fill up, level, and wall or fence all those parts of the said bed or foreshore coloured blue and green respectively, lying between the intended roadway and the present river frontage (above high-water-mark), to the satisfaction in all respects of the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, as to the bed or foreshore coloured blue; and of the First Commissioner of Her Majesty's Works and Public Buildings as to the bed or foreshore coloured green, and such filling up and levelling (unless such last-mentioned Commissioners respectively shall otherwise direct in writing under their respective hands as to the whole or any part thereof), shall be done to the level of the adjoining river frontage above high water-mark, and of the said intended roadway and street respectively, on the side or sides abutting thereon respectively." The 73rd section is, "The bed or foreshore so filled up, levelled, and walled or fenced as aforesaid, shall, as to the part coloured blue, continue vested in Her Majesty, her heirs and successors, and shall as to the part coloured green be annexed to and be deemed to form part of Somerset House, and the house heretofore known as the Board of Control respectively, for all purposes whatsoever; and it shall not be lawful for the Board to use any part of the bed or foreshore coloured blue or green, so to be filled up as aforesaid, for the purpose of depositing materials, except during the construction of the works, nor to appropriate or grant any part of such bed or foreshore, or any right or easement to, over, or in connexion therewith, by way of compensation to any person for loss of river frontage or other damage, it being the intention of this Act that the same respectively shall be and remain vested and annexed as aforesaid in possession, without becoming subject to any rights or estates of or in any leases of the river frontage or other persons, except only so far as any lessees may exercise the option by this Act given to them of taking leases of the reclaimed land; and after such filling up, levelling, and walling or fencing aforesaid, of the said bed or foreshore, coloured blue and green respectively, and the embankment in front thereof, shall have been completed, it shall not be lawful for the Board to enter on the parts so filled up, levelled, and walled or fenced for any purpose whatsoever." The 74th section is, "It shall be lawful for the Board to erect any building or structure whatever (other than a parapet wall or railing not exceeding four feet in height) or any part of the embankment coloured blue, green, or red on the said Crown plans, without the consent in writing of the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, as regards the part coloured blue, or of the First Commissioner of Her Majesty's Works and Public Buildings as regards the parts coloured green and red." The 75th section is, "An estimate shall be made of the amount of any diminution in value which may be caused by the works by this Act authorised (except of so much thereof as will be situated on the lands coloured blue, green, or red on the Crown plans, for which excepted parts no money compensation is to be paid) of the rights and interests of Her Majesty in right of Her Crown, and of the Conservators of the River Thames, under 'The Thames Conservancy Act, 1857;' and the amount of such estimate shall be paid by the Board to the Conservators, to be applied by them according to the provisions of the same Act, by way of compensation for the rights and

Sir *T. Thwaites.*

6 April 1868.

and interests aforesaid; and the said estimate shall be made by two arbitrators or their umpire in manner following, viz.: one such arbitrator shall be appointed by the Board, and the other by the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, within one month after the passing of this Act; and such arbitrator shall, before they commence their duty, appoint an umpire, in writing; and if, within 21 days after both arbitrators have been appointed, they shall omit or refuse to appoint an umpire as aforesaid, it shall be lawful for the Commissioners of Her Majesty's Treasury to appoint an umpire, which appointment shall be valid, whether the arbitrators have then commenced their duty or not; and if either party shall neglect or refuse to appoint an arbitrator as aforesaid, the arbitrator appointed by the other party shall act alone; and the decision of such arbitrators, or arbitrator, or umpire (as the case may be), shall be final; and all the costs and expenses of the valuation to be incurred by either party shall be borne and paid by the Board." The 76th section is: "The Board shall not be liable to pay to Her Majesty, her heirs or successors, any compensation for any damage or injury which may be caused to any of the lands belonging to Her Majesty, her heirs and successors, in right of the Crown above high-water mark, by reason of the severance from the River Thames and of the construction of the roadway on the Embankment by this Act authorized." The 77th section is: "Whenever the Board shall shut up, remove, or in any manner obstruct the use and enjoyment of any existing stairs, hards, or landing places on or in front of any part of the bed or foreshore coloured blue, green, or red, in the said Crown plans, they shall, at their own expense, construct and maintain other stairs or landing places in lieu thereof, to the satisfaction of the Commissioners of Her Majesty's Woods, Forests, and Land Revenue, as regards the part coloured blue, and of the first Commissioner of Her Majesty's Works and Public Buildings, as regards the parts coloured green and red respectively; such substituted stairs or landing places to be for the sole use and enjoyment of Her Majesty, her heirs and successors, or such other person or persons as are or would have been entitled to the use and enjoyment of the stairs or landing places in lieu whereof the same respectively shall have been constructed; and it shall not be necessary to obtain the approval of the conservators of the River Thames before constructing such stairs or landing places, nor shall the same vest in the said conservators any general provisions in this Act notwithstanding; and the Board shall at their own expense construct and maintain such roads, ways, and other communications into the said intended roadway from the lands or buildings adjoining the parts coloured green and red respectively on the said Crown plans, and also such stairs and other conveniences for access to the river from the same lands as the Commissioners of Her Majesty's Treasury shall from time to time during the construction of the works authorised by this Act in writing require; and shall on the like requisition afterwards stop up and discontinue the same, or any of them; and it shall be lawful for Her Majesty, her heirs and successors, or the Commissioners for the time being of Her Majesty's Woods, Forests, and Land Revenues, at any time or times hereafter, to require the Board at the expense of the said Commissioners to construct any vaults or cellars extending not more than 12 feet under any roadway or street to be constructed upon any part of the said bed or foreshore coloured blue, and also to have access at all points to such roadway or streets from any part of the hereditary possessions of the Crown, and to open any streets into the same; and it shall also be lawful for the Commissioners for the time being of Her Majesty's Works and Public Buildings, with the consent or by the direction of the Lords Commissioners of Her Majesty's Treasury, at any time or times hereafter, to require the Board, in like manner, and at the expense of the said Commissioners, to construct any such vaults or cellars as aforesaid under the roadway or streets to be constructed upon any part of the said bed or foreshore coloured green or red, and also to have access at all points to such roadway or streets from any part of the buildings or land adjoining the said parts coloured green and red respectively, and to open any streets into the same: Provided always, that no work to be done under the foregoing provision shall be such as to prejudice or injuriously affect any subway or other works of the Board, or the convenient use thereof by the public." The 78th section is, "It shall be lawful for the lessees of her Majesty of the river frontage adjacent to so much of the land and foreshore coloured blue on the Crown plans as lies between Whitehall-stairs and the southern extremity of the land and foreshore so coloured blue, to have the option (to be signified by notice in writing under the hands of such lessees respectively, and to be left at the office of the Commissioners of Her Majesty's Woods, Forests, and Land Revenues), within five years after the passing of this Act, of taking leases from the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, on behalf of Her Majesty, of the land and foreshore adjacent to their respective leasehold properties which will intervene between the same and the intended roadway, for terms co-extensive with their several existing leases, and at rents to be fixed as hereinafter provided; and in case any question shall arise as to the lessees or lessee entitled to such option, or to the extent of land and foreshore to be included in any lease, every such question shall be settled by the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, whose decision shall be final; and the rents to be reserved by such lessees shall in every case be fixed by the arbitration of two surveyors, one to be nominated by the Commissioners of Her Majesty's Woods, Forests, and Land Revenues, or one of them, and the other by the lessees respectively, or by an umpire to be appointed by such arbitrator, or to be agreed to in the first instance by the said Commissioners or Commissioner and lessees respectively; and such rent shall be estimated on the basis of a fair rental on the land as garden ground which cannot be built upon; and in any claim for compensation by the said lessees, on the ground of their lands or interests being injuriously affected by reason of the works by this Act authorised, regard shall be had to the option by this section given to such lessees of taking leases of the land and foreshore adjoining to their respective properties at such rent as aforesaid."

520. You had to give up your crescent in consequence of the opposition of these proprietors in the main?—In consequence of a general opposition.

521. Do

521. Do you think that one may assume that the proprietors in that part of London, especially in the Adelphi-terrace, Mr. Drummond and those who rent the land of him, would raise any objection to an ornamental public building?—We propose to take the Adelphi-terrace, and resell it.

522. How do you propose to deal with the Adelphi-terrace?—We propose to purchase the interests of all parties, and resell.

523. Opinions as to the beauty of sites of course necessarily vary, but I suppose there could not be any difference of opinion as to the Adelphi-terrace being a very remarkable site for a public building?—Clearly.

524. Do you think that, for any scheme for the construction of a public building upon that site, it would be necessary to get the Adelphi-terrace?—I suppose you could not carry out any such scheme without it.

525. What would answer best, would it not, would be a building parallel to the river, near Adelphi-terrace, with gardens in front, and projecting wings, which would hide the Charing Cross Station, acting as a screen?—Yes.

526. That would probably, with a view to the effect of the Embankment, be the most agreeable, and the best way of dealing with that bit of land?—Yes; I think to erect a large building there would be a very proper thing to do.

527. On some such plan as I have indicated?—Yes.

528. Do you believe that it would be possible, assuming that the Government got possession of the Adelphi-terrace, and the houses in that part of the town, if needs be, to carry a roadway at the back of that building, communicating with Wellington-street?—Yes; I think there would be no difficulty in that, because, if you take that property, you are getting on to a different level, and you would have the means of getting down on to the roadway on the Embankment, without the inconvenience of the present plan.

529. Then if the plan of the Metropolitan Board of Works is to take more land than you actually want, with a view to reselling the frontage on the new ground, and recouping yourselves, you would think it desirable, in dealing with this bit of land for any public building, that the same system should be resorted to at the Adelphi-terrace; and that instead of paying compensation for blocking out the views of some of the proprietors of those houses, it would be better to buy up those rights, and lay the ground out afresh, as you do in most of your improvements?—I think, in reference to the Adelphi-terrace, it would be found that, even after you had erected a very large building in front, those houses would still be extremely valuable, and that the proper course would be, in the first instance, to purchase the houses, and to hold them, and then to sell them when everything was finished.

530. You would purchase more land than you required for your building and avoid paying compensation?—I do not mean that you could cover those houses without compensation. I do not think Parliament, on principles of justice, would permit a large building to be placed there without compensation being made to those proprietors in some form.

531. You think it would be better to purchase more property than is required, and to hold it, and that the Government would lose less by holding it in that way, and reletting or reselling it afterwards, than by giving compensation?—I think the bolder course would be the cheapest in the end, that is, to purchase and re-sell.

532. It has proved itself so, on more than one occasion, has it not?—Yes.

533. And you have found it so in your own works?—Yes.

534. Has it or not been the case, that where that course has not been followed by the public, they have had eventually to pay more than if this course had been followed at first?—No doubt that has been the case. If you took the Adelphi-terrace, and satisfied all the interests, first the freeholder, then the lessee, then the sub-lessee and occupiers, it would be a very expensive process; but if you purchased the Adelphi-terrace, and allowed the tenants to remain, or if you relet it, and exhausted the sub-interests, by notice or otherwise, that would be a much cheaper course of action than taking it down at once and clearing the ground.

535. As a mere matter of policy, would it not be advisable, with reference to this new line of road, before any steps are taken for its construction, even supposing it were not abandoned, to let it be in abeyance until this Embankment road is opened the whole way along to Essex-street and Blackfriars, and until by its being so opened, there is an opportunity of judging of what the demands of the traffic really are, and how the opening of this Embankment affects the Strand and other parts of the metropolis?—That is a condition of things that does not exist. We are under a contract, and we must proceed. If the parties give us notice we must proceed to have the compensation assessed by a jury or by an arbitrator, and all we can do is to acquire the interests, to pay the money, and to hold the property.

536. I suppose, in order to suspend operations, it would require another Act suspending the existing Act?—Yes.

537. That is a private Act, so that it cannot be carried through the Session. The Government, however anxious they might be to do this, would have no power to do it this Session, because notices would require to be given?—The Metropolitan Board must be indemnified.

538. What you consider is, that you have incurred possible liabilities?—Actual liabilities.

539. You have incurred possible liabilities to the amount of 32,000*l.* It may be less, you said, I think?—But we have served notice on seven other proprietors who have not sent in their claims. The 32,000*l.* is simply the amount claimed by four out of the 11 parties who have received notices.

540. And you hold that the ratepayers of the metropolis ought to be indemnified from any loss under that head?—Clearly. If Parliament, in 1866, determines on a certain course of action, and for that purpose confers certain powers on our Board, and we, as the executive authority acting in pursuance of those powers, incur a liability, and then Parliament, in 1869 or 1870, changes its mind, and directs another course of policy to be pursued, Parliament must clearly bear the onus of the damage resulting from the change of policy.

541. You have said that in any case, sooner or later, a road must be made somewhere in the direction of Northumberland House, to accommodate the traffic of the north-west and west of London. This road clearly does not effect that object in any way. This road is to cost you about

Sir *J. Thwaites.*

6 April 1869.

about 230,000*l.*; that, therefore, at the present moment, is a liability under which the ratepayers of the metropolis lie by Act of Parliament. Now, supposing that through the intervention of Parliament, you were relieved from the liability to spend that 230,000*l.*, it might be possible, might it not, to set off one liability against the other in the interests of the ratepayers?—Supposing the new liability were equal to the old.

542. Or less, still more so. If what you had to pay for this road you are now bound to make did not amount to 23,000*l.*, or anything approaching to it, you might accept the other liability, on the understanding that you were relieved from this?—Certainly, so far as that goes.

543. It must necessarily be very much less, because your 230,000*l.* estimate was not confined to the mere construction of the works, but embraced also compensation for injury in any way, or property taken?—It was an inclusive estimate.

544. So that necessarily any liability you have now incurred, either actually or possibly, would be very much less than the liability you lie under by Act of Parliament?—Of course, whatever liability we incur, we should certainly save the structural cost; but then there would be the liability of selling these houses at much less than we buy them for, because you may purchase a man's goodwill but you cannot sell it; you have to purchase all the property at its full market value, and then there is 10 per cent. added for compulsory sale, which makes it beyond the market value; therefore there would be a loss in that respect. But some of the parties, having regard to what they have said, might be desirous of asking us to withdraw our notice; I do not know whether Mr. Clark might, I am not sure.

545. Putting all questions of liabilities as regards these notices, and liabilities to execute the work under the Act of Parliament aside, it would be manifestly, would it not, the wiser course, even supposing eventually there was to be any construction of a road in that direction, to wait until one sees how the traffic of the metropolis developes itself when the Embankment is opened?—Yes; but the Board would have no discretion.

546. I am putting a mere abstract proposition, I am supposing that the Board was relieved of all this liability?—Clearly, we have no strong feeling in favour of this road; on the contrary, we would rather spend the money elsewhere. I should like just to explain with regard to this elevation, that the arrangement was not to put these houses (*pointing to the elevation*) in front of the roadway but at the back, and to raise the level so as to destroy the effect we wish to destroy. I am afraid the impression was that the roadway was behind; the roadway is in front.

Tuesday, 13*th April* 1869.

MEMBERS PRESENT:

Mr. Buxton.
Mr. Cowper.
Captain Dawson Damer.
Mr. Dilke.
Lord Elcho.
Mr. Gregory.
Mr. Beresford Hope.
Mr. Layard.
Mr. M'Lean.
Lord John Manners.
Mr. Tite.

LORD ELCHO, IN THE CHAIR.

Mr. JOHN TAYLOR, called in; and Examined.

Mr. *J. Taylor.*
13 April 1869.

547. *Chairman.*] I BELIEVE you are Surveyor to the Office of Works for this district of London?—For the London district.

548. Has your attention been called to this Metropolitan District Railway which is being constructed, or about to be constructed along the Thames Embankment?—It has.

549. How has your attention been specially directed to it, in connection with the office which you hold?—With reference to the vibration that may be caused by it.

550. Your attention has been directed to this Metropolitan Railway, in your official capacity, with reference to the vibration which may be caused by trains running along the line?—In front of Somerset House.

551. Has anyone called your attention to that, or has the possibility of vibration occurred to yourself?—The question of vibration was raised nearly a month ago, in consequence of a tie-bolt in the terrace dropping when certain waggons, carrying sand, were passing in front of the building, on a temporary railway.

552. In the terrace of Somerset House there are certain tie-bolts; one of those dropped, about a month ago; and you attributed that to the waggons carrying sand along the Embankment?—Yes; it fell at the time of the waggons passing.

553. Have not tie-bolts fallen on previous occasions?—They have.

554. Was there any similar occurrence then, to cause the tie-bolts to fall?—I am not aware of any.

555. Then it does not follow that this second tie-bolt fell in consequence of the railway?—No.

556 Is that the only reason you have for apprehending danger from vibration?—The settlement has been increased since the Thames Embankment was formed.

557. Did that settlement take place before any railway ran along the Embankment?—It did.

558. So that you cannot connect that settlement with the vibration of the railway, although you might connect it with the formation of the Embankment?—Yes.

559. Has any other circumstance called your attention to this question of the vibration of the railway?—No other circumstance.

560. Have you yourself been much in Somerset House, or on the terrace, or in the rooms under the terrace, since this temporary railway has been in operation?—I have questioned persons who have been there, but I have not been there myself.

561. What was the result of your questioning?—They could not perceive any vibration at the time of the waggons passing.

562. So that practically your evidence, and the evidence of persons in Somerset House, resolves itself into the question of a tie-bolt having fallen?—Yes; it was not really a tie-bolt, it was a bolt which had been used in repairing a tie-bolt many years ago.

563. It was not an original bolt, but a repairing bolt?—A repairing bolt.

564. Do you think that was properly constructed, or that it was defective in construction?—It was much lighter than a bolt which I should have put in.

565. So that this bolt which was put in was a repairing bolt in itself defective?—It was much too light for the purpose.

566. Will you describe to us where these bolts are?—They are across the vaulting, and form abutments to the vaulting.

567. Mr. *Tite.*] They are tie-rods?—Yes.

568. *Chairman.*] With reference to other public buildings, can you speak of the effect of this Metropolitan, or any other railway, upon them?—My attention has not been called to any others.

569. Mr. *Layard.*] Do you anticipate any injury to Government property in consequence of the Underground Railway being carried under the Embankment?—There having been a settlement in the terrace, in my opinion, if vibration be added it will probably increase the defect.

570. Do you think that any precaution could be taken, in constructing the railway, to prevent the effect of this vibration?—I have not considered what precautions should be taken, but I think every precaution should be taken to avoid

Mr. *J. Taylor.*

13 April 1869.

vibration at all the points where the railway comes near to the building.

571. You think that unless some precautions be taken, Somerset House might be endangered by the passing of trains under the Embankment?—I think the settlement of the terrace would be aggravated, unless some precautions be taken for preventing the vibration.

572. Is there any other Government property on the Embankment which might be affected by the Metropolitan Underground Railway?—The only other building is the one at the end of Cannon-row; and that, I believe, in all probability does not require any special attention.

573. There is also the Probate Court?—I am not aware that it will affect that; I do not think it is near enough.

574. Have you turned your attention to the precautions which might be taken to prevent this vibration?—No, I have not.

575. You cannot give any information on that subject?—No, none whatever on that subject.

576. Mr. *Tite.*] In what way are the foundations of Somerset House laid; do they go down to the blue clay, or are they piled upon planks, in the ancient fashion?—They are piled on planks or piles, I believe; but I have not seen them.

577. You have never gone down?—Never.

578. Neither do you know, I suppose, how far the foundations go over the blue clay?—No, I have not seen them.

579. Have you seen the blue clay reached by the Thames Embankment?—No, I have not.

580. To what do you attribute the subsidence of the earth?—In my opinion, it must be either from the pumping during the progress of the works, or the wetting of the foreshore from the wharf at the end of the terrace.

581. Surely it does not come near enough to any wharf?—Against the wharf of the terrace.

582. That is the hole which has been filled up?—Yes.

583. Were settlements there before?—Yes, about 20 years ago; but for 10 previous to the commencement of the Thames Embankment works no settlement had taken place.

584. These tie-bolts were introduced at the time Sir William Chambers finished it?—I think it must have been so; from the nature of the bolts, I think they must have been introduced originally.

585. Do you know the date of the building?—Yes, within a very little.

586. You know it was built by Sir William Chambers?—Yes.

587. *Chairman.*] How long have you held the office which you now hold?—I have held my present office for three years; but I have been in immediate connection with it for 10 years.

588. The Exchequer Office, or some of those buildings, I believe, was affected by some drainage works which were going on some years ago; there were settlements which were supposed seriously to affect those buildings?—I do not remember that.

589. Mr. *Tite.*] When you speak of pumping, do you mean pumping the water which was in the strata between the blue clay and the piling and planking?—Yes.

590. And that that pumping drained the water, and you suppose that thereby the strata shrunk?—That was my opinion.

591. Mr. *Layard.*] The fact is that no settlement had taken place for many years at Somerset House before the construction of the present Embankment; but after the construction of the Embankment, the subsidence took place?—For 10 years it had not moved; but immediately after the works were begun it did move, and the attention of the Metropolitan Board was called to it at the time.

592. Have any precautions been taken to prevent that subsidence going on?—With the exception of additional tie-bolts having been put in, no precautions have been taken.

593. Mr. *Tite.*] Is the settlement of a very important character?—It is a general settlement of the terrace from the main building, a separation of the two, going over towards the river.

594. Of course the pumping having ceased, and the Embankment going right down to the blue clay, there would be no more drainage of the superficial stratum?—I should say so.

595. Mr. *Layard.*] Are you of opinion that in the construction of the railway there will be no more pumping and loosening of the strata?—It depends upon the depth they have to go down to get foundations.

596. But still there might be?—There might be, if they go down deep enough.

Mr. JOHN HAWKSHAW, called in; and Examined.

Mr. *J. Hawkshaw.*

597. *Chairman.*] A QUESTION has been raised in Parliament, which has been referred to this Committee to report specially upon, whether the Thames Embankment is likely to be injuriously affected in any way as a site for public buildings by the construction and action of the Metropolitan District Railway, which, under its Acts, is to be made under the roadway of the new Embankment; have you turned your attention to that point, and, if so, will you favour the Committee with your opinion upon it?—It is a question which depends so much upon various circumstances; for instance, the distance at which it would be proposed to place the public buildings, and the nature of the foundations, that without some information on that point it would be very difficult to give a correct opinion.

598. You say that the effect would depend very much upon the distance of the buildings from the railway, the nature of their foundations, and the foundation of the railway?—Yes; for instance, the depth to which it was proposed to carry the foundations.

599. Not referring then specially at the present moment to this railway and to these buildings, has your attention been directed to the effect of the vibration of railways in other parts?—Yes; it was directed to it very carefully in 1865, when the South Eastern Railway Company proposed to make a railway near the Observatory at Greenwich. At that time a very extensive series of observations was made; I happened to be the engineer of the Bill, and these observations were made by Mr. Stone of the Observatory, and Mr. Mallett, who went over to Ireland and carried on a number of experiments which you will find in the evidence upon that Bill of 1865.

600. Why did they go to Ireland?—They went

went to Ireland because there had been a great deal of conversation about doing away with this vibration by the use of peat, bark, and a variety of things of that sort; therefore they thought they had better go to some of the Irish bogs and make experiments. They went there, and made very careful experiments, and came to certain conclusions as to the distance to which vibration would travel; the result of that was, that Mr. Mallett stated that if they kept about a thousand feet away from the Observatory, it was quite safe. That did not quite satisfy Professor Airey, but they induced him to conclude that if the line were 1,500 feet away it would be safe. We did so move it, and the Bill was passed.

601. Was that portion of the line which was complained of, which caused alarm on the part of Professor Airey, a cutting or a tunnel?—It was a covered way, which passes along the margin of Greenwich Park, just within the boundary of the park. It was proposed to cut it open and cover it over, but we were obliged to remove the line from that site.

602. What was the distance you intended to carry it?—It was then about 1,200 feet. We ultimately compromised the matter by moving it outside the Park to a distance of about 1,800 feet; but this question related to an observatory, and vibration which would be fatal to an observatory would be unimportant with regard to a public building. I do not think vibration which is not sensible to persons in a public building need be noticed. I think if it is not sensible, you may disregard it as regards public buildings, therefore I do not think these observations would have much bearing upon the subject of your inquiry. I merely mention them, to show that at that time I was obliged to pay a good deal of attention to this question.

603. With regard to these Irish experiments, the result was that there was a mode of deadening the possibility of vibration, at least to a great extent, by the application of peat?— Yes, the conclusion arrived at was that peat did deaden the vibration.

604. Did you yourself agree in the result in those conclusions?—Yes.

605. Do you know whether those conclusions have been practically tested anywhere in the construction of railways since that time?—No, I do not. I have understood with reference to the Metropolitan District Railway where it passes Westminster Abbey, that something of the sort, peat or bark, had been recommended to be placed outside the wall; I have heard so, but I do not know whether it was done or not.

606. You have heard that it has been tested?—I have heard that peat or bark was recommended to be placed outside the retaining walls, but whether it has been so placed or not, I do not know.

607. Was any conclusion come to by these Irish experiments as to the duration of the checking powers of peat with regard to vibration; whether as the peat became dry it would lose those powers?—Anything that would do away with its elasticity would no doubt destroy its powers in that respect; the only object of using peat is to get an elastic medium, because it then acts like a spring, and deadens the shocks.

608. As it dried it would lose that to a certain extent?—To a certain extent.

609. So that it might possibly not be a permanent mode of checking vibration?—No.

610. You referred to some documents bearing upon this; where are they?—You will find the evidence in the South Eastern Railway Bill, 1865.

611. In the published evidence?—Yes. Professor Airey gave evidence, and Mr. Stone, Mr. Mallett, myself and others. I think those observations would not have much application here. I think the vibration which would affect an observatory need not be noticed with regard to public buildings.

612. But they would be valuable as to the effect of peat?—Yes, and they would also be valuable in showing the extent to which these vibrations extend when you measure them with instruments.

613. Have you had any experience of the effect of the vibration of this railway or any other railway, upon any building which you yourself have resided in?—Yes; I had occasion a short time ago to stay at the Westminster Palace Hotel, and there the vibration is sensible enough, not on the ground floor, but on the second and the third floor; the vibration is there very sensible.

614. Is the Westminster Palace Hotel near the Metropolitan District Railway?—Very near.

615. Do you know what the distance is?—The railway passes, I should think, within 20 or 30 feet of it.

616. And was the vibration which you felt at the time of the passing of trains?—Yes; at the time of the passing of every train. On the third floor I could feel the passing of every train quite distinctly.

617. To the extent that in course of time a well-constructed building would be injured by such vibration?—That I cannot tell.

618. Is the vibration much stronger now than the vibration caused by a heavy waggon passing along in front of the building?—Of course, in some cases, you feel the vibration of a very heavy waggon to a very considerable extent.

619. You cannot say that it would necessarily damage the building?—No.

620. Or that it would be more felt there than any waggon or omnibus that would pass?—Yes; but, as I say, it is a question of distance. In a conversation with a gentleman who was much interested in this question, who seemed to consider this as very important indeed, I said, "The railway is very close to the hotel." The effect upon the Law Courts I cannot state; I have heard it suggested that they should be placed near the Thames Embankment, and, it would depend on their proximity. I do not think it would be wise to put the Law Courts as near the Metropolitan District Railway as the Westminster Palace Hotel is placed; but I said, "You may test it in another way. There is the Clock Tower of Westminster Abbey; go to the top of that and try the effect." He did go to the top of it and he said there was no vibration whatever.

621. Mr. *Tite.*] A spirit level would show it in a minute?—Yes, but I was only speaking about vibration, which you could feel without instruments, because if you come to instruments, you will feel it at a much greater distance. I think in these experiments, if you refer to them, you will find that the vibration of trains was felt 1,000 feet off.

622. *Chairman.*]

Mr. *J. Hawkshaw.*

13 April 1869.

622. *Chairman.*] I suppose you have been at other hotels in London?—Yes, but I have never been in any hotel near the railway.

623. Irrespective of railways, you have been at other hotels?—Yes.

624. Have you been at the new Charing Cross Hotel? —Yes.

625. Have you felt vibration there, either from carriages or cabs coming into the court, or from the general traffic of the Strand?—No, I have never noticed any vibration in any hotel at all corresponding to this.

626. And you clearly and distinctly trace that vibration, in that hotel, to the passing of the railway trains?—Certainly; there is no doubt about it, because if you get into a room looking on to Tothill-street, you will feel the vibration; in fact you may time the trains in the room without looking for them.

627. Was the same complaint made by others resident in the hotel?—I do not know.

628. It is the case, is it not, that in a letter which was quoted in the House the other day, written, I believe, by Dr. Percy, the person referred to in that letter as having experienced the effects of the vibration, is yourself?—Yes.

629. You had communicated with Dr. Percy on the subject?—It arose upon this very question of the Law Courts: a number of gentlemen were present at the Athæneum Club, and there was a constant discussion going on about the Law Courts being placed on the Thames Embankment. I said then as I say now, that in deciding that question it is necessary to take into consideration how near it is requisite to bring that building to the railway, because of course you cannot go within a certain distance of it without running the risk of a considerable vibration. I do not know at all at what distance it is proposed to put the buildings, but of course it would be wholly unnecessary to place them so near as the Westminster Palace Hotel is. I should say, however, if the Law Courts were as far off the railway as Westminster Abbey now is, they would be safe enough; when I say "safe enough," I mean that they would feel no vibration at all practically.

630. But supposing the necessity of the sites on the Thames Embankment, for public buildings, required that the railway and the buildings should be in juxta-position, and even that the station of the railway should be perhaps incorporated with the Law Courts as part of the building; in that case would you apprehend the possibility of injury to that building from such juxta-position?—Well, I should certainly not advise a building of that character to be placed in such close proximity to a railway over which locomotive engines and trains ran.

631. Should you consider that within a hundred feet it would be safe?—Yes; I do not know exactly the distance from the Clock Tower of Westminster Abbey to the railway, but I should think it would not exceed a hundred feet.

632. Supposing you were responsible for the erection of such a building, and that you had to take care that from this vibration, and from your knowledge of the effect of this vibration, no injury to that building should arise, at what distance would you consider it necessary to place the building, irrespective of any precaution in the construction of the railway?—Well, it depends very much upon the nature of the foundation. It would be almost impossible to give an answer to a question like that without knowing something more of the character of the soil, because vibration will be transmitted much farther in some cases than in others; in some cases it will be transmitted a very short distance.

633. If the ground is suitable?—Yes.

634. It would depend entirely on the nature of the soil?—Yes.

635. Then within certain distances, if the soil is suitable, you think no precautions would be necessary; but supposing it was found that precautions were necessary, do you believe there would be any difficulty in taking such precautions in the construction of the railway?— I am assuming that you place the building at a reasonable distance from the railway.

636. That distance we have not exactly got, but by safe data you come to the reasonable distance?—If you place a building at what I should call a reasonable distance, which of course would have relation to the magnitude of the building; because you may make an experiment on a dwelling-house which you would not like to make with regard to a building which was to cost a million or more, then I think you might do it so that it might not be injured by the railway. It would also depend on the depths of the foundation, because the vibration will pass very nearly in a horizontal plane; that is, it will pass very nearly horizontal in the plane in which the action takes place, so that if you take the foundations deep you, to a certain extent, get rid of the effect of the vibration; but, of course, if you go very deep with the foundations, you also go very deep into expenditure, which is another thing to be considered.

637. Then it might be necessary in constructing a public building on that site, if the site was not large enough for the building to enable you to go at what you call a reasonable distance, to spend more money in laying the foundation of the building than you otherwise would have to do in consequence of the railway being in proximity to it?—Certainly.

638. That would be an expensive process as regards those who construct the building?—Yes.

639. You say that as regards a railway, you have no doubt that the evil could be guarded against by precautionary measures. These measures, I suppose, are those which you referred to as the result of the experiment tried in Ireland on peat and other deadening materials?—Yes.

640. Would those precautionary measures be costly?—It is quite impossible to give an answer to the question, unless one knows the circumstances under which those matters have to be applied. I doubt whether by any precaution you could prevent vibration to a building which is to be placed close to a railway.

641. You are not aware whether in those cases where it has been done it was found to be a costly process?—No, I am not. I do not know any case where it has been done; I am not aware of any case where a building like this has been placed close to a railway, or upon it.

642. Referring to the precautions which were taken at Westminster Abbey to guard against vibration from this very same railway, you do not know whether those precautions were costly? —No.

643. Mr. *Tite.*] Nor what they were?—I heard that peat or bark was recommended.

644. *Chairman.*] Would you believe it possible to construct a railway in this way, so that the works might go on as at present, like any ordinary works, on the understanding that in the event

event of its being found that the vibration was very great, and likely to injure any building, although this deadening substance be applied subsequently, would there be any engineering practical difficulty in that: I suppose that would depend on what the deadening process is, and on the nature of the works; but perhaps you will consider that question?—Yes; but the question seems to have such an extensive application that I should be afraid to give an answer to it.

645. Can you say whether the vibration caused by the train passing is greater where it is in an open cutting, or where it is in a close tunnel?—I do not think it would make any difference. I think the vibration is caused simply by the impact of the train upon the soil.

646. As there are a great many stations in England, there are a great many buildings close to railways; take any great central station where the lines run into each other, some of which have been in work, and the station-houses have been erected for a considerable period of time; are you aware whether, irrespective of the sense of vibration, which may be more or less disagreeable to those residing in the buildings, the buildings themselves have received any injury that can be traced at all to the passing of the trains?—I am not aware of any. I think you might have a considerable amount of vibration, assuming the building was properly constructed, without damage to the building.

647. Still, in the case of a public building, costing many hundreds of thousands of pounds, would you think it advisable that some precautions should be taken if it was found absolutely necessary that the building should be constructed near a railway?—The precaution I should recommend would be to keep it a considerable distance from the railway.

648. And failing the possibility of that, owing to the circumscribed nature of the site, would you think it necessary that some precautions should be taken either by deepening the foundations, or constructing the railway differently to the way in which it would otherwise be constructed?—I think if you do not keep it away from the railway, the only other plan is to go down to a great depth with the foundations.

649. Then, apparently, you would not have much faith either in the effect of these various modes of deadening the vibration, or in the permanent duration of that effect?—No; I think I should have no faith except in one of two things, either keeping the building well away from the railway, or taking the foundations of the building considerably below what I call the plane of vibration.

650. Was it in consequence of coming to that conclusion in 1865, that you thought it better to remove the railway than to trust to any of these various processes?—Certainly, I have no confidence in the peat question myself, and the Duke of Somerset had still less. He was the chief objector to the railway, and he said he would have nothing to do with railways which had to be watched. If a railway could not be made safe, so that it could be left to itself, he would have nothing to say to it; and he did not believe in any cure by peat or bark, or anything of the sort. I take the same view.

651. Mr. *Layard.*] Did you say just now that the distance at which a building would not be affected by vibration is 150 or 100 feet?—I was simply giving that opinion, from what I believe is an ascertained fact, that the Clock Tower of Westminster Abbey is not at all affected. I am guessing at it; but I suppose the distance would be about 100 feet, and I should say at that distance it would be safe enough. I think you might place a public building at that distance.

652. *Chairman.*] Do you believe 50 feet would be sufficient?—I would rather place the Law Courts 100 feet than 50 feet from the railway.

653. I think you said the Westminster Palace Hotel was about 30 feet?—It is very close; I should not think the hotel was above 30 feet from the railway.

654. Is the railway under the hotel?—No; it is under the street.

655. Do you know how deep below the surface the railway is?—I should think 20 feet below the surface.

656. That is, the rail?—I am guessing at it, but I should think the rail was about 20 feet or 25 feet below the surface.

657. Mr. *Dilke.*] Do you happen to know the depth of the foundation of the hotel?—No, I do not.

658. You have no idea at all?—No.

659. Mr. *Tite.*] The Observatory at Greenwich is placed on a denuded knoll of gravel resting on blue clay, therefore the depth of the foundation has nothing to do with the question of the vibration to be derived from the running of a railway train at some distance?—No.

660. It was suggested that if it was tried on a bog which was known to be quaking and shaking, you would have a better experiment for trying it than on a solid bed of gravel resting on blue clay, and that was the reason, I think, why the experiments were made in Ireland?—No; I think there had been various suggestions about using peat, putting the railway on peat, and so on.

661. With regard to this peat, you say it was found that peat was not sufficient?—No; but it was agreed, I think, that peat did reduce the vibration.

662. With regard to the construction of a subway exactly like that you have seen, do you imagine that there is any use in packing peat behind a retaining wall?—No, I cannot say that peat would do any good behind a retaining wall; if peat is to do any good, it must be placed below the railway.

663. And, on the whole, you think that a moderate amount of vibration would not affect the building?—No, I think not; but I would not put peat below the rails; I am not suggesting it.

664. *Chairman.*] You have no faith in peat?—No.

665. Mr. *Tite.*] Putting peat behind a retaining wall you do not think would be of any use?—No.

666. Did you ever happen to sleep in Lowndes-square, on the two-pair floor?—No, I never slept in Lowndes-square.

667. But you slept in your own square; in Eaton-square?—I have slept in Eaton-place for many years.

668. Did you ever experience the effect of a Pickford's waggon coming there at five o'clock in the morning?—From the fact of there being bars Pickford's waggons do not go there; but I have felt vibration from heavy vehicles in other houses.

669. You do not apprehend that that would injure my house in Lowndes-square?—No, I think not.

670. Does the vibration which you have experienced from the passing of heavy omnibuses produce

Mr. J. Hawkshaw. 13 April 1869.

produce any sensible effect?—No, I do not think I have been annoyed by the vibration; I have been very much annoyed by the noise.

671. *Chairman.*] You have stated that the vibration at Westminster Palace Hotel, in consequence of the passing of these trains, is greater than you have felt, either in a private house or in any other hotel?—Yes, in the third floor.

672. Did you ever notice it on the first floor?—No.

673. The higher you go, the greater the vibration?—I dare say it would be so.

674. Mr. *Cowper.*] Is there any experience of the permanent results of an underground railway which would justify you in saying that 100 feet would be a safe distance from an underground railway to put a public building?—The only experience I have, is the experiment which was made at the Clock Tower of Westminster Abbey.

675. Is not the disadvantage of that experience that it has existed so short a time that we cannot tell what will be the permanent result of this repeated vibration to a building in the long run?—No; my own opinion, and it can only be an opinion, is, that if you place a building at that distance, and if you take the foundations considerably below the railway, the building would be safe enough; but then, of course, you have the extra expense.

676. Would you not say, also, that in the present state of knowledge and experience on the subject, there are reasons which you at present cannot estimate?—Well, I do not think, at that distance, I should be afraid of it myself. To a bad building vibration is one thing, and to a good building it is another.

677. Mr. *Dilke.*] I think you stated that in the Westminster Palace Hotel the only vibration which was felt at all, was in the upper storey, the third storey?—I think I have felt it on the second floor.

678. But sensibly, on the third floor?—Yes.

679. Have you any idea what height the third floor is from the ground?—I should think about 50 feet.

680. Would this vibration which you apprehend, in speaking of the proposed site of the law courts on the Thames Embankment, be felt on the level at which it is proposed to build the law courts; that is, upon the first floor?—I do not know the level of the Law Courts.

681. *Chairman.*] It would be above the level of the Strand?—The level of the Strand would be considerably above the level of the railway.

682. Mr. *Dilke.*] From 30 to 40 feet above, would it not?—I suppose the level of the Strand would be 40 or 50 feet from the level of the railway.

683. Do you think the vibration would be sensibly felt at that height?—Supposing the law courts to be 40 feet from the level of the railway, and supposing you were to bring the floor of the Law Courts close to the railway, there is no doubt it would be felt; but if you bring them within 100 feet, I do not think the vibration would be sensibly felt.

684. *Chairman.*] On that principle, are you aware whether at the top of the hotel itself it is even more felt than on the second and the third floor?—I am not aware of it, but I should expect it would be so.

685. The higher the building the greater the vibration at the top?—From the circumstance that we do not feel it on the ground floor, and that we do feel it on the second and third floor, and more on the third floor than on the second, I should suppose it would be more felt as you go higher up.

686. So that if that theory holds, and these law courts were constructed with high floors, if there is any vibration at all, upon that principle it would be more felt on the top floor than on the level of the court?—Yes.

687. Mr. *Cowper.*] And it would follow that the higher the building the more the vibration?—Yes; but it is an intricate question; there is another element with regard to it. I believe the vibration of a very light building would be considerably more than that of a heavy one. If the structure is very heavy, you will not get such an amount of vibration as you would with a light structure.

688. Lord *John Manners.*] The hotel of which you have been speaking is a considerable building, is it not?—Yes; but it is not a building of the character that the Law Courts would be. I think it is very probable that the foundations of that building are on nearly the same level as the railway.

689. Do I understand you to say, that if you were responsible for placing the Law Courts on the Embankment, you would think it wise to take care that they should not be placed at a distance of less than a hundred feet from the underground railway?—I should, certainly, if I had anything to do with them, like them to be at that distance from the railway.

690. Mr. *Dilke.*] When you speak of the distance from the first floor, do you call the first floor that which is practically the first floor; because when you find yourself at the door of the hotel and go up the steps, you are at a considerable height from the street?—I call the coffee-room floor the first floor; and in the coffee room I have not perceived it at all.

691. Do you know the rooms that Sir George Cartier, the Canadian delegate, is now occupying?—No; but I think the room I felt it in most sensibly was 135.

692. Facing on Victoria-street?—No; it was on the Tothill-street side.

693. Mr. *Layard.*] Supposing it was desired to put the Law Courts on the Embankment, do you think that 50 feet distance from the railway would be a serious objection: I mean taking into consideration the object to which the Law Courts are to be applied, do you think a distance of 50 feet would be too little?—I think that, supposing there is any objection to placing them at more than 50 feet distance for the purpose of space, and so on, you might get rid of the greater proximity by going to a greater depth in the foundation. My own impression is that, assuming this table to represent the level of the rails, it represents what I call the plane of vibration; and, I think, if you put your foundations considerably below that you would not get upon the plane of vibration; so that, if it went in within 50 feet of the railway, I am not prepared to say that it would not be quite safe.

694. I think you stated that the vibration would not injure the building?—Such a vibration as I am contemplating might not.

695. Therefore, the practical effect of the vibration would be simply the discomfort or inconvenience which it would occasion in a court of law?—I do not think it would be a satisfactory thing

thing, in a building of that character, to find it trembling and shaking under you.

696. Mr. *Cowper.*] Are you able to say that if this large building were placed at 50 feet from the railway, that in the course of a considerable number of years the vibration produced would not endanger the structure of the building?—I think it would depend upon the depth to which you carried the foundations.

697. In fact, there is not at present knowledge enough to enable you to speak positively on the subject?—I think if the foundations were deep enough the vibration would not effect the building.

698. Mr. *Tite.*] And you take into consideration the character of the foundations; supposing, for instance, they went through blue clay?—When I am speaking of the foundations I mean the walls; if you carried the walls to a considerable depth I think the building would be safe.

699. *Chairman.*] From the nature of the soil there, would it be necessary to go very deep for the foundation?—Yes. I have had some experience in buildings on that shore, and I find that the foundations, in coming from the Strand, get worse as you come to the river.

700. This would be on the reclaimed land, the foreshore, practically?—Yes; and that would be a very serious point for consideration, when you come to decide about the Law Courts. The nearer you go to the river the more expensive the building will be. For instance, with regard to the Charing Cross station foundations, we got a pretty good foundation near to the surface, at the Strand side, but it got worse the nearer we got to the river.

701. So that, irrespective of the railway, if the building is to be constructed within 100 feet or 50 feet of the present roadway, you would have to go very deep for foundations, and perhaps as deep or deeper than you would if it was a mere question of correcting this vibration?—Yes. I think you could not decide the question of building the Law Courts near the river until you have gone into that question, and ascertained exactly how much you would have to expend in getting the foundations adjacent to the river. I should expect to find it a considerable expense.

Mr. *J. Hawkshaw.*

13 April 1869.

702. You have stated that the extent to which the railway would affect the durability of the building as a matter of vibration is questionable; but do you think such vibration is as likely to be caused by the railway at 50 or 100 feet, would injuriously affect very delicate specimens of entomology of a friable nature, insects and so forth, if a building erected on such ground was to be a museum?—Always assuming the building were to be properly constructed; that is, that the foundations were laid at a sufficient depth, and carried below what I call the plane of vibration, I should not expect that it would.

703. Mr. *Gregory.*] I think we may take for granted that the result of your evidence is this; that both safety and convenience may be attained by sinking the foundation to a considerable depth, and under any circumstances whatever, a considerable depth of foundation would be necessary in building law courts on the Thames Embankment?—Yes.

704. Mr. *Cowper.*] I presume there is a mode of propelling trains without an engine, which might affect the question of vibration?—Yes; if the trains were propelled without locomotives, that would get rid of a great portion of the vibration.

705. Mr. *Tite.*] I suppose also that in the arrangements of the Law Courts, I mean the mere planning, if the Law Courts happened to be placed at some distance within the front line of the building, with an interval between the courts themselves and the façade of the building, the effect upon the courts would be less than if they were brought up to the main wall without any interval of that kind?—Yes.

706. All those matters of course would have to be considered?—Yes; it is impossible to give an opinion upon that subject, unless you have the plans of the law courts before you.

707. Mr. *Gregory.*] In fact offices might be placed there which would not be affected by the vibration, if the vibration existed?—Of course light buildings feel vibration more than heavy ones, and you would not place a tower close to a railway.

Dr. Percy, called in; and Examined.

Dr. *Percy.*

708. *Chairman.*] I QUOTED a letter signed with the letter Y., and I stated in the House that it was generally believed that you were the writer of that letter; was I right in that statement?—That is a question which I feel it optional in me to answer or not; but as I never write anything to which I should not be prepared to affix my name, I have no hesitation in saying that I did write that letter.

709. In that letter you call attention to the possible evil effects on public buildings, especially in the Thames Embankment, of the Metropolitan District, and other railways?—If you will allow me to state why I wrote that letter, I will do so in two or three words. Of course I have heard a great deal of discussion about the site of the law courts, and I have heard many opinions expressed with regard to the existence of vibration; some contending that vibration would injuriously affect them, and others holding a contrary opinion, and believing that a great deal of valuable information of a practical character might now be got, I suggested in that letter that inquiries should be made, and such information obtained. That was the sole object I had in writing that letter.

710. You said you wrote that letter in consequence of a difference of opinion which prevailed upon the subject; have you yourself had any experience of this vibration?—No, none whatever.

711. Was your letter simply written to elicit the information of what theoretically would be the effect?—Solely with the object of eliciting, not information so much as opinion.

712. You have no confirmed opinion yourself upon the subject?—None whatever; I have no practical knowledge of it.

713. You have had no experience of it in the Westminster Palace Hotel?—None.

714. Or in the Houses of Parliament here?—No, none.

715. Have you any experience in the Clock Tower?—I have not made any observations at all, and it would be hardly fair to do so, because the speed

Dr. *Percy.*
13 April 1869.

speed of the engine slackens very much long before it reaches the Clock Tower; therefore it would be hardly fair to make an experiment there at present.

716. Have you any experience in the vibration of the Clock Tower here?—No.

717. There the trains are slower?—Yes, the speed is very much slackened before the train reaches the Clock Tower.

718. Have you any experience of the vibration in the clock tower of Westminster Abbey, to which it appears Mr. Hawkshaw's evidence referred?—None whatever.

719. Generally, do you agree with the evidence given by Mr. Hawkshaw?—I did not hear the whole of it; and I really should not presume to state my opinion, which is worthless on the point, because it is not a question to which I have devoted particular attention, and it is not one upon which I should venture to express any opinion.

720. Then all you wish to speak is, that in your opinion it is a question of sufficient importance, not only to justify but to call for inquiry, and that the evidence of practical men, such as Mr. Hawkshaw and others, should be heard upon it?—I should be very much disposed to recommend, also, that the evidence of persons living near the railway should be taken.

721. The owner of the Westminster Palace Hotel, perhaps?—Especially where the railway intersects a street. Take, for instance, Inverness-terrace, Bayswater, and let inquiry be made of persons who inhabit the houses adjoining the railway; then you will get some evidence, if I am not mistaken, especially in places where the railway intersects the street at right angles.

722. You have said, that what would be practicable and useful would be the evidence of persons having houses near the railway?—Yes.

723. Could you give the Committee the names of any such persons?—I do not know any names, but I have heard statements of that kind.

724. Where?—I will take Inverness-terrace as a good example; yesterday I was informed that there were several serious complaints there.

725. Any other?—Well, all about Praed-street, for example. I hear statements which I cannot believe in positively, because they are simply those vague statements which float about.

726. Are you aware, from what you have heard, whether those statements go simply to the inconvenience of living in such a house, or to injury to the building and its foundations?—Simply inconvenience, so far as I have heard.

727. Do you yourself believe, from what you have heard, that generally this would resolve itself into a question of inconvenience rather than of injury?—I think so chiefly, unless there might be a cellar of good wine, and the house might be disturbed in consequence of vibration in such a way as to spoil the wine; I know that has been caused more than once.

728. Do you think delicate specimens of natural history in museums might suffer?—No, I do not think that they would, much.

729. Mr. *Layard.*] Have you experience of the effects of vibration in any part of this house?—Not any whatever.

730. You would not know that there was a railway within a short distance?—No, I should not.

731. Do you know at what distance from this spot the railway runs?—About 100 feet.

732. You say that at the Clock Tower the speed is slackened, so that it would be no test as regards this house?—No. I may mention that my colleague, Mr. Warrington Smyth, who has had great experience in underground operations, lives in Victoria-street, not very far from the railway, and on the opposite side to the railway. He says at first he felt no inconvenience, but now the vibration is becoming more and more sensible, until at length the windows begin to shake. He is proposing to leave in consequence now, and he is a witness who, I think, might give you some valuable information upon the subject.

733. You consider that, wholly irrespective of this question of public buildings, private comfort, and the value, consequently, of private buildings, is diminishing, on account of the vibration caused by this underground railway?—I should not be myself disposed to take a house where I was subjected to vibration of that kind; and I have heard of a great many people who entertain the same opinion; but still it is one of those things to which people become in the course of time habituated, no doubt.

Mr. Charles Hutton Gregory, called in; and Examined.

Mr. *C. H. Gregory.*

734. You have been in the room during the examination of Mr. Hawkshaw and Dr. Percy, I think?—Yes.

735. I should like to ask you, as an engineer, whether you generally agree with the views expressed by Mr. Hawkshaw?—I could not hear all that Mr. Hawkshaw said, but I did not agree with some opinions that I heard fall from him.

736. What are the points, mainly, on which you differ with him?—My impression is, that Mr. Hawkshaw over-estimates the evils which vibration may cause to structures, whether public or private, and also the inconvenience of it.

737. Have you yourself recently directed your attention specially to this question of vibration?—Not recently; I think it was in the year 1864 that I was called in by the Corporation of the Inner and Middle Temple with reference to the works of the Metropolitan Railway; they were apprehensive of structural injury to their buildings.

738. Was that when the Bill was before Parliament?—When the Railway Bill was before Parliament they were going to oppose it, because they were apprehensive of structural injury to their buildings, and of great inconvenience, as well as interference with the amenities of the property generally. I was instructed by them to consider the subject, which I did then very carefully.

739. What was the result of your inquiries at that time?—The result was, that they were not likely to be seriously inconvenienced, and that even the amenities of their property would not be interfered with.

740. What inquiries did you enter into?—In the first place, I had lived for many years in a house within 12 feet of a railway, close by an open

open cutting, and had my own experience of the vibration.

741. In London?—At Sydenham; and also I had made, as an engineer, certain observations in and about railways, with this object. At the time of this inquiry for the Temple, I made it my duty to inquire what was the effect of the running of trains on the Metropolitan Railway. I may state, with regard to the house in which I lived, that it was not a very well-built house, and not a large one, and that during the day-time we scarcely felt any inconvenience from the vibration.

742. What was the distance from the railway?—There was a road of about 12 feet between the wall of the house and the retaining wall which was the boundary of the line, the railway being in cutting, a cutting of about 12 feet in depth; of course we could hear the trains during the day, but the only time when the passage of trains caused any annoyance was during the night. I used often to be awoke by the passing of a very heavy goods train.

743. Mr. *Layard.*] That was, I suppose, by the noise, not by the vibration?—It is rather difficult to say, when you hear a noise and feel a movement, how much of the effect produced upon you may be caused by the noise, and how much by the vibration.

744. *Chairman.*] The goods trains are heavier trains than those which run in the day?—They were heavier trains, and they ran at a high speed, and therefore cause greater vibration. But this was in an open cutting, and with regard to noise, it is evident that the amount of annoyance must be very much less in a close covered way than in an open cutting; my belief is that the vibration is less, because part of the vibration is due to the movement of the air.

745. You believe that the effect on a railway that is covered would be less than it would be upon a railway in an open cutting?—Yes, I think so.

746. Even if a building were immediately over it?—If it were very close to it. I am speaking, not of the effect upon the structure of any neighbouring building, so much as the effect upon the comfort and convenience of the occupiers of that building.

747. As regards the effect on the structure of your building, have you perceived in the course of years any appreciable effects whatever?—None. The house to which I alluded was a badly built house, and its structure was not affected.

748. Are you still inhabiting that house?—No, I have not lived there for some years.

749. How long did you inhabit it?—For 10 or 12 years, I think

750. And you found no sensible effect caused by the railway upon the building itself?—No.

751. Did windows rattle which had previously not rattled?—Sometimes a very heavy train would make the windows rattle, but there was no sensible difference during the time I lived there.

752. Have you heard complaints from private persons in London of their property being injured, or their convenience and comfort being interfered with by the proximity of railways?—I have heard of such complaints, but I have not met with the individuals who have made them. Will you allow me to make one observation with regard to the structural effect of the vibration of trains upon neighbouring buildings? It will be obvious to the Committee that the case in which the vibration of a railway train would most affect a neighbouring structure would be where the walls have been brought in actual contact, therefore I think some of your Lordship's questions rather lead to the conclusion to which I am anxious to direct the Committee's attention. If you find that railway structures themselves, built, as they very often are, on very bad bottoms, are not affected by the vibration of trains to any great extent, *a fortiori*, a building properly constructed that is not in immediate contact with those railways will not be seriously affected. If any structure is likely to be affected by the vibration of trains if built at a distance of 30 or 40 feet, I should like to know what the effect of this vibration would be on viaducts more than 100 feet high. I remember attention being called to a viaduct of my own, which had been built in a very cheap manner. The engineer was very much afraid, from the great amount of vibration which he felt upon this viaduct, that structural injury might result. I went and sat on the parapet, and found that the amount of vibration was rather alarming. That was an extreme case, and it was watched for some time, but no evil effect arose. I did, at least, seeing that there was a very great amount of vibration, order the ordinary ballast to be removed, and sand ballast to be put in its place.

753. Did you find that that diminished the vibration?—Considerably; I think sand is one of the best buffers you can have.

754. Therefore, in the construction of any railway, either to avoid the inconvenience and discomfort to private persons who live near the railway, or to avoid the possibility of injury to a public building, it might be desirable to have sand as ballast, instead of other ballast, for the construction of such railway?—When it appears that any inconvenience will arise, I believe the inconvenience would be diminished. I believe that the cases where serious inconvenience would arise would be very few.

755. That is irrespective of whether inconvenience would or would not arise; but supposing it were assumed that it might, you think it would be obviated in a great measure by the use of sand?—Yes, I think it would diminish the amount of vibration.

756. Would the use of sand in the construction of such a line as the Metropolitan Railway add greatly to the expense?—It would add materially to the expense, I should think, for this reason, that they get their gravel *in situ*. There is a large quantity of gravel to be found in the land which they pass through, and they might have to draw the sand ballast from a considerable distance.

757. If the gravel were finely screened, it would be better than putting coarse gravel?—I was going to say that screened gravel, or gravel itself, is so near in its consistency to sand, that while the broken stone ballast might be so consolidated, as to become an undesirable medium, comparatively speaking, gravel ballast in itself is a very good medium for preventing the transmission of vibration.

758. What was the nature of the ballast for which you substituted sand in the case referred to?—Broken stone.

759. And the result was sensibly to diminish the vibration?—Yes.

Mr. C. H. Gregory.

13 April 1869.

760. Has that work which you erected subsequently stood well?—To the best of my knowledge. I have heard no complaint of failure. Will your Lordship allow me to add a few words with regard to individual experience? Mr. Hawkshaw has given some individual experience as regards the Westminster Palace Hotel. He stated, as I understood, that inconvenience and annoyance had been felt in one of the upper stories of that hotel. Now, it has been my lot very frequently to sit upon arbitrations in the back rooms of that hotel, which I believe are very close to the line of railway; and although I have sometimes been disturbed by the passage of waggons in the street, I do not remember ever noticing the presence of a railway. I may name, again, another case of personal experience. I very often walk through Park-crescent, under which the Metropolitan Railway passes, and I think that two of the houses in Park-crescent are built over the railway. I have often stopped there for several minutes, to see whether I could notice, by any sense, the passing of trains; but I have not been able to do so. Also, in passing along the New Road, I have often, as a matter of curiosity, endeavoured to notice whether I could perceive the passing of the trains of the Metropolitan Railway; and the noise and movement of the vehicles in the road have, perhaps, prevented my observing the passage of trains by the railway. I can quite understand that nervous people, and ladies, especially at night, might suffer considerable inconvenience from what, in itself, may be a comparatively small amount of vibration; but I think, with regard to public buildings, no special precautions would be necessary.

761. You think that though the nervous temperament of a human being might suffer, the constitution of a public building would not suffer by any vibration likely to be caused by a railway on the Thames Embankment?—I think not.

762. You do not think that for the sake of the constitution of such buildings it would be necescesary, as Mr. Hawkshaw has said, to build them at 50 or 100 feet from the railway without taking express precautions with reference to their foundation?—I should not be the least afraid of erecting such buildings 20 feet off the railway, and I should believe from what I have seen of the soil on the foreshore of the river, that any public building erected very close to the railway would, for its own stability sake, require very deep foundations.

763. Mr. Hawkshaw gave that evidence, and you agree in that view?—I agree in that view; that for the stability of any large public building it would require foundations as deep as the railway itself along the foreshore of the River Thames.

764. In erecting your stations along lines, especially where there has been a great deal of through traffic, have you found it necessary, with a view to the permanence and solidity of those buildings, to make the foundations deeper than you would in constructing ordinary houses?—No, I should say certainly not; one form of station which I have frequently used is with a booking office over a railway, and I have never found that those buildings which were carried on piers or abutment walls, similar and adjoining to the abutments of a bridge with a railway running immediately underneath were subjected to any peculiar depreciation.

765. Are the railway stations, houses, and buildings, generally on solid or upon made ground?—Generally on solid ground. If they are on made ground special provisions would be made by piling or concrete.

766. Would the erection of those buildings which would necessarily be on made ground necessitate deeper foundations?—I should think with regard to any public building on the Thames Embankment it would be wise, entirely irrespective of the railway, to go down to a material which would be below the bottom of the railway structure itself.

767. And it might also be wise, perhaps, having regard to this question, to see that the ballast used is of the description which would be most likely to obviate vibration?—Well, I do not think that the amount of vibration would be such in any public building near a railway as to require any special provision as regards ballast.

768. But that, if necessary, you think would be the best way of meeting the vibration in preference to what has been tried or experimented on with regard to the use of peat as a deadener of vibration?—I have no experience with regard to the use of peat, therefore, perhaps it would not be fair for me to give any very decided opinion upon it; but I think the use of peat has certain objections, I believe it would work up into the ballast very soon, and get mixed with the ballast. Ballast has a habit of incorporating itself with any earth which is below it. When you have got ballast on a clay bottom, the clay and the ballast get mixed, and so I believe the peat and the ballast would get mixed.

769. What would be the effect of the mixture?—It would make bad dirty ballast, and it would lose its deadening effect.

770. So that, supposing this peat were effective this year, you have no security that it would be as effective 10 years hence?—Yes. Then again, if put behind the side walls, it would be put in a place which is rather inconsistent with engineering rules, because we generally like behind such walls to have a dry and strong material.

771. In fact, the peat eventually would be no support at all?—No, I should think not: it would be drying and shrinking, and there would be no backing to the wall.

772. Mr. *Layard.*] May I ask whether you are professionally connected with the Metropolitan District Railway?—Not in any way, and in the evidence which I gave the other day before a Committee of this House, which I see was alluded to in the House, I was called as a witness against the Metropolitan Railway with a view of getting a protective clause for the Metropolitan Board of Works, so that I was in no way favourably influenced towards the company at the time that evidence was given.

773. *Chairman.*] A protective clause as to what?—As to the application of certain money to the carrying on of the railway along the line of the Thames Embankment, the Metropolitan Board of Works being anxious to get the railway finished, so that they might complete their works on the Embankment.

774. Mr. *Layard.*] Then, in your opinion, the question of placing the Law Courts on the Thames Embankment would not be affected by the existence of the Underground Railway on the Embankment?—No, it would not.

775. Not in any way?—No, I think not. I confess, as far as my present knowledge goes, I should

should not advise the Committee that there ought to be any special restrictions.

776. Are you aware that, in the Act of the Metropolitan District Railway, a clause was inserted for the protection of Westminster Abbey?—I have heard so.

777. You had nothing to do with that clause?—I had nothing whatever to do with it. I believe Mr. Bidder advised the Dean and Chapter.

778. Lord *John Manners.*] I think you said you did not hear all Mr. Hawkshaw's evidence?—I did not hear all, because I was sitting behind.

779. Are you quite sure you heard him say that, in his opinion, there might or would be structural damage to any public building that would be placed within 30 or 40 feet of the railway?—I did not hear exactly the distinctions which he drew between structural damage and inconvenience.

780. I think, in almost the first answer to the noble Chairman, you said you wished to combat that view of Mr. Hawkshaw's; but supposing he never stated that view, you withdraw that observation?—Certainly.

781. Therefore, perhaps, it will be convenient to confine ourselves to the other view of the case namely, the inconvenience and annoyance which might be experienced by those who have to transact business in a building placed in immediate proximity to the Metropolitan Railway?—I thought it had reference to structural injury as well as inconvenience.

782. You said you lived some time at Sydenham, and you perceived no inconvenience or annoyance in the daytime from the trains, although you did at night?—Yes.

783. Is it possible that you were more in the habit of being in your house at night than in the daytime?—Yes, undoubtedly; but I was generally at home on Sunday, and then, if my family had been inconvenienced, I should have been aware of it, and I should not have concealed that fact from the Committee.

784. With respect to these two houses in Park-crescent, you have said that you stood near them, but I did not gather that you had been in them?—No, I have not.

785. Would not the experiment have been more satisfactory if you had entered into those houses, and been able to give us the result of your experience?—If I had been advised that this Committee would have done me the honour of calling me, and had known upon what subject, I might have done so; but I came here quite unprepared, and have not lately directed my attention to the subject. I shall be most happy to make further investigations if the Committee desire me to do so.

786. I have no wish for you to do so; I was only considering whether the evidence of a gentleman who stationed himself outside the houses was really worth much?—I do not mean to value my evidence at all, but I beg to observe that it was not I who tendered it.

787. Now, with respect to the foundation; I think you agree with Mr. Hawkshaw, that if it is decided to place such a building as the Law Courts on the Embankment, it will be absolutely requisite to go very deep for the foundations?—Yes; because of the nature of the ground, but not because of the proximity of the railway.

788. Can you give the Committee any idea of what the difference of the foundation would be between the Carey-street site and the Thames Embankment site?—No.

789. You have not studied that question sufficiently?—I have not.

790. You stated that if the Law Courts are to be placed on the Thames Embankment, you have no doubt the foundations must be very deep and therefore expensive?—Where they are near the foreshore of the river; I happen to know that, because I have seen the geological sections which Mr. Bazalgette, the engineer of the Metropolitan Board of Works, has, which were taken from actual borings along the line.

791. Mr. *Gregory.*] The southern foundations are what you alone allude to?—I allude only to the southern foundation.

792. *Chairman.*] Do you suppose that the original foundation of Somerset House was solid ground, or that any portion of it was made ground?—I have no idea; I never examined it.

793. Mr. *Layard.*] Would there be any difference between the soil beneath Somerset House and beneath any building that might be erected between Somerset House and the Temple?—I cannot say; I would rather you asked Mr. Bazalgette about those foundations, because he has got the actual facts.

794 Lord *John Manners.*] With respect to ordinary stations that are built close to railways, do they ordinarily carry much superstructure?—It varies very much; in many cases they do not; in many cases there may be only the single floor, but I think the usage generally is to have a resident officer in small stations over the booking office, and many stations have large buildings, and some a hotel built as part and parcel of the station.

795. Then, would your observation apply more to those comparatively low structures than to large and lofty structures?—It applies to all those that I have observed, and as I think I explained to the Committee, it applies to certain stations which I have myself built, which have been part and parcel of the structure of the railway, and built upon the very walls which carry an adjoining bridge.

796. Are those particular stations to which you refer structures carrying hotels, or are they the ordinary railway stations?—Merely the ordinary railway stations.

797. Not above two storeys in height?—No; but then the illustration which I gave of the viaduct is a far stronger illustration than any house, because I am not aware of any house which reaches the height of a railway viaduct.

798. I conclude that nobody lives on the top or in the viaduct?—No; but I am speaking of structural safety.

799. Mr. *Layard.*] There are many instances of railways, particularly in the metropolis, passing under other railways; have you had any reason to believe that in any such case a viaduct has been injured?—I have no knowledge of the tunnels which run under one another, but I think certainly, if completed with the care with which the works of the metropolitan railways have been completed, any danger would be anticipated and prevented.

800. There are constant cases in the neighbourhood of London of railways passing under viaducts?—Many.

801. Upon which are railways?—Yes.

802. Have you ever heard of any case of a railway so passing under a viaduct injuring that viaduct?—None whatever; I have constructed such works myself, and have never made any special arrangements because there was a railway underneath instead of a road.

Mr. James Fergusson, called in; and Examined.

Mr. *J. Fergusson.*

13 April 1869.

803. *Chairman.*] I believe you are now acting as Secretary to the Office of Works?—Yes.

804. Mr. *Layard.*] I think that, in company with Mr. Scott, you ascended one of the towers of Westminster Abbey with the view of ascertaining whether the passage of trains had any effect upon the building?—I did; I went with Mr. Scott and his son, and the clerk of the works; there were four of us altogether who went up. It was suggested to me by Mr. Hawkshaw that if there was any vibration it would be felt there, and therefore we went up one evening, and watched the trains coming into the tunnel, so that we were aware that trains were passing, and we observed as carefully as we could whether any effect took place, but we could not detect any vibration whatever. We all four placed ourselves in different positions on purpose to detect the vibration if there was any, but none of us observed any vibration.

805. Then you have no reason to believe that the passage of trains underground is likely to have any effect on the abbey?—Not upon the abbey.

806. Have you inquired whether the absence of vibration is owing to any precautions taken in the construction of the railway, and whether vibration would exist if there were not such precautions?—I have no personal knowledge of the matter, but I have been told that when the railway was made past the Abbey, great precautions were taken by stuffing in peat alongside the tunnel, and attending to various other suggestions. It was supposed that the effect, if there was any, would thereby be neutralised, but how far those precautions were effective, of course, I have no means of knowing.

807. Can you tell us the distance of the tower from the railway?—About 90 feet, I believe.

808. And you could perceive no vibration?—None.

809. Lord *John Manners.*] Do you happen to know how long the railway has been open for traffic?—About six months, I think.

810. Mr. *Layard.*] Did you measure the distance between the towers and the railway?—No, I did not, there are no means on the surface of doing so; but I measured it on the plan which was deposited, and I cannot, of course, inform you what exact position the centre line of the railway occupies within the limits of deviation.

811. *Chairman.*] You have not specially turned your attention to the question of the vibration of buildings, I suppose?—I have no personal experience.

812. As an architect, and knowing the site, which I presume you do, of the Thames Embankment, which has been spoken of for the Law Courts, any building which is erected near the line where it is assumed that the southern line of that building would come, would have to go very deep for its foundations in any case, irrespective of the railway, would it not?—It is so, I believe.

813. And without having turned your attention specially to the subject of vibration, I suppose you are prepared to state that that would necessarily depend more or less upon the solidity of the building, and the solidity of the building depends more or less on the depth and strength of its foundations?—Certainly. I do not suppose that the railway passing in front of it, if properly constructed, would be otherwise than a slight inconvenience to people occupying such a building. I do not suppose it would affect the solidity of the building in any way if the necessary precautions were taken; but if used as a habitation, it would be probably inconvenient.

814. The same inconvenience which people are subjected to in a street, with a crowded thoroughfare, with heavy waggons passing?—Certainly.

815. Which affects some people more than others?—Yes.

816. As organs affect some people more than others?—Quite so.

Mr. William Bridges Adams, called in; and Examined.

Mr. *W. B. Adams.*

817. I believe you are a Civil Engineer?—I am.

818. Before coming into this room I believe you have had your attention called to this question of the vibration of railways, and their effect upon buildings?—Yes.

819. Have you heard the evidence which has been given?—I have.

820. Do you agree, generally, with Mr. Hawkshaw, in his view?—I did not catch all his views; but I take it that the question is this, beneath the course of the Thames Embankment you have various strata, as sand, gravel, earth, water, and peat superincumbent on solid blue clay. If a building on the site of it be placed on the solid blue clay, it will not be affected by the vibration which takes place in the plastic material on which the railway will be constructed; of course the buildings will be subject to the noise. It is a known thing on railways that, where they run through or over bogs, the permanent way does not get destroyed in the same proportion as it does on solid ground If we could have the knowledge of what takes place, we should probably find that the blows instead of taking place upwards take place downwards, and are dispersed through the floating mass.

821. In this case the foundations of any buildings which would have to be constructed would have to go down very deep?—They would have to go to the solid foundation of the blue clay.

822. And the probability is that that would be considerably below the surface of the earth?—Very probably; and it would have the better effect if it were so. I have had some experience in various ways. Many years ago I resided in Chilé, and there was a vibration there of a very remarkable kind, an earthquake; the strongest vibration we know of. In a district near Valparaiso, called the Almendral, the ground is alluvial, and the buildings thereon, of one storey, formed of solid massy bricks, were all shaken down. The churches, which stood on solid ground, on the hill sides, were not shaken down. Therefore, I came to the conclusion that the under surface was moved with the foundations, and left the top to fall.

823. You have heard it stated by Mr. Gregory, that

that by the use of sand as ballast, instead of broken stone, the vibration is greatly checked, and that in one case he had resort to it; do you believe that something of that kind would be advantageous here?—The more solid you construct a railway, the less will be the vibration down below, and the greater will be the wear and tear upon the rolling stock. If you could make, for instance, a floating stratum of timber, 10 or 12 feet thick, perfectly solid all through, you would have no vibration at all beyond the timber. I had chambers in the Adelphi for some 15 years, on one of the upper floors, and the result of a coal waggon, weighing about 5½ to six tons, passing by my chambers was that it shook the glasses on the table; I found it a great annoyance.

824. Where was the coal waggon passing?—Up towards the Strand, from the lower part opposite Southampton-street; the vibration was so great that I was obliged, when I was writing, to put down my pen; but those houses have been built for a great number of years, and I have no doubt that they were built not on the solid ground, but that they all, as it were, float together. In the third floor of the Society of Arts' house, this fact may at any time be tested by putting a coal waggon in motion on the road below it leading to Durham-street

825. Do you apprehend that there would be any structural injury which this railway is likely to cause to public buildings, erected, say, within 50 feet of it?—It depends upon how they are erected; if they are carried down to the blue clay, they would not be affected, and if the railway were carried down to the blue clay it would not be affected; but if the buildings and railway were put on the same floating foundation, they would all vibrate together.

826. You are in no way connected with his railway?—Not the slightest.

827. Speaking simply as an engineer upon this point, are you of opinion that it would be necessary to take any precaution with reference to the construction of this railway to guard against injury to public buildings?—I think it would be desirable to take precautions to diminish the noise and vibration as much as possible.

828. Have you any definite plan which you think would effect that?—No; I am not now advocating any particular plan, but generally that the structure might be made much stronger than it is. It is a very good structure as at present made for ordinary circumstances; but there must be vibration, as anyone who travels by the trains must feel. There is one difficulty which it has to contend with, namely, that the railway being underground, the rails are more or less wet; therefore a heavier engine is used to obtain adhesion.

829. Possibly, if public buildings were erected there, there might be an understanding that in passing that part the speed should be lessened?—Undoubtedly.

830. Because, I suppose, the extent of vibration depends on the rate of speed?—Certainly; and therefore the evidence given as to the non-vibration at the summit of the clock tower goes for nothing, as the Westminster Bridge station is at present a mere terminus, with the slowest possible motion over the rails; and the clock tower goes down into the blue clay.

831. On the Metropolitan Railway, we know there is great passenger traffic; is there much goods' traffic upon it?—I am not aware that there is any goods' traffic at all; but the trains are very heavy.

832. If the speed was diminished, of course there would be less vibration?—Yes, of course. The advantage a railway has over a stone road is that it has a less irregular surface, therefore that takes off much of the difficulty which would be otherwise experienced.

833. Mr. *Layard.*] There is no doubt that means could be taken to prevent any such vibration, either by using different locomotives, or by some structural change in the railway itself, I presume?—I think so. I think we are very far from having culminated yet, in all that we have to do with railways.

834. *Chairman.*] Are you a believer in peat?—Peat, if it acts at all, can only act as a sponge, and that depends on the water that is in it; if you squeeze the water out, it becomes a solid body.

835. So that peat, which might be of use in 1869, might be of no use whatever in 1879?—Certainly. Peat, with water in it, is not an elastic, but only a plastic substance; ceasing to be plastic by the abstraction of the water, it becomes a salid, and is thus prepared as fuel for manufacturing purposes.

836. Lord *John Manners.*] How long would you give peat to be an effective agent?—It would depend on the water that was enclosed in it. If that got away, the peat would squeeze down solid.

837. From what we heard from the last witness, it seems that peat was applied to the Underground Railway passing Westminster Abbey, with a view of deadening vibration; that railway has been open some six months; do you imagine that peat might have retained its virtue during that period without giving any indication of its not continuing to do so for the future?—Possibly. The process of train hammering is to solidify; it is like ramming under a steam-hammer.

838. The traffic upon this underground railway you have stated to be unusually large?—Not unusually large between Victoria and Westminster Bridge at present; but the trains are unusually heavy; the engines must be heavier than other engines, because they have the difficulty to contend with of slippery rails, from the moisture in the tunnels.

839. If the speed of the trains that are to pass by Somerset House, or any great public building placed just beyond Somerset House, has to be slackened in order to prevent this vibration, would that continued slackening exist over so large a space between two stations as to interfere with the legitimate traffic, and therefore the profits of the company?—Of course the advantage to the public is to be carried as quick as they can, with as little delay as possible.

840. All along the Thames Embankment will not the Underground Railway have a very severe and active competition to encounter from the cheap steamboats?—I suppose it will. It will be a question of cost and of speed. The railway will be the quickest, but the least pleasant.

841. Therefore, will it not be a question for the consideration of the railway company whether they really can, with due regard to their own interests, engage to slacken the speed of the train along the whole length from Somerset House to the Temple?—I should say they had better

Mr. *W. B. Adams.*

13 April 1869.

better try to improve their rolling stock rather than slacken their speed.

842. *Chairman.*] What is the distance from Westminster Bridge to Blackfriars Bridge?—I should suppose about a mile.

843. What is their present rate of travelling?—I should suppose at present, from Victoria station down to Westminster, it cannot be more than 10 to 12 miles an hour, exclusive of stoppages; but I am only guessing at it.

844. You do not know how many stations they will have, and what speed they propose to travel?—No; but the nearer the stations are together the greater the speed they will try to make up between the stations. Stopping trains commonly travel faster, at intervals, than express trains.

845. What speed do you think they could get up?—They could not get up a very great speed in any case. Time is wasted in starting and stopping, and much depends on the structure of engine, and the efficiency of the breaks, which should be self-acting, with a block to every wheel.

846. Mr. *Layard.*] In your opinion, ought the position of a great public building, supposing that position to be in every other respect a very advantageous one, to be seriously affected by the construction of an underground railway, and ought that position to be abandoned simply because of the existence of such railway?—A public building is of very great importance,and an underground railway is also of importance; but the latter might be shifted from one place to another.

847. But would it not be advisable that means should be taken to prevent the vibration of the trains, rather than that a public building should be given up?—Certainly. You might try it on the surface of the Embankment without any difficulty, and find out what is the real resistance of the trains, and the sources of vibration.

848. As a practical engineer of great experience, you say it would be rather a foolish thing to give up the erection of a great public building because a railway was to be constructed in its vicinity?—If it were demonstrated that the railway could not be made without nuisance.

849. You think arrangements could be made to carry it into effect?—I think so.

850. Lord *John Manners.*] Two sites being named for a great public building, one of them being remote from an underground railway, and the other being in close proximity to it, which of those two sites would you be disposed to select?—It is of very great advantage to a public building to have communication as near as it can; but if the nuisance arising is very great, of course it must be removed.

851. Mr. *Layard.*] You will not say that a nuisance does not exist?—I think it does. For instance, you would not like to have your House of Commons situated over an underground railway. It is a question of construction, no doubt. You would want a much heavier railway, to get rid of the vibration, and a much heavier structure altogether than you could use upon solid ground.

852. Lord *John Manners.*] Then the immediate proximity of a railway is a thing to be taken into consideration in deciding upon the site of an important public building?—I think there is no question about that, both as regards its possible convenience and possible nuisance.

853. *Chairman.*] Not only the railway, but other things have to be considered; for instance, whether the road near the building is paved or not, and whether omnibuses and heavy vans travel along it?—No doubt. If you had a passage through the middle of the building, of common granite, with heavy waggons travelling upon it, it would not be endurable. Try it, for instance, at Somerset House, by letting a few vans drive round the yard, in the middle of the day; you would very soon have a complaint from all the officers.

854. Are you aware whether there is much vibration in Somerset House from the Strand side?—That I cannot say; as to the inner courtyard, the Strand part must of course be in the condition of the other Strand houses.

Mr. Joseph William Bazalgette, called in; and Examined.

Mr. *J. W. Bazalgette.*

855. *Chairman.*] You are, I believe, Engineer to the Metropolitan Board of Works?—I am.

856. The Embankment is your design?—It is.

857. And the works upon it are your design?—Yes.

858. Architectural and constructive?—They are.

859. I wish to ask you one or two questions with reference to this railway, bearing upon the point which we are considering to-day, namely, the effect that it may possibly have on public buildings; that, I imagine, has not been considered by you specially with reference to your own works?—No, it has not.

860. You do not consider that your roadway, or the wall of any building with which you are connected, would be in any way affected by the railway?—I do not.

861. You have heard the evidence which has been given with reference to this general question of the effect of vibration on buildings, public or private, and more especially with reference to the effect that such a railway might possibly have upon any public buildings erected: what is the result of your own consideration of that subject and what is your own impression, from what you have heard to-day, here?—I have not made any special examination of the subject, but I have made that general inquiry and general observation which most of the witnesses who have been examined before me seem to have made; and my opinion is that any houses which are suited to stand the vibration of the heavy traffic of the streets, particularly paved streets, will not be injured by the vibration from the underground railway.

862. Are you of opinion that, supposing a public building was erected with its front to the Strand, it would be as likely to suffer from any structural injury, supposing any structural injury arises from such a cause, through the vibration of heavy traffic, quite as much, or rather more so, than such a building would suffer from the vibration of the Metropolitan District Railway?—I think certainly quite as much.

863. Is that from your personal experience and observation, or from communications with others?—From both.

864. You can speak necessarily as to the nature

nature of the soil along there, where any public building which was erected near the line of railway would stand?—Yes.

865. Is the nature of the soil there such, that the foundations of such a building, a heavy large building, would have to be very deep?—In the first place, the railway is not so heavy as a public building would be, and it covers a large space; therefore by using a bed of concrete it is not necessary to go so deep with the foundations of the railway as it would be for the foundation of a public building.

866. You speak of that irrespective of the railway?—Yes; a building constructed there would have to go down to the solid ground.

867. How far deeper than the railway?—It would vary in different places, and I should say it would have certainly to go 10 feet deeper than the railway generally. It would have to go something like 30 feet below the level of the foreshore of the river at that point; that would be from 20 to 25 feet below low water. I should state, from the borings which I have taken and the knowledge I have of the bed of the river, that is nearer into the river than where a public building would be constructed, and therefore I have no doubt the ground rises to some extent towards the shore; but I may be a little out.

868. Will you turn to your right, and look at that large map, which perhaps may explain exactly the answer which you have just given: you have stated that any public building erected on the foreshore would have to go 25 feet below the level of the foreshore?—Of the natural bed of the river.

869. That applies to that point where the white comes in between the yellow lines; that white being the opening of the Metropolitan Railway; where would the point which you have referred to come on that plan, where you would require to go 25 feet down; how near the main line of the roadway would you have to go to that depth?—At the end of Norfolk-street or Somerset House, probably you would have to go some 20 feet below the bed of the river; there the bed of the river is somewhat higher. I have not a boring at that particular point, but judging from what I know, I say that from where the river falls at that point to the Embankment wall, where I have put in the foundations to get to the solid clay, we have taken a depth of 30 feet.

870. What depth would you have to go for the foundations of a large public building, if this river wall was on the opening of that part which is white on the plan, which is the opening of the Metropolitan District Railway?—The white portion surrounded by the red is the point upon which the Metropolitan Railway Company have to construct a railway station.

871. Supposing in the line of the Embankment, though it may not be in the immediate spot, you had to construct a public building, would you have to go 25 feet deep there?—From 20 to 25 feet.

872. So that in any case you would have to construct to that depth if you did not think the vibration of the railway would sensibly affect the building?—I think it would be a very wise precaution to have round that building an area separating the communication between the railway and the building itself.

873. To what depth?—From the foundations to build up an area round the building to the surface of the ground, just as you would round a house.

874. You think that would check the vibration?—I think that would check the vibration better than sand, or anything of that kind.

875. Do you believe in peat?—No; I think that would be the best thing.

876. Do you believe in sand as ballast?—Yes; I think that sand is good ballast.

877. Would there be any difference in the ballast of the railway being sand instead of other material?—None whatever.

878. Would it add to the cost?—I should think not.

879. Is sand to be had *in situ*?—I think they are excavating a good deal of sand in a part of their line; they are bringing a great deal of sand and gravel upon our Embankment from the Kensington cutting.

880. They could screen gravel which would serve the purpose?—Yes; there is no difficulty in getting sand.

881. Do you think, as a precautionary measure, it might be desirable in any Act, as in their original Act, the railway were, for the sake of Westminster Abbey and the dangers which were there apprehended, obliged to use peat or some other material, if they were compelled to use some precautionary measures. Do you not think it might be advisable to insert a section in their Act, as they are now before Parliament, to the effect that they must use sand as their ballast, or fine screened gravel?—I do not know that I should do that.

882. You do not think it would be necessary?—I do not think so.

883. But if you think that it might be a precaution, and that really the sand or fine gravel being on the spot, would not entail any trouble or cost upon the railway company, do you not think that it might be desirable as a precautionary measure?—Yes; I think it might.

884. Mr. *Layard.*] Supposing that crescent, of which the elevation has been submitted to the Committee, had been erected as proposed by the Metropolitan Board of Works upon the Embankment, would you have considered it necessary to have advised the Metropolitan Board to have exacted any precautions from the railway company in order to preserve these buildings?—No, I think not.

885. You think that those buildings would have let just as well where they were placed near the railway, as they would if they had been at a great distance from it?—I do.

886. It would have made no difference?—I think the railway is rather an advantage than otherwise; I think that the advantage of having a railway near, is greater than any disadvantage arising from vibration.

887. Can you tell the width of the yellow mark, which I suppose means the road between the end of Norfolk-street and the railway?—Fifty feet, I think.

888. Mr. *Gregory.*] What is that mark?—An approach road.

889. Mr. *Layard.*] Then I understand that the white space is where the railway is to run?—It is where one of the stations is to be.

890. Do you know at all the distance of the railway itself from the Norfolk-street end?—It will come under that white portion. The station will be over the railway; the station will be above ground, and the railway underneath.

Mr. *J. W. Bazalgette.*

13 April 1869.

891. Supposing a large public building, such as the law courts, were erected there, do you think that the fact of the railway being so near would affect the courts?—I do not think it would affect the stability of the courts.

892. Would there be any inconvenience as regards vibration or noise?—I am not prepared to say that there would be no noise.

893. But nothing very considerable?—I think not more noise than would arise from the ordinary street traffic.

894. Not more noise than would arise from carts and waggons passing along the street?—I think not.

895. Do you know at all what depth you would require to carry the foundation of a large public building at the Strand end of Norfolk-street?—I do not.

896. You have not the slightest idea?—No, I have not.

897. You do not know whether there would be any great difference between the Strand end of Norfolk-street and the Embankment end of Norfolk-street?—I cannot speak positively; I believe it is made ground to a very great depth, but I cannot speak to that.

898. I presume there is no difference in the subsoil between Somerset House and the Temple Gardens, and that the foundations of any building between Somerset House and the Temple Gardens would be the same as at Somerset House?—Very much the same I should think.

899. *Chairman.*] The line of railway is to be where that part marked blue is; does it run along under the yellow for the rest of the line?—The line of railway is not very well shown upon that plan.

900. Can you show us the line of railway relatively to your embankment?—The whole way. (*The Witness explained a plan to the Committee.*)

901. Will you explain to us why it is that it does not run continuously along your roadway; I see on the Crown property here at this end it runs under the roadway, and on the Crown property opposite Somerset House it runs under the roadway, but on other portions where it is not Crown property, it runs under the reclaimed land?—It passes under the roadway at Charing Cross in order to get room for the station, and also to get ventilation. Here again (*pointing to the plan*) it passes from under the roadway in order to get a station for Norfolk-street, and to get ventilation here. Where it is under the roadway it can have no ventilation.

902. It was solely for the purpose of ventilation and convenience of stations, that it left your roadway?—Yes.

903. I wish to ask whether these sites for stations, and these sites for ventilating shafts, were approved of by the Metropolitan Board of Works, and whether they were agreed to by them?—I think they have been formally agreed to; at any rate they have been discussed and virtually agreed to, but whether by formal agreement, I do not know.

904. When they were before Parliament on the former occasion, did the Board give any evidence as to the best position for the sites of the stations and their ventilating shafts, so as to make the property of the Board as available as possible for any purposes?—The Board got clauses in their Bill requiring the railway company to get their sanction.

905. To get the sanction of the Board on all points, with reference to shafts, stations, and so forth?—Yes.

906. To what extent: were the Board in a position to say, "You shall put your station here, and not there; you shall have your ventilating shaft here, and not there; here you shall go under the roadway, and there you shall come out"?—The line of the railway was defined by the Act of Parliament, and the position of the stations was defined by the Act of Parliament, but the designs of the stations and the number of openings were left for the Board to determine.

907. And the amount of ventilation?—Yes; so far as their property is concerned, and what ventilation they could give with reference to that property.

908. On this plan the portion coloured yellow is the property of the Board, and the portion coloured blue is the property of the Crown?—It is.

909. On the property of the Crown, between Westminster Bridge and Charing Cross Bridge, there is no ventilation or opening at all?—No.

910. On the other hand, when you come to Charing Cross, to the property of the Board, there is an opening under the Charing Cross Bridge which you pointed out; then comes a station, and on the other side of the station there are three open shafts for ventilation?—That is so.

911. Were there two openings made with the sanction of the Board, or were the Board obliged to yield?—They were made with the sanction of the Board.

912. The Board did not consider that these three openings damaged the value of the property as a site for any buildings or for any other purposes?—The Board curtailed these openings as much as they thought it possible to curtail them, having reference to the working of the railway.

913. Originally were they proposed to be larger?—They were; the railway company wished to have them much larger.

914. To what extent?—They proposed to have an opening all through the yellow.

915. Do you know the extent of the opening to the west side of the station?—It is open to about 10 feet beyond the line of the Charing Cross Bridge.

916. Do you believe that, as they required no opening in the long space here, it is necessary, in that comparatively short space, to have four openings?—I do believe they could not work their line with safety and comfort to those who are travelling by it with less openings than they have got.

917. Would there be now any structural difficulty, as regards your roadway, in carrying the line nearer the roadway, and having these openings nearer the roadway than they now are?—I think it would be objectionable.

918. On what ground?—I think that the steam issuing from these openings close to the road would be objectionable.

919. Would be objectionable to the road?—Yes.

920. It would be equally objectionable, would it not, to any buildings which might be erected there?—I think it would.

921. If there were any gardens there, those openings would be very objectionable to those gardens?—We proposed to build round there.

922. But

922. But still, in the position in which those three openings now stand between Waterloo Bridge and Charing Cross Bridge, would they not very materially interfere with that bit of land as a site for public buildings, or for recreation purposes?—Certainly.

923. Do you see any difficulty in having these stations for ventilation moved further to the east, in which case they would be half-way between the ventilating shafts beyond Somerset House and the ventilating shaft at Charing Cross?—Mr. Fowler will point out to you, better than I can, the difficulty of that; I think he attaches very great value to having the ventilation at his stations the whole length of the platform.

924. From your knowledge of the ground, and the portion which might be available, supposing it was taken for public purposes, in your opinion does the existence of these three ventilating shafts render the land unavailable for such purposes, or does it not very materially diminish its value?—If a public building were to come out close to that, I think it would seriously interfere with it.

925. Therefore any architect for the Government, or any public body who wanted to make use of that, would be barred and limited in the use of that ground by these ventilating shafts?—Over them, certainly.

926. That bit of ground could not be occupied by public buildings?—No. Allow me to say, that I am not clear that Mr. Fowler might not say that if he were allowed an opening up to some given point from that, he would remove these three to different points.

927. But I should like to know, taking this plan as we see it, and as it is at present before Parliament, whether this railway has got an Act enabling it to construct its line according to what is here laid down?—Yes.

928. I should like to know from you, as engineer of this Metropolitan Board of Works, what extent of the site would practically be cut off for any public purpose if those works are so constructed, and the shafts remain as they now are?—As designed, any public buildings could be erected over that place.

929. What is the total depth at present from York-terrace to the roadway?—About 300 feet.

930. Therefore, of a depth of 300 feet, one-third would be practically unavailable for public buildings in consequence of these shafts being where they are?—That is so.

931. Then if we take it longitudinally, what would be the depth that would be cut off for that purpose?—Three hundred and fifty feet; that is, from their station.

932. So that from their actual station there would be in length along the Embankment 350 feet, cut off by a depth of 100?—There would.

933. What is this which is marked red along here?—That is the open space over their platform.

934. The result is that if these shafts could be moved, that site would be much more valuable?—It would clearly.

935. For any public purpose, whether gardens or buildings?—Yes.

936. And if these shafts are not removed, it will be materially damaged as a site?—Yes.

937. Now as to the construction of these buildings and these ventilating shafts, you say that the Board of Works were in communication with the railway company as to the construction of those buildings; have they been designed with your approval?—They have.

938. And you consider that the buildings will be in character with the Embankment works, and will not injuriously affect the appearance of the Embankment when completed?—Yes.

939. Along here, do you think that this station and these ventilating shafts opposite Surrey-street, Norfolk-street, and Arundel-street could be conveniently moved elsewhere?—I am not prepared to speak to that. They were settled by the Act of Parliament.

940. The whole thing is settled by the Act of Parliament, but having in view the possibility of this land being made available for public purposes, instead of being left to private speculation do you think that without any inconvenience to the railway works, it would be possible to arrange these stations and the ventilating shafts so as to be less injurious to any public buildings which might be there erected, I mean as regards appearance and convenience?—I think that station might be moved from that spot.

941. Speaking as an engineer, where do you say that the stations and ventilating shafts could advantageously be placed?—It would depend entirely on the design, I suppose. If there was to be a public building here (*pointing to the plan*) it would be desirable to have a station near, because it would be both near to that building and to the Temple.

942. Then you would encroach further upon the Temple Gardens?—Where you would place it must depend on the design of the building, in a great measure.

943. Do you think that the convenience which the railway required would be got without encroaching on the Temple Gardens, and without interfering with the approach to the station by Essex-street, and by driving the stations and the ventilating shafts further eastward?—I have no doubt it could, but I have never considered that point.

944. On the other side of the Temple Gardens is there any ventilating shaft?—There is.

945. Was that made with the approval of the Board?—Yes.

946. And the stations there are likewise subject to their approval?—No; the design for that station, and the ventilating shaft as well, was put in when the Act was obtained; it was under an agreement with the Duke of Norfolk, I think.

947. Lord *John Manners.*] That was put into the Act of Parliament, in consequence of an agreement which had been entered into, previously, with the Duke of Norfolk?—It was.

948. *Chairman.*] That is to say, then, from the line of embankment, which is a continuous line of wall, designed by yourself, of the same architectural character throughout, we may see railway stations and railway shafts along one part of the line, that is, between Wellington-street and Charing Cross Bridge, which have been approved of by you, erected of one architecture and of one construction, and on the other part, which is beyond Somerset House, opposite the Duke of Norfolk's property, we may see these buildings of a totally different character, with reference to which the Board of Works have not been consulted, but which are sanctioned by a private person?—No, I think not; I think I was a party to that agreement; I rather think I was consulted about it in the lobby of the Committee-room.

949. Can you say that they will be of the same

Mr. *J. W. Bazalgette.*

13 April 1869.

same character as the others?—To the best of my recollection they will.

950. But you cannot speak positively?—I am pretty sure.

951. Mr. *Layard.*] Are you satisfied with the station they have erected at the foot of Westminster Bridge?—That is a temporary wooden station.

952. *Chairman.*] There is no station between Blackfriars Bridge and the station at the bottom of Arundel-street?—No.

953. But there is a ventilating shaft?—Yes.

954. Was that part got subsequently to their Act?—It was.

955. Have you seen the designs for that?—Yes.

956. And with those you are satisfied?—Yes, we are satisfied so far, that we feel that the railway cannot be worked without it. We object to any openings of that kind, as far as it is possible to object to them, but we feel that we must allow them to have as much as is necessary for the working of their line.

957. I suppose there must be a station at the bottom of Essex-street?—There should be.

958. Mr. *Layard.*] When the Crescent was in contemplation was it also proposed to make these ventilating shafts; and, if so, what arrangement was to have been made to prevent them interfering with the buildings?—The ventilating shafts, in that case, would have come in the garden in front of the Crescent, and we should have had mounds; it would have been laid out, in that case, as an ornamental garden, with mounds planted with shrubs, and walks in between.

959. You do not show a mound in the design?—No; I think, at that time, the mounds had not been arranged.

960. You state that they would be an inconvenience to a public building; would they not be an equal inconvience to a private building?—I think so far they would have been.

961. They could not have been very far from the buildings, because, according to this plan, your Crescent would have gone right into this road (*pointing to plan*), and the Crescent was intended to hide that road?—That plan shows a Crescent, with three ventilating shafts, about the centre of the green.

962. According to Sir John Thwaites' evidence that Crescent was intended to screen the ascending road, consequently it would have been constructed between that road and the Embankment?—The road, in that case came further back; the front of the Crescent would be in that road.

963. Where would the shafts have come?—As near in the centre of that green spot as possible.

964. They would have been close to the houses?—Yes; there would have been a 60-feet roadway, and then there would have been 60 feet more; they would have been 120 feet from the house.

965. *Chairman.*] They would come in the green?—As near the centre of the green as possible; rather nearer to the road, I think, than the centre.

966. Mr. *M'Clean.*] I think that Crescent was designed before the Act of Parliament was obtained for the railway?—I think it was.

967. *Chairman.*] Have you any suggestion to make as an engineer with reference to these ventilating shafts and stations, as to where they might be made, and how they might be made, so as to render this ground more valuable for public purposes and buildings than it is now, according to the plans of the railway?—I could only do that in conjunction with Mr. Fowler. You see I might propose to put them in places which he would say for the working of his railway would be of no avail.

968. You think that probably by communication with him, you might hit upon some plan or other which would render this ground more valuable for any purpose to which Parliament might wish to devote it?—I think, possibly, if we had any definite plan put before us, we might do so.

969. Along the whole line, not only as regards the portion between Waterloo Bridge and Charing Cross, but likewise that portion to which I refer, marked white, opposite Norfolk-street, Arundel-street, and Surrey-street?—I cannot answer any general question upon that; if any proposition were put before Mr. Fowler and myself, asking us how we could best arrange to work in conjunction with such a plan as this, we should consider it and give it a distinct answer.

970. Do you believe that the works could be so constructed, that the question as to the exact position of the site of the station could be left open for a short time, and that other portions of the work would go on, and that the question as to where these ventilating shafts should be, whethey should be here or there, might be left open for some months?—I think that would certainly cause a great deal of delay.

971. But in such a case as that might it not be desirable in the public interest that there should be some delay?—I am not prepared to say that I think it would be a great disadvantage if the opening of that roadway should be delayed any longer; and if the railway is delayed, that must delay the opening of our roadway.

972. Mr. *Layard.*] Suppose the Metropolitan Board of Works had been able to dispose of that piece of reclaimed ground, the foreshore between Hungerford Bridge and Waterloo Bridge, do you not think that the questions of these ventilating shafts would have been a serious deterioration to the value of the property?—Clearly it would.

973. *Chairman.*] You have stated that the Metropolitan Board of Works appeared before the railway committee, and made the best terms they could with reference to this question of shafts and stations, and so forth; was this question ever brought before any public officer?—Not before the committee.

974. As far as you know, this question of the arrangement of the sites of the ventilating shafts and other matters, the nature of the buildings to be erected, the architecture of the shafts and all those matters have been arranged between the Committee of the House of Commons, the Metropolitan Board of Works, and the railway company, wholly irrespective of any interference or questioning or action of any sort on the part of any person representing the public; I mean any official person serving the Metropolitan Board of Works?—Yes.

975. The Office of Works could take no heed of it?—No.

976. It has no power of interference of any sort or kind?—I think not.

977. Lord *John Manners.*] As engineer to the Metropolitan Board of Works, may I ask whether they regard themselves as representing the public in making metropolitan improvements?—They do.

978. Mr.

978. Mr. *Gregory.*] If some great public object was at stake, for instance the erection of some large and national building in the space between Charing Cross and Waterloo Bridge, in front of the Adelphi Terrace, would it not be possible to place these ventilating shafts elsewhere, where they would not be in the way of that public building?—That is just the point which I do not like to answer without conference with the engineer of the railway. As far as the Board of Works are concerned, I could find a more convenient position for them certainly than where they are placed.

979. But do you think there would be any insuperable difficulty as affecting the railway accommodation?—Yes; I think Mr. Fowler will tell you that it is most important of all to have light and ventilation at their station.

980. I suppose that any arrangement that is made ought to be made at once, ought it not?——

981. Mr. *Cowper.*] Assuming that there are about 250 feet between York-terrace and the three ventilating shafts that are marked upon the plan, and that it should be very desirable to erect a public building upon it, up to what distance of the ventilating shafts do you think the building might be brought so as not to suffer inconvenience from the air or vapour proceeding from these ventilating shafts?—I think if there were 40 feet of roadway between the building and these ventilating shafts, they would not suffer.

Mr. *J. W. Bazalgette.*
13 April 1869.

982. So that a very large space is left for building to the west of these ventilating shafts?—Yes.

983. Mr. *Layard.*] Do you think that the erection of a public building on the site between Hungerford Bridge and Waterloo Bridge, would be an advantage to the property possessed by the Metropolitan Board of Works?—I suppose they would get a large sum of money for it.

984. Supposing they could sell some of their land, would the fact of a large public building being there add to the general value of the property of the Metropolitan Board of Works on the river site; would it give increased value and importance to it?—In a pecuniary point of view, I do not know that it would. I think it would be of great advantage to it to have fine buildings along the Embankment, in place of very poor buildings which are there now.

985-6. Mr. *Cowper.*] Do you think that the ventilating shafts would be injurious to the gardens in which they were situated?—No, I think not.

Mr. JOHN FOWLER, called in; and Examined.

987. *Chairman.*] You are, I believe, Engineer to the Metropolitan District Railway Company?—Yes.

988. A question has arisen, as you have heard, as to how far any public building which might possibly be erected on this reclaimed land would be affected by your railway, and the vibration consequent upon the passage of trains; has your attention, before the meeting of this Committee on this point, in any former years, been directed to that?—Yes, constantly, for many years.

989. Not only in connection with this railway, but with other railways?—Yes, generally; but chiefly in connection with the metropolitan railways, which furnish great experience with regard to the effect of vibration.

990. Is this railway different from the Metropolitan Railway?—Yes; it is a different company.

991. They are both underground railways?—Yes.

992. This is a branch of the other?—It is a continuation of the other from South Kensington down to Westminster Bridge.

993. You have had experience upon this point of the vibration, especially with reference to this railway?—Yes.

994. I think in your Act of 1864 there is a clause specially bearing upon this point in connection with Westminster Abbey?—There is.

995. How did that clause get introduced?—At the instance of the authorities, the Dean and Chapter of Westminster. It is the 34th clause of "The Metropolitan District Railway Act, 1864." Mr. Bidder, the engineer consulted by the Dean and Chapter, required certain precautions, which were, that we should, on the site adjoining Westminster Abbey, put tannin or peat seven feet wide, and for the full depth of the railway down to a little below the level of the rails.

Mr. *J. Fowler.*

996. That is between the Abbey and the wall of the railway?—Yes.

997. That peat was the result of what, in the first place, was the action on the part of the Dean and Chapter, and then your own action upon consultation with their engineers?—I would rather say with my consent; Mr. Bidder required it, and I did not see any objection to it.

998. Who proposed the peat?—Mr. Bidder, acting for the Dean and Chapter.

999. Do you know upon what data he went when he proposed peat; was it in consequence of the experiment referred to by Mr. Hawkshaw?—No; but I can readily understand why he would propose peat, for this obvious reason, that any substance that breaks the continuity of homogenous material, between the point of impact and the building which you desire to protect, is useful in breaking what is called the wave of motion; probably, therefore, peat is as good as anything, if you can always keep it in the state in which it is put into its place; the difficulty is to keep it from getting wet, because then it gets into a solid state and is not so good.

1000. What is the amount of peat there?—It is seven feet in thickness.

1001. What depth?—The depth of the railway.

1002. What is the distance of the railway from the Abbey?—Seventy feet; it is 62 feet from the nearest point, measuring from the outside of the peat to the foundations of the Abbey.

1003. This peat is put between walls of brick and concrete?—Outside the walls of brick.

1004. The wall of the railway is brick; then comes the peat against the ordinary soil?—And then comes the foundation of the Abbey.

1005. How long do you suppose the peat would

Mr. *J. Fowler.*

13 April 1869.

would be likely to retain its elasticity?—I think in that place, owing to the nature of the railway, it is not likely to lose its condition very soon.

1006. Was any evidence given at that time to show that public or private buildings which had not been protected in any way, and which were near railways, had suffered structurally from vibration?—No, I have never yet known in my experience, which I suppose is as large as that of anyone, a single occasion where there has been structural injury from vibration.

1007. Therefore, although you were, in consequence of the action of Parliament, moved by the Dean and Chapter, obliged to use this peat, you did not think it necessary?—No, I did not; I did not think it would do any harm, but I did not think it was required in that case.

1008. But it might be effective?—Yes; I think the principle is quite sound, and I think peat is as good as anything else, excepting space. I rather agree, I confess, with Mr. Bazalgette's suggestion, that an open space is better.

1009. A kind of air cushion?—Yes, that would break the continuity.

1010. You have had great experience in all kinds of buildings connected with railways, stations, viaducts, roadways, and so forth; have you known of any instance of structural disintegration, if I may use the word, in consequence of the tremulous motion caused by the passing of heavy trains?—Never in a single case, nor do I believe it physically possible; I do not believe it to be possible that there can be any vibration, so as to cause structural disintegration. If it were, it would be in the nature of an earthquake, and not a vibration of the ordinary kind, caused by the passing of vehicles.

1011. The question of personal inconvenience and discomfort is another thing altogether; that is a matter depending very much on the solidity or not of the house?—Just so. The Westminster Palace Hotel has been instanced; that is a place very much frequented for arbitration; I have very frequently been there, and have spoken to a great number of people who have attended arbitrations, and, although the house is not, of course, built as a public building would be built, I have never met with anyone sitting at arbitrations who has been cognisant of the passing of the trains.

1012. When your railway was before Parliament, did persons on the line of railway appear before Parliament to resist the Bill on the ground of injury to their property?—No; except in the case of the Westminster Abbey. I do not remember any other case.

1013. You necessarily know this ground well, as you are the engineer who designed the line of railway upon it?—Yes.

1014. From the nature of the ground, will it be necessary that the foundations of any public buildings on the Thames side should go very deep?—I think an important public building should be taken into the solid ground.

1015. How far are you yourselves from the solid ground?—We go into the gravel which rests upon the solid clay. I did not think it necessary in the case of our railway (which has much less weight per square foot than a public building) to go down into the solid clay; but probably it would be thought prudent by an architect of a public building that it should be carried through the gravel into the solid clay. In considering any question of foundation on the Embankment, it should be remembered that in carrying the foundation of a public building even 10 or 15 feet extra depth, the expense would not be very serious, because there would be no water to contend with; it would be simply filling in the excavations with concrete, therefore you must not take it as important as regards costs. Mr. Hawkshaw is mistaken in supposing that the foundations would have to be taken deeper in consequence of the railway. I understood him to suppose that the railway required to be taken deeper in its foundations into the ground than would be necessary for a public building.

1016. I did not understand that; what I understood Mr. Hawkshaw to say was, assuming your railway to be where it is, that, in any case, irrespective of the railway, looking to the nature of the public building and to the soil, it would be essential to construct that building with its foundations considerably below the level of the railway?—There is no doubt about the fact that in any case the foundations must be taken down lower than the foundations of the railway.

1017. You say that you think Mr. Bazalgette's suggestion of an open space or air cushion is the best you have heard?—Yes, I do.

1018. Mr. Gregory told us of an instance where he had used sand instead of broken stone as ballast with the same object, namely, to check vibration; would you have any difficulty in getting sand and using it for that purpose?—We do really use the coarse sand which you might call either coarse sand or gravel, and I daresay that would meet Mr. Gregory's view.

1019. Would you undertake, with a view to giving security, to use that description of ballast?—Yes, we do use it now, but I think that fine sand would be objectionable to the passengers. We do, in fact, use a very pure gravel which we get round London, and which we find most excellent. That, I think, would entirely meet Mr. Gregory's suggestion, as distinguished from broken stone.

1020. Mr. *Layard.*] Supposing, in the public interest, and the interest of the metropolis, it was found advisable that a great public building should be erected on the space between Hungerford Bridge and Waterloo Bridge, and another public building, such as the Law Courts, between Somerset House and the Temple Gardens, do you think that the existence of the Metropolitan Underground Railway would be a serious objection to the erection of such buildings?—I am quite satisfied it would be the contrary. It would give a very general amount of convenience.

1021. We will come to that hereafter; I ask now with reference to the effects of vibration and the inconvenience from noise or anything of that kind?—I can give the Committee the most positive assurance that they need be under no apprehension as to the case of structural damage, even if they build up to the line of the railway, provided the foundations be put in properly; nor need they, for the purpose of avoiding noise, give an interval of 50 feet. What would be desirable, for the purpose of avoiding inconvenience, would be to make some provision as to the distribution of rooms, that any rooms requiring special silence should not, of course, be put against the side nearest to the railway. But, having exercised such skill and discrimination as an architect naturally would, under the circumstances, I see no reason

reason whatever as regards safety and convenience that any public building may not be brought quite near to the railway, or, in fact, built over the railway.

1022. Therefore you would not limit the distance to 50 or 100 feet?—Certainly not.

1023. You might even bring the railway under the Law Courts?—Certainly, there is no reason why it should not be so. The only thing I would suggest would be, that, structurally, there should be some reference to the fact that the building be clear of the railway, so as not to carry the wave of vibration from one to the other. The works should be made separate and distinct, as we have already done in certain instances on the Metropolitan Railway.

1024. I understand that both yourself, personally, and the directors of the company, are very anxious to do anything they can, consistently, of course, with the interests of their shareholders, to meet the views of the Government with regard to any public buildings that it might be found desirable to place on the Embankment?—Certainly, I may say they would be most anxious to do everything they possibly could.

1025. Mr. *Gregory.*] I think you stated that in any great public building it would be necessary for you to bring down the foundations to the solid clay?—Yes.

1026. Therefore it would be precisely the same thing; you would have to go precisely the same depth at the south side, if the Law Courts were to be placed on the Embankment, as you would have to go upon the north side?—Certainly.

1027. It would make no difference whatever?—Certainly not.

1028. In any place where there is a public building would you have to go pretty much the same depth to obtain the requisite foundations?—Certainly; but the Thames Embankment makes a permanent cofferdam, which shuts out the water of the river; therefore there is no question of water; and, therefore, very little difficulty.

1029. Then you differ from Mr. Hawkshaw in supposing that a building in proximity to the Thames Embankment would create an additional expense with regard to the depth of the foundations?—It would not affect the depth of the foundations in the smallest possible degree. It was very difficult to hear what Mr. Hawkshaw said; but both Mr. Bazalgette and I understood him to say so.

1030. Lord *John Manners.*] You have spoken about arbitration-rooms in the Westminster Palace Hotel; can you tell us on what floor they are?—On the first floor above the street.

1031. Mr. *Dilke.*] You mean what is really the ground-floor?—Yes; the raised ground-floor.

1032. Lord *John Manners.*] On a level, in fact, with the coffee-room?—On the coffee-room level.

1033. Have you any experience of the vibration of the railway in any of the rooms above that level?—No, I have not myself; but I can state this to the Committee, with reference to vibration caused by passing vehicles in streets, that I lived for 20 years in Jeremy Bentham's house, which is more than 100 feet from Birdcage Walk, and I have felt the vibration of vehicles in Birdcage Walk continually.

1034. Mr. *Layard.*] You do not think that the vibration on the Thames Embankment from the railway would, under any circumstances, be greater than the vibration near the Strand from carts, and other traffic?—I should think it would be decidedly less. That which produces the greatest vibration is a heavy vehicle; for instance, Pickford's vans, which combine weight with speed. Heavy van traffic at a trot produces the greatest vibration, especially over the pitched streets.

1035. Lord *John Manners.*] A previous witness gave some slight evidence as to two houses at the end of Park Crescent, which I think had to be pulled down; you, I believe, were the engineer?—Yes.

1036. Can you tell us anything about the feelings of the people who inhabited those houses?—They have been let by the company to Mr. Gilbey, and he has frequently expressed his perfect satisfaction with the arrangements, and the absence of all discomfort in living in the houses, which are over the railway.

1037. *Chairman.*] Did he get them a bargain?—No, I believe he paid the same price as the company gave.

1038. Mr. *Layard.*] Has the company been obliged to buy any land on either side of the railway?—Yes.

1039. Have they built upon that land?—The company generally avoid building, if they can; they generally sell it.

1040. For building purposes?—Certainly.

1041. Do you find any difficulty in selling the land for building purposes?—None whatever; the most recent act of building near the railway of the company, is in a locality no doubt well known to the Committee; viz., those very fine houses built by the Marquis of Westminster, in Grosvenor Gardens. The Marquis of Westminster and his agents, thoroughly understand London buildings, and everything connected with them, and have voluntarily built the finest of their houses within 15 feet of the railway.

1042. And you have heard of no complaint?—None whatever; they have taken the precaution of placing the foundation at the same level as the railway.

1043. The houses are built over the railway?—Houses near the Victoria Station have been built completely over the railway.

1044. And you have heard of no complaints from those who occupy them?—None whatever; they are most valuable.

1045. The rents are rather higher, in fact?—Yes; it is an excellent locality.

1046. Mr. *Dilke.*] The trains move very slowly when they pass there, I think?—Yes, it is near a station.

1047. They slacken speed when they come there?—Yes.

1048. *Chairman.*] Is that by any understanding?—No; it is proper to bear in mind, however, that we are obliged to start our trains as rapidly as possible, and run them with somewhat regular speed until we get almost into a station, and then pull them up very quickly. If we do not do that, our average speed would be so low that people would not travel by our railway; therefore, the difference in speed between the stations is not very great.

1049. Do you use any special break?—We do; and our engines are constructed so that full power can be put on at once.

1050. What is your average speed?—From 14 to 16 miles an hour; and we do not get be-

Mr. *J. Fowler.*

13 April 1869.

tween any of these stations to more than 25 miles an hour; therefore, the difference is not great.

1051. How sharp do you pull up?—We pull up very rapidly; if we enter a station at 16 miles an hour, we can bring the train to rest before the engine gets too far into the station.

1052. Lord *John Manners.*] Then I understand you to object to any statutory restrictions as to speed?—Yes; and I would venture to say that it is not necessary, the difference between our average speed and our extreme speed being so small; there are houses over the railway also in Victoria-street, which are very fine new houses, all faced with Portland stone.

1053. *Chairman.*] How near do the foundations of those houses come to the top of the railway?—There is nothing but a girder between them.

1054. Is there any statutory line of demarcation?—None.

1055. If you touched their property you must take the whole of it?—Yes; but this was vacant ground, where the Turkish baths stood. We bought them, took them down, and then sold the land for these houses. They were built up under our own directions, with regard to strength, and so on; but the railway was there before the houses were built.

1056. Mr. *Layard.*] Had you any difficulty in selling the land for building purposes?—None whatever.

1057. You got as good a price as for the land adjoining?—With this difference; that where they are over the railway there is no basement; otherwise they are the same.

1058. Mr. *Cowper.*] Do the extremities of the houses go down to the site of the foundation?—Yes.

1059. *Chairman.*] The houses, after the railway is constructed, can be made solid in their foundations, and means can be taken to avoid inconvenience; but with regard to a poorer description of houses, which you now tunnel under, you say you can go as near as possible without touching them, without being liable in any way?—Yes.

1060. But if these houses have very shallow foundations, that must render them almost impossible to live in?—Then we improve the foundations by under-pinning them.

1061. Have persons who live in that description of house any means of redress; have you to pay them compensation?—In certain cases, but not all cases; we are liable if we do them an injury.

1062. Do you happen to know where the Museum of British Antiquities in Victoria-street is?—I never heard of it.

1063. Lord *John Manners.*] With respect to the two houses at the end of Park-crescent, did the railway company rebuild them after they had pulled them down?—They did.

1064. Mr. *Layard.*] Why did they pull them down; were they badly built houses?—No; but it was cheaper to pull them down. I went into a calculation very carefully, and I found it was cheaper to pull them down and rebuild them than to repair the foundations. So exactly were they rebuilt, according to the original formation, both inside and out, that the Crown required us to re-produce all the decorations; the rooms were decorated exactly as they were originally.

1065. Why did you pull them down?—The railway goes underneath them, and so near to them, that we found it cheaper to pull them down than to sustain them.

1066. Lord *John Manners.*] In rebuilding them, did you take any extra precautions, with a view of meeting the objection of vibration?—No; we made them substantial, but with no greater strength than one would build them in the ordinary way, that is to say, the foundations on which the houses are built, which are girders resting upon solid brickwork, were made of the proper strength, but above that the houses were built as they were before.

1067. As far as the houses themselves were concerned, you did build them in a more solid way than the neighbouring houses?—We made the foundations more solid, but that in every respect is an extreme case, because there is only 18 inches between the floor of the kitchen and the tunnel of the railway.

1068. *Chairman.*] I wish to ask you a question or two with reference to the point raised, in which Mr. Bagalzette's examination, namely, as to these stations and ventilating shafts. We will begin at Westminster Bridge; you have a station there have you not?—Yes.

1069. Is that permanently erected?—No.

1070. I will ask you first, generally as regards the architecture of your stations; have they been arranged by communication between you and the architect of the Metropolitan Board of Works?—They have.

1071. All of them?—The whole of them.

1072. The stations as well opposite the Duke of Norfolk's property, Arundel-street, Norfolk-street, and Surrey-street, the same as in other parts?—The Metropolitan Board of Works have no control over the station at Bridge-street, that is under the control of the Office of Works.

1073. Under the control of the Crown?—Yes.

1074. How has the Crown exercised its control there?—By permitting us to make a temporary wooden booking office there, with the obligation to take it down, and put in place of it a permanent building, the designs of which must be sanctioned by the Crown.

1075. That permanent building has not been sanctioned?—It has not.

1076. Then there has been control exercised by the Crown?—Yes. Perhaps I had better explain why that has not been done. It has been proposed from the first to combine this station with an important building there, and that important building has not yet been settled.

1077. An important building of what kind?—A Crown building, or a block of private offices; but as it was necessary that the railway company should open their line, it was agreed that there should be an obligation on the part of the company to remove this temporary building, and replace it by a permanent building.

1078. Is that obligation an honourable understanding, or is it by Act of Parliament?—It is a written understanding, contained in a letter from myself to the Government.

1079. Of course, where there is a station, you have ventilation as well?—We have.

1080. Is the form which the ventilating shafts are to take, temporary also?—It is temporary.

1081. Therefore they can be moved right or left, according as that building is constructed?—Certainly, within certain limits.

1082. Certain necessary limits?—Yes.

1083. Now we come along here (*pointing to the plan*), and we see that your railway runs from where it leaves this white part under the roadway;

roadway; is that in consequence of the action of the Crown that you have gone under the roadway? — No, not necessarily; there was never any question about its passing under the roadway there, because the curves of the railway necessitated its passing in that way. There was no discussion about it, and the whole of that is being carried out, and a clause has been inserted in the original Act of Parliament at the instance of the Crown.

1084. If it had not been for that, would you have taken any other line?—No.

1085. Then there is no ventilation between the ventilating shaft at your temporary station and the ventilating shaft under Charing Cross railway bridge?—No.

1086. Was that in consequence of any action on the part of those representing the Crown?—Not action, excepting in this way. I ascertained from the Crown tenants the extreme difficulty there would be in getting any ventilation between those two points, and as the stations at Charing Cross and Westminster are the nearest of any two stations, I saw my way to the means of working the railway without an opening between those two stations, provided I got openings contiguous to them.

1087. When you say it was extremely difficult, do you mean structurally or morally?—It was a moral difficulty.

1088. That is to say, you knew that the Crown, or those representing the Crown, or the parties so interested would consider ventilating shafts there as deteriorating the property, and would therefore resist them?—Certainly, the Crown tenants there had shown their great power, and it was quite right and proper that they should not have ventilating shafts in their gardens if they could be placed elsewhere, and the line satisfactorily worked.

1089. Therefore you saved the Crown property for about half a mile?—Yes.

1090. What is the space which is supposed to be ventilated under Hungerford-bridge at that station?—The station is 300 feet long, and that may be said to be all open for ventilation.

1091. What is the extent of your ventilation there?—Three hundred feet.

1092. Do you apprehend that, whatever buildings are constructed, you will always have 300 feet there?—No; we do not require 300 feet

1093. What do you require there?—From 150 to 200 feet.

1094. That you think can be conveniently arranged with reference to the building?—Yes.

1095. From there how much is it?—From St. James's-park it is about half a mile, or a little less; we have an opening in Victoria-street.

1096. What is the size of it?—About 500 feet.

1097. Here you are going to have 350 feet?—There the necessity for ample ventilation becomes not merely urgent but absolutely necessary.

1098. If you can do with 50 feet here because you have 350 feet there, you require your great ventilation in the centre?—Yes, it becomes absolutely essential.

1099. What is that yellow piece of ground there (*pointing to plan*)?—It is a piece of land dedicated to the public.

1100. An open space?—Yes.

1101. What is the size of it?—About 300 feet and 180 feet in depth.

1102. Supposing, in the interest of the public, it was thought more desirable not to have those ventilating shafts here, but to give you ventilation there (*pointing to plan*); it would answer your purpose just as well having it there as along here, would it not?—If we get a piece of ventilation at each end we should prefer having it all here.

1103. So that as regards the railway, that is a question of consideration for the public?—Of course the object of the railway company is to provide proper ventilation for the trains, therefore I consider them as one.

1104. There is a public under ground, and a public above ground?—The public using the railway I must protect, and in their interest I should prefer the ventilation partly on one side, and partly on the other, of the Charing Cross station; that is, instead of the arranged spaces extending over 300 feet on one side of the station, I should prefer taking 100 feet of greater width close to the station, and on each side of it.

1105. I suppose you are not prepared to dispute the fact, that assuming that this site was to be used for any public building, whoever laid out that ground or constructed that building, would be materially interfered with in his arrangements, and possibly the general plan and beauty of the building might be impaired by the existence of these shafts?—If you wish to bring public buildings down to the Embankment, there is no difficulty in altering the ventilating shafts even after the railway is open. The stations, however, must be settled now for all time; but with regard to ventilating shafts, they are comparatively a small work, and I see no objection to such a change, which would give sufficient ventilation to the railway.

1106. Would you have any difficulty in coming to the same understanding here with the Metropolitan Board of Works or the First Commissioner or any other person representing the interests of the public with reference to this station with these ventilating shafts that you have come to with the Crown at the other end, namely, that you make your station temporarily, and that the ventilating shafts shall be of such a nature that your railway would be so constructed that you could move the shafts right and left?—There is no question about the position or the dimensions of the station, it is simply as to what may be called the booking-office, or the over-ground part; the great object is to have them as unpretending as possible; Mr. Bazalgette was quite right in his recollection, that before this was settled with the Duke of Norfolk, it was submitted to him for the purpose of saying that it was of the same character as the other stations, and the Charing Cross station is intended to be of the same character as that.

1107. Is it necessary that you should proceed at once to the erection of these stations which are above ground?—No, it is not pressing for a short time. The sides of the Charing Cross station are now very far advanced, but the buildings above ground may wait for a month or two.

1108. In the same way as the other places?—At Charing Cross and at the Temple.

1109. Lord *John Manners.*] The site of the stations, I understand, you regard as irrevocably settled?—I think so.

1110. *Chairman.*] Are the works begun?—

Mr. *J. Fowler.*

13 April 1869.

Only the excavations, not the brickwork, as in the case of the Charing Cross station.

1111. Would there be any difficulty in leaving that at that end (*pointing to the plan*), instead of this end; this yellow part is for open ventilation, I suppose?—No, that is an open space for the public.

1112. Mr. *Layard.*] Supposing Essex-street were enlarged and became an important street, would it not be very convenient to have a station there?—There would be very great difficulty, I think, in postponing that.

1113. *Chairman.*] Why so?—In the first place, it could not be done without an Act of Parliament and the consent of the Duke of Norfolk; I believe we are also restricted by the Temple from having any part open within a certain distance of the Temple-gardens.

1114 But you might have your building there?—We could not have the building hermetically sealed; if it were a station it must have a certain amount of ventilation.

1115. Lord *John Manners.*] I suppose that all these stations were very carefully laid out after mature deliberation, were they not?—They were indeed; they were subject to very long and serious consideration by all parties interested.

1116. Mr. *Layard.*] But at that time it was not contemplated to erect public buildings on the Embankment?—No, it was not; the Charing Cross station, I think, under no circumstances could be advantageously moved, because now it is as much out of the way as it can be.

1117. And I suppose you would want to make it also convenient for the railway?—Yes, for the Charing Cross railway.

1118. Mr. *Cowper.*] Does your Act of Parliament provide for any access from the station to Norfolk-street?—It does. This matter has been the subject of negociations and consideration for a very long time, and you will see that a terrace is provided for along the upper part of the railway, and a station placed entirely underneath, the effect of which is to shut out the railway and station as much as possible from the houses.

1119. It is not intended to have a carriage-way from the station to Norfolk-street?—From what may be called the higher level, it has a communication with the Thames Embankment on each side, down Norfolk-street, Surrey-street, and Arundel-street, by a back or duplicate street.

1120. These side streets from Norfolk-street are not within the province of the railway company to make?—No, they are not.

1121. The railway company, I presume, makes steps for foot-passengers from their station up to Norfolk-street?—That is so; the only thing the railway company were required to do, was to make their railway consistent with the design.

1122. *Chairman.*] That is the design arranged with the Duke of Norfolk?—Yes; and the Board of Works jointly. The Act of Parliament requires that for 100 yards on each side of the Temple it shall be covered, so that there shall be no opening of any kind. In the clause protecting the Temple, the railway is not only required to be covered, but it is required not to be wider than is just necessary for two lines of rails, which of course would render it impossible to make a station under such a clause.

1123. Here you are not tied, but are free to move right or left with these ventilating shafts?—Yes, the construction of this part of the line is under the control of the Board of Works, but with the condition that we have a sufficient provision for light and ventilation.

1124. But you would undertake, as regards that part, to endeavour as far as possible to meet the views of either the Board of Works, the First Commissioner, or any persons on the part of the upper ground public, not the under ground public, who might wish to utilise that part for public buildings?—Certainly, there would be no difficulty about that. I see no difficulty in power being given to us to get openings on the other side, and that space of 300 feet can be curtailed down to 100 feet if correspondingly wider.

1125. Supposing that power could not be got, and you were to confine your operations within the space which I marked, could you, by enlarging this ventilating shaft, do away with one or two of these (*pointing to the plan*)?—What might be done is this; I do not think these three openings are in themselves more than sufficient, but they might be put in a different form; they might be made wider in order to permit of any building being there.

1126. Is there any reason why they should not be made, as you say, wider?—No, there is not; I myself preferred and was anxious that they should be in a different form, but these were settled after a great deal of consideration and discussion with the Board of Works as being on the whole sufficient for our purposes, but in a form which the Board of Works thought most convenient for the land under their charge.

1127. But as regards these parts, you feel yourself bound by clauses in the Act of Parliament, and there is no means of moving the station right or left?—We are bound there in such a way that it would be impossible.

1128. Mr. *Layard.*] Without the authority of Parliament?—Without the authority of Parliament it would be extremely difficult.

1129. *Chairman.*] Could you in the meantime arrange your stations so as to give Parliament time to consider these things?—We could not possibly do that, because we are under obligations to the Board of Works to finish the railway *pari passu* with them, and they are very much disposed to complain of any delay on our part.

1130. Mr. *Layard.*] I may ask a general question, whether it would not be for the advantage of the railway company that a great public building should be erected on this site?—I think I can safely say that it would.

1131. Therefore it would be for your interest, as representing the railway company, to meet the Government in any way that you could, supposing it was their desire and intention to do so?—Certainly; and I think I may safely promise, on their part, that they will do everything in their power.

1132. *Chairman.*] As regards this station, putting aside all question of private right, *qua* the railway and any public building that might be erected there, supposing it were possible, would the railway company make any objection to the incorporation of their station with any public building there?—Certainly not.

1133. Or to the alteration of the architecture of their station that is above ground, so as to suit that building?—Certainly not; and I would even

even go further and say it is important in the case of a public building erected there, that it should be incorporated with the railway station, so as to afford the greatest amount of convenience.

1134. As regards this public building so incorporated, would the steam and vapours coming up disagreeably and injuriously affect it?—Certainly not, if the plans now before the Committee are carried out, because they provide for proper and sufficient ventilation; there is also another point which will be for the Committee, at some time or other, to consider; viz., that in case of any difference of level, an elevator can be adopted, by which persons desiring to get to any particular floor could go there in great numbers with comfort.

Mr. *J. Fowler.*

13 April 1869.

1135. You could have a lift from your station up to any of the floors?—Certainly.

1136. You could have in your station a colossal lift, which could take up any number of suitors and lawyers, wigs and all, to any floor they chose to go, without inconvenience?—Certainly, and I think that would be a matter worth consideration in the arrangement of the law courts.

1137. And it could take them down again if they are weak in the knees?—Yes.

REFORM CLUB
PALL MALL

Monday, 19*th April* 1869.

MEMBERS PRESENT:

Lord Elcho.
Mr. Buxton.
Mr. M'Lean.
Lord Sandon.
Mr. Alderman Lawrence.
Mr. Tite.
Mr. Cowper.
Mr. Layard.
Captain Dawson-Damer.
Mr. Sclater-Booth.
Mr. W. H. Smith.
Mr. Dilke.
Mr. Beresford Hope.

LORD ELCHO, IN THE CHAIR.

SIR JOHN THWAITES, called in; and further Examined.

Sir *J. Thwaites.* 19 April 1869.

1138. *Chairman.*] I BELIEVE you have some additions to make to your former evidence?—I promised your Lordship and the Committee at the last sitting to produce some examples of the gradients of some particular streets which were well known. I have done so, and put them on this plan, which I will now hand in (*handing in a plan to the Committee*).

1139. You begin with St. Martin's-lane?—I begin with St. Martin's-lane.

1140. From St. Martin's Church?—Yes; from St. Martin's Church up to Great May's-buildings; that is a gradient of 1 in 46.

1141. Is that the Horse bazaar?—I am not quite sure, but I will ascertain that. From Chandos-street to St. Martin's Church it is 1 in 37; from Duncannon-street to the statue of King Charles at Charing-cross it is 1 in 28, down from the church, which is considered to be an inconvenient gradient. Then from Coventry-street to Panton-street in the Haymarket it is 1 in 32; from Panton-street to James-street 1 in 26; and from James-street in the Haymarket down to Suffolk-place is 1 in 39. Then in Regent street, from the County Fire Office down to Jermyn-street is 1 in 48 and 1 in 24; and from the fire office to the Circus is 1 in 48. From the Circus to Jermyn-street is 1 in 24; from Jermyn-street to Charles-street is 1 in 53, and 1 in 85 at the lower part. Then in St. James's-street, from the Piccadilly end down to Little Rider-street, is 1 in 24.

1142. From the Piccadilly end?—Yes; taking nearly two-thirds of the distance.

1143. Past the clubs?—Yes, a considerable distance; nearly two-thirds is the steepest part. Then from that point to King-street is 1 in 34; and the lower end is 1 in 54. Then there is another well-known point, namely, Constitution-hill, from Hyde Park-corner down to Buckingham-gate, the first portion is 1 in 98; the second is 1 in 67, and the third 1 in 58. Those are good gradients throughout. Then in Piccadilly, from Park-lane down to Engine-street I think, from at any rate a point between Down-street, and that is 1 in 47. The next small portion is 1 in 46, and then from White Horse-street back to the other point would be 1 in 51; from White Horse-street to Half Moon-street, 1 in 29; from Charles-street, Half Moon-street, to Bolton-street, 1 in 40 and 1 in 59. I was asked to give some information as to the cost of the Thames Embankment, and I have prepared a statement which I will put in.

1144. There is another point with reference to the cost. You have made a statement with reference to the cost of a curved roadway round by Northumberland House-garden, taking off a very small corner of the garden. Have you considered at all what the probable cost of such a curved roadway would be?—I think my answer to that on the last occasion probably was not sufficiently clear. The cost of these approaches, including Northumberland House, is 467,000 *l.*, and I am afraid my answer led to the conclusion that that was the cost of the approach through Northumberland House, but that is not so.

1145. Mr. *Layard.*] That includes the purchase of Northumberland House, including the whole building, gardens, and everything?—Yes, the nett cost.

1146. Up to Northumberland-street?—From the Strand. Certain commercial premises were taken in that, independent of the Duke's house and other premises at the lower end between the Duke's garden and the Thames were also taken.

1147. May I ask you, was that up to Northumberland-street?—The cost I referred to included the widening of Northumberland-street at the part coloured red.

1148. *Chairman.*] It was the purchase of the whole of that block between the two pink lines?—Yes, and making the other approach.

1149. Have you calculated at all what the cost would be, avoiding Northumberland House, in the way that is suggested by your curved line, which will just touch the corner of Northumberland

land House-garden, where the word "Scotland" is printed?—Having carefully looked at, and separated those estimates, I should think the nett cost of going through Northumberland House, taking the property at the rear, after realizing the return ground, which would be very valuable in that case, would be something like 200,000 *l.*

1150. Avoiding Northumberland House, and taking that corner line according to your white line which is laid down?—I have had a plan drawn of apossible approach clearing the Duke's house.

1151. Mr. *Tite.*] Avoiding it?—Yes, avoiding it entirely, except a very small portion of the garden at the south-western end. I stated before that any curved plan, having for its object the avoidance of the Duke's property, would necessarily be driven so near to Charing-cross that it would cut diagonally the houses to a considerable depth, certainly down to Craig's-court, and some houses lower than that. That circumstance would greatly add to the cost of this line; however, we have endeavoured to make what we hoped might be a fair and reasonable estimate, and the cost will be a little over 400,000 *l.* for making this line as contrasted with 200,000 *l.* in passing through the Duke's property.

1152. *Chairman.*] Do you make any allowance in this calculation for the resale of any land which you require, on the principle upon which you have hitherto acted?—Yes; that is the nett cost.

1153. And making a similar allowance in favour of Northumberland House, there would be a difference in favour of Northumberland House direct line of 200,000 *l.*?—Yes.

1154. Do you think that a fair and reasonable estimate?—Yes; giving the same margin in each case, the cost of the Northumberland House plan would be about 200,000 *l.*, and the cost of this curved line, indicated on this map, would be a little over 400,000 *l.* In both cases that is nett. We should have to take down the National Bank. (*The Witness explained the plan to the Committee.*)

1155. May I ask you what extent, according to this blue line of ground belonging to the Duke, you take at that corner; apparently it must be something infinitesimal?—It is extremely small; and of course there would be this advantage, you could have a frontage to this fine roadway on the Embankment. Here there are properties which are not quite nice behind.

1156. Have you calculated at all, in the course of your projected improvements, the cost of widening that narrow part of Charing-cross, between Scotland-yard and the Admiralty, or rather higher up, between Cox's and Drummond's?—We have not made a careful estimate of that, but it would be a very serious cost indeed.

1157. It would be one of the greatest improvements practicable?—It would be a very desirable thing, but of course, it is a question of funds.

1158. It cuts off the communication with other parts of the town, and the Houses of Parliament?—It approaches the Houses of Parliament, and if the House will take a liberal view of the question, and not tax the metroplis, we shall be happy to be its executive.

1159. What is the width of the roadway; it is about 45 ft., is it not?—Yes; but there is a fall here (*pointing to the plan.*)

1160. What do you reckon the minimum width you ought to have for a great thoroughfare?—No great thoroughfare ought to be less than 50 feet, and 60 feet is a proper width for a street in the metropolis. Sir *J. Thwaites.* 19 April 1869.

1161. Mr. *Sclater-Booth.*] What is the width of the blue?—Eighty feet.

1162. *Chairman.*] Then with reference to gradients, have you considered the question of the gradients of Essex-street since you were before this Committee, and what sort of access or approach might be made from the Strand to the roadway on the Embankment through Essex-street or in that direction?—In the first portion of Essex-street from the Strand the gradient is very indifferent. I think it is 1 in 17.

1163. Mr. *Layard.*] For how long is that?—I should think rather more than one-third of the distance.

1164. *Chairman.*] Without going into detail as to the gradients of the different parts of the incline between the Strand and the roadway on the Embankment, have you considered generally what would be the gradient of an approach road made there; there would be no difficulty, in fact, there, would there?—That would involve the taking of the houses on both sides of Essex-street, and a re-formation of it.

1165. I assume that?—You might, by equalizing these several gradients, reduce it to 1 in 30.

1166. Mr. *Layard.*] Can you tell me the gradients of Norfolk-street and Arundel-street, between the Strand and Howard-street?—It is 1 in 28 at Norfolk-street, between the Strand and Howard-street. The next point from Howard-street is 1 in 19. It dips very much there, and then from the end of Norfolk-street to the Embankment roadway it would be 1 in 10, which is an impossible gradient.

1167. Mr. *W. H. Smith.*] That is the proposed circular roadway?—From the end of Norfolk-street down to the Embankment; the gradient would be one in ten, which is quite impossible for public traffic.

1168. *Chairman.*] With regard to that portion of the land which is represented white between the Metropolitan Railway Station and Blackfriars-bridge, a suitable approach from Essex-street could not, in fact, be made without purchasing the houses?—I should think not.

1169. Not a really handsome and convenient approach?—It would be quite impossible to get a roadway at a better gradient than one in ten, which for public traffic, I need hardly say, is almost inacessible.

1170. I gathered from your evidence on the last occasion, that you considered that at some time or other, it would be necessary for the convenience of the metropolis to make an access and an approach to the Embankment roadway there?—It would be a very convenient point for an approach to the Embankment, especially if the law courts should be built there.

1171. And if the Metropolitan Railway Station is, as I suppose it will be, where it is marked on that plan, it will be necessary to have a good access to that station, will it not?—That no doubt will be an improvement; but it would be scarcely an obligation of the Metropolitan Board of Works to facilitate railway traffic.

1172. Mr. *Smith.*] If there was a road to Holborn from the Strand, an approach to the

Sir *J. Thwaites.*
19 April 1869.

Embankment in that direction would become still more necessary, would it not?—Clearly.

1173. That is a street which is contemplated, is it not?—Yes; what I meant by its being scarcely a Metropolitan Board of Works' obligation is this: that if a railway company chooses to put a station in a very inconvenient position, they have scarcely a right to call upon the Metropolitan Board of Works to make them convenient approaches. The facilitating the traffic *per se* is obviously a duty cast upon the municipality. That is the distinction I draw.

1174. Mr. *Layard.*] You do not consider Essex-street in an inconvenient position, considering that it abuts on the Strand, in one of the most central portions of the metropolis?—Not for a railway station; it is near the Temple; and especially if the law courts are to be fixed in that locality, it would be a great advantage to have a railway station as near to them as possible.

1175. Whether the law courts are placed on the Embankment, or on the Carey-street site, it will be equally important to have Essex-street open, will it not?—No doubt it is very important to have all the lateral streets open.

1176. *Chairman.*] That portion of the reclaimed land which is uncoloured, between the railway and the houses to the east of the Metropolitan Railway Station, which you have just referred to, in front of the Temple-gardens, belongs to the Temple, does it not?—Yes.

1177. Is the part still further east, beyond the precincts of the Temple, available for purchase or for any other purpose; I mean the reclaimed land, which is the strip between the roadway and the gas-works?—Yes; there is a special clause in the Act appropriating that.

1178. The whole of that is appropriated especially to the gas-works, is it not?—Yes.

1179. The Temple have the part between the Metropolitan station and where the green ceases; that is, I suppose, at the end of what belongs to them, but beyond that the whole of that narrow strip is appropriated by a clause in the Act to the City Gas-works, so that it is unavailable for any public purpose; I mean from where the Temple property ceases, at Blackfriars-bridge, to that roadway where it passes under Blackfriars-bridge?—There are three or four wharves from the Temple to the City Gas-works. There is now a 100 feet roadway instead of 70 feet, as originally designed. We propose to have an uniform width of road throughout. The road on the Embankment is 100 feet, and we propose a road of the same width passing the gas-works, instead of a width of 70 feet, as originally designed. In order to lessen the cost and to avoid the taking of the gas-works, we first proposed to give them an inner dock approach by means of barges, so that the barges could be taken in and let out. We have since arranged to have 100 feet of roadway, and a solid embankment throughout, which of course would lessen somewhat the area to be dealt with.

1180. As drawn there, that roadway represents 100 feet, does it not?—Yes; the railway will occupy a considerable space.

1181. But the railway will be under ground, will it not?—Yes; but they will have to deal with the surface.

1182. That is only temporarily, but permanently they will be under ground?—I believe they propose to extend the frontage and to give a frontage to the main roadway, the railway passing underneath.

1183. As I see that the map you have before you is marked both with the railway and with different colours, it will perhaps indicate what you have to say best; therefore I will refer to the map which you now have in your hand. Between the building and the roadway, there is a piece of ground beyond the reclaimed land, coloured pink, which I suppose belongs to the Temple?—Yes.

1184. Then comes a block of white, through which the Metropolitan Railway passes; is that given to the gas-works by a clause in the Act of Parliament?—That will have to be appropriated, supposing these wharves are taken; that will be a question of re-sale of that land, and extending these wharves to the front of the road, making them, in point of fact, warehouses with a dry entrance instead of a barge entrance.

1185. What is the position of that bit of land which is apparently occupied by buildings now, and by the roadway; does it belong to the Metropolitan Board of Works?—It will belong to us if we purchase the whole of that property, unless we can make arrangements; if we purchase the whole of the property, that area in front will be under our control, to dispose of for building purposes.

1186. But if you do not purchase it, what then?—Then it will be a question of give and take; we shall have to compensate the parties for the possession of their water-rights, and we may assign to them the area in front of it up to our roadway, for the purpose of lessening the amount of compensation.

1187. What is the character of those houses now?—They are wharves.

1188. They are rubbishing buildings, I suppose, more or less?—No, one of the wharves is a very fine building now.

1189. But they are not buildings of an ornamental character?—No, they are of a commercial character.

1190. If you assign that portion of the land which you will have it in your power to do to the owners of these wharves, do you think that the character of the buildings will be changed, and that they will erect ornamental buildings on that part?—I should think the buildings will be lighter, and certainly more architectural, when their character is altered from that of ordinary wharves for receiving vessels and landing goods from the water into that of roadside warehouses, which they, in point of fact, must be if they are deprived of the right of water.

1191. Mr. *Layard.*] Did you not purchase the water rights of the owners of these buildings?—Not at this part; at present we have not settled with these parties.

1192. *Chairman.*] Then that at present is unsettled; there is no defined settlement now as to the possession of the land in future, as to the nature of the buildings to be erected on it, or how that land is to be applied?—That is undefined.

1193. So that it might so happen that these wharves, warehouses, or whatever you choose to call them, might be of the most unsightly description, and abut on to your now roadway?—Some of them might.

1194. Now we will proceed further eastward. We then come to what is coloured a sort of claret colour; that is, the ground to which you referred

opposite the gas-works; that is reclaimed land?—This is the original line of the Embankment.

1195. But that part which is coloured claret, between the City Gas-works and the roadway, is land which I think you said had, by the Act, been now offered to the City Gas Company; is that so?—That is so.

1196. Then the Metropolitan Board of Works, and no one else, has any control over the use to which that portion of the land will be applied?—Yes.

1197. Then the City Gas-works may bring their works or any buildings, sightly or unsightly, close up to the roadway at that spot?—Yes.

1198. Are you perfectly certain, with reference to the white part, whether a dock, called the Grand Junction Dock, has not been reserved?—The tidal water is already excluded, and, on Thursday last, I was in the basin.

1199. It was reserved in the original Act, was it not?—Originally it was intended to have carried the roadway on a viaduct, and to have given access eventually by means of arches, to enable the gas people to have taken the whole in, these wharves giving an outlet here (*pointing to the plan*), so that the whole of these properties, in point of fact, would have had an inner dock, which they could have used, and their water rights would have been improved probably from what they originally were.

1200. Mr. *Tite.*] That was in the original Bill, was it not?—Yes; but since we have determined to make the roadway 100 feet wide, that inner dock, of course, had to be destroyed.

1201. Mr. *Layard.*] Have you never settled with the owners of the property on that white piece, the compensation which is to be given to them for the construction of the road, and for the deprivation of their water rights?—Not yet; it is now under negociation.

1202. I think you stated that the Government had determined that there should be a communication between Somerset House and the Embankment, and that the determination of the Government led you to make the line of road which you propose now to construct?—What I stated was this: it was understood at the time the Royal Commission sat on the question of the Embankment, that the Government thought it desirable that some communication should be arranged giving access for persons visiting Somerset House, to the Houses of Parliament, and the Commissioners indicated a line down Wellington-street on to the Embankment.

1203. You made use of the expression "The Government"; did the Government interfere, through the Office of Works, or by any other direct means?—I do not think there was any active interference or any special demand, but it was one of that kind of understandings by which you gather that it was desirable to have a communication from this point; that is my own impression, acting as a Commissioner at the time.

1204. *Chairman.*] Mr. Layard just now, in putting a question to you, described this roadway as a roadway which you proposed to construct. Now, it is not your proposal, as I gather, at all; you simply act under the Act of Parliament, and, as I collect from your evidence, you are rather opposed to the roadway than otherwise?—I suppose, the Bill being brought in by the First Commissioner of Works, representing the Government, and that Bill not only authorising but requiring the Board to carry out that particular improvement, I think I am not very far wrong in saying that the Government have expressed some view with regard to it, and that ours was a merely executive duty, to be performed without discussion.

1205. Mr. *Layard.*] Do you know whether the Government or the Office of Works took any evidence as regards the traffic in the Strand which led them to that determination?—I do not remember at this moment.

1206. In any way whatever, either through the Commission or by any other means?—I do not know.

1207. Has the Metropolitan Board of Works gone into the question of the traffic and taken any evidence on the subject?—Not as to the traffic, beyond our knowledge of the condition of the traffic generally.

1208. Then you are not prepared to state that, in consequence of evidence taken on the subject, it is necessary for the relief of the Strand, that the traffic should be divided at Wellington-street?—Well, I think it would be desirable to have some communication between Somerset House and the railway station, if possible, on to the Embankment, but the communication which has been suggested, and which it has been my duty to carry out, is not one that we can approve, because it is not in the condition in which things were left; at the time the Act passed we were prohibited from putting up any building which might screen that approach to Wellington-street, and if we had exercised our discretion in the formation of an approach there, in the absence of any means of screening that approach, we should not have made it.

1209. You say, "Somerset House and the Embankment"; you mean not a communication between the Strand and the Embankment, but a communication between Somerset House, supposing Somerset House to be occupied by Government offices and the Embankment?—Somerset House and the traffic generally; I do not mean that the roadway would be simply convenient for the Somerset House people, but it would be desirable that the parties coming down there should get on to the Embankment if possible.

1210. I presume that you could construct lateral steps from the Embankment up to Somerset House without interfering with that road?—We could construct steps to the top of the Monument if necessary, but for carriage traffic steps would be of no use.

1211. But for passenger traffic, I presume you might have a very handsome ornamental flight of steps from the Embankment to the terrace of Somerset House?—Oh yes.

1212. In the model which we have here, I see that between the upper part of this road upon the Embankment, which we are now discussing, that is to say that part where the road is to be carried upon arches, there are two deep holes between the road and the present buildings; what is the intention of the Board of Works as regards those holes. Are they to be filled up?—I suppose they must be filled up, or arranged and covered with shrubs and trees.

1213. I mean the holes, not on the river side, but on the other side; there are two great depressions. To whom do those holes belong?—They belong to the Duchy of Lancaster.

1214. Then you have nothing to do with them?—No.

Sir *J. Thwaites.*

19 April 1869.

1215. They belong to a Government department?—Yes.

1216. And it is for the Government to fill up those depressions?—Yes; we have no control over them.

1217. If nothing is done, I suppose they would be places for the accumulation of dirt and filth of every kind?—Yes; they would be very objectionable, no doubt.

1218. You are, of course, well acquainted with the metropolis. Do you know any site in a central part of London which could be more advantageously employed for a great public building than that site between Hungerford-bridge and Waterloo-bridge?—I know of no site in London, and I was going to say in Europe, so suited for a public building as the ground behind the roadway on the Embankment.

1219. Supposing the Government were seeking for a place accessible to all parts of the metropolis, with a view to erecting a public building there, they could not find a better site than that?—I should think not.

1220. Do you think any site could be found in the centre of the metropolis at a more reasonable rate than that site?—The rate is not stated.

1221. I think you gave evidence as regards the value of the land there?—I took the estimate of the gentleman who is employed by the Government to make an estimate.

1222. Taking that estimate, do you suppose you could get any central site of equal value for the erection of a public building for the same sum?—It would be quite impossible to get an area equal to that, without clearing the ground of buildings, which is a most expensive process.

1223. In your opinion generally, that is one of the most advantageous sites, if not the most advantageous site, that could be found for a public building?—Clearly. You have light, air, and ventilation, and wherever you have a tidal stream you have also a current. A public building of any architectural pretensions would be a most desirable thing to be placed on the Embankment, to hide that which we have always felt to be a deformity, namely, the ragged condition of the foreshore.

1224. I wish to ask you one more question upon a point which you did not seem quite to understand the other day; supposing two persons were starting from that part of the Strand at which Wellington-street leaves it, and one person went down the Strand to the Admiralty, and another took the line along the Embankment, would there be any difference between the two routes as regard distance?—I should think very little indeed.

1225. I mean, supposing one were going from the corner of Wellington-street to the Admiralty by the Strand, and the other by the proposed road on the Embankment?—I think there would be very little difference.

1226. Mr. *Cowper.*] There has been an apprehension that this road which is intended to descend from Wellington-street to the Embankment will be a disfigurement. Assuming that the Act of Parliament is carried into effect, and that all the ground which was intended by that Act to be pleasure ground still continues to be pleasure ground, have you any apprehension that in making that road you would make anything which would be a disfigurement to the pleasure ground?—That would be a question for the Committee and the public to judge of; whether an approach of considerable length, at all events sufficiently long to master the rise of 26 feet, would be pleasant to the eye, or be consistent with the ordinary notions of propriety and symmetry of form.

1227. Looking at the model which is before us, am I right in collecting that where there are no buildings, and the ground is opened, the road will be made on a level with the ground on each side of it, by means of rising slopes of ground up to the level of the road?—No doubt, being in a difficulty, our object was to reduce that difficulty to a minimum. The model itself will rather deceive, unless you very carefully judge of the height; the slope breaks the height, and of course looks almost as if it were on a level; but practically it is not so; our object would have been to have sloped it down, to have planted it, and to have thus got rid of the difficulty as far as we could; but it would be still unsightly.

1228. You do not apprehend any difficulty in so filling up the ground on each side of the road that there will be an easy slope of green across from the road, and that the road will not remain above any of the ground in its contiguity?—No doubt there will be an easy slope, but still you have the longitudinal difficulty to master; it gradually rises up to a point.

1229. Then you apprehend that the disfigurement would be in the slope of the road from end to end, and not in its being elevated above the ground on each side of it?—And it will increase, you see, in width as it approaches Wellington-street.

1230. Then, with reference to the portion of the road which is to be carried on arches, is it not the fact that those arches will be concealed by buildings erected on the south arches?—There will be no buildings on the south.

1231. The buildings that I speak of are those which will be substituted for the Thames Plate Glass Works, which are on the south road on the south side of which, by the Act of Parliament, houses may be built?—Yes; clearly that property belongs to us.

1232. Am I right in supposing that you would naturally cause buildings to be erected upon that site?—Yes; we should dispose of that for building purposes certainly.

1233. So that it would not be possible for anyone to see the arches on which the viaduct is carried, when the whole ground has been completely disposed of and covered with buildings?—Not this portion of it probably, if you carried the buildings high enough.

1234. Then that bit of ground in front of Carter-street is also intended to be built upon?—Yes.

1235. Therefore it would follow, that no viaduct, speaking of a viaduct as a road that is carried on arches, would be visible from the Embankment?—I do not know the extent of the arch at this moment, whether it is beyond the point coloured green or not.

1236. Look at the model, and I think you will find it is quite clear that it is?—The arches would be covered.

1237. *Chairman.*] Are you not restricted from building on that portion marked green?—Oh no; we have the right to build there.

1238. Why have you a right to build on that; is that what you purchased, and is it irrespective of the reclaimed land?—Yes.

1239. Mr. *Cowper.*] So that what has been called

called a disfigurement really results in this, that there is a gradual slope from east to west, consisting of the roadway and the ground near it?—Yes, I think the arches would all be covered.

1240. Mr. *Tite.*] Concealed?—Yes, concealed.

1241. Mr. *Cowper.*] Then, as one of the objects for which the cost of the Embankment was incurred was the removal of the traffic coming from the eastward, through the Strand to Charing-cross and Parliament-street, was it not a necessity that there should be some lateral line of communication by which people coming from the east might reach the Embankment between Blackfriars-bridge and Whitehall-place?—Yes, I have already stated that it would be desirable to have a communication, if possible.

1242. As you were one of the commissioners who recommended this road from Wellington-street to Charing-cross Railway, I presume your idea was that it was the most convenient place in which you could get that lateral communication?—Yes, having regard to the gradients of the lateral streets.

1243. But supposing that the land which was intended to be left as pleasure grounds were to be used as building ground, would you then see an objection to placing a road in the position which would interfere with that building?—When you state that I, as a commissioner, thought that was the best approach at the time when the Commission determined that matter, of course the whole question dealing with that area of ground reclaimed was undetermined, and I naturally supposed that a portion, at least, of the ground so reclaimed would have been built upon, first, with a view of giving something like a return, in order to reduce the cost to the public of the Embankment, and, secondly, to put a creditable face on the Embankment itself, and not to leave offices and wharves of every possible description in a ragged and unsatisfactory condition, when we had erected the retaining wall and a splendid roadway, which the Metropolis might be proud of, I did not foresee that the whole thing was to be spoilt by the background being left in a condition which was unsatisfactory to everybody. When the Commission had reported a Bill was introduced into the House, and the whole of the ground so reclaimed was directed to be kept as gardens, so that we had no means of screening any approaches, or could help bringing it down in its naked deformity on to the Embankment.

1244. Assuming that the ground which was intended by the Act to be left as pleasure ground still continues as pleasure ground, can you suggest any other lateral communication which would be as good as the one proposed from Wellington-street to the Charing-cross Railway?—No; if you must have a communication with that part of the Strand, undoubtedly that is the best communication, having regard to the gradient.

1245. Although the line from Norfolk-street or Essex-street might answer some of the purposes, yet a good road from either of these streets would involve a very large expenditure, in the purchase of the houses on both sides of those streets, in order to settle the proper gradient?—No doubt; in Norfolk-street you see you are getting a long way back toward Temple-bar, and you are not giving relief to those parts which it was anticipated at the time would be relieved.

1246. If, then, assuming that we were to substitute another lateral communication on the west of Somerset House, should you think it advisable to buy up the houses in one of the existing streets and make the lateral communication there?—No, I do not think that that approach is so important as to justify that public expenditure.

1247. Would the object that is sought by this Wellington-street communication be attained by a road either through Northumberland House-garden or near it?—Well, that proposed line through Northumberland House is to give access from Charing-cross; it is to take in a distinct and separate traffic to that which you are pleased to call the viaduct. All the western traffic must go round Whitehall-place to get on to the Embankment. Supposing they are desirous to go to the City they must make that angle, which is very inconvenient, instead of passing on to the Embankment directly, supposing it was to be carried through Northumberland House.

1248. We may assume, then, that any vehicles which would find it convenient to make use of Wellington-street would not find any advantage whatever in making use of Northumberland-street; they would be coming from east to west or from west to east, and would not be assisted by coming down from Charing-cross on to the Embankment?—I do not think the east traffic proceeding west (I am now speaking of traffic proceeding west of Charing-cross) would use the Embankment at all, because it would be one-third greater distance, in the first place, to travel than going directly down the Strand, because you must remember that immediately this roadway from the Parliament House up to the Mansion House is completed, it will relieve immensely the Strand, Fleet-street, and all those other streets where the traffic is now so crowded. Therefore the traffic passing down the street westward would not be so inconvenient as now.

1249. Cabs starting from any point between New Bridge-street and Charing-cross would be helped by the Wellington viaduct, if they were going to Parliament-street, but they would not be assisted by a street that passed from Charing-cross to the Embankment by Northumberland House?—No, it would be no use to them.

1250. Do you think that if this present Wellington-street viaduct were omitted without a good substitute being found for it, it would be inconvenient?—Well, I think there would be a convenience from the construction of it, but unless you can in some manner screen it, it will be a disadvantage; independently of which it must always be borne in mind that the formation of that approach, whether from the point of the Strand or from Wellington-street, diminishes the value of the land, that might be appropriated for public purposes.

1251. That is for building purposes?—Clearly.

1252. *Chairman.*] Did I not gather from your evidence with reference to the possibility of combining, if it was found necessary, a roadway with buildings on that site, that you thought the roadway instead of bisecting the ground, as it does, in that red line, supposing the land was appropriated to building, might come at the back of those buildings?—We proposed to form that crescent not in front of the roadway but at the back of the road, but so to arrange the elevation as practically to get rid of the gradual rise which would be so offensive to the eye.

1253. Mr. *Cowper.*] What is the gradient of the red line; is it 1 in 57?—It is 1 in 35.

1254. Do you think that a rise of 1 in 35 is a

Sir *J. Thwaites.*

19 April 1869.

thing which is offensive to the eye in itself?—Well, it is not a long line, you see; you have a fine level line by the Embankment wall, then you are cutting off a considerable length which would be offensive to the eye.

1255. The upper part where the gradient is steep is to be concealed by houses?—No doubt where the arches are that would be concealed, but still there is a considerable length of approach before you get to the houses.

1256. Then what I understand is offensive is seeing a road which rises at a gradient of 1 in 47?—Whether 1 in 47 or 35 would not matter; first of all, your base, which I take the retaining wall of the Embankment to be, is in a straight line; then you have houses at the rear, and a line running diagonally against both, which must be offensive to the eye.

1257. Would a road in Constitution-hill become offensive to the eye if, instead of 1 in 58 it were 1 in 45?—Well, the conditions are not equal; in Constitution-hill you have a small rise which is unobservable, but to persons passing up the river, as I said before, you have a given line as a base, and then at the back of you a gradual rise; you have also a line cutting through a building at an angle with the base line, which would be offensive. It may be a want of taste on my part, but that is my impression.

1258. Would not the building in front, that is, to the south of the red, break that diagonal line which seems to disturb you?—To the extent of the arches, no doubt it would, but that is a small portion as compared with the whole.

1259. You were asked about a hole which is shown upon that model, in the property of the Duchy of Lancaster. May we not expect that the Duchy of Lancaster will utilise that land by erecting buildings upon it, and that therefore the hole will cease to exist?—It is impossible for me to say what the Duchy will do.

1260. But assuming that they have common sense, will they not do it?—Assuming always that they have common sense. But some people who have common sense, do not always act up to it.

1261. With reference to a question that was asked you in your previous evidence about the reasons for abolishing the veto which the original Act of Parliament gave to the First Commissioner over works executed by the Metropolitan Board of Works, to the value of more than 50,000 *l.*, you stated that that veto was abrogated in consequence of a dead-lock having arisen; I wish to ask you whether the veto that was exercised by the First Commissioner of Works upon your plan of June 1856, was not justified on his part by an assertion that the outfall proposed by your plan was within the boundary of the metropolis, and therefore contrary to the Act of Parliament?—I suppose, strictly speaking, that was so; it was just on the boundary, but I suppose a few feet would have determined it either one way or the other.

1262. Then the second veto, which was exercised in the later period of the same year, 1856, was justified by the First Commissioner on the ground that the outfall, though outside the boundary, was so near it, that it still was in contravention of the terms of the Act of Parliament?—I do not know that the First Commissioner justified the veto, but he alleged that as his reason.

1263. Then you adopted his suggestion of putting the outfall at a distance of 15 miles from St. Paul's, near Raynham Creek, and in your third plan submitted to him you placed the outfall at a place which he had recommended?—I think he proposed to go very much further down the river.

1264. Did not the dead-lock arise in this way; that the First Commissioner of Works, instead of simply expressing approval or disapproval of the third plan, summoned to his aid three engineers, who proposed a plan, which plan he submitted for the approval of the Metropolitan Board?—Yes; that is one part of the history of it.

1265. So it would seem that the dead-lock arose from the First Commissioner of Works having changed places with the Metropolitan Board, and instead of signifying his approval or disapproval, he submitted a plan to the Metropolitan Board for their approval or disapproval?—That was, undoubtedly, one part of the difficulty which tended to increase the dead-lock to which I referred; but it was not the whole history of the case, neither did it produce the result which I described to the Committee.

1266. But supposing the First Commissioner of Works had kept within the part assigned to him by the Act of Parliament, and upon your third plan had either approved or disapproved, the dead-lock which subsequently occurred from his suggesting a plan of his own would not have arisen?—The difficulty his plan suggested would not have occurred, but the dead-lock would have occurred.

1267. On the two previous occasions when he exercised his veto there was no dead-lock, but since he refused his assent to two plans, the Metropolitan Board proposed to submit a third plan?—What I understand by a dead-lock is this, that the executive, clothed with power to carry out a particular work, subject to the veto of A, were stopped in their progress, and prevented discharging their statutory duty by reason of the exercise of a veto which A had vested in him.

1268. I do not know whether I am right, but it occurred to me that it was not so much the exercise of his veto that made the dead-lock, as his submitting a plan of his own which the Act of Parliament did not empower him to do?—No doubt, if I may venture to say so, he went beyond his statutory power. He ought either to have approved or disapproved. That aggravated the mischief, undoubtedly; but it was not the whole of the mischief of which we had to complain, and which brought us to a dead-lock and prevented these large public works being carried out.

1269. Mr. *Tite.*] I believe that at present the Metropolitan District Railway Station is exactly opposite the end of Norfolk-street?—I believe it is.

1270. Do you apprehend that it is to be a building erected on the vacant ground, of the usual height and character of a railway station?—So I understand.

1271. Does it appear to you to be an inconvenient place for it?—Well, I do not think it is an inconvenient place as far as the railway itself is concerned.

1272. My question has more reference to the placing the Law Courts here; supposing the Law Courts are to be on the Carey-street site, as it is called, then the railway station would be tolerably conveniently

conveniently placed, as regards the courts of law, would it not?—Yes.

1273. But at the same time, the access would be by Essex-street or Arundel-street?—Yes; it is not quite at the end of Essex-street, it is at the end of Norfolk-street.

1274. The centre of the building is opposite to the centre of Norfolk-street?—That is so.

1275. There is a piece of vacant ground on the Thames Embankment at that point between Essex-street and Arundel-street?—Yes.

1276. I believe you have had a suggestion made by myself, that that site should be appropriated for a portion of the offices of the New Law Courts?—Yes.

1277. That would necessarily involve the widening of Essex-street and the widening of Arundel-street as part of the scheme?—Yes.

1278. It was supposed that a site could be found there for the Probate and other offices at a much less cost than the 700,000 *l.* that was supposed would be spent in enlarging the present area?—Yes; I believe that was so.

1279. Your mind evidently being that there should be some communication from the Strand to Westminster, and as you evidently seem to be disinclined to continue the proposition of taking it from Somerset House, would not Essex Street and Arundel-street be very convenient points, so as to diminish the traffic along the Strand and save distance up to Westminster?—It would save distance in going up to Westminster from that point undoubtedly, and would somewhat diminish the necessity of an opening from Wellington-street to the Embankment. Still, there is a considerable distance from Wellington-street up to Essex and Arundel streets, the whole length of Somerset House and the land beyond.

1280. Would it, in your opinion, be a convenient or an inconvenient place of access; it is, of course, west of the Temple, and very near the proposed site of the New Law Courts, and would at once cut off all the traffic going by Saint Clement's church into the narrow part of the Strand?—I think if the Law Courts are built at the point indicated, at the part cleared, the Carey-street site, some communication must be made from the Strand, near to that point, with the Embankment.

1281. Of course the means which would be obtained by purchasing the waste land there of the Metropolitan Board would have the double advantage of getting rid of the hideous sight of these ragged buildings, and of furnishing you with some means towards a public improvement?—Yes, no doubt it would utilise that portion of the ground.

1282. You have a right to sell that ground now, I think, between Essex and Arundel-streets?—Yes.

1283. Presuming that the greater site were used for the Law Courts, do you, or do you not, think that it would be desirable to have some convenient communication with the Strand at some tolerably near point, because if that land which is coloured red and green on that plan were occupied by the Law Courts, of course the access to Wellington-street would be at an end; do you think, then, that you could obtain a reasonable communication by means of Essex-street and Arundel-street transferring the cost of that red road which you have there, to the improvement of that approach?—No doubt if you mean by the larger plan, the Carey-street side, I think it is absolutely necessary that there should be a communication from the Strand at or about that point.

1284. If that were so, supposing the Law Courts were built on the site suggested by an honourable Member which will be discussed to-morrow, do you think that communication would be necessary notwithstanding?—Clearly.

1285. Mr. Alderman *Lawrence.*] Was it not the unanimous opinion of the Commissioners appointed to inquire into the best mode of embanking the Thames that the land reclaimed should be left as open space for the advantage of the public?—No, it was not my opinion.

1286. Was it not embodied in the Report of the Commission that the part which was reclaimed should be used as open space?—I think not; I should not subscribe to that view.

1287. It was the general opinion of the Commissioners that as much open space as possible should be kept for the advantage of the public, from the land which was reclaimed?—Yes, by the Commissioners who signed it, clearly.

1288. Is there not a very jealous feeling, and, I may say, a growing feeling, on the part of the inhabitants of this metropolis with respect to preserving as much as possible every open space which exists?—Undoubtedly.

1289. In your opinion, whatever alterations may take place with respect to the communication with the Embankment, and with respect to the erection of any public building adjacent to the Embankment, ought not the space which is now allotted as open space to be still retained for the advantage of the public?—I think a portion of the reclaimed land might, with great advantage, be given up for building purposes, having regard to the fact that you have a roadway of 100 feet in width. You have the whole area of the Thames, which of course would be a splendid open space for the health and recreation of the public, and I do not think that the abstraction of that part of it for building purposes would be a metropolitan injury.

1290. *Chairman.*] Would you see any difficulty whatever in combining the two, that is to say, from the conformation of the ground would there be any difficulty in so arranging the buildings that perhaps the most effective building you could get would be a public building, with a public garden in front of it?—Yes, but I am speaking now of the apportionment.

1291. So that laying out the ground on that principle, you would acquire a fit site for a public building, and assuming that the Commissioners wished this plan to be kept up with regard to recreation purposes, a large portion of it might be so kept, and at the same time would be more ornamental than it would otherwise be?—Yes.

1292. Mr. Alderman *Lawrence.*] Am I to understand that in your opinion you would advise a portion of the open space to be utilised for a public building, rather than for the present building adjacent to the Embankment, to be sufficiently cleared away and demolished, so as to allow space for a public building that might be intended to be built adjacent to the Embankment?—I should have no objection to a portion of the reclaimed land being used for that purpose. I apprehend that if a public building were placed there it would not be brought up to the roadway, the 100 feet way, but would be set sufficiently back to have it ornamentally arranged in front, so as to make it extremely pleasant, and so as to put

Sir *J. Thwaites.*

19 April 1869.

put a better face on the Embankment, and, I might venture to hope, improve the public taste, by preserving buildings of a public character, instead of buildings used for wharves and things of that kind.

1293. *Chairman.*] Alderman Lawrence has spoken with reference to the interest of the dwellers in the metropolis having open spaces and recreation grounds; there is another consideration, is there not, namely, the question of the rates; if a portion of this land were devoted to building purposes, the probability is that whoever used it would have to pay a certain sum for it, which would go, *pro tanto*, to the diminution of the expenses of this Embankment, whether from rates or any other sources?—No doubt; no one having any regard to the health of the metropolis can argue against the propriety of open spaces, but we must have regard to the cost of those improvements; and from the fact of the cost of those improvements being entirely borne by the ratepayers of the metropolis, they should be reduced whenever we can reduce them, by availing ourselves of some open space existing; otherwise the same doctrine would prevent us building on the other side of a public street which we are making. If we clear away the houses on one side of the street, if that doctrine were to be legitimately carried out, we should not be able to cover those open spaces which we have.

1294. Mr. Alderman *Lawrence.*] Then if that principle were thoroughly carried out, a much larger sum would be realised if the whole of the space recovered from the Thames by the Embankment were utilised for buildings?—I have not expressed an opinion that the whole of the space should be utilised.

1295. But undoubtedly a much larger sum would be obtained?—Undoubtedly; it is a question of degree.

1296. If it were possible to build a public building between the land which has been obtained by the Embankment and the Strand, would you not advise the public building to be placed so far back that the land would be still left, and the public building being placed upon higher ground would be seen to greater advantage than if placed on the level ground reclaimed by the Embankment?—That is a question of taste. I have no objection that a small portion of the reclaimed land should be given up for that purpose.

1297. When you say "a small portion," can you define the small portion of land which is to be given up which was originally intended for public use?—If you ask me the question, "Are you prepared to agree to the utilisation of all the land reclaimed from the river, except the area of the road"? I should say, "Most certainly not." If you ask me the question whether, having regard to the difficulties in the metropolis in carrying out improvements by reason of want of funds, I would use a portion of the land so reclaimed, and so recoup the metropolitan exchequer, I say I am ready to adopt that course.

1298. You look at it as entirely a question of funds, not as a question which is the most advisable for this metropolis?—Unfortunately for public bodies as well as for private individuals, the question of funds is a very important question.

1299. Then, not looking at it as a question of funds, but supposing it would not realise any more funds by using this portion of the ground than clearing away the back property, which would you advise?—I do not quite understand your question.

1300. My question is this, supposing you could clear away the whole of that back property which you say is of a bad description, and of a disjointed character, and build the public buildings which you wish to build, and buy the land adjoining to it, it not costing more than using the land, would you advise that proposition to be carried out?—It is quite clear, and the honourable Member will see at once, that a proposition for removing all these houses, and clearing the ground, would cost more than using the open space.

1301. But I will suppose that it does not?—The supposition amounts to nothing; it could not be carried out as a practical fact.

1302. Am I to understand that this opinion is your own opinion, but not an opinion which has been tested in any way by any resolution of the Board of which you are chairman?—No, I am simply expressing my own opinion.

1303. And in expressing that opinion, you are entirely guided by the question of the expense upon the metropolis, and the rates which would fall on the inhabitants?—That undoubtedly is a very serious element.

1304. Then I beg to ask the question whether the proprietors of the land adjoining the Thames Embankment, to whom portions of the land which has been reclaimed have been apportioned, have the power of building upon that land?—No.

1305. Then it has been very carefully provided by the Act of Parliament under which this Embankment has been made, that the land so reclaimed shall not be built upon by parties to whom the land has been apportioned?—I think that is clearly so in all cases.

1306. Mr. *Layard.*] Not in all cases; has not Lord Salisbury, under the Act, a power of buying that piece of land between Salisbury-street and the Embankment, and building upon it?—There are some exceptional clauses. There are special clauses with regard to the Duke of Northumberland, Mr. Drummond, the Duke of Norfolk, and the Marquis of Salisbury, but I cannot carry them in my head at this moment. I believe there is an arrangement with reference to the property of the Marquis of Salisbury that he can build on a small portion, but it is very small indeed.

1307. *Chairman.*] I think you stated a short time ago that the City Gas-works could build?—I am just about to read part of a section in the 27th & 28th Victoria, c. 61, the Metropolitan Railway Act, with reference to the gas-works. "No buildings, or other erections, shall be placed on any land reclaimed and inclosed under the power of this Act between the Embankment, so to be made, and the present left bank of the river without the consent of the Board in writing under their common seal, unless for such stations and other necessary works as are hereby expressly authorised, or, as shall be made with the approval of the Metropolitan Board of Works as hereinbefore provided, and such buildings as may be reasonably required by the City of London Gas Company, for the inoffensive conduct of the business of that Company, not being buildings for the manufacture and storage of gas; but the plans and elevations of buildings so required by the City Gas Company shall, previously to the execution thereof, be submitted to the Board for their

their reasonable approval." That clause we got inserted specially when the Bill was before the House.

1308. Mr. Alderman *Lawrence.*] Does not that apply to the buildings they possessed before?—No; you cannot control a man's freehold.

1309. Am I to understand that you are of opinion that a portion of the land might be utilised for building purposes, and the portion which is now to be allotted to the public as open spaces be diminished in quantity for that purpose?—In proportion to the land which you utilise, clearly; it is a logical sequence.

1310. Do you not think that a great error has been committed in permitting the St. Thomas's Hospital to be built so close to the Embankment on the southern side that no roadway has been left for carriages to drive in front of it?—The Board were anxious at the time to have had a different arrangement, but we consented to a footpath in front of St. Thomas's Hospital, having a road at the rear, running simply the width of the hospital, between the hospital and the water of the Thames, so that in point of fact there is a roadway, which roadway has been very much improved.

1311. My question is not whose fault it is, but do you not think an error has been committed in having that public building so near to the Thames that there is no public carriage drive in front of it, between it and the river?—I cannot say that an error has been committed by anybody; you have a splendid roadway in the rear, running parallel with the river within a few yards, comparatively speaking; a roadway therefore in front is quite an unnecessary consumption of ground, and it would clearly interfere with the character of the building to be placed there, to have a road both in the rear and in front. It would have made it extremely unpleasant for the patients of that hospital, and I do not know that the present arrangement is not the best.

1312. Lord *Sandon.*] Of course no one has a better knowledge of the requirements of the metropolis than you have; you are aware, of course, of the enormous difficulty of getting open spaces in any part of the town which is densely peopled; therefore we may consider it impossible to create any more open spaces for the masses in the centre of the town?—No doubt.

1313. Therefore all hope of creating this sort of place, parks or gardens, even on a small scale, is confined to the suburbs, many miles from the centre of the town?—Yes, all we can do is to preserve those which already exist.

1314. Would you not agree with me in saying that the district which lies due north of the Thames Embankment from Hungerford Bridge to Blackfriars Bridge is about the most densely populated part of London?—The population is very dense indeed.

1315. And of a very poverty-stricken and wretched character in many parts?—Yes, in many parts.

1316. Would you agree, with regard to this portion of the Thames Embankment, that the primary object should be, not so much to make it a carriage-drive, and a place of enjoyment for the wealthy, as a place of enjoyment and healthy recreation for that very densely-populated district?—I think we are combining both by the arrangements we have made.

1317. There are two arrangements, one the roadway, No. 1, and the other the roadway, No. 2, which would be absorbing a good deal of the space for carriage traffic; would you not, therefore, agree with me that it is very desirable to keep every inch of the ground that you possibly can for the purpose of the recreation of the million, instead of using it for building, considering that buildings might be equally well placed, though at some increased expense, on the site of the forlorn-looking structures which abut on the old river line?—Of course I should be glad to retain all the open places in the metropolis, but I must have regard to the position of the river; the present frontage of the river is disgraceful to the metropolis. Then, having regard to the enormous cost at which these metropolitan improvements are carried out, you cannot entirely disregard the financial aspect of the question.

Sir *J. Thwaites.*
19 April 1869.

1318. Am I not right in thinking that you will agree with me that the condition of the vast population of the places north of the Embankment, with regard to health of mind and body, is of greater importance than the advantage which would accrue to the City, of having stately buildings on the banks of the Thames?—That question assumes that nothing is done for the health of the inhabitants of that large and densely-populated district; but we have formed a roadway, and have formed footpaths very much wider than they are usually formed, for the purpose of giving the public access for the purposes of health; I do not propose that they should take the whole of the ground, only a portion of it.

1319. Will you kindly give me any comparison with regard to the acreage of the land which you propose to give up for public enjoyment on the Thames Embankment with, say, St. James's Park?—I do not know that; my point is first of all to have some building there which will screen that which I have described as a discredit to the metropolis, and I am prepared, in carrying out that view, to give up a small portion of the reclaimed land for that purpose; but I am not prepared to give up the whole.

1320. It is, in fact, a question of money, a question whether the metropolis can afford to buy the land for its public buildings, or whether it must encroach upon the reclaimed land, which, I think, should be kept guarded for public recreation?—It is a question of money, and a question of taste.

1321. I think, as a question of taste, we may put it aside, because everybody will agree that you can place your public buildings equally well at the back as you can at the front?—Only I want to know how that frontage is to be covered with creditable buildings unless you take some portion of the land which has been reclaimed from the river for building purposes, and erect buildings of a creditable character upon it.

1322. There is only one other question which I wish to ask you, which is with regard to the approaches to the railway station at Essex-street; I think I understand you to say that you thought the Metropolitan Board of Works were not to be charged with making the approaches for the public convenience to that station; that if the railway planted its station in an inconvenient place, the Metropolitan Board of Works had nothing to do with facilitating the public access to it?—No; I did not put it in that form, because one of our duties is clearly to facilitate the traffic of the metropolis; but what I said was this, that if a railway company placed their station in the most

Sir *J. Thwaites.*

19 April 1869.

most inconvenient position, as far as gradients were concerned, it was hard upon the metropolis to be called upon, at enormous cost, to give access to that particular station. On the abstract question whether it is the duty of the Metropolitan Board to facilitate the traffic of the metropolis, it is so under the Act.

1323. Mr. *McLean.*] Has clause 26 of the Act of 1862 been repealed by any subsequent Act; that is, the clause dedicating certain lands to the public for the purpose of recreation?—There is a slight alteration of it in a subsequent Act.

1324. Mr. *Buxton.*] You are of opinion, are you not, that in course of time the country will probably require large additional public buildings, besides those which it now possesses?—Well, probably that will be so.

1325. And that there will be a splendid site for them on a portion of the Embankment reclaimed from the river?—Yes.

1326. And that it will add greatly to the appearance of the river if we have some splendid public buildings on that portion of the reclaimed land?—Not to absorb the whole of the land.

1327. And it would be a great relief to the taxpayers of the metropolis, would it not, if a portion of the land were utilised that way instead of being left open?—It would.

1328. The ratepayers of the metropolis are very seriously burdened, are they not, by their rates?—They are.

1329. And very serious evils arise from the weight of the rates, which interfere with the building of houses for the working classes?—Generally, of course, if you overtax any community, you depress it in every form.

1330. In various ways the pressure of the rates is very great, and produces various evils, does it not?—It is very great in some districts.

1331. And when the Thames Embankment was made, the idea was that a portion of that outlay should be recouped to the ratepayers by arrangement; that part of the land should be set aside for building and so forth, was it not?—That was my own impression.

1332. The cost of the Embankment falls on the ratepayers of the metropolis, does it not?—Yes.

1333. And the benefit of it is mainly for those who live in this neighbourhood, is it not?—Yes; but that principle applies to all improvements.

1334. Still it would be, would it not, in your opinion, unfair to the metropolis that they should be required to make an enormous outlay merely to provide the people of this neighbourhood with extra recreation ground, one of a considerable magnitude having been provided, besides the roadway?—I think the roadway itself is a very large recreation ground, and, in addition to that, if you leave certain portions which have been reclaimed from the river, you are conferring a great boon upon the inhabitants of this densely populated district, admitting that you take a small portion for building purposes.

1335. And even if there were public buildings placed on a portion of this Embankment, was it not proposed to have parts set aside for recreation grounds, gardens, and so forth, in addition to the roadway?—It would be planted ornamentally.

1336. That would not be inconsistent with having public buildings at the back?—On the contrary, it would be consistent with it.

1337. On the whole, although you, like all others, would wish to give as much open space as possible for the recreation of the people, upon the whole, the balance of advantage to the metropolis and to the country, you think, would be that, at the back of this reclaimed ground, there should be places set aside for the erection of public buildings?—Yes; we have two objects in arriving at that conclusion. The first is to cover the condition of things which we have on that Embankment at present; the second is to get some slight return for the expense which the metropolis will be put to in carrying on this large work.

1338. Mr. *Beresford-Hope.*] Travelling back to the evidence you gave in answer to Mr. Cowper's examination, you say, you have been restricted, in laying out the green ground by the application of that road marked red; do I gather that you did not lay out that ground as you thought might be best, but merely as a makeshift, in order to meet the unsightliness of that gradually rising road?—Yes; clearly, as indicated in that model.

1339. The plan therefore that you now propose for laying it out is not what you would tender as absolutely the best?—If we had been in the first instance free, we should not have adopted that course.

1340. I suppose that if you had had your own way you would not have made the artificial ups and downs and mounds over that ground?—If we had had a series of that class of thing, in conformity with the ordinary notion of laying out an ornamental ground it would have been unobjectionable, but my opinion of a straight line rising from point *a* to point *b*, coming diagonally in opposition to the base line is, that the line at the rear would be extremely disagreeable.

1341. Looking to the ground that you are to lay out there, and looking to the possibility and desirability of its being backed by handsome buildings, would you not rather adopt the form of a rectangular terrace for forming a garden, than the picturesque form with mounds and shrubberies?—That would be a matter of taste.

1342. I was asking you whether you adopted the plan which you at present contemplate with a view of masking that part, or because you think it would be the best in itself?—If we were relieved of the obligation of the formation of that road, we should undoubtedly re-arrange the whole of the ground.

1343. You would re-arrange it as a whole?—Yes.

1344. Not with a view of hiding this or that, but with a view of distributing the whole in the handsomest and most commodious manner?—So far as the viaduct was concerned, it would be gone, and therefore would require no hiding; we should have the whole of it to deal with.

1345. You could lay it out with greater convenience either in connection with a public building or entirely as open space?—Yes.

1346. On the whole, then, you look upon the present arrangement of the land as a makeshift?—Entirely; applying the observation to that particular part.

1347. Do you conceive that you incur much additional expense by having to throw up these mounds in order to hide that viaduct?—Well, the expense would not be very much, and it is not an element of consideration.

1348. You could not give us any idea of the comparative cost?—No; I think the ground displaced

placed by the railway would be sufficient to enable us to fill up that.

1349. Now looking at the question of public convenience and recreation, is not that diagonal road almost fatal to anything like a large area for a popular recreation ground?—It would seriously interfere with its being laid out, especially for recreation grounds.

1350. It would interfere more with that than a public building would?—Well, I do not know.

1351. A public building would only occupy the one corner; it would be clear and compact; the rest of the ground also would be compact; whereas that is a line which cuts it in two, leaving only a narrow strip on each side: is not the road, therefore, more detrimental from being less compact?—No doubt; here it is raised, and the necessity of sloping it would affect a very large area of ground, probably more than the space necessary for a public building.

1352. Can you tell me in square yards or feet what the whole area of the diagonal road would be?—I will supply that information.

1353. I observe by the map that you have a white space to the east of the long green strip, which is your property for building?—Yes.

1354. Therefore, if there was any extreme necessity for providing a communication from Wellington-street to the Embankment, you might make a carriage road there, taking away one or two houses at the south end of Lancaster-place, and bringing a curved roadway, no doubt at a steep gradient, but still at a possible gradient, into Wellington-street?—The levels are so against us that we could not do that.

1355. I presume the continuation of Whitehall-place on to the Embankment is irrespective of the diagonal road; would you still propose to continue Whitehall-place on to the Embankment, if the diagonal road were done away with?—Yes; we are now forming it.

1356. Are you forming it on the same plan as on the plan before us, namely, debouching at a right angle on to the Embankment, and with a south easterly turn at the river-end of Waterloo-place?—The object of that formation is to take in the Craven-street traffic, and so accommodate the railway traffic at that point.

1357. Therefore it is irrespective of the diagonal road?—Entirely.

1358. And will be carried out?—Something in that form, even if the other were done away with.

1359. Is it also independent of the Northumberland House approach?—Entirely.

1360. In short, by dropping the diagonal road, or forming the Northumberland House approach, you would not interfere with that improvement?—On the contrary, the Northumberland House approach would enter into that; there would be a junction formed between the two lines.

1361. Have you calculated how much of the Northumberland House garden you would cut off by the plan, which you showed us early in the day?—A very small portion, indeed.

1362. *Chairman.*] I think you said, with reference to that, that it was almost inappreciable?—It is very small indeed.

1363. Mr. *Beresford-Hope.*] To whom will that long white strip to the east of Somerset House, and to the west of the Temple, belong?—That is vested in the Board on behalf of the public, to be laid out for public purposes.

1364. Have you power to build upon it?—No.

1365. It will be dedicated to the public for the purposes of public recreation?—Yes.

1366. Then that is an additional place for public recreation?—Entirely so.

1367. I did not gather whether you said that the Temple has power to build over the ground which vests in it, or whether it is to be kept open?—It is to be kept open.

1368. In addition to the Temple gardens?—Yes.

1369. Then as the Temple gardens are very liberally open to the public, that again is an addition to the public recreation grounds, or may be so?—Yes; and though the public might not have access to it, it is still an open place in the centre of the metropolis.

1370. Then it is not until we get to that place by the east of the Temple and west of the gasworks that private persons can build *ad libitum* close up to your Embankment roadway?—The reclaimed land in front of the wharves now under consideration of the Board will not be built upon.

1371. It is not allowed to be built upon?—It would not be brought out beyond the general line.

1372. I think you said that the land in front of the gasworks might be built upon?—No, they are prohibited from building on that; there is to be an additional wharf.

1373. Mr. *Layard.*] They are prohibited from building without permission of the Board of Works?—Yes.

1374. *Chairman.*] You read a clause, I think, which distinctly said that they might build, subject to your approval?—We had that clause inserted for the purpose of being able to refuse it.

1375. Mr. *Beresford-Hope.*] I suppose you apprehend that whatever course might be adopted with regard to the Law Courts, Essex-street must be widened and brought down to the Thames?—Yes; there must be some approach from that point.

1376. Therefore you infer, considering the satisfactory character of buildings in London now, that buildings of a creditable character will, in all probability, be put upon that site?—Yes, they ought to be, clearly.

1377. And probably will?—Yes.

1378. Supposing the Law Courts are carried out in Carey-street, should you have any control over the design of the buildings so erected, or are they exclusively to be built according to the taste of the people who build them?—All lands that the Board disposes of for building purposes they have always retained the control over, with regard to the elevations, and things of that kind.

1379. May I ask, as a fact, is that a dormant or an active power on your part?—An active power.

1380. You attach value and importance to the architectural character of the buildings put upon your ground?—Yes; they have to submit their elevations of the houses, and those are agreed to by resolution of the Board, and signed by myself.

1381. Have you any particular architectural adviser, or is it the general good taste of the Board which decides the question?—Mr. Vulliamy is architect to the Board.

1382. He is the adviser on such questions?—Yes;

Sir *J. Thwaites.*

19 April 1869.

Yes; and we have several architects of eminence on the Board.

1383. Mr. *Layard.*] I do not understand you to say that you have any control over buildings erected on private freehold land?—No; I refer to land which we ourselves have disposed of.

1384. Mr. *Beresford-Hope.*] You always make a rule of disposing of it, subject to your approval with regard to the elevations and things of that kind?—Yes; in all our new streets we reserve in all cases that right.

1385. There is one question about that crescent; I suppose that is not a design which you desire to carry out, or which you wish to see taken up again?—That is a point which is, of course, dropped.

1386. It was tendered by Mr. Vulliamy under particular circumstances, which do not now exist?—Well, we were anxious to do that which I have pointed out so many times to the Committee, namely, to cover these houses at the rear. If the roadway is to be got rid of, of course one part of our reason drops. With regard to the roadway itself, of course the Committee will take its own view of the case. I do not know whether they have rightly appreciated the position in which the Board is placed at this moment; I stated in my previous evidence that we had served notices on certain parties, and, in answer to those notices, we had received claims for very large amounts, which will, no doubt, when they come before a jury, or an arbitrator, be very greatly reduced; but several other claims having been sent in, of course we are under contract, and it is a matter of great moment to the Board that we should know as soon as possible what the disposition of Parliament may be with regard to this roadway. I have stated also that we have no desire to carry out this roadway, but we are carrying it out in obedience to an Act of Parliament. I suppose nothing less than an Act of Parliament would relieve us from the obligation of a contract into which we have entered; because, under the Lands Clauses Act, immediately you serve notice to take, it becomes a contract, and the parties can compel you to take, and may give you notice to summon a jury or an arbitrator for the purpose of deciding what compensation is to be paid. I do not know what the Standing Orders may be with regard to passing an Act this year relieving the Board from that liability; but it is a very unusual state of things, and probably has never arisen before, and if a course were taken without much delay, and before any of the parties who have been served with notices have acted upon those notices by taking premises elsewhere and entering into contracts themselves, to accommodate their professions or trades, then no serious injury will be done to the parties by merely withdrawing the notices; but if delay takes place, then parties, having received a notice, and having entered into a contract which they themselves can enforce, may take steps for the purpose of securing for themselves buildings in which they can carry on their trades or professions; I merely name that, because it is quite clear that the Board will not be able to fence these parties off; they having given us notice, we must proceed with our work; I hope the Committee will forgive me for putting that forward, because it is really the pith of the whole question, so far as this approach is concerned.

1387. Mr. *Sclater-Booth.*] In reference to the statement which you have just made on the part of the Metropolitan Board of Works, can you, within a reasonably short time, present to the Committee a scheme such as you would suggest should be substituted for the road which you are under a contract to construct, and carrying out, as you have stated your wish to be a division of the reclaimed land between building purposes and recreation purposes?—I do not think we could present any scheme for an approach from Wellington-street to Craven-street; supposing always that this particular scheme is dropped, I do not think we could present any scheme which will really give an available approach from the Strand by reason of the imperfect gradients which exist; therefore it will be simply a question as to the disposition of the ground.

1388. Do you mean to say that from your point of view you would desire that this inclined roadway should be dropped, and there should be no substitute for it except such lateral approaches as you can make from the streets leading down from the Strand?—I think that is clearly the best road that can be made with a fair and reasonable gradient. As far as we are concerned, of course we should rather apply the funds for the purpose of forming an approach from Charing-cross, to give relief to the western traffic finding its way on to the Embankment going to the City.

1389. Then, supposing Parliament were immediately to relieve you from the necessity of making this inclined road, you, in your judgment, would propose nothing by way of a substitute for it?—We cannot; it is physically impossible.

1390. I understand you to say that the communication from Whitehall-place and from Craven-street is in process of formation, and will be undoubtedly carried into effect?—From Whitehall-place clearly.

1391. And from Craven-street?—Yes.

1392. That being so, do you seriously contemplate the advisability of spending a sum of from 200,000 *l.* to 400,000 *l.* in making a roadway between these places to connect Charing-cross at right angles with the Embankment?—I have said before it is absolutely necessary to have some approach from Charing-cross other than the approach through Whitehall-place. It is very inconvenient for all the western traffic to come down that narrow street with an incline, and come round by Whitehall-place to get down to the Embankment.

1393. What western traffic wants to go down the Embankment at right angles?—I think all the western traffic passing through Trafalgar-square anxious to go to the City will necessarily select the Thames Embankment route.

1394. Why should they do so after the Strand has been cleared of a great portion of its traffic?—Because it is clearly the nearest way. In the first place, they get rid of a hill; you have in the one case, Fleet-street and Ludgate-hill, and you have a narrow inconvenient roadway, while in the other case, you would have a roadway of 100 feet along the Embankment.

1395. Then, after all, it would be limited to the western traffic coming from Charing-cross and requiring to go as far as the Bank, because there is no other convenient mode of getting back into a great thoroughfare?—Yes.

1396. Will the cost upon the ratepayers of the metropolis be very considerable for the accommodation of that limited traffic?—No doubt.

1397. Seeing also that there is a railway at Charing-

Charing-cross to carry a great portion of the traffic?—At present, apart from any funds that might be derived from disposing of any portion of the land, we really have not any funds for carrying out that approach from Charing-cross.

1398. With regard to this crescent which is shown on the plan, do I understand you to say that you have now power to carry out that crescent?—No.

1399. That crescent was designed to stand upon a portion of the reclaimed ground?—Yes.

1400. And you have no power of building upon the reclaimed land at all?—None.

1401. Supposing buildings were placed on the reclaimed land, and supposing they were placed at the back of the reclaimed land, that is to say, at the point nearest to the existing buildings, they must be of an enormous height, must they not, in order to have any effect from the river?—Yes, of course, if they were public buildings they would be buildings of a considerable height.

1402. But no public buildings of an ordinary height would have any effect from the river, seeing that they would be placed back from the river at a distance, I suppose, of 200 yards or more?—Not quite so much as that.

1403. Do you contemplate that public buildings set back from the edge of the river could be constructed of sufficient height to conceal the whole of the unsightly buildings that stand upon the proper bank of the Thames?—Yes, I should think the height probably of the buildings now existing would range from 15 to 20 feet.

1404. I do not quite understand you?—The present line, or, rather, the line of the Embankment prior to the new formation, is higher than the bed of the river; that height would vary from 15 to 20 feet, and that is the building you would have to screen.

1405. Should you not expect your new building to conceal, for instance, Adelphi-terrace?—No, not necessarily.

1406. Would you intend to show the Adelphi-terrace buildings above your new buildings?—Not necessarily to show them, but they might be higher than the buildings, and I do not know that there would be any objection to that, because the ground gradually rises up to Seven Dials.

1407. If you do not show them, do you not think, as a matter of taste, there would be some difficulty in designing the buildings set back from the river, which would be dwarfed by the Adelphi-terrace and the enormous roof of the South Eastern Railway Station?—That depends a great deal upon the character of the buildings.

1408. In the event of Parliament sanctioning an appropriation of this reclaimed ground for public buildings, would you expect that the persons erecting the buildings should pay you the full market value of the site?—Clearly.

1409. That would amount to a very large sum?—No doubt.

1410. You would not expect that, because the buildings were for public purposes, therefore the Metropolitan Board should not be paid the full value for the site?—Clearly not.

1411. *Chairman.*] There is an old saying that half a loaf is better than no bread; in your present position you have no bread at all with regard to this land; that is to say, you can dispose of none of it for public buildings?—Exactly; but the time for negotiation has not yet arisen.

1412. Captain *Dawson-Damer.*] Even if the Carey-street site is still chosen for the Law Courts, is it not necessary to have communication with the Strand from the Embankment, either by Arundel-street or Essex-street?—Yes, I think there must be some communication.

1413. Mr. *Dilke.*] With reference to the lateral communication you spoke of just now, and one of the changes proposed causing the widening of some of the streets, can you tell at all what would be the cost of the viaduct by reason of the waste of land?—Supposing the land were to be sold for building purposes, the question is, what would be the reduced value of the land by reason of this viaduct.

1414. That is my question?—I have not gone into that matter, it is a question of calculation of the width of the road and the slopes, and how it prevents your disposing of the other land for building purposes.

1415. It is material to the present inquiry, is it not?—I will supply that information to the best of my judgment if you will permit me to do so.

1416. Mr. *W. H. Smith.*] You said that an approach by Essex-street is absolutely necessary in your judgment?—Yes, I think it will be still more necessary if these buildings are erected.

1417. That will take all the traffic coming west from any point east of Essex-street?—Yes.

1418. If there is an approach also at Wellington-street, that approach will only take the traffic in that case arising between Essex-street and Wellington-street, or coming north from Wellington-street?—If you stop the traffic of the Strand at Essex-street, you are diverting it from using the Wellington-street line.

1419. At Wellington-street you would only have the traffic as between Essex-street and Wellington-street, or as between Endell-street and the north of Wellington-street, which would be small?—All persons coming down the lateral streets into the Strand would probably use that approach.

1420. Wellington-street is only a thoroughfare north and south; it is not a thoroughfare as from north to west at all, because the traffic coming from the railways, from Euston-square terminus and the Great Northern terminus, finds in Holborn, or in High-street, south-west streets running through Seven Dials and to St. Martin's-lane, taking that traffic south-west and west; Wellington-street is merely used as a north and south road, not in any sense as a road for the convenience of passengers living west of Charing-cross?—No; all traffic due from the area north and south of Holborn, for example, would not necessarily come down to that point there to go to the City; they might take another line, and it would be merely the east and west traffic.

1421. So that the road which is proposed to be formed from Wellington-street to Hungerford would be a road simply for the purpose of the traffic arising between Essex-street and Wellington-street, or between Endell-street on the north; that is between Holborn, as the extreme point north, and the Strand?—It would, of course, be a question of convenience whether a party driving past the end of Essex-street would say, "I will turn down Essex-street and get on to the Embankment, in order to find my way to the Parliament House;"

Sir *J. Thwaites.*

19 April 1869.

House;" or, "I will go straight on, and go by the more direct route."

1422. You can only speak of probabilities, but it is probable that a person would prefer the Embankment drive rather than the narrow drive through the Strand and Wellington-street?—No doubt the temptation will be to get on to the Embankment as soon as possible.

1423. Then it will come to this, that if the approach is made by Essex-street, which you declare to be absolutely necessary, the approach from Wellington-street becomes of very much less importance?—I think it is of less importance.

1424. The remar7 is merely confined to the traffic arising between Essex-street and Wellington-street, and between Holborn and the Strand, which are not points developing a great amount of traffic?—No doubt that would be so.

1425. Then as far as the approaches west of Whitehall-place are concerned, has the Board any power to make any approach to the Embankment for carriages, west of Whitehall-place?—No.

1426. Therefore all the carriage traffic coming from the City must be turned out into Whitehall, under the present arrangement?—We are now considering a proposition for opening a communication from Derby-street next to the new club in Parliament-street, over some ground which we have purchased, which was previously occupied by wharves, and it is a question whether we can make a communication through that.

1427. You have power to make it?—Yes, it would be over our own ground, but we have no power to take down the red line.

1428. It would be most desirable that there should be an approach as nearly as possible to Great George-street and Westminster-bridge?—Yes, I think it would be a desirable thing, if the cost is not too great.

1429. The use of the Embankment will be very considerably restricted if all the traffic is to be turned out at Whitehall into Whitehall-place?—They have an approach at Westminster-bridge.

1430. Only for foot passengers?—Oh no, a carriage road is contemplated of 100 feet in width.

1431. Mr. *Cowper.*] Is it a fact that the reclaimed land which is not to be built upon, which lies east of Hungerford-bridge, and which is marked green in the map, amounts to six acres?—Six and a quarter acres, I think.

1432. Then supposing that a public building were erected upon that site, would any land be left worth using as recreation ground?—Well, I think it might be laid out ornamentally.

1433. I mean as to the extent; supposing half of it were taken for public buildings, would not an area of three and a quarter acres be a very small area for the recreation of the public?—Even as it stands now, I do not suppose you could have a cricket ground there; neither could you devote it to many other purposes for which a public park would be devoted; still there would be so much open space.

1434. Can you inform the Committee what is the area of the reclaimed land between the proposed railway station, south of Norfolk-street, and the Temple-gardens?—I will supply that information.

1435. *Chairman.*] You may give us, if you please, at the same time, the whole of the land including that portion which is not coloured at all, the white block upon which you are empowered to build; give us all that is marked green, red, and white upon that map?—This map is correct, and I can leave it for the consideration of the Committee for a short time.

1436. Mr. *Cowper.*] Having reference to laying out the ground north of the Embankment in the most artistic and architectural way, would it not be preferable that the flat ground, level with the water, which has been reclaimed, should remain as recreation ground, and that the buildings which are to give an architectural effect to the site should be erected on the high ground?—That no doubt would get rid of one of my objections; you would then give a respectable appearance to the face of the Embankment, but it does not get over my next objection, namely, that we should like to have a little return.

1437. Do you not think that, in the ordinary course of things, the very inferior houses which now occupy the crest of the hill above the Embankment would naturally give way to houses of a higher class and of a more architectural appearance?—I have no doubt that if the Embankment were laid out, disregarding the frontage entirely, that self-interest would move the proprietors of houses ultimately to construct houses of a better character, and probably to erect dwelling houses in the place of other houses facing a splendid river roadway and ornamental grounds; that would be very probable, but it would be the work of time; still, it is just that kind of thing which you might expect will be the result of years.

1438. Can you give us the gradients of that roadway which is marked upon the plan as coming down from Norfolk-street laterally, to the right of the Duke of Norfolk's approach road?—The steepest gradient is one in thirty.

1439. You just now assumed that Essex-street would be made into a street fit for traffic; will you tell me at whose expense Essex-street is likely to be so improved?—I hope at the expense of the Crown, or rather the nation.

1440. You are not contemplating an expenditure of any of the funds of the Metropolitan Board of Works upon that?—No; we have no funds at present applicable to that purpose.

1441. Mr. *Tite.*] You spoke of a possible street, which I apprehend you mean to be between Richmond-terrace and Westminster-bridge?—I think it is called Derby-street; it is a short street running by the side of the new club.

1442. Would there not be great difficulties there with regard to the levels?—Well, probably they might be filled up so as to lessen that difficulty; but it is a case of cutting up some valuable building land, which would occasion considerable cost.

1443. My question had regard to the physical difficulty, and not to the cost; you have not had the levels taken, perhaps?—We have not.

1444. Mr. *Alderman Lawrence.*] Can you tell why the Metropolitan Board of Works obtained a Bill for the abandonment of the approach through Whitehall-yard?—Because we did not think it was necessary, and the cost would have been more than the value received.

1445. More than the value that would have been received by the Board?—By the public.

1446. Are you aware that the whole of the land, for some distance, right and left of that approach is Crown land, belonging to the Woods and

and Forests?—I think the whole of it belongs to the Crown.

1447. Are you aware that the leases of the whole of that property at the present moment are in hand?—I am not aware of that fact.

1448. Do you not consider that if that approach were made by the owners of the property right and left of that approach, the property would be increased in value to a much larger amount than the cost of making that approach?—I have not gone into that question, and therefore cannot offer an opinion upon it. So far as the Metropolitan Board is concerned, if we had purchased the property for the purpose of making that street, we should have been restricted to so much as was necessary for the area of the street itself; the building land would have reverted to the Crown, and the frontage which, in point of fact, we had created, would go back to the Crown, so that the public would have had no return; but the Crown, taking it up, of course could utilise its own land.

1449. I think this rather an important point; it is quite true that if, according to your Act of Parliament, you had made the street, the ratepayers would have found the money, and the Crown would have obtained an advantage in the increased value of the property right and left of that street?—Yes; but no doubt you are aware that in all cases where you take Crown property, they usually require the insertion of a clause which would give them the property and restrict you to taking just as much as you require for the improvement itself.

1450. Have you seen Mr. Pennethorne's report upon this matter, in a letter dated 24th of April, 1868, in which he states, "Having regard to Buckingham Palace, the Park, and the Horse Guards, with the public offices south thereof, the Treasury may deem a handsome approach to the Embankment necessary, as shown by Plan A?"—Yes; and we shall be very glad to see it made.

Sir *J. Thwaites.*

19 April 1869.

1451. My question is not whether if the Board of Works had made this street they would have been able to recoup themselves, but whether, from your knowledge of the locality, and the plan which has been marked out by Mr. Pennethorne, that approach might not be made, and profit made by the possessors of the Crown land, in consequence of that approach being made?—I have not gone into that question.

1452. Mr. *Cowper.*] As regards the public convenience, it would not have been necessary, would it, to have had a street both at Whitehall-yard and at Whitehall-place?—It did not appear to be so.

1453. *Chairman.*] But with reference to the traffic and the public convenience, the road at Whitehall-place would be comparatively not of any service to those who dwell in Tyburnia, Belgravia, St. James's, St. George's, and Marylebone, as compared with an entrance at Charing-cross through Northumberland House or a curve round Northumberland House?—Yes, that is clearly a necessary approach to complete the Embankment.

1454. When Mr. Sclater-Booth, a short time ago, asked you a question as to the districts of London which would be benefited, he seemed to assume that it would only benefit those living in the west and north-west who were going to the City; would it not be the case that persons living in the districts to which I have just referred, going over Westminster-bridge, would greatly prefer that route, instead of going up the narrow part of the Strand, and turning that crowded corner at Bridge-street?—Yes, no doubt it would.

The Right Honourable AUSTEN HENRY LAYARD, a Member of the Committee; Examined.

1455. *Chairman.*] YOU have naturally, in your position as First Commissioner of Works, taken the question of this roadway into consideration?—I have.

1456. Have you considered it, not only with reference to the effect which it would have upon this ground so reclaimed by the Thames Embankment, but also with reference to its necessity as a communication between different parts of the metropolis?—Of course I can only give a personal opinion upon that subject; but, as far as I have been able to ascertain from inquiries, I do not at present consider that it has been proved that that line of communication is necessary for the diversion of a large portion of the traffic of the Strand.

1457. Then you think, as regards what I may call the arterial communication of the metropolis, that it really is not an indispensable roadway?—I think not; I think the statement made by Sir John Thwaites is conclusive upon that point, that if you have, as you undoubtedly will one day have, a communication between the Strand and the Embankment by Essex-street, you will, by that street, draw off a large portion of the traffic coming from the City, which would seek the Embankment, and therefore you would very much relieve the traffic between Essex-street and Wellington-street, and render it unnecessary to have a further communication between Wellington-street and the Embankment.

Right Hon. *A. H. Layard*, M.P.

1458. Looking to the other end, you naturally feel, as every one feels, that the great district of this metropolis which lies in the direction of Belgravia, Tyburnia, Marylebone, St. James's, and St. George's parishes, would naturally require or wish for some approach as direct as possible to the new roadway on the Embankment?—Undoubtedly.

1459. Whether that population is going eastward to the City, or westward to Parliament-street, or over Westminster-bridge?—Undoubtedly; anybody coming from the west of Charing-cross would, if possible, seek the Embankment, because, besides the Strand, they would have Fleet-street, Ludgate-hill, and St. Paul's Churchyard to go through; and even if the Strand were relieved of traffic, you would have very heavy traffic in Fleet-street and St. Paul's Churchyard; therefore, people would naturally seek the Embankment by the shortest possible route, which would be the road which you propose by Charing-cross on to the Embankment.

1460. And this diagonal road under consideration would in no way affect the communication between the parts of the metropolis to which I have referred and the railway or the Embankment?—Certainly not.

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

1461. Practically, then, it comes to this, that this roadway is, in the main, a means of bringing into communication the Admiralty, Horse Guards, and Somerset House?—Well, the difference in the distance between the Admiralty and the Strand entrance to Somerset House, whether by the Strand or the proposed road, would really be scarcely perceptible. I believe it has been measured by some gentlemen connected with the Office of Works, and it has been found that the distance would be about the same; that is to say, anybody wishing to go from Somerset House to the Admiralty, whether he went by the Strand or the proposed road, would have about the same distance to traverse; I believe the difference if, any, is in favour of the Strand.

1462. So that, in point of distance, there would be no gain, or any gain that there might be would be in having two routes instead of one?—That is to say, supposing you were going from the Strand side or from Somerset House to the Admiralty or the Horse Guards.

1463. Supposing the Law Courts to be on the Embankment site, this new route would be no advantage, in that case, to those who frequent those courts?—None whatever.

1464. Supposing the courts remain where they are at present proposed to be placed, namely, on the Carey-street site, and assuming that a road is made at Essex-street, a good approach to the Embankment, do you think persons going to the House of Commons from those courts would be more likely to go by the Essex-street route, or by this red road?—Undoubtedly by the Essex-street route, I should think, unless the traffic of the Strand was very much relieved.

1465. If the Law Courts are put on the Carey-street site, even if this road were made, that portion of the Strand between the corner of Wellington-street and Carey-street would not in any way be relieved by the creation of this road, would it?—No; undoubtedly it would not be relieved.

1466. But Essex-street would clearly take away that portion of the traffic?—Of course; if Essex-street were enlarged, and made an accessible street to the Embankment, no doubt that would relieve a portion of the Strand traffic, but not otherwise.

1467. Leaving the question of the absolute necessity of this roadway, which you appear to consider more or less of secondary importance, I will come now to the question of the utilisation of this land: you are aware that by the Act of Parliament this land cannot be used in any way for building purposes, and at the same time that there are provisions in the Act that it is to be kept for the purposes of recreation; do you think, irrespective of such conditions, so tying down the use of this land, it is a site which might advantageously be used for public buildings?—I think I had better state to the Committee the way in which my attention was first called to this road. I confess that when I first went to the Office of Works I was not aware that that road was about to be constructed; I was not aware of the provisions of the Act of Parliament; but there is a public building which must be constructed very shortly, and which, in public opinion, requires a central position. In thinking over the different sites which might be appropriated to that public building, it struck me that the site between Waterloo-bridge and Hungerford-bridge would be an excellent spot for it. The public building to which I allude is the Museum of Natural History. As the Committee is no doubt aware, it has long been thought absolutely necessary that the natural history collection should be separated from the art and archæological collections and library of the British Museum. Various sites have been suggested for the new Natural History Museum, amongst others a site connected with the South Kensington Museum. Great objection has been taken to that site by various scientific men, upon different grounds, and considerable opposition has been raised to the transfer of the Natural History Museum to South Kensington. It appeared to me that the site in question would be admirably adapted for the purpose of the Natural History Museum; I communicated with a great many of the leading scientific men of this country, and they all accepted the idea as the one best calculated to solve the difficulties with regard to the removal of that Museum. Every one to whom I spoke on the subject, including, I think I may state, Mr. Cole, who might have been supposed to be very adverse to this scheme, at once accepted this site as the most appropriate for a Natural History Museum. They admitted at once that it would be the most appropriate, as being central, very accessible from the south of London, from whence access to a museum is much required, as being immediately in connection with the British Museum, as being removed altogether from South Kensington, South Kensington having been considered as objectionable by scientific men on different grounds, and as having plenty of light and air, from having the river in front. I thought, consequently, that this site offered many advantages for the erection of such a building; and on coming to inquire how it could be erected there, I found that this road was about to be constructed, which would at once put an end to the possibility of making use of the site for this purpose. I am aware that the Act says, that the reclaimed land is to be used for the purposes of public recreation; but that word seems to me to be a very wide one, and I think nothing could tend more to public recreation and enjoyment than a great Natural History Museum on that spot, laid out with appropriate gardens in a way which would attract the public, which would lead the working-classes to go to the Embankment, and from the Embankment to the museum; in every respect, I think, such a building would be eminently calculated for public recreation; therefore the words of the Act would be met by erecting a building of that kind on this site. I entirely agree that it is very important to keep open spaces for the public, but the River Thames is an open space in this part of London, and the three or four acres of land which might be used for a Natural History Museum, leaving three for public recreation in the way of gardens would not make much difference; if the public building which I propose were erected with gardens, and were carried back to the Adelphi-terrace, which is possible, there would be ample enjoyment to the public, as far as gardens are concerned, with the additional advantage of a public building containing so interesting a collection as that of natural history; but as long as it is contemplated to make this road, it is impossible to utilise the site for purposes of this kind.

1468. Then you consider that a museum would be a recreation ground taken *per se*?—The very best of all places of recreation, I think.

1469. Have you any plan which you could lay before

before this Committee, by which, setting aside the question of the ground which is used for the museum being, as a museum, a recreation ground in itself, you could so arrange the remainder that it would be an open space, not only recreation ground, but probably more ornamental, from the juxtaposition of this building and its adjoining terraces, than it would be if simply a recreation ground as now laid out on that model before us?—I must mention that when the idea was suggested of a Natural History Museum on this part of the Embankment, I consulted Mr. Waterhouse, the architect commissioned by my predecessor to erect a Natural History Museum, supposing that museum to have been at South Kensington. Mr. Waterhouse, who is an architect of great eminence, was very much attracted by the idea, and at once said that the advantage of the erection of a great building upon this site was so great, that he would willingly reconstruct his elevations and plans. I may state to the Committee that he had already prepared elevations and plans for a building at South Kensington; but he declared that he would willingly undertake to reconsider all his plans and elevations for the purpose of putting the building on that site; I think, therefore, that the Committee will do well to examine Mr. Waterhouse on that point, and I think he will satisfy the Committee that an admirable building, with gardens and approaches, could be erected on this part of the Embankment; upon that point, of course, technical evidence should be taken, and I should recommend the Committee to call Mr. Waterhouse.

1470. Questions were asked Sir John Thwaites with reference to any public buildings which might be erected there, which implied that those buildings would be on a low level, and it would be necessary to keep them on a low level; is that your view, or do you contemplate the erection of this building upon a raised terrace, which would be much more imposing in character, and would improve the appearance of the recreation grounds below, or the gardens, or whatever you choose to call them?—That would, of course, depend a good deal upon any decision the Government may come to; for I must state to the Committee that the evidence which I am now giving is entirely founded on my own private opinion. I am not authorised by the Government to put forward this scheme, but it is simply my own view, which I am bound to express to the Committee. Of course, the question of raising the building is one of expense, but a high building would be a much finer object than a low one.

1471. Have you considered with Mr. Waterhouse, or in your office, whether, supposing such a building were to be erected, and it were subsequently found, by the course of traffic in the metropolis, that it were necessary or desirable to have some sort of communication with Wellington-street or the Embankment roadway below Charing-cross approach, it would be advisable to have such a communication in the rear of that building?—Yes; I have consulted Mr. Waterhouse on that subject. Of course that is a matter of expense. It could be done, no doubt.

1472. You have no doubt that a roadway of that kind could be obtained with a possible carriage gradient?—Yes, I believe it could be; in fact, a similar road to that which we are now inquiring into will be carried further back, and behind the building.

1473. Apparently, in the position in which this roadway is, if Parliament takes immediate action, there would be an opportunity of preventing the destruction, for it amounts to that, of this reclaimed land, for any purposes but a public building?—Exactly.

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

1474. If Parliament does not seize that opportunity, it will be gone for ever?—It appears to me to be so.

1475. It will be doubly gone, will it not, in this sense, that a roadway will be constructed which will render the greater portion of that land permanently unavailable for public buildings, and a site will be left in the rear of that land for the present proprietors of those buildings to erect whatever chance buildings may seem to them desirable as private speculations?—That will naturally be so; but I must remark that of course you might, by buying Adelphi-terrace, and the land between that and John-street, still erect a public building there; but you would have to pay a very large sum for that land, and I think the expense would put it out of the question. There is another objection, that you would carry the building too far back, and one of the objects in putting a public building there would be lost, that is, the object of screening that hideous semi-circular roof which covers the railway station.

1476. Then if I may summarize your conclusions from what you have stated, they come to this: that, in your opinion, there is sufficient ground here to erect a fine public building?—Undoubtedly.

1477. And combine with it a considerable amount of garden and recreation ground?—Yes.

1478. That you have at the present moment a building in view which would answer in itself the purposes of recreation, and would be better placed there than in any other part of the metropolis?—That is my personal and private view.

1479. That persons who object to the transfer of the Natural History Collection to Kensington are not only content, but would highly approve of its transfer to this site?—Yes, some of the principal scientific men in this country inform me that they would accept this as a solution of the difficulty; that they would be glad to see the collection there.

1480. That no objection is raised on the part of those who are interested in Kensington, Mr. Cole for instance, to this change of plan?—On the contrary, I have reason to believe that Mr. Cole highly approves of it.

1481. We have heard a great deal as to the necessity of the Natural History Museum being left in the centre of the population; as far as that could conveniently be done, *quâ* that point, the museum would be nearer the great efflux of population, would it not, than if it were transferred to Kensington?—Yes; it appears to me the position would be in every respect admirable, and the most central you could find. It would give the south of London easy access to a great museum; by the bridges, and by ferry steamers, people might cross the river in a very few minutes. On the other hand, by the Metropolitan Railway, you would have access to the museum from all parts of London, and all parts of England. For excursion people coming up from the country, and for the best class of working men, I think such a site as that would be of the greatest possible

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

possible advantage; in fact, you could not get a finer and more appropriate site for a Museum of Natural History.

1482. It would be near the Houses of Parliament, Somerset House, and possibly the Law Courts, so that the excursionists to whom you refer, would, within a reasonable distance, have not only the advantage of seeing the Museum and its contents, but also the buildings which lie right and left of that site?—Certainly.

1483. Supposing this road to be made, it would either render it impossible to erect such a building, or would greatly add to its cost by necessitating the purchase of more of the land, and the buildings lying north of this contemplated roadway?—I may state, as far as I am concerned, and as far as I know the opinions of the Government, that if that road were carried out I should not think it possible to make any proposal for having any public building there.

1484. So that the creation of this roadway puts a stop entirely to any idea of the Natural History Museum being on that site?—Completely.

1485. Do you consider, looking to the responsibility which one generation incurs to future generations, by their conduct of matters such as this, that this House of Commons and this Committee would be justified, upon the evidence that has hitherto been brought before it, in sacrificing this land for ever, by causing the act to be carried into effect for the making of this roadway?—Of course, I only speak for myself; I naturally think it would be a very great reflection upon our generation if we neglected an opportunity such as has never been presented to this country before, or perhaps to any country, of converting the main artery of this metropolis, the River Thames, into a line of great public buildings; we have now that opportunity, and if it be lost, it is gone for ever; we shall never have such another.

1486. Looking to the position in which this roadway is, *quâ* Acts of Parliament, is it your own opinion that it would be desirable to relieve the Metropolitan Board of Works from the obligation of making this roadway?—I have a very strong opinion on the subject. I think it would most decidedly be advisible to do so; I have stated that in the House of Commons, and of course there is no objection to my re-stating it now.

1487. Do you think, supposing the Committee were to report in favour of relieving the Metropolitan Board of Works from the obligation, and Parliament were to approve of such a report, there would be any difficulty in relieving them at once in the present Session by a suspension of the Standing Orders?—I could not give an opinion on that subject; I presume it could be done, but it is a matter of practice.

1488. Setting the question of practice aside, assuming that practice did not render such a course impossible, do you think it would be desirable in the position in which this question now is, looking to the evidence given to-day by Sir John Thwaites, and to the position of the Metropolitan Board of Works with reference to the notices which they have served, that this question should be decided as speedily as possible, and that this Committee should report its view upon this branch of the inquiry as soon as possible to Parliament; and then, if Parliament approves of our view, that we should take some steps to settle the question at once?—Of course every thing must depend upon the Report of this Committee; if this Committee makes a very strong Report, I presume some action must be taken, and, of course, if the Committee decides upon reporting in that sense, the sooner it is done the better.

1489. I asked you whether it is your individual opinion that it would be desirable that this Committee, upon this branch of the inquiry, should report at once, as soon as it has satisfied itself upon the evidence before it?—Certainly.

1490. And not delay the Report longer than is absolutely necessary to come to some decision on the matter before us?—Certainly. I may state to the Committee, that after the debate in the House of Commons on the subject, raised by your Lordship, I thought it right to communicate with Sir John Thwaites, who met me in a very kind and cordial manner, as he has always done in any matter connected with the Office of Works. I could only communicate with him unofficially, because I have no power, officially, to interfere in this matter, and he very kindly directed that every possible step should be taken to keep this question in abeyance, and that the works should not be proceeded with until Parliament should come to a decision upon the subject; therefore I think it is only fair towards Sir John Thwaites, and to the Board of Works, that this Committee should report as soon as possible, and give the House an opportunity of acting upon its Report.

1491. Looking at the question of expense, and the position of the ratepayers with reference to these improvements, at present the ratepayers have, through their coal and wine dues, which are available for the purposes of the Embankment, been practically charged with the cost of reclaiming that amount of land; they are at the present moment debarred from recouping themselves in any way by the advantageous disposal of any portion of that land?—Yes.

1492. I presume, in the event of Parliament sanctioning the abandonment of this road, and also sanctioning the erection of a public building, such as you contemplate, on this site, that in that case you contemplate purchasing from the Metropolitan Board of Works the portion of land which would be requisite for the erection of this building?—I presume it would involve something of that kind.

1493. You do not contemplate acquiring this land without any cost at all?—No.

1494. At the present moment you have in Kensington, I think, a large amount of land, something like 14 acres?—We have; which land has been purchased for the Royal Commission.

1495. In such a case as this, do you think a portion of that, in fact the greater portion of it, would be disposable, and would not be required?—No doubt.

1496. So that a sale of that would enable you, on the part of the Government, to have a sum at your disposal for the purchase, from the Metropolitan Board of Works, of what is requisite for your purpose upon this other site?—That I should not like to speak to now; it would require a great deal of consideration.

1497. Although necessarily the details of any arrangement of that kind would require very great consideration, and mutual understanding and agreement between you, as representing the public, and the Metropolitan Board of Works, as representing the ratepayers, still one may reasonably

ably assume that the ratepayers would not be losers by a transaction of that kind; and when I say they would not be losers, I mean that at the present moment there is a portion of land which cannot be turned, by those who manage these affairs, to any beneficial purpose, and which, perhaps, in coming to an arrangement with the Metropolitan Board, they might dispose of to the advantage of the ratepayers?—It appears to me that if that roadway were given up, it would at once be a saving of 220,000 *l.* or 230,000 *l.* to the ratepayers, because it would not then be necessary to make that road. Then I presume they would obtain something for the sale of land, which might go towards opening that access which you purpose, by Northumberland House. Of course those are all questions to which it is impossible to speak off-hand.

1498. The probability is, that an arrangement of that kind would enable the Metropolitan Board of Works to be in funds to make access to their roadway on the Embankment, which, according to the Chairman of the Board, would be more beneficial to the public, taking the whole metropolis into consideration, than this diagonal roadway which connects Wellington-street and Waterloo-place with the Embankment?—Undoubtedly. You might put it in this way: supposing they sold land, say, for 100,000 *l.*, and they gave up a roadway which is to cost them 220,000 *l.*, it would virtually be 320,000 *l.* in their pockets; that is to say, they would have 320,000 *l.* less to spend, they might make purchases, and they would be released from the spending of that 220,000 *l.*

1499. They would likewise be released, would they not, from the liability to those persons upon whom notices had been served, and looking to that, upon the evidence of Sir John Thwaites, it is an additional reason for Parliament, one way or the other, coming to a speedy determination as to this roadway?—Undoubtedly it would be only fair to them that we should come to a decision as soon as possible.

1500. Is there any other point that you would wish to refer to?—No, not that I am aware of.

1501. Mr. *Cowper.*] You have intimated to the Committee that you think the traffic which would be accommodated by the Wellington-street road might be as conveniently accommodated by the use of the Essex-street approach?—Not exactly; I say that Essex-street would take off a large part of the traffic which would otherwise go by Wellington-street.

1502. But you would, as a practical view, propose the alternative of Essex-street instead of Wellington-street?—It appears to me that, whether the Law Courts be on the Carey-street site or on the Embankment, it will be absolutely necessary to make an approach by Essex-street from the Strand to the Embankment; as to who is to do it is another question; but I think you must have a road through the Strand to the Embankment on that spot.

1503. Before the Committee could be called upon to decide that the Wellington-street entrance is not necessary, ought they not to have something beyond mere probabilities and guess-work as to the Essex-street approach ever being made capable of carriage communication?—It appears to me that the contemplated road is being constructed a good deal upon guess-work, because you will remember, when I asked Sir John Thwaites the question whether any evidence had been taken as regards the traffic in the Strand, he said he was not aware that any had been taken, nor can I find any trace in my office of any evidence having been taken on the subject.

1504. Although it is quite certain that if this Committee do not interfere with the Metropolitan Board of Works, we shall have the Wellington-street road, yet can you, in your official position, give us any certainty that if we part with that road, we shall get a street where Essex-street now stands fit for traffic?—I could not, of course, speak officially on the subject, but my impression is very strong, that you ultimately must have that street enlarged, and that is also the opinion of Sir John Thwaites, speaking on behalf of the Metropolitan Board.

1505. But as Essex-street is at present totally unfit for such a purpose, having a gradient of 1 in 17, for the upper part, and 1 in 10 for the junction, could we not get some idea as to what funds are to be employed?—Sir John Thwaites distinctly stated that he did not contemplate any metropolitan funds being employed. We have no reason to suppose that the railway company will give anything for it; for they have provided the means of access for foot traffic at Norfolk-street; can you therefore give us any hope that the Government will undertake to make the Essex-street approach?—It depends a good deal on the result of Mr. Gregory's motion; if the House determine to put the Law Courts on the Embankment site, I think then the question of the Essex-street approach will come as a matter of course, because you will have to deal with all that block, and it will be absolutely necessary in the general scheme to include Essex-street. If the Law Courts are not placed on the Embankment, it will be a matter of consideration whether the Metropolitan Board are to enlarge Essex-street, or who is to do it; but I think you will find that the public, especially if the Law Courts are placed on the Carey-street site, will demand that Essex-street shall be enlarged; it is one of those things which must come one of these days, and probably the Metropolitan Board of Works will have to do it.

1506. It will be a balance of expenditure between buying the whole of Essex-street, and re-building the whole street, and making the present viaduct from Wellington-street; therefore if the Metropolitan Board are to do it, it would not be to them a saving of expense?—It appears to me that whether you have the Wellington-street viaduct or not, you must have Essex-street, I think that does not interfere with Essex-street at all.

1507. Can you tell the Committee that matters are in such a state with regard to Essex-street, that they can act upon the assumption that within any definite period of time Essex-street will be pulled down and rebuilt?—I could not, of course, give you any official answer; but I think everybody will feel that a communication such as Essex-street will afford will be absolutely necessary between the Strand and the Embankment; I do not say Essex-street in particular, but you must have a street carried through that mass of squalid buildings between Essex-street and Arundel-street; what I mean is that, supposing the Law Courts are placed on the Carey-street site, a street uniting the Strand with the Embankment will be absolutely necessary there, and if the Law Courts are placed on the Embankment, that street will be constructed as part of a general scheme.

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

1508. Of course, the Carey-street site, if it is built upon, would require either a communication at Essex-street or Wellington-street, Strand; do you mean to say that Wellington-street, Strand, would not provide for all that is required by persons coming to and from the Houses of Parliament and Parliament-street?—It might for those who are coming from the Houses of Parliament, but look at those who come across Blackfriars-bridge, and from the South of London; and, after all, the South of London is an important part of the metropolis to be taken into consideration; that portion also coming from the East of London would make use of Essex-street.

1509. But as they have got Fleet-street, I presume it would not be worth a very large expenditure of money to save the short distance they would save by using Essex-street?—If you have ever been up Fleet-street and Ludgate-hill, as no doubt you often have, you will know how very crowded that part of the metropolis is, and people coming from the Law Courts would certainly prefer taking the Embankment to going up Fleet-street and Ludgate-hill. You see that between the east of London and the Law Courts, supposing them to be placed either on the Carey-street site or on the Embankment are some of the worst streets, as far as traffic is concerned, in the metropolis, that is Fleet-street, Ludgate-hill, and St. Paul's Churchyard therefore you would force people to take Essex-street, or some lateral street leaving the Strand.

1510. You stated that, looking at the Embankment from an architectural and artistic point of view, you desired to have a public building erected on the reclaimed land below Adelphi-terrace, or in its neighbourhood; judging of the matter architecturally, should you not greatly prefer placing a new building upon the high ground near Buckingham-street and Adelphi-terrace, by which you would get an elevation that would give dignity to the building without the expense of building a basement simply for the purpose of raising the building, and would you not have a very good fore-ground for the building on the reclaimed land which there is about the width of 100 yards?—Of course that would be so, but in my proposal you have a large part of the reclaimed land; you have a considerable distance of garden between the public buildings and the Embankment. My idea was (and upon that, perhaps, the Committee will see Mr. Waterhouse, who will submit his views and plans) to utilise the high ground behind, and partly to utilise the reclaimed ground. That place which is there marked white is all reclaimed ground, and might be used for public buildings partly.

1511. Mr *Beresford Hope.*] All to the east of Adelphi-terrace will be open for gardens?—Yes.

1512. Mr. *Cowper.*] Putting for the moment financial considerations aside, should you not prefer to put your building on the high ground which is now covered with buildings, rather than in low ground which is not covered with buildings?—As I have stated, no doubt if you could have the full disposal of money, and pay what you like for the land, and have unlimited credit, you would perhaps buy the land behind Adelphi-terrace. But I have another object in bringing the buildings forward, which is, if possible, to screen that hideous construction which covers the railway station; by bringing it forward you might screen that, and make it into something less unsightly than it is now.

1513. As Sir John Thwaites has already given us his estimate of the value of that land, and has put the value of that six acres at 900,000 *l.*, which is at the rate of 150,000 *l.* an acre, have you reason to suppose that the land which is now covered with houses between the cliff and the Strand would cost more than the Embankment site?—I should not like to go into that question; of course, that is a matter of arrangement, but I have reason to believe that it might be done at a moderate rate. I have taken the opinion of those gentlemen with whom you are acquainted at the Office of Works, and their opinion is that it might be done.

1514. Do you not think it probable that you might get the land now covered with houses for the purpose of your site at 100,000 *l.* an acre, whereas you may have to pay for the reclaimed land a higher price, namely, 150,000 *l.* an acre?—I do not accept Sir John Thwaites' estimate at all. I have no doubt he stated the largest sum, hoping to get as much as he possibly could.

1515. Do you not think that in the market the value of that reclaimed land near the Embankment must be quite equal to, if not greater than, the market value of the land covered with houses?—First of all it has no market value, because the Board of Works has no power to sell that land. If they were relieved from the necessity of converting that land into gardens for public recreation, of course it would be done, I presume, upon certain conditions; what those conditions might be it is not for me to say at present; but I have no doubt Sir John Thwaites and the Metropolitan Board of Works would think it so important to have that part of the reclaimed land used for public purposes, that they would be willing to meet the Government in any way they could.

1516. One part of the ground upon which you propose to put your site is already in the hands of the Metropolitan Board of Works, with a right of building upon it; therefore I presume that that portion of the land you would not expect to get for less than its present market value?—I believe that portion is very small indeed.

1517. It is about two acres, I should think. Then with reference to the reclaimed land, which by the Act is not at present to be used for building purposes, would you think it fair to the ratepayers of the metropolis that you should take the land, which is at present intended for recreation ground, for public purposes, and save the Exchequer, by not paying to the ratepayers the full market value of their land?—Of course it is a matter of calculation; you do release them from an obligation which will cost them 230,000 *l.*, therefore you must take that into consideration. If the ratepayers are released from paying this 230,000 *l.*, it is so much less upon the rates.

1518. But as the question of making a road or not is quite independent of the question of building or not building on the reclaimed land, is it fair to take that into consideration when you are settling the price of land which belongs to the Metropolitan Board?—I do not think you can eliminate the question of the road. If there had been no building at all there, and that land had been given to the Board of Works to dispose of at the best possible price, of course the Government could not expect that the Metropolitan Board of Works would have sold them that land

at

at a lower rate than they would have sold it to any private person; but when they have got land which they cannot sell, and when you relieve them from this obligation, I think they might possibly meet the Government, and give that land in return for the very manifest advantages which they would receive; but that is a question to be dealt with by the Government and the Metropolitan Board of Works.

1519. Have you not proceeded on the terms that originally the reclaimed land was to be left as open ground, because of the roadway, whereas is it not the fact that the two matters were independent and distinct; was not the reclaimed land to be left open for pleasure ground, for the purpose of securing to the people of London in that neighbourhood the advantage of an open park, and not for the purpose of the railway?—That is perfectly true, but the two questions are so intimately connected that you cannot separate them.

1520. Supposing we were to determine that Essex-street was quite a sufficient communication with Wellington-street, it would not follow then, either that the public should lose their recreation ground, or that they should retain it; the recreation ground would remain, as it is, without being altered by that circumstance?—Of course, if you stopped the construction of the road, and left things as they were, the land occupied by the road would then, I presume, be used as part of the gardens to be constructed on the Embankment; of course I am now merely expressing my private opinion; I assume that the idea of putting a Natural History Museum there would be a popular one; that the people of the metropolis would like it, that the people of the South of London would like it, and that scientific men would like it, in fact, that it would be generally approved of; I think then that something might be done by the aid of Parliament to enable you to put a building on that site.

1521. One reason you mentioned for putting it on the low ground, instead of the high ground, was that some portion of it might conceal the railway station, but if we have to choose between six acres of pleasure-ground, in such a densely-peopled part of London, and the view of an ugly railway station, do you not think that the public at large would rather prefer the possession of a small park, which would be so infinitely valuable, to escaping the view of a railway station to which by this time they are tolerably accustomed?—I simply state that as one of the reasons, but it is not the main reason; if you throw back the public building to the line of the Adelphi-terrace and have to buy the land in the neighbourhood, for a large amount, I think the expense would be so very large that I should have no hope of the Government entertaining it.

1522. Mr. *Tite.*] Do you think that the Metropolitan Board, in the performance of their duty, would be called upon to abandon this communication without thoroughly understanding what was to be done with reference to Essex-street?—Really that is a consideration for the Metropolitan Board, but it appears to me that there would be no difficulty in it.

1523. You have said that you thought there must be some communication if this red line of road were abandoned?—My opinion is that whether that road be constructed or abandoned, in either case, we must have some communication between the Strand at that point and the Embankment, on account of the law courts which will be placed either on the Carey-street site, or on the Embankment site.

Right Hon. *A. H. Layard*, M.P. 19 April 1869.

1524. If the law courts are placed on the Embankment site, Essex-street is involved in that plan?—No doubt.

1525. And I suppose some communication might be made along the side of the proposed building?—Just so.

1526. You have rather hesitated to commit yourself to any opinion as to paying the Metropolitan Board of Works for the land which you take; you are, doubtless, quite aware, from the evidence which you have heard, that the Crown showed no mercy in the matter to the Metropolitan Board, but that they sold them that which they thought they had very little right to at all, and made them pay a large sum for it; if that be so, *ceteris paribus*, the Crown would not expect the Metropolitan Board to give them that money?—You must make a distinction between the Crown and the Government; the Office of Works has nothing to do with the Woods and Forests; but you must remember that I put it in this light, if the Board of Works ask such a sum as to render it impossible to utilise that land, then they will get nothing.

1527. With regard to the building proposed to be put there, I should certainly very highly approve of it for the reasons which you have given, but it would be, in point of fact, a building on two distinct levels, the same as some other buildings are there, and the basement would not necessarily be at the level of the Embankment road?—I must say I think many unnecessary difficulties have been made with regard to levels there; we find that in former days when private individuals wanted to build houses they had no difficulty in raising a terrace; the Adelphi-terrace is raised on a basement, and Somerset House, which is a great public building, is also there raised. However, Mr. Waterhouse will explain all about that.

1528. Mr. Alderman *Lawrence.*] The Museum, I believe, is national property, and all the expenses incurred with regard to it are charged upon the national exchequer, not upon any local fund?—Of course.

1529. And if at its present place any additional land was taken and any increase made to the building, the cost of the site and the cost of the building would be charged to the public exchequer?—You are aware, of course, that the Government has purchased a very large piece of land at South Kensington from the Commission of the Exhibition of 1851. I forget exactly what was paid for that land, but it was something about 150,000*l.*; that land is increased in value very much, and I have no doubt if the Government were at liberty to sell it, they would not only recoup themselves, but that the proceeds of its sale would be very much beyond what they paid for it. Perhaps that could not be done, but that is a matter for further consideration; I have been in communication with persons acquainted with the subject, and I do not think there would be any difficulty in dealing with that question; the Government might apply what they were able to get back from the resale of that land for the purchase of land on this site.

1530. I think you are of opinion that the whole frontage of that Embankment is admirably situated for placing public buildings of various descriptions, both with regard to beauty of appearance and convenience of situation?—I am quite

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

quite certain that no nation in the world would neglect such an opportunity; I am quite certain that if any capital in Europe had such a public thoroughfare as that Embankment it would not neglect the opportunity of erecting public buildings upon it. In fact the French Government have gone to great expense of late years in erecting public buildings on the Seine, which is very inferior to the Thames; the same thing has also been done in St. Petersburgh; in fact I think there is scarcely a capital in Europe where the river artery has not been made use of for public buildings.

1531. That effect would be obtained whether the building is brought nearer to the Embankment wall, or whether it is at some distance from it; that is to say, if it were built on the site of the old buildings, instead of taking any portion of the ground which has been reclaimed?—I do not think too much garden between the Embankment and the public buildings would be desirable; I should have some gardens handsomely planted; but 100 feet, more or less, would not make much difference with regard to such recreation as these gardens would afford; it is not like a park of 200 or 300 acres; the whole thing amounts to only two or three acres.

1532. In erecting this building, do you apprehend, if you do not take Adelphi-terrace and the houses adjoining which have views over the river, that you will have to build in front of those premises without paying a large sum in compensation, and would it not be a question of taking even the whole of the property to make a saving of expense?—That, of course, is a question for consideration. There are different opinions on that point; all I want to impress on the Committee is the great importance of laying it down as a principle, without going into details, that the Thames Embankment should be utilised. How that is to be done as regards expense would be very difficult for me to say; but I think if we could lay down as a principle that the Embankment should be utilised, the Government would have to see how it could be done in the most economical way.

1533. Although, of course, this building would not be vested in the Woods and Forests, the land would be vested in the Crown in another form?—The British Museum is under the management of trustees.

1534. Would this land, if taken, be vested in the Crown in another form, though not in the Woods and Forests?—It would not belong to the Woods and Forests at all, it would be taken for a specific purpose.

1535. The Woods and Forests is entirely a different department, but still it is another portion of the public revenue, and is, in fact, public property under a different form. There is a theory connected with the matter which no doubt puts it in a different form, but do you not think that the Metropolitan Board of Works and the public will consider that after paying a large sum of money for the fore-shore, and for the water rights, that the Crown property, which occupies, I believe, nearly the whole distance from Westminster-bridge to the railway-bridge, has been immensely increased in value, and that they will be very tenacious of parting with any land without having the full value given for it?—There is rather a misapprehension with regard to the Woods and Forests; the Woods and Forests have to deal with all land yielding revenue; it is quite a distinct department; the department is not responsible directly to Parliament; some years ago an Act was passed to divide the two departments, the Office of Works, and the Woods and Forests; the Office of Works is responsible to Parliament through the First Commissioner who is in Parliament, but the Woods and Forests is not represented by its head.

1536. The Woods and Forests are responsible to the Treasury, and the Treasury is responsible to Parliament?—That is the distinction.

1537. Mr. *Tite.*] If we succeed in persuading the Commissioners for building the new law courts to divide their building, and take their site at the end of Essex-street, supposing Mr. Gregory's scheme is thrown over, then Essex-street would fall to them to be improved, and at their cost?—Certainly, taking your scheme as involving the appropriation of that land between Arundel-street and Essex-street, you must have an access somewhere, or else the law courts would be utterly useless to all persons coming from the North.

1538. Mr. Alderman *Lawrence.*] I take it for granted, you consider there should be ample approaches to the building which is proposed?—You have the best of all approaches: you have the Metropolitan Railway, the Embankment, the River, and the Strand.

1539. You think it is the duty of all parties, whether the Government or local bodies, when they put up public buildings, to see that proper approaches are made to those buildings?—I think when you put up a public building in any part of London, you must not confine yourself to the actual expense of that building, but you must take into consideration the expense of approaches; whether those approaches are made at once or hereafter does not much signify, but I think you ought, in calculating the expense, to take into consideration the approaches, because without approaches, no public building is of full advantage to the public.

1540. Therefore, whenever the question of site comes to be decided with respect to the Law Courts, you are fully of opinion that the question of approach ought to form one great consideration?—Certainly.

1541. Mr. *McLean.*] In the event of a museum being built on the part coloured green, would the approach from Wellington-street not be more necessary than ever?—I do not think so, but I think Mr. Waterhouse will show you that an approach might be made the rear, sufficient for the purpose. You would not require a great public approach; you would require only an approach for people who have business at the Museum, not for the public.

1542. The people who live to the north of the Strand have looked to this as a place of recreation, and if you deprive them of the approaches I think they will be aggrieved. It was an actual contract that they should have approaches to the Embankment?—But you do not deprive them of any approaches to the Embankment. If the approach came directly from the Strand to the foot of Waterloo-bridge or Wellington-street, I should quite agree with you, but supposing a person standing at the Strand end of Wellington-street wanted to go to the Embankment in a carriage, he would have to go all down that road, and would only come on to the Embankment near Hungerford-bridge.

1543. By what other way could he get there?—It

—It would take a little longer, but he could go round by Craven-street and Northumberland-street.

1544. But then the Strand would not be relieved as a thoroughfare?—Yes, it would be greatly relieved by the Embankment. You must remember that when the Embankment road is constructed, it will probably relieve the Strand of much of its traffic at once, therefore you must not look at the Strand, after the Embankment is completed, as you look at the Strand at present. In taking into consideration the relief of the Strand by any lateral road, you must take the Strand as it will be after the Embankment is open, not as it is now, which makes a great difference.

1545. Mr. *Beresford Hope.*] Do you not think that there is a good deal of ambiguity in the term "place of public recreation;" it does not mean a fives court or a cricket ground, but a boulevard or something of that description?—I entirely agree with Sir John Thwaites that the place of recreation will be the Embankment itself. You will find that large numbers of people who wish for air will walk along the banks of the river.

1546. In fact, I suppose the public recreation-ground will really run from Westminster-bridge to Blackfriars-bridge?—Exactly.

1547. Besides the advantage which this museum will be as a place of general amusement and instruction?—I am convinced that the more buildings of that nature you have in London, the more you will elevate the people.

1548. Mr. McLean just now raised the question of contract. Is it not the fact that this transverse street was an afterthought, and that the original contract was simply for making an Embankment, which will be carried out now?—Unquestionably.

1549. Mr. *McLean.*] They are not in the same Act of 1862?—All that was an afterthought.

1550. It was recommended in the Commissioners' Report?—I am speaking now of the original idea of the Embankment.

1551. *Chairman.*] You know the Terrace at Windsor, I presume?—Yes.

1552. That is open to the public on Sundays?—Yes.

1553. Is it not a cricket-ground?—No.

1554. Do you consider it a place of recreation?—Certainly.

1555. Mr. *W. H. Smith.*] I think we understand that if what is called the Embankment site is taken for the Law Courts, Essex-street will be made a proper approach from the Strand, but if it is not taken, have we not forgotten, throughout the whole of this discussion, that Norfolk-street, and what is called the approach road, will be an approach, and a very good approach to the Embankment from the Strand?—When I am asked a question as regards approaches to a museum, for instance, from the north, you must remember that the class of people who come from the north of the Strand to see the museum and to walk in these gardens, will not be what I may call "carriage people"; they will be the working classes, people who come to saunter about the gardens and who would be on foot; for that class of people there will be a great many approaches, there will be Cecil-street, Salisbury-street, and Adam-street, and that is the class of people that you chiefly want to accommodate.

Right Hon. *A. H. Layard*, M.P.

19 April 1869.

1556. You were speaking of the traffic from the east going west; even for carriages, if the Embankment site is not taken for the law courts, there will remain Norfolk-street as an approach to the Embankment, by what is called the approach road, which will run from Norfolk-street both east and west to the Embankment, therefore the carriage traffic proceeding west from the City will be accommodated, possibly not sufficiently, but to a very considerable extent?—Oh, yes, supposing an approach road were made, it would be so, undoubtedly.

1557. The approach road is not to be touched under the present arrangement?—No.

1558. *Chairman.*] I just want to ask you generally, with reference to these buildings, you do not anticipate, supposing this roadway were to be stopped, that you would have any difficulty either in arranging with the Metropolitan Board of Works as to the terms on which this land should be acquired, upon which these buildings should be erected, or in erecting the buildings on the ground which would be most ornamental, and which would show the buildings to the greatest advantage, combining with that the best utilisation of the ground possible?—I can scarcely answer that question; as I have already stated, I have merely given a private opinion. I have been examined by the Committee, and I am bound to tell them what my private opinions are, but they are merely my private opinions; I am not at all aware that the Government would take up such a scheme, but if they did, I should enter into a communication with Sir John Thwaites.

1559. Speaking as an individual, you do not find any such difficulties as have been conjured up?—Knowing Sir John Thwaites as well as I do, I do not think there would be any of those difficulties.

Sir JOHN THWAITES, re-called; and further Examined.

1560. *Chairman.*] I BELIEVE you have some further observations which you wish to address to the Committee?—Yes, I am very anxious that there should be no misapprehension so far as the Metropolitan Board of Works is concerned, with respect to the land which may be used for the purposes of these public buildings. We desire no other terms from the Crown than we should desire from a private individual, namely, those which are fair and reasonable, and which a jury or an arbitrator would give us; but we should certainly oppose most strenuously any attempt to compromise the question on the plea that we are released from certain obligations, and are saving, as has been alleged, 230,000*l.* for an approach, and that you must have regard to that saving in determining the value of the land. If we are released from the obligation of spending 230,000*l.* on that approach, we are willing and desirous that the money should be expended in perfecting the approaches elsewhere; and if the land is to be purchased, as we have already purchased land of the Crown, and have expended enormous sums in reclaiming it from the river, and have made it what it is, namely, building ground, the ratepayers of the metropolis must be thoroughly

Sir *J. Thwaites.*

Sir *J. Thwaites.*

19 April 1869.

thoroughly recouped the fair value of that land, whatever it might be; we desire to fix no arbitary sum, but the Crown in approaching that question, must approach it as if they were buying land at its fair market value; I am quite sure that neither I nor my colleagues will take into consideration the release from the obligation to form this roadway, or the reduction of the amount to be paid whenever it may arise; of course, that land is vested in us for public purposes, and if Parliament takes off its band, and relieves us from that obligation, then it becomes land to be disposed of for building purposes, and the ratepayers of the metropolis have a right to be dealt with in the same way as the Crown dealt with us when it disposed of that foreshore; I was only anxious that there should be no misapprehension in dealing with this matter.

1561. Supposing that you speak only in the interest of the ratepayers, and the choice as regards the ratepayers lies between their being relieved from this charge of 230,000 *l.* for this roadway, and their getting not the full value, but a value for this land, would you not consider that 230,000 *l.*, which otherwise they would have had to expend; and if that was not so considered, and the whole thing fell through, and they had to make this road, do you not think, in the interest of the ratepayers, it would be desirable to consider such a point as that?—I think you must eliminate from this question of the value of the land the cost of that approach, because if that approach is not to be made, or *an* approach is not to be made from that point, it will be made from some other point, and that fund will be devoted to the perfecting of the other approaches. When you come to the question of the value of the land, it must be taken in the ordinary course of procedure, and ascertained either by a jury or an arbitrator, as the case may be.

1562. Those who are responsible to Parliament for advising the expenditure of public money in these matters might say, "If we can get this at a reasonable rate we are prepared to recommend so and so with reference to the sale of land at one place and the purchase of land at another place, and the ratepayers shall be relieved from certain liabilities; but if we cannot get this land at a reasonable price, and we have to give something like 500,000 *l.* or 600,000 *l.* to purchase it, we then cannot recommend such a case to Parliament, and things will remain as they are, namely, that a roadway will have to be made by Act of Parliament which will totally destroy the value of this property, of which at the present moment you cannot make any use, of any sort or kind *qua* diminishing the rights of the metropolis." Such a proposition as that might arise, and in that case probably in the interest of the ratepayers, you might think it desirable, although you to a certain extent, take your stand on the position you have just now laid down, to modify your views upon that?—At present I think it is quite right that the stand should be made.

1563. Mr. *Layard.*] You only say that that is your opinion, but you do not say what the Board of Works may do?—I am merely expressing my own opinion.

1564. *Chairman.*] And you take a stand which you think you can take in equity?—Yes; I think so.

Monday, 26th April 1869.

MEMBERS PRESENT:

Mr. Buxton.
Capt. Dawson-Damer.
Mr. Dilke.
Lord Elcho.
Mr. Gregory.
Mr. Beresford Hope.
Mr. Alderman Lawrence.
Mr. Layard.
Lord John Manners.
Lord Sandon.
Mr. Sclater-Booth.
Mr. William Henry Smith.
Mr. Tite.

LORD ELCHO, IN THE CHAIR.

Rev. HENRY WHITE, M.A., called in; and Examined.

Rev. *H. White.* 26 April 1869.

1565. *Chairman.*] I BELIEVE you are chaplain to the Chapel Royal, Savoy?—Yes.

1566. You naturally have taken an interest in this roadway from below Charing-cross Bridge to Wellington-street, Strand, which originally was to have passed through a portion of the grounds of the Savoy Chapel?—Yes.

1567. You have, I believe, called public attention to this matter; indeed, I may mention here that the deputation which I accompanied to the First Commissioner of Works was promoted by you, was it not?—It was.

1568. You promoted that deputation, and have taken an interest in this matter upon public grounds solely?—Solely.

1569. Speaking in the interest of the public, what are the grounds upon which you object to this proposed roadway; just state shortly your objections to this roadway?—The main objection I took to it was the waste of valuable ground reclaimed from the river, such ground as it would be impossible to set a value upon; next, the unsightliness of the proposed road, with whatever conditions of beauty it might be surrounded, the costliness of the road itself, and its costliness also in respect to the damage to valuable property in the rear; in fact, the entire costliness of the whole project.

1570. As regards its cost, and its doing away, in a great measure, with the possibility of making that land available for other purposes, there can be little or no dispute; with reference to the communications in the metropolis, do you consider, looking to the arterial lines of communication which the map shows, that the roadway, as proposed, from underneath Charing-cross Bridge to Wellington-street, Strand, is an essential communication?—Certainly not.

1571. It would not be in the line of arterial communication between the chief points of the metropolis on the Surrey side, or on the north side of the river?—I think not.

1572. This line of communication would run from the left and over Westminster-bridge, Blackfriars-bridge, Southwark-bridge, and London-bridge?—I should think so.

1573. And in like manner from the north, coming in the direction of the "Elephant and Castle," it would take the same line?—I should think so.

1574. This is a transverse line, which really will not affect the main lines of traffic at all?—Not in the least, I should think.

1575. Looking to the locality itself, do the people in the locality of the Savoy hold to this line much?—With one or two exceptions, every man is opposed to it, so far as I know.

1576. They would rather see this ground made use of for public buildings, or for recreation grounds laid out, perhaps, in combination with a public building, and terrace gardens?—I think so.

1577. That would be to the locality itself a much greater advantage?—Unquestionably.

1578. Do you believe that, supposing eventually it was found necessary that there should be any communication between Northumberland House and Wellington-street, from the Strand, with the Thames Embankment roadway, there would be any difficulty in making such a communication in the rear of any public building that might be erected on that site?—No, I think it would be quite easy.

1579. But that would, probably, be the most feasible and most convenient way?—Provided it did not arrive at the Strand, at the corner of Wellington-street; that I consider to be a most fatal objection to the whole scheme.

1580. You object to that, not upon Savoy grounds, but you consider that that question was perfectly settled by what took place at the time?—Yes.

1581. What is your objection to the roadway entering the Strand at the corner of Wellington-street?—I think it is the very worst and most crowded point between Charing-cross and Temple-bar.

1582. A sort of "Vale of Avoca, where the sweet

Rev. *H. White.*

26 April 1869.

sweet waters meet"?—Yes; and I think that to tempt a still larger traffic to that corner would involve an utter impossibility for traffic to circulate there.

1583. Then to generalise your evidence, speaking as a citizen of the metropolis, you think it would be a waste of a fine site to form this roadway upon it? As regards the roadway, you do not think that it is necessary to the arterial communications of the metropolis; and speaking as an inhabitant of the district, you do not consider it locally necessary; and you state that, with one or two exceptions, the mass of the inhabitants are against it, and would approve of the land being otherwise utilised?—Undoubtedly.

1584. That is the substance of your evidence?—Yes.

1585. Mr. *Layard.*] Are you residing near the proposed road?—Hard by, in King's College.

1586. Have you much to do with the working classes in your neighbourhood?—I know very much about them, and have had a good deal to do with them.

1587. There is rather a large community of working men in that part of London, is there not?—Very large, chiefly consisting of printers.

1588. Do you think that a public building such as a museum of natural history, combined with handsome gardens, upon the piece of embankment between Charing-cross and Wellington-street would be an advantage to that community of working men?—I think that the museum would be very acceptable to them; the gardens, except for the purpose of appearance, do not seem to me to be so necessary, because of the contiguity of the parks.

1589. As regards public recreation, taking it in its largest sense, namely, recreation for the working, and poorer classes, would you look upon a museum of natural history as quite as much a place of recreation as a garden?—Yes, considering the contiguity of the parks.

1590. And you think that working men would resort to a museum of natural history if placed upon the Embankment?—Undoubtedly.

1591. Do you think it would be an advantage if we could have both, a museum, and handsome gardens in front?—Certainly.

1592. As regards the inhabitants of that part of the metropolis, you do not think that any objection would be made to the erection of a museum of natural history on this site?—No; quite the reverse.

1593. Lord *Sandon.*] What class of houses are they principally that abut upon the old line of the river?—They are chiefly stables, and the remnants of wharves, in use before the Embankment was constructed.

1594. Are many of the houses occupied by families of labourers, the working-class?—No, not on the south side of the Strand.

1595. You think it would be rather an advantage than otherwise to the property that is adjacent if these back parts were improved?—Unquestionably.

1596. It would raise the value of the property?—Most undoubtedly; it is nearly valueless now, by reason of the Embankment.

1597. Mr. *Beresford Hope.*] I think I understood you to say that a museum would be as truely a recreation ground for the people as anything?—Quite so.

1598. I suppose, looking at the conformation of the ground, it would be impossible to devote any part of it to athletics, to a cricket-ground, or anything of that sort?—It is not large enough for those purposes.

1599. You do not think there is any desire among the working-classes in your neighbourhood to have that species of recreation ground?—I think they would prefer the other.

1600. Taking the ground that is not occupied by any buildings, but which is left open to the public, I presume they would rather like that as ground to walk about in with their families?—Decidedly.

1601. Therefore, the garden ground, so to speak, had better be laid out in terraces with flower beds, than in mounds and shrubberies?—Yes; I think working men would look upon it as a waste of valuable ground, to set that out as a cricket-ground, or simply ornamental ground.

1602. Or as a shrubbery?—Or as a shrubbery.

1603. You think that the plan of laying it out as a shrubbery with mounds is objectionable in itself?—Very; it is absolutely extravagant.

1604. As a man of taste, your general experience of London shrubberies is that they are not ornamental, I presume?—I have great difficulty in making my own at all satisfactory.

1605. You do not base your objection to this diagonal road on the injury which it would do to the Savoy?—It would be injurious to the Savoy; but in the presence of other objections, that is of minor importance.

1606. Still, it is of a certain importance, and a matter upon which you can speak with authority, which no one else can; it would, to a certain extent, still be injurious to the Savoy?—Undoubtedly.

1607. *Chairman.*] Why so? Because it now avoids the Savoy?—It would throw the chapel, the chapel grounds, and the square in which the chapel stands, into a well.

1608. Mr. *Beresford Hope.*] Under the present plan, will it still cut off a corner of the church-yard?—No; a concession was made to the Queen in that respect.

1609. I knew a concession was made, but I forgot whether it was only diminishing the evil, or removing it?—Only diminishing it.

1610. The corner of your ground will still be cut up?—No; it diminishes it to that extent; but still that is not enough.

1611. It will still leave the chapel in a greater hole than it is now?—Oh, yes; far greater.

1612. Lord *John Manners.*] Will you explain whether, leaving the chapel in a hole, there would be any compensating gain on the other hand by the removal of the houses which stand behind the chapel. Supposing the road was made, would not inconvenient and awkward houses be moved which now stand on the south?—No, not in the least; some of the houses are empty, and the others are unobjectionable.

1613. But there are houses on the south of the chapel which this road would remove altogether?—Yes; no objection will be raised by anyone to their removal.

1614. What I want to know is whether, if the road on the one hand would tend to put, as you express it, the chapel in a well, it would not, on the other hand, remove houses that now stand between what I may call the sunshine and the chapel?—The houses at present on the side of the chapel are not objectionable at all to the position of the chapel.

1615. Then you think it would be an unmixed objection

objection and loss to the chapel, without any compensating gain?—Decidedly.

1616. Is there a window at the south end of the chapel?—No.

1617. Mr. *Beresford Hope.*] Then the sunshine would not be of much use there?—No.

1618. Mr. *Layard.*] And you would have there what is very objectionable, a number of dry arches, which are always a place of refuge for bad characters, and a place for throwing dirt and filth?—We think so.

1619. Mr. *Tite.*] You objected to the original line of road, and you appealed to the Metropolitan Board, and they altered it at your suggestion, did they not?—Not at my personal suggestion.

1620. Then at whose suggestion?—I headed a deputation to the Board, with some kind of a hint that the Queen wished a diversion.

1621. And you objected to the line of road which was proposed?—Yes, I did.

1622. And you agreed, I think, to the line of road which was subsequently introduced into Parliament?—Yes, I agreed in my official capacity.

1623. What is that?—As chaplain of the Savoy.

1624. Then what is your objection now?—My objection now is on public grounds.

1625. Then that which you agreed to on private grounds you object to on public grounds?—That which I was obliged to agree to on official grounds, I should certainly have objected to on personal and public grounds.

1626. But why did you not take the objection at the time?—I had not then looked into the matter, except as it affected the chapel.

1627. Then it does not affect the chapel, as I understand you?—Not so much as before.

1628. Does it affect it at all?—It will, as I said before, tend to throw the chapel and all its surroundings into a well.

1629. How can you avoid that?—By abandoning the road.

1630. Is that so, because the well is still there?—Only on one side; then it would be on both sides.

1631. I do not quite understand you?—At present the chapel is more or less open to the river.

1632. You cannot see the river from it, can you?—Oh, yes, you can.

1633. Lord *John Manners.*] Are there any houses between it and the river?—There are houses, but there are openings.

1634. Will there be any houses if this road is made between it and the river?—No; there can be nothing but this road.

1635. Mr. *Tite.*] But there are arches?—Arches are even more objectionable.

1636. But if you could see through between houses, you could see through between the arches of a viaduct, could you not?—It very much depends upon the kind of arches that are built.

1637. Was it proposed to you at the time when you agreed to it, in point of fact?—That was not urged. When I went with the deputation, the only point raised, upon which I gave an opinion, was the nearness of the viaduct to the chapel. I was given to understand that the Duchy of Lancaster would not object if the viaduct was removed some 12 or 14 feet away from the chapel. If that were done they would be satisfied; and because they were satisfied I did not feel justified, in my ignorance of the whole project, in raising any further objection.

1638. Who was the principal person who raised the objection?—I attended the Committee of the House of Lords last summer, and then, for the first time, I realised all the objections to this viaduct, which I have just now given.

1639. They were raised by Mr. Clark, the auctioneer, were they not?—He promoted the petition, but I attended the Committee as a listener, and I declined to challenge public opinion at that time, because I thought it would be better to wait until the meeting of Parliament.

1640. You are aware, I suppose, that Mr. Clark's house is taken?—Yes.

1641. And the other house of his partner, Mr. Lye, is left?—Yes.

1642. Mr. *W. H. Smith.*] Are you aware whether there is any necessity, so far as the immediate neighbourhood is concerned, for an approach to the Embankment by means of a roadway (there will be approaches for foot-passengers from the several streets which communicate with the Embankment), but are you aware whether there is a necessity for a roadway approach, so far as the immediate neighbourhood is concerned?—I think not at that point.

1643. Has any feeling been expressed in the neighbourhood, or in the adjoining parishes, the parish of St. Paul, Covent-garden, or the parish of St. Clement Danes, in the Strand, with reference to their own immediate necessities?—Not within my knowledge.

1644. You are well acquainted with the general feeling of the neighbourhood?—Fairly so.

1645. Mr. *Tite.*] Do you think it necessary to have a communication with the Strand between Hungerford-bridge and Blackfriars-bridge, or is there to be no communication whatever?—Certainly; I always assumed there would be a communication either at Norfolk-street or Essex-street.

1646. You are in favour of a communication at Essex-street?—I do not pretend to say that, only I assumed, in my objection to this viaduct, that there would be approaches either at Villiers-street or some other street close by, and again, either at Essex-street or Norfolk-street. In my judgment it would be better certainly not to make an approach to tempt the traffic into so crowded a portion of the Strand as that between Charing-cross and Norfolk-street, but that a few approaches not so tempting, even if they were slightly inconvenient, would be better than a great tempting approach like this viaduct.

1647. However, you think there ought to be one?—I am not prepared to say that there necessarily should be one between Norfolk-street and Villiers-street.

1648. There would not be, I suppose, practically; Essex-street might admit of it?—If there be approaches at Villiers-street and Norfolk-street, I think the public convenience will be satisfied; but I think it will be desirable to make two or three less important approaches between, but not such approaches as to attract a large traffic into the narrow portions of the Strand.

1649. Have you paid any attention to the communication from Charing-cross with the Embankment?—In a general way.

1650. But I presume you never imagined there was to be a viaduct from Charing-cross to Wellington

Rev. *H. White.*

26 April 1869.

lington-street?—From the bottom of Villiers-street, I understand.

1651. A viaduct?—Partly a viaduct, and partly an earthwork.

1652. *Chairman.*] Do you mean that there was to be a viaduct the whole way, or that it was to be partly roadway?—Partly earthwork, and partly on arches.

1653. Mr. *Tite.*] I am speaking of Charing-cross?—From the bottom of Villiers-street.

1654. That is where it is proposed to be?—Yes.

1655. Then there was never any misapprehension in your mind as to what the real project was, whether you approved of it or not, that it was to be from the bottom of Villiers-street to Wellington-street?—I always believed those to be the points of departure and arrival.

1656. As to the engineering means, you were not perfectly informed upon that subject, probably?—Not until last summer; when I was at the head of the deputation of which I spoke of just now, I had no knowledge of the project in its completeness.

1657. However, you knew, I suppose, that it would not be necessary to arch it all the way, because you started from nothing?—I did not at that time give my mind to the general question, but only as it affected the nearness of the viaduct to the Savoy chapel.

1658. Lord *John Manners.*] When you say that the working people in your neighbourhood have sufficient park accommodation at present, you allude, I presume, more especially to St. James's Park?—Mainly to that.

1659. Has it ever occurred to you, at the middle or about the end of the summer, to look at the condition of St James's Park?—I have seen it at such times.

1660. Do you think that it is so frequented by masses of poor children that anything which takes away a portion of those poor children and places them somewhere else, would be beneficial?—I am not aware that I have seen it unpleasantly crowded with children.

1661. Have you ever seen the grass completely destroyed?—Yes; but that would be if there were only half the number of children.

1662. I suppose the poor children from your neighbourhood do frequent that park especially?—Very much so.

1663. Would it, in your opinion, be a good or a bad thing for the children in your neighbourhood, and for St. James's Park itself, if they had nearer to their own doors, another place for recreation?—Undoubtedly, it would be an advantage.

1664. *Chairman.*] Do you think there are other considerations in the interest of the working classes, with reference to laying out gardens and places of recreation than having mere tumbling greens for their children?—I think a sensible working man would prefer a permanent museum to a rather faded and dried-up piece of grass land.

1665. We will take the Crystal Palace for instance; working people frequent that very much, do they not?—Yes, very much.

1666. The Foresters go there, 60,000 at a time, do they not?—Yes.

1667. Do you think they would prefer the Crystal Palace, if there were no flowers, no vases, no statues, and no terraces, but if it were simply a tumbling place for their children?—No, I think not.

1668. Do you think, from your knowledge of the working classes, that they like beautiful things as well as any other class?—I think so, more especially in my neighbourhood, because the bulk of them there are printers, who are usually a more intelligent class of men.

1669. Mr. *Beresford Hope.*] Do you think the worn-out condition of the grass in St. James's Park in summer is an argument against making recreation grounds with grass slopes, rather than with terraces?—Of course everything will dry up in summer.

1670. In an asphalte pavement there is nothing to dry up?—No.

1671. *Chairman.*] Do you think that a better regulation with reference to these gardens would be by combining the two things, that that would be better than what is shown in St. James's Park?—I think so long as children are suffered to go upon grass at all, it will, in a few days, come into the condition which St. James's Park presents during the summer.

1672. Lord *Sandon.*] I presume a large portion of the population about Covent-garden are much too poor to go to the Crystal Palace?—But a very large portion are not so poor.

1673. A very large portion are of a very poverty-stricken and wretched character?—Yes.

1674. Therefore it is an object, if possible, to combine the two things, in order to get plenty of recreation for these wretched people, which they cannot get, as well as the working classes, who are better off, who can go to amusements?—Yes.

1675. Mr. *Layard.*] Have you not found that the poorer classes are very fond of flowers?—Yes.

1676. And I daresay you have seen them, as I saw them yesterday, walking up and down the walks in Hyde Park, looking at the beds of flowers?—Yes.

1677. That seems to afford them great enjoyment?—Yes.

1678. And do you not think that flower-beds would afford them greater enjoyment than a mere piece of grass, which would soon become a tumbling ground for the children, and be dried up in the summer?—I think so.

1679. *Chairman.*] As regards the Thames Embankment, and the ornamentation of the metropolis, with a view to what we call the education of the eye of the working classes of the metropolis, clearly it would be better that the ground should be laid out in terraces with flowers, than that it should be what I have described as a tumbling green for the children?—Yes.

1680. With reference to air and space, whether it was laid out in one form or the other, the effect upon the health of the people of the metropolis would be equal?—Yes.

1681. Lord *John Manners.*] I am sorry to have to put this question to you, but as a matter of taste, do you think that all grass should be excluded from the banks of the River Thames?—My object in saying that was to express my opinion that to set out a valuable plot of ground of that size simply for the sake of grass, mounds, and swings, would be accounted, even by the working man, a wasteful expenditure of property.

1682. *Chairman.*] In your reply to my questions, I suppose you assumed that in putting them I anticipated that this public building, or

these public buildings, would be combined with terraces, grass, and gardens; that that was part of the scheme?—Yes, certainly.

1683. When one refers to terraces and flowers, one assumes, probably, a certain amount of grass and gardens?—Yes; grass without traffic going over it will flourish very well in London, but with the traffic of children going over it, it will not flourish even for a week.

1684. Mr. Alderman *Lawrence.*] Do I correctly understand you to say that any open spaces left for the public are generally likely to become nuisances?—I do not say so.

1685. It is not your opinion that they would become nuisances?—Certainly not.

1686. Because it seemed rather to be implied that if this place is left open, it must necessarily become a tumbling ground for children; do you think that that is a certainty?—I thought the question assumed that it would be laid out as a recreation ground, and therefore I said I thought that even the working man would better esteem a museum of natural history, with the privilege of sending his children to St. James's Park, rather than to see an available and a valuable site of this kind laid out simply as a grass plot, or an athletic ground, or the like.

1687. Is there any plan marked out in which it is suggested that it should be laid out for an athletic ground or a gymnasium?—The question was put to me once or twice rather in that form, whether I thought a working man would appreciate opportunities of public recreation of that kind.

1688. Do you think that the working classes would appreciate this ground, if laid out in walks, with grass and flowers, as much as if it were covered in for some building, enclosing articles of taste?—I think, if both were combined, the working man would prefer it.

1689. The ground that would be covered, of course could not be open?—But I presume that no building would be constructed so as to cover the entire space; there would be some room left between the building and the river, and if that were laid out ornamentally, with flowers and terraces, it would be a very desirable thing.

1690. Do you not think it would be as congenial to the taste of the working man if some of the present buildings were removed, and public buildings placed upon their site, and the whole space now open, laid out in walks with flower-beds?—The working man would probably reflect upon the costliness of such a proposal.

1691. But as to how it would meet his views with respect to his enjoyment, do you not think he would appreciate quite as much the whole space being left open and laid out in walks and planted with flowers, and some portion of those ragged houses adjoining pulled down, and public buildings placed on their site, as a portion of the open ground being abstracted for placing public buildings upon it?—Of course, if a working man could have both public buildings and a public recreation ground at the same time, and at the same cost, he would prefer to have them both, rather than to have only one.

Rev. *H. White.* 26 April 1869.

1692. Does cost enter into your calculation with respect to these improvements that are being carried out in London; do you apprehend that it affects the working man?—I should think that the price of coals, or whatever dues the money would be gathered from, he would feel very keenly.

1693. Do you apprehend that the dues will be removed one year earlier, whether this building is placed on the site of the houses that are now existing, or placed on this ground?—I suppose every little helps both to increase and to diminish the revenue.

1694. Are you aware what the duty on coals is?—I have not the least idea.

1695. Do you know the weight of taxation upon the working man with respect to these coals; are you aware how much of that coal-tax it is presumed a working man pays in a year?—No, I have never calculated that.

1696. Are you aware that it is calculated that a working man consumes a ton of coals a year?—I have never gone into the calculation at all.

1697. And are you aware that the duty upon a ton of coals is 1*s.* 1*d.*?—Yes.

1698. Therefore that is the amount of taxation that falls upon the working man?—Yes.

1699. Then in your opinion, if the cost were equal, it would be more desirable to keep the open space, and build the public buildings upon the site in the neighbourhood of the old buildings?—If the cost were equal, certainly.

1700. Can you inform us of any open spaces in which the poorer classes may circulate with the exception of the parks?—No, I cannot, except the Temple-gardens, which are very freely open to the use of children provided they are dressed fairly and respectably.

1701. They are not open to the working classes generally?—I have seen working men's children there.

1702. They must be respectably dressed?—Yes.

1703. Are Lincoln's-inn-fields open?—Not at all.

1704. Is there any ground or garden open except St. James's Park?—None that I am aware of.

Mr. Henry Bidgood, called in; and Examined.

1705. *Chairman.*] I believe you are the vestry representative of the parish of St. James on the Metropolitan Board of Works, are you not?—I am the representative of the parish, elected by the vestry.

1706. Have you been in that position for several years?—Yes, nearly the whole time that the Metropolitan Board of Works has been in existence.

1707. Then you are aware of all the various phases through which this question of the Embankment and roadway has passed?—Quite so.

1708. I shall not trouble you with any question with reference to those phases, but I wish to ask you whether it is or is not the case that the vestry of St. James, of which you are the representative, has petitioned Parliament against this roadway?—That is the fact.

Mr *H. Bidgood.*

1709. Did you petition on your motion?—Quite so.

1710. Having petitioned on your motion, you naturally know what moved you to get the vestry to petition; will you kindly state to the Committee what are your grounds of objection to this

Mr *H. Bidgood.* 26 April 1869.

roadway?—My objection to the roadway is mixed up with the question of the west end approach to the Embankment, and I think in the petition, if I remember rightly, both objects were embraced: the objection to the roadway, as not being necessary, and the great necessity of a west end approach.

1711. Perhaps the shortest way will be for you to read the petition?—This is the petition: "To the Honourable the Commons of the United Kingdom of Great Britain and Ireland in Parliament assembled: the humble Petition of the Vestry of the parish of Saint James's, Westminster, in the county of Middlesex, sheweth, that your Petitioners have seen with much satisfaction a roadway formed on the banks of the River Thames, whereby the metropolis will be considerably benefited, and a great addition made to its beauty. That it becomes a matter of first importance, in order to promote the usefulness of the Embankment roadway, to have suitable approaches thereto, and your Petitioners are thoroughly convinced that too much attention cannot be given to that object, lest by the adoption of inadequate plans the utility of this fine roadway should be marred. That your Petitioners are of opinion that the proposed roadway to be raised on a series of arches from the Thames Embankment to Lancaster-place, Waterloo-bridge, which has been sanctioned by your Honourable House, will be very unsightly; and that it is extremely questionable whether such a structure is required for the traffic of the metropolis. That your Petitioners are also of opinion that the best way of utilising the roadway of the Embankment is by giving the most direct access to it from the east and west, and your Petitioners do therefore most earnestly desire that a direct route to the Embankment may be afforded from Trafalgar-square to the large parishes of Saint James's, Saint George, Hanover-square, Saint Marylebone, Paddington, and the other populous parishes lying to the west of Charing-cross. Your Petitioners therefore humbly pray that your Honourable House will interpose delay in the execution of the said roadway as proposed, until further inquiry has been instituted as to its necessity, and whether much better and far more useful approaches cannot be made. And your Petitioners will ever pray," &c.

1712. I suppose you drew that up yourself; you moved the resolution, at any rate?—Yes.

1713. When that petition was carried in the vestry on your motion, you had come to that conclusion from information then at your disposal?—Yes.

1714. Since that petition has been laid before Parliament, Parliament has ordered an inquiry, which inquiry is now taking place before this Committee, and I think you have been present on one or two occasions during the course of that inquiry?—I have.

1715. Has the evidence which has been given before this Committee in any way led you to alter the views which you held when you moved the vestry to petition Parliament?—Not in the least.

1716. Are the views which led you to move the vestry strengthened and confirmed by what you have heard before this Committee?—They were as strong as they could be before, and therefore cannot be stronger.

1717. In that petition it is stated that the roadway is to be on arches from Hungerford-bridge to Wellington-street, Strand; is that statement with regard to its applying to the whole line, an accident, or were you aware that only a portion of the roadway would be on arches, namely, where it gets to a greater height at Wellington-street?—That may be so, but the objection will remain quite in as full force, inasmuch as it would be the higher portion of the roadway which would be on arches, and therefore the most objectionable.

1718. I asked you that question with the intention of finding whether the view you expressed antagonistic to the roadway has been at all modified by the fact of your now knowing that perhaps the larger portion of it will be on an incline of earth on the Embankment?—The objection is quite as strong to the non-necessity of the roadway altogether as it was originally to its being an unsightly thing.

1719. Judging from what that petition states, you do not consider that this roadway is essential to what I may term the arterial communications of London?—I do not.

1720. But you do consider that having regard to the arterial communications of London, of those great populous and important districts, St. James's, St. George's, Marylebone, Tyburnia, and also Belgravia, there is a necessity for some good approach to the Embankment?—In the language of the petition, I think that too much attention cannot be bestowed on the approaches in that direction, namely, from Charing-cross on to the Embankment, and from the Bank on to the Embankment at the other end.

1721. Then you consider that an approach to the Embankment, somewhere from Charing-cross, through Northumberland House, or in some direction near it, is essential as a great arterial communication in London?—I think there can be no doubt of it.

1722. This roadway would give no advantages of any kind in that respect to these districts, would it?—None.

1723. It would not in any way facilitate direct communication between those districts and the Surrey side of the river?—No.

1724. Any person going from Belgravia to the "Elephant and Castle" would not pass that way?—Certainly not.

1725. Any person going from St. James's to the "Elephant and Castle" would not go over there?—Certainly not.

1726. Or any person going from St. George's?—No.

1727. Or Tyburnia?—Certainly not.

1728. Or from Marylebone?—Certainly not; all those questions I apprehend have reference to the roadway from Lancaster-place.

1729. All those questions have reference to the roadway from Lancaster-place up to Hungerford-bridge?—Quite so.

1730. You are strongly in favour of a direct approach from Charing-cross. How do you think that approach could best be made, from your experience of the past, and from your conclusion on the evidence given before this Committee?—My own opinion is so strong in favour of the one route that I cannot imagine any other to be so convenient for the public.

1731. When you say "the one route," which do you mean?—The direct route from the Opera House down on to the Embankment, leaving the National Bank as the right hand corner house of the new approach.

1732. And

1732. And going through Northumberland House?—Without question.

1733. Taking Northumberland House?—Without question, as you would any other house.

1734. That would be the direct route?—The direct route.

1735. Have you heard of a proposal, or, rather, a suggestion, made to this Committee, with regard to avoiding Northumberland House, and curving round it from Charing-cross in the line delineated white upon the plan, taking only a very small corner of Northumberland House garden?—I know everything that has been proposed.

1736. That would give the communication, would it not?—It would give the communication in an indirect way which the other gives in a direct way.

1737. That is, it would give the communication in a curved form instead of a straight line?—Instead of a direct form.

1738. But in other respects the communication would be as direct and convenient, the only excess of distance being that between the straight line and the curve?—A curved line cannot be so short as a straight one; if I had my choice of the two routes at the same cost, without question the direct route would be the one which I should prefer; but, if I have to pay twice as much for the indirect route as I have for the direct one, then my case is doubly strengthened.

1739. Upon that answer I would ask you, which, in your opinion, would be the most costly, the curved route or the direct one?—I have no doubt that the curved line would, inasmuch as you would have to take down most valuable commercial premises, and would have to compensate parties for their interest in their premises; you would take nearly all the commercial premises between Northumberland House and Craig's-court.

1740. But irrespective of the line that this road is to take, whether it is to go through Northumberland House direct, or curve round it, do you hold it to be essential that this line should be made somewhere in that direction?—I hold it essential that if the Embankment is to be of the slightest service for the great west-end parishes, it must have a first class approach.

1741. Do you consider that the money of the ratepayers would be better expended in the interest of the ratepayers generally throughout the metropolis in the formation of such an approach as that you have now suggested, than in the formation of the roadway now ordered by Act of Parliament, from Wellington-street to Hungerford-bridge?—I cannot imagine anybody with any knowledge of west-end traffic who would not be of that opinion. There is hardly a comparison to be instituted.

1742. Do you think it would be a waste of this land to use it for a roadway when it might be made available for public buildings?—Very much so.

1743. And in the interest of the ratepayers of the metropolis, and as representing the ratepayers of St. James's Vestry on the Metropolitan Board, you would be rather in favour of such an application of the land as that?—Quite so.

1744. Do you believe, looking to the line of the ground, that supposing a public building, such as has been suggested, were to be erected, combined with gardens, on that site, it would be feasible to establish a communication on each side of that building with the Strand, in the rear of the building?—If it should prove to be necessary, no doubt the thing could be done, but traffic is a very delicate thing to meddle with. If you form a number of roads which in your opinion will answer a proposed end, it is very possible that the public will not be of your opinion, and that you will eventually find that you have formed a roadway which nobody makes use of. Traffic makes its own line.

Mr. *H. Bidgood.* 26 April 1869.

1745. Then I gather from that answer that you have just given, that, in your opinion, the wisest course will be to wait until you see how the traffic, when this road is open, is inclined to go?—That is the wisest course, and that is the point of our petition.

1746. Now, looking further eastward, beyond Somerset House, you have heard what has been said about approaches in that direction by Essex-street; do you believe that it would be an essential to have an approach to the Embankment from the Strand in the direction of Essex-street?—I think you must have one at Essex-street, and for this reason, that at Essex-street you take advantage of a greatly depressed level, that is to say, at Essex-street I think you are six feet lower than you are at Waterloo-bridge or at Wellington-street. It is the natural outfall of what would be termed the watershed. Everything slopes down to that.

1747. It is the natural outfall of the traffic?—It would be the natural outfall of the traffic.

1748. And that, whether the new law courts are on the Carey-street site in the whole or in part, or on the Embankment site, in the whole or in part, that would be a desirable approach to make, would it not, I mean the Essex-street approach from the Strand to the Embankment roadway?—No doubt it would, partly on account of its being a better gradient, and also that, coming off as you would in that case, from Messrs. Twining's, you would set back those houses which project out northerly from Messrs. Twining's, and you would come off with a very nice easy curve from Temple Bar on to the Embankment.

1749. Then supposing Essex-street were not made, and supposing the new law courts were on the Carey-street site, this roadway from Wellington-street to the Thames Embankment would not relieve in any way, as regards persons coming from Carey-street to the Houses of Parliament, the traffic at that portion of the Strand between Carey-street and the corner of Wellington-street?—I think not.

1750. And if there was an approach from Carey-street by Essex-street to the Embankment, that would relieve a portion of the Strand?—No doubt it would very much.

1751. In the same way, supposing these law courts were to be placed on the Embankment site, this Wellington-street approach would not any more relieve the traffic along the Strand with regard to persons going to the Houses of Parliament?—It would not relieve it at all.

1752. Whereas, in the case of the Essex-street approach, that would relieve it?—It is on the ground of the non-necessity of the roadway from Lancaster-place down to the Embankment, on the ground of its absolute non-necessity, that we found our petition.

1753. Exactly; but I want to prove, by going into these details, the existence of this non-necessity, if one can so express it: looking to both ends,

Mr. *H. Bidgood.*

26 April 1869.

ends, looking to the east and looking to the west, the result of your evidence is that, in the interest of the ratepayers of the metropolis, and for the public convenience, it would be better to make an approach to the Embankment roadway by Charing-cross in the direction of Northumberland House at the one end, and by Essex-street at the other, in preference to making this roadway between Wellington-street and Hungerford-bridge?—Entirely so.

1754. This roadway, which, as you see, is coloured red on that map, is about at right angles, not only with the Embankment, but also with Whitehall-place?—It is.

1755. Now this roadway would not in any way benefit persons going from Charing-cross over Westminster-bridge, and it would not relieve that traffic in any way, would it?—No; because you would have to go down so far, that any person driving there would naturally turn down Parliament-street and over Westminster-bridge.

1756. So that that narrow neck between Cox's and Drummond's would not be relieved of the traffic?—Not at all.

1757. There is, at the present moment, a great deal of traffic at the corner of Bridge-street, Westminster. That traffic would in no way be relieved by the present plan, would it?—Any person coming down from Charing-cross, and turning into Whitehall-place, and getting on to the Embankment, if his destination is Westminster-bridge, would clearly avoid the semaphore.

1758. According to the present plan?—Yes.

1759. You think, according to the present plan, they would go along Whitehall-place and turn round at the angle thereon to the roadway?—No, I do not think they would, because they would have to make an angle, but if they did, clearly they would avoid the semaphore.

1760. But they would greatly lengthen the distance?—Greatly.

1761. For a person coming from the Admiralty, going round as proposed by Whitehall-place on to the Embankment, and then coming up at Westminster, that would be clearly longer than proceeding along Whitehall, Parliament-street, and Bridge-street?—Yes.

1762. Mr. *Layard.*] In your opinion, would a public building, such as a museum of natural history, be a proper building to be placed on the Embankment; do you think it would offer advantages to the working classes of the neighbourhood?—There can be no doubt of it.

1763. And with your knowledge of the working classes in your district, do you think a museum of natural history, combined with handsome flower gardens, would be, in the sense of the Act of Parliament, a place of recreation for working men?—I do not know whether the Act of Parliament mentions working men especially, but it would be a convenience for everybody, and a great ornament to the river.

1764. The Act of Parliament enacts that the ground shall be used as a place of recreation. Do you consider that, using that space of ground for a museum of natural history, and for gardens, would be complying with the Act of Parliament?—For everybody, no doubt.

1765. Mr. *Tite.*] With regard to the suggestion you have spoken of, of making a road from Charing-cross near Northumberland House, are you aware that the Metropolitan Board had a Bill in Parliament for carrying that into effect?—They had.

1766. And do you know that it was withdrawn because the Duke of Northumberland had the power upon some arrangement made with him before the Metropolitan Board had anything to do with it, of preventing anyone touching Northumberland House without his consent?—I am not quite sure that we approached the Duke quite in the right way at that time, seeing that we were about to ask him to give up his house, but I know that that Bill was in Parliament.

1767. And his refusal prevented it going on?—No doubt.

1768. With regard to the road of which you have spoken, from Hungerford-bridge up to Somerset House, did you always oppose that?—Always.

1769. Both in the Board and out of it?—Both in the Board and out of it.

1770. And a good many men sympathised with you in that view?—No doubt.

1771. Only we were compelled to make it by Act of Parliament, and there was an end of the question?—That is so.

1772. Do you imagine that a road must be made somewhere from the Thames Embankment to the Strand, and do you think a better place can be found than Essex-street?—No better can be found than Essex-street.

1773. Then you mean this, that if we can make a road from Charing-cross on the Thames Embankment, and use the money, it would be more desirable to spend the money in that way than in making a road from Hungerford-bridge to Wellington-street; is that the meaning of your petition?—The meaning of our petition is that we hope never to see a crooked road made at Charing-cross, but that we do hope to see, at whatever cost, a direct road from Charing-cross.

1774. You have not seen the altered plans, I suppose, which Sir John Thwaites produced the other day?—I think I have seen everything connected with this matter.

1775. Do you think that is very crooked?—I think it is not straight.

1776. Lord *Sandon.*] Have you ever observed going along Cockspur-street, that if you sweep away Northumberland House, the eye along that whole vista will immediately fall upon the great railway shed?—That railway shed is, without doubt, a very ugly thing, but the buildings that would be erected there on the left-hand side would effectually shield that monstrosity.

1777. But does not the fall of the ground there make it almost impossible to get buildings of such a gigantic height as to cover that shed, which is probably the most unsightly object in London?—I have said that the National Bank would form the right-hand corner, and the buildings on the opposite, that is, the left-hand corner, if equally high as the National Bank, which of course they would be, would almost entirely shut out from view the shed of the South Eastern Railway Company.

1778. May I venture to ask, if that is the result of accurate study, or only an opinion?—It is not an opinion.

1779. Is it the result of measurement that buildings of such a character could be erected?—Not measurement, so much as standing in the roadway, opposite Waterloo House, and taking the angle which would be presented by buildings equally high on the left-hand, and continued all the

the way down on the left-hand side. I mean buildings equally high as the National Bank.

1780. Can you tell me at all how many storeys those buildings would be?—I think the National Bank is six storeys high.

1781. But I mean, when the ground falls on the left hand of your supposed road, how many storeys high would the houses require to be to mask that great railway shed?—I should think they would be about as high as the National Bank. It is not the buildings nearest the shed that would shut it out from view, but those nearest to Charing-cross, and that would constitute the left-hand corner.

1782. But there is a rapid fall of ground there, if I am not mistaken, between Northumberland-street and Northumberland House?—We should not go near Northumberland-street, and the fall is not very rapid. It is partly on that ground that I advocate a straight line from Charing-cross, because it is the easiest fall; and another thing, you do not go down an incline and then have to rise again, which you would do if you dip into the throat of Charing-cross.

1783. *Chairman.*] Will you look at this plan which I have in my hand; I see lines marked here uncoloured, which pass through Northumberland House in a direct line from Charing-cross, from Charles I.'s statue, and one line cuts the Embankment road at the westernmost pillar of Hungerford viaduct; is that the line you refer to?—That is a line direct from the Opera House.

1784. It takes off one end of Northumberland House, and goes through the centre of the gardens?—Yes.

1785. Is that a line originally proposed by the Metropolitan Board of Works for which they had a Bill before Parliament?—That is the line, to the best of my recollection.

1786. That line would come close on to the pillar before it turned on the Embankment, and it would give a very sharp angle, would it not?—Yes, but it would be a roadway equally wide with Regent-street.

1787. It would be an obtuse angle on one side, and an acute angle on the other, from its direction?—Yes, but the width is so ample that no difficulty would arise.

1788. With reference to a question put to you by Lord Sandon, as to the effect of this direct roadway upon Charing-cross station, you say that the hideous structure of the South Eastern Railway would be concealed by high buildings?—Yes.

1789. Now I wish to know, according to this direct line, what would be the distance between the site of this new roadway and the corner of the Charing-cross structure?—That will hardly convey my meaning; my notion is this, that if the National Bank stands there, and is six or seven storeys high, if you put a line of buildings equally high on the left-hand side the very first object that meets the eye, with the line continued through, would be those buildings, and you would see nothing of that South Eastern shed.

1790. You would see nothing at Charing-cross, but if these buildings, as the road descends to the Embankment, were to continue to hide this structure, they would have to be progressively increased in height?—I think not; the first object that would strike the eye would be these buildings here (*pointing to the plan*), and if the others are erected of a corresponding height the shed would be hidden; there is no very great fall between that point and that.

1791. Do you know what the fall is?—I do not, but it is not great.

1792. But, at any rate, according to this plan, supposing it were necessary at the corner of this Charing-cross station, to screen it by a building, there is no place to erect such a building?—The street forming the left-hand side would be an effectual screen, and the shed would not be nearly so conspicuous as St. James's Hall is, as you go down Regent-street.

1793. I only mean the lower part where the brickwork ceases; between that and the line of railway there would be a very small space indeed?—Which would, in my opinion, be effectually shielded by the fact of these houses being there.

1794. But at the bottom there would be no houses?—The eye would be satisfied long before it got to that point, and it would present no obstruction.

1795. Lord *John Manners.*] Do you mean that on the west your proposed line of houses would form an effectual screen?—Coming in from the west.

1796. Coming in from the west, your line of houses would form an effectual screen, but you do not, of course, wish the Committee to understand that persons going down the Embankment from the north, and up the Embankment from the south, would have their view of the railway shed obstructed?—No.

1797. Mr. *Beresford Hope.*] Do you conceive that the buildings erected along the curved line would be an equally effective screen?—They might be, but then we lose the direct route, and pay double as much money for it.

1798. Are you aware that that Northumberland House scheme was not dropped hastily, but came before the House of Commons, and that strong general feeling was expressed in the House against it?—I know there was a strong expression of feeling against it.

1799. It came before the House in the beginning of the Session of 1866, and was subsequently dropped?—It was dropped because the opposition was very great; and as we were not likely to succeed, we bowed to the opinion of the House, and withdrew it.

1800. I suppose you acknowledge a certain architectural and historical value attaching to Northumberland House?—I am aware of certain associations connected with Northumberland House, but I am not aware of any great historical value being attached to it.

1801. *Chairman.*] As a matter of fact, the curved line would give more space between the roadway and Charing-cross Station than the straight line?—That may be, but the cost would be enormously increased.

1802. Mr. *Tite.*] That is supposing we could buy the Duke of Northumberland's house at a fair price?—Yes.

1803. Why do you assume that it would be less in the one case than in the other?—Because I do not think you would have to take all the business premises below the National Bank; for instance, if you take the curved line, you would have to begin by taking the National Bank itself.

1804. But do you imagine that their business is very valuable, knowing the incidents con-

Mr. *H. Bidgood.*

26 April 1869.

nected with it?—You will find that the house is a very valuable property.

1805. But the trade cannot be worth much, I should think?—I am not a shareholder, and therefore cannot say.

1806. Do you imagine that we should buy Northumberland House cheaply, with all its frontage, and all its associations?—You would have to give a fair market value, and having given a fair market value for it, you would do the best thing for the west end of London that could be obtained; in the other case you will have to pay the full market value for obtaining a second rate thing.

1807. You think, then, that the one would be far cheaper than the other?—I do.

1808. Have you any estimate upon which that is based, except your own opinion?—Excepting that it has been generally supposed, that if Northumberland House would cost, say 200,000*l.*, the other would cost nearly 400,000 *l*

1809. Mr. *Sclater-Booth.*] Do you come here as representing the west-end of London?—I come here as representing the parish of St. James's.

1810. Lord *Sandon.*] There is only one other point with reference to the placing of a museum of natural history on the Embankment; from your knowledge of the metropolis, do you think there is some jealousy about moving these collections to Kensington?—I think not; I think there are some persons who would grumble, of course.

1811. You do not think there is any feeling in favour of putting the museum on the Embankment?—I think if the west-end public were asked whether they would have it at Kensington or on the Embankment, they would certainly say on the Embankment.

1812. I am not speaking of the west-end public, but generally, of all classes, whether it would not be far more practicable to have this museum on the Embankment than to banish it to Kensington?—It would be so accessible on the Embankment by the penny steam-boats, and the Metropolitan District Railway, that I think it would be much more convenient for all classes to have it on the Embankment rather than at Kensington.

1813. It is also much more available for the south of London?—No doubt.

1814. Mr. Alderman *Lawrence.*] At the present moment, I think the Metropolitan Board of Works have the laying out of the ground that has been reclaimed from the river Thames, and it is for them to lay it out for public purposes, is it not?—If I remember rightly, Parliament has given us but a very small portion of what we have reclaimed. Most of it has been appropriated by the parties whose ground abuts on the Embankment.

1815. But the part we are talking of now, the roadway which has been directed by Parliament to be made, is in the hands of the Metropolitan Board of Works, I believe?—Where the red road and the green is.

1816. That, of course, is a considerable portion of ground which is placed at your disposal, the greater portion of the ground having been, as you say, appropriated to the different owners abutting on the river Thames?—Yes.

1817. That being the case, do you think it advisable that any portion of that ground should be covered by any buildings whatever, or that the original intention should be carried out, of preserving it as an open space for the benefit of the public?—I think if the public were asked whether they would have it as open space, or whether they would have a beautiful building dedicated to their use upon the same space, that, looking at the two things, the vast majority of the public would be in favour of the building.

1818. But supposing that the building were placed upon a site at present occupied by buildings, and the open ground, laid out in gardens and terraces, as has been described, attached to this building, would not that be a greater advantage than covering any portion of the present open ground?—I am so enterely in favour of dedicating this beautiful site to public buildings, that I can strike no balance as between the claims of the two things; I certainly think it would be a great loss; an immense loss to the metropolis, if we should fail now to put up beautiful public buildings specially dedicated to the use of the public; I think we should fail lamentably in our capacity for governing the metropolis, if we did not advocate having the buildings.

1819. Then if I understand you, you are for appropriating a considerable portion of the ground that has been dedicated by Act of Parliament to the public, as open ground, to handsome buildings?—I think that Parliament, like everybody else, was not aware at the time, what a beautiful site this would be, and I think that Parliament is not wiser than other persons. The importance of the site has grown upon us, and we now see that what might have been dedicated to the public for open space, will be far better appropriated to them by erecting public buildings there.

1820. Whether Parliament made a mistake or not, your opinion is that a large portion of the ground that has been dedicated to being kept open for the public, may with advantage be used for placing public buildings upon it?—No doubt.

1821. Lord *John Manners.*] You have stated that a public building on this part of the Embankment would be very accessible by railway. Are you aware whether there is any convenient railway access at the present time to the buildings at Kensington?—I think the Metropolitan Railway has a station very near the Kensington Museum.

1822. Are you at all aware of what the number of the working classes who frequent the South Kensington Museum is at present?—I am not.

1823. Should you be surprised to hear that it is a very increasing number?—I know it must be very large.

1824. Do you think that if more inducements were given to the working classes to frequent the Museum and institutions of that nature at Kensington, more of them would go there?—I think that the facilities now offered for going to the Kensington Museum are as great as can very well be offered, and I do not see how additional facilities could very well be given to the public.

1825. You misunderstood me; I did not say additional facilities, but additional inducements; that is to say, there being already certain collections of great interest to working people at South Kensington, if more museums and institutions of that nature were placed there, it would be natural that more of the working classes would go there?—I think there is so much inducement now offered to the public to go to Kensington, that additional inducements need not be added; and

and I do think it is fair towards other parts of the metropolis that Kensington should not monopolise everything.

1826. Mr. *Layard.*] Do you not think that the south of London has a fair claim to have a museum near it?—Undoubtedly.

1827. *Chairman.*] And this museum being on that site, though no doubt, as Lord John Manners said, Kensington has the benefit of the Metropolitan railway, this, in addition to the Metropolitan railway, would have the great water communication of the river Thames, to bring people there from the eastern parts of London, and from Greenwich and those districts?—Quite so.

1828. They would be landed there much nearer than they could by possibility be brought to the Kensington Museum?—They would be landed almost on the spot.

1829. Mr. *Sclater-Booth.*] You represent, I believe, the parish of St. James's?—I do.

1830. You have spoken about the west-end, have you any authority for speaking in the name of the west-end of London?—None, except that the parish of St. James's is an influential district at the west-end of London.

1831. You spoke of this roadway through Northumberland House as being, in your opinion, necessary for the inhabitants of the west-end, in order to enable them to get on to the Embankment?—Quite so.

1832. Do you mean for the purpose of through traffic, or merely for the purpose of driving on the Embankment?—For the purpose of through traffic to the City.

1833. What portion of the west-end requires to go along the Embankment in the direction of the City?—All the inhabitants of St. James's going to the City would, in my opinion, get on to the Embankment so as to get to the Bank of England, which would most likely be the point of their destination.

1834. Assuming that the inhabitants of St. James's would take that route, is not that a very different thing from saying that the west-end of London would do so?—I fancy that it is very much the same thing.

1835. Let us examine that for one moment. Belgravia is a great portion of the west end of London?—Belgravia is a very influential portion of it.

1836. The direct access for Belgravia would be by way of Westminster-bridge to the Embankment, would it not?—It would; but all the St. George's portion between Hyde Park corner, Piccadilly, and Hyde Park corner, Oxford-street, the inhabitants of the whole of that immense block of buildings would take the same course as the St. James's people.

1837. Do you think that the traffic along Oxford-street would come down to Charing-cross in order to drive to the City?—There is a vast portion of traffic south of Oxford-street.

1838. But do you think that the Piccadilly traffic, even, would come down to King Charles's statue, in order to get upon the Embankment, when, as a matter of fact, it now goes through Leicester-square and those narrow streets, in order to get a nearer approach to the City than if it even came down to Trafalgar-square?—I think, no doubt, that the whole of the St. James's traffic must of necessity come to Charing-cross, and not go through Leicester-square.

1839. If you look at the map, it is obvious enough that the line from Piccadilly by King Charles's statue, and so on to the Embankment, and thence to the City, is a very roundabout line, as compared with the line either through Leicester-square, or along the top of Trafalgar-square and through the Strand?—But the whole of the Piccadilly omnibuses now take the Charing-cross line.

1840. Omnibuses do not of necessity go the nearest way, they go the way which suits them best, having reference to the facilities for picking up passengers?—They take the line which the public take, in order that they may get passengers for their vehicles.

1841. Is that so, do you think?—That is so.

1842. Are you not aware that there is an enormous cab traffic through Leicester-square from Piccadilly directly towards Waterloo and London-bridges?—The whole of the Piccadilly traffic finds its way zig-zag through Leicester-square and Hemming's-row, but still it takes the Strand route.

1843. But it would not answer the purpose of these cabs to come down to King Charles's statue, and take the Embankment there on their way to the City?—I should think that if the line is direct from Charing-cross, 99 out of 100 cabs would go by that route if their destination was the Bank of England, or the Mansion House.

1844. At all events you would limit the requirements of the persons living at the west-end to that portion of them who want to go through to the Mansion House or the Bank?—Yes, so to speak, that is putting the great public in another form, because everybody wants to go to the Bank of England, and to the bankers in Lombard-street, and about there.

1845. *Chairman.*] I may ask you whether the west-end, whether it be St. James's, Belgravia, or Tyburnia, would go not only to the Bank or the City, but whether it would not occasionally require to go to the Surrey side of the river, and require to go to the House of Commons?—Yes.

1846. Looking at those two things, going across the river or to the House of Commons, would not such a line as you propose from Northumberland House be a very great convenience?—In my opinion it is of such importance that we cannot at present form an adequate idea of the value which the approach to the Thames Embankment would be.

1847. It would lead west as well as east?—West and east.

1848. When once they got on to the Embankment?—No doubt.

1849. And across the river, as well as east and west?—Quite so.

1850. I suppose we may assume, looking to the future, that the Embankment will be continued, probably, on the southern side of the river, at some time or other?—I fear not.

1851. Do you not think, looking to future times, that there is any probability of the extension of the Embankment which has been completed as far as St. Thomas's Hospital and Westminster-bridge further east down the river?—There is not the same necessity for it; the necessity in this case was a twofold necessity: first, we wanted a roadway; secondly, we wanted a route for the sewage, and, but for those two things combined, I apprehend we should not have had the Thames Embankment; that is not the case with the southern side; on the southern side you have a roadway all along.

Mr. *H. Bidgood.*

26 April 1869.

1852. Mr. *Sclater-Booth.*] In your opinion, although we may look forward by means of the great facilities for communication which are being developed everywhere, to the great thoroughfares of Charing-cross and the Strand, being therefore relieved of traffic to a certain extent, do you still think it would be worth while to spend so large a sum as 200,000 *l.* in constructing this roadway from Charing-cross direct at right angles to the Embankment; and do you think that even with the thoroughfares less crowded than they now are, the public would be willing to go a longer distance by the Embankment than the shorter distance through the Strand, on the one side, and Charing-cross on the other?—The fact is, that we anticipate diminished traffic whenever we open a new route, but no sooner do you open a new route than you find that that new route is equally thronged with the old route, and the traffic on the old route is not abated at all. The population increases at such an enormous rate, and is now reckoned by millions, that all the facilities you can give by way of opening new routes will sure to be crowded.

1853. Mr. *W. H. Smith.*] You are acquainted with all that transpires at the Board of Works with reference to contemplated improvements, I suppose?—Yes.

1854. Are you aware whether it has been proposed to make a road from the Strand by Carter's-lane, I think it is called, to the Embankment. Carter's-lane is opposite Southampton-street and is a lane now abandoned, which I think was used for carting coals?—I know the place you mention, but it would be so exceedingly steep as to make it impossible.

1855. It is not practicable in your judgment to make such a road?—I think not.

1856. I only want to ascertain the fact, in consequence of statements which have been made; you believe it to be impracticable?—I do indeed.

1857. Mr. *Tite.*] Has it ever been before the Board?—I am not sure.

1858. Mr. *W. H. Smith.*] Or before your committee?—No; some approaches were ordered to be sketched out, and it may have been one of the number, but it never was thought of.

1859. But you seriously entertain the question of an approach by Essex-street, and you propose to take down the east side of Essex street. That is your scheme, is it not?—Yes; or you might cut a new route altogether; you might cut out a route beginning at Twining's, and instead of following Essex-street rigidly you might let it go off gradually.

1860. In a slanting direction from Twining's, and terminating at the Embankment; and therefore to the westward of Essex-street?—Yes, and avoiding Gwynne's-building at the bottom.

1861. Mr. *Tite.*] That has been gravely discussed and thought of, and alternative suggestions have been made by yourself and others, I believe?—Yes.

1862. Mr. *W. H. Smith.*] That would not be very costly, would it?—Anything would be costly.

1863. But not very costly?—Not very costly.

1864. Property in Essex-street is not of very great value, is it?—Not of very great value.

1865. And it would have this additional advantage, that it would throw open the Temple to Essex-street, would it not?—Yes.

Mr. James Pennethorne, called in; and Examined.

Mr. *J. Pennethorne.*

1866. *Chairman.*] I suppose, in your official capacity, connected as you have been with the Office of Works and the Commissioner of Woods and Forests, you have considered the question of this roadway, embankment, and approaches?—With reference to the Crown Estate at Whitehall, I submitted plans to Mr. Gore last year for laying out that estate. Those plans were printed by the House of Commons, and since then I have reconsidered the subject, without instructions, but simply to prepare myself upon it, and to show how those plans might be extended, with a view to uniting the improvement of the Crown property with the road in contemplation from Charing-cross to the Embankment.

1867. You say these plans were laid before the House of Commons last year, and printed?—Yes.

1868. In what form did they come before the House of Commons last year?—They were moved for by Mr. Gregory.

1869. Were those plans moved for by Mr. Gregory bearing upon the question of public offices?—Yes.

1870. They are "Parliamentary Paper, 399, 7th July 1868"?—Yes.

1871. You say you laid these plans before Mr. Gore, which were subsequently moved for by Mr. Gregory, and are now Parliamentary documents?—Yes.

1872. You say they dealt with certain portions of Crown lands; what portion of the Crown land did they deal with?—What I should call the "Whitehall Estate"; the whole of the property from the north of the Duke of Buccleugh's to an irregular line rather south of Northumberland House.

1873. In fact, what is white on that line south of the Waterloo and Whitehall railway in the direction of the Duke of Buccleugh's house is the Crown land to which you refer (*pointing on the plan*)?—Exactly, and the green also.

1874. The white is the Crown land?—Yes, the Crown reclaimed land.

1875. Which was given up to the Crown on its reclamation by means of the Thames Embankment?—It was always the Crown's; therefore it was not given up to them, but it remained with them. The bed and foreshore of the river were vested by the Conservancy Act of 1857 in the Conservators of the Thames, except such portions as were situated in front of Crown property, which portions were specially reserved to the Crown. The land coloured white is part of that so reserved.

1876. What was the description of the land before?—It was the bed of the river.

1877. What is commonly called the foreshore?—Yes.

1878. And that on its reclamation became Crown property?—It was always the Crown property, it was not parted with, and was not sold.

1879. Was it for that portion, or rather for the Crown rights along the river on the north side, that 27,000 *l.* had to be paid by the Metropolitan Board of Works?—On the north side of the river

river there were about 26 acres of land reclaimed that were not in front of Crown property; for these 26 acres the Metropolitan Board paid 26,000 *l.* to the Conservators of the Thames, in whom the land was vested.

1880. A thousand pounds an acre?—A thousand pounds an acre, of which money two-thirds went to the conservators of the river, and one-third only to the Crown, pursuant to the Conservancy Act.

1881. Then, for this portion, the Metropolitan Board of Works did not pay anything?—They did not pay anything for the foreshore in front of the Crown property.

1882. But the Crown allowed them to make the Embankment and obtained the ground which was the benefit of the reclamation?—Exactly, and required no money payment for the foreshore that was required for the Embankment and railway.

1883. What should you roughly estimate is the value of that land so reclaimed to the Crown?—I am not prepared to state that exactly. As building land it will become valuable land.

1884. Can you build upon it now yourselves?—Yes.

1885. The Crown may build upon it?—The Crown may build upon it, and not only that, but Parliament have so far contemplated the Crown building upon it, that by the Act of Parliament vaults can be built all the way along under the Embankment road.

1886. You have the power, in addition to this reclaimed land which belongs to the Crown, of utilising the Embankment as vaults in connection with these buildings?—Therefore, when the Whitehall leases fall in, rows of houses may be built there.

1887. That is to say, the Crown will have power to build the houses up to the footway of the Embankment, and under that footway and roadway they may erect cellars in connection with those houses?—So the Act of Parliament says.

1888. Can that be done without interfering with the roadway?—The same as it could be done in every other street in London.

1889. As regards the railway, would not the building of such vaults be prevented by the Metropolitan Railway, which runs under the roadway at that part opposite the Crown property?—No; the railway, except in a very small portion, is under the road, and not under the footway, therefore there is room for the vaults, notwithstanding the railway. In a small portion, it actually passes through part of the reclaimed land belonging to the Crown; but through that small portion a right of way in perpetuity has been sold to the company.

1890. So that you would have room between the white ground occupied by the Crown buildings and the railway for erecting such buildings as might be required in connection with your buildings?—If it should ever come to that; the probability is that it never may, but there is the power existing.

1891. Then the Crown may erect on that ground any buildings that appear desirable?—Any buildings.

1892. The railway opposite the Crown property runs, as you say, almost under the centre of the roadway; at any rate it does not run except in that portion which you have sold to them in perpetuity under Crown land?—Exactly.

1893. Was that line taken by the railway as most convenient to themselves, or did you, or any other person on the part of the Crown, insist upon that line being taken?—We had nothing of any sort or kind to say to the railway; we did not interfere with them.

1894. Did the railway buy that portion of land from you in perpetuity?—It is a very small piece, and they have bought a right of way under the land in perpetuity.

1895. So that if they had gone under your land, instead of that small piece, had it been more convenient to them to do so; if they had gone along the white instead of the yellow, they would have had to buy, not only a small portion, but a very large portion in perpetuity?—They would have had to buy it, but probably we should have objected to it, because it would have been departing from the powers of their Act.

1896. You would have objected to it because, *pro tanto*, it would have diminished the value of your property?—It would have interfered with the laying out of the property.

1897. So that it comes to what I said, that though no positive action was taken on your part to compel them to take their railway under your land, self-interest, which perhaps is the most powerful of all motives, forced them to do so?—The company always proposed for it to go under the roadway.

1898. Did this plan which you have laid before Parliament, which was moved for by Mr. Gregory, propose to deal with this land for public purposes, or was it the laying out of it for private purposes, a continuation, for instance, of the private buildings, such as the Duke of Buccleugh's, or other buildings in Whitehall-gardens?—The plans were made for the purpose of enabling the Treasury to consider whether the ground should be laid out for private purposes for the advantage of the Crown, or whether they would take advantage of it for public purposes, in which case they would have had to purchase it from the Crown.

1899. Then you had alternative plans, one for private buildings and the other for public buildings?—Exactly.

1900. And in your laying out of this ground for public buildings did you propose to place the public buildings on this reclaimed land?—Yes.

1901. Would your plan for public buildings have occupied the whole of that reclaimed land?—I do not think the plans that were printed did, but I am not aware of anything to prevent it.

1902. Did you consider the question of the approaches to the Embankment in that plan?—Yes.

1903. What approach to the Embankment did you propose in the original plan last year?—That was a question left entirely open for the determination of the Treasury, whether or not the road should be made opposite to the Horse Guards; there had been a suggestion to that effect.

1904. That is through Whitehall-yard?—Yes.

1905. Or what?—Or whether it should not; the plans were made that all those questions might be determined.

1906. What public buildings did you propose in that plan to put there?—None in particular, it was simply this: here was the ground; the Government at that time were considering what they should do for public buildings, and the question was asked whether or not the Crown land would be available for that purpose.

1907. I see

Mr. J. Pennethorne. — 26 April 1869.

1907. I see a considerable number of buildings have been cleared away from the rear of Whitehall-place, recently?—Yes.

1908. Is that all Crown land?—Yes.

1909. Were those public buildings?—It was Fife House.

1910. What is the extent of ground now available for public buildings, without clearing more than is in process of being cleared?—I should think about seven and a half acres.

1911. Is that without including Whitehall-gardens?—Without including Whitehall-gardens. This little map, if put upon the other plan as a rider, will show you exactly (*handing in a small coloured map*).

1912. Now we have this rider put upon the plan, we find by that there is some little land covered with houses, apparently coloured blue and pink; will you explain to the Committee what the blue and pink mean?—The whole of the ground coloured blue and pink belongs to the Crown; the part coloured pink can at any moment be made available for building purposes, because it is either now vacant, and the leases are out, or it is in the hands of Government, used as offices holding upon short tenancies. One house in the middle is not; that belongs to Lord Gage.

1913. You say that one house of Lord Gage's is not available; what is the length of his lease?—It has about 23 years to run.

1914. I see on this rider, as I may call it, a certain portion marked blue and pink, with no lines upon it; that, I presume, is the reclaimed land to which you have referred?—Exactly.

1915. Between the part that has lines, apparently to denote houses, and the Embankment road?—Yes.

1916. That is delineated white on our large plan behind you, I think?—Yes.

1917. Now I will begin at the west; the portion that is marked blue on the west is apparently occupied by houses?—Yes.

1918. What are those houses?—Whitehall-gardens.

1919. With regard to that part which is blue, on the east, or on the left as I am looking at it, which is marked with the line denoting houses, what is the position of that *qua* the leases of the houses?—They are long leases; those are the houses in Whitehall-gardens.

1920. Which abut on the Duke of Buccleugh's?—Yes.

1921. Those houses are private property at the present moment; that is to say, they are so far private property that they are on long Crown leases?—Yes.

1922. What is the length of those leases?—Fifty years; some more, and some less.

1923. So that it will be 50 years, unless those leases are bought up, before the Crown can get possession of those houses?—Yes.

1924. The portion that is marked blue, without lines, between the lined part and the Embankment, is the reclaimed land?—Yes.

1925. And upon that could you at this moment build?—No; because by the Act of Parliament, the lessees of the houses are at liberty to take that ground, and to annex it as garden-ground to their own.

1926. So that, for all practical purposes, the ground on the estate marked blue, whether it is covered with lines, denoting houses, or whether it is without lines, denoting the reclaimed land, will be unavailable for public purposes for 50 years unless the interest of the persons holding those leases is bought up in the meantime?—Yes.

1927. Now we will proceed to the westward, and we come to the pink part, which is marked all over with lines denoting houses; that portion which is coloured pink, in the rear of the blue portion to which I have just referred, is garden-ground, is it not?—That is Gwydyr House and garden.

1928. Is that available?—That is held upon a lease which will expire in April 1871; there is also a stable belonging to Lady Dover, held till October 1883.

1929. That ground is held by the Government from the Crown for an office, and the lease expires in two years, so it will be then available?—Yes, in two or three years.

1930. Now, will you proceed further eastward?—Then there is the stable which is attached to Dover House, which is let on lease till 1883, the same term as Dover House.

1931. Which also belongs to the Crown?—Yes.

1932. Do you know whether that is held for a long period or not?—I do not remember the term, but it is a long period, I think.

1933. Then what is the next?—Whitehall Chapel.

1934. We will take this line and go gradually along it, then comes the roadway, which is the roadway between the chapel and Lord Carrington's house?—Lord Carrington's house.

1935. That is held now under a lease, is it not?—No; that is in hand; the lease has expired.

1936. Mr. *Tite.*] To whom does Whitehall Chapel, formerly a banquetting house, belong?—It is part of the old palace of Whitehall, and belongs to the Queen.

1937. Could it be pulled down without the Queen's consent?—Certainly not without the Queen's consent.

1938. Then Mr. Gore is not paramount there?—No.

1939. Who repairs it?—It is entirely under the charge of the Office of Works.

1940. Is it not under your charge?—No.

1941. *Chairman.*] Then there is a space with a little square in the centre, that is the yard in the rear of the chapel where the statue is, is it not—Yes.

1942. Then what are these other buildings (*pointing to the map*)?—Then all the buildings between Whitehall Gardens and Lord Gage's are now occupied by the Board of Trade, who have recently gone there, on a temporary holding.

1943. That is at present available for any purpose?—Yes, as soon as they can be moved out.

1944. But they have no tenure?—They have no tenure.

1945. Then comes Lord Gage, who you say has a long lease?—Yes.

1946. What length?—About 23 years.

1947. Then beyond Lord Gage's house, what is there?—Then there is a small house of Mr. Tomline's, the lease of which will expire at Michaelmas 1870. Then there is the Medical Board, which belongs to the Crown; I cannot tell you how that is held exactly, but the War Office are in occupation of it now.

1948. That is available also, is it?—It is always considered so.

1949. Then there is the United Service Institution?—The lease of that has expired, and they hold

hold it by the year, except a portion held at the pleasure of the Sovereign.

1950. That you reckon available, then?—Yes.

1951. What is the next?—The whole of this is Fife House and gardens.

1952. That is all cleared away?—Yes.

1953. In fact, from this part here (*pointing to the plan*) to the east of Lord Gage's to the extreme on the east of the Crown property it is available?—Everything is available.

1954. Now, going again towards Whitehall, I see a large block of buildings there; that is Lord Carrington's house, which is coloured pink, is it not?—Yes; that I have already described.

1955. To the east of Lord Carrington's the land marked blue is all Crown property, is it not?—It is all Crown property.

1956. At present held under long leases?—Yes, for 50 years to come.

1957. And therefore unavailable.—Until that period.

1958. So that the two places are practically in the same position; the part coloured blue to the east, and the part coloured blue to the west, are both held on 50 years' lease, and are only available by purchasing the existing rights?—Yes.

1959. But all the pink is available?—Yes.

1960. Can you state what the whole extent of ground amounts to?—I think the entire is about 13 acres, of which the pink is seven and a half acres.

1961. So that the greater portion is now available?—Yes.

1962. Now the Crown land that is marked blue towards the east extends as far as Cox's?—Yes, nearly; it goes to Craig's-court.

1963. Is Cox's beyond that?—Cox's is, but there is a building belonging to the Crown which fronts Craig's-court.

1964. Is the new National Bank Crown property?—No, it is not.

1965. Then there is a zigzag sort of line which runs down the Embankment in the rear?—Yes.

1966. That zigzag line is in part caused by an angle that runs into it from the direction of Northumberland House, is it not?—Yes.

1967. Is that Northumberland House and gardens?—The Crown and the Northumberland properties touch at that point.

1968. They are conterminous?—Yes.

1969. To the westward the property is the property of the Crown, is it not?—Yes.

1970. How far?—To the Duke of Buccleugh's and Richmond-terrace.

1971. That is also held under long leases?—Yes.

1972. What is the length of the Duke of Buccleugh's lease?—Eighty-five years.

1973. Then there is Richmond-terrace, is that held on short leases?—Richmond-terrace leases will have now 52 years to run.

1974. Then I see, beyond both the Duke of Buccleugh's and Richmond-terrace, there is some property unoccupied partly, and partly occupied by buildings, what is that?—That belongs to the Metropolitan Board of Works.

1975. That is to say, they have purchased it?—Yes.

1976. Then comes another large building?—That is the Board of Control.

1977. Then there is a white block beyond, which brings us down to Westminster-bridge?—That is the Metropolitan District Railway station.

1978. Was that Crown property?—About one-third of it was the Westminster-bridge Commissioners' property.

1979. I think we had it in evidence that there was an arrangement come to between the Metropolitan Railway and the Crown as to the position and the character of the station?—Yes with the Westminster-bridge Commissioners.

1980. Had you anything to do with that?—I do not remember whether I had anything to do with it.

1981. At any rate, the Commissioners seem to have some powers and rights over that portion of the land?—The Westminster-bridge Commissioners, not the Crown, because the Bridge Commissioners sold that land to the Metropolitan Railway Company, and reserved to themselves a power over the elevation of the buildings towards Bridge-street.

1982. Who are the Westminster-bridge Commissioners?—They are now represented by the Office of Works.

1983. So that when the witness who spoke about this railway station used the term "Crown" he ought to have used the term "Office of Works"?—In speaking of that portion, yes.

1984. In speaking of the Metropolitan Station, nearest to Westminster-bridge?—Yes, the Crown have nothing to do with that.

1985. Is the Board of Control Crown property?—That is Crown property.

1986. Is that held under lease or how?—That is now in hand.

1987. That is also available?—Yes.

1988. Do you know the extent of land belonging to the Metropolitan Board there?—I do not.

1989. Do you know for what purpose they acquired that?—I do not think they have yet determined what to do with it; but I cannot tell.

1990. Was it necessary for them to have acquired that before they made their Embankment?—That I cannot tell.

1991. Mr. *Beresford-Hope.*] Is that part cleared open, or is it occupied by any sort of building?—It is cleared now.

1992. *Chairman.*] The portion of land that has been reclaimed opposite the houses of Richmond-terrace and the Duke of Buccleugh's house is not in the same condition as the blue and the pink to which you have already referred; it is opposite the houses and goes with the houses?—Yes.

1993. And is unavailable, and would have to be bought up with the leases of the houses?—Yes.

1994. You say you presented to the Commissioners of Woods for the London district last year two plans which were moved for by Mr. Gregory, and which dealt with the Crown lands in this district?—Yes.

1995. One you said was a plan for dealing with them for the erection of private buildings, and the other for the erection of public buildings, and you have further stated to the Committee to-day that you have modified your views as regards those plans, and have got some other plans which you have prepared, and are ready to submit to the Committee?—Yes.

1996. Will you kindly explain how you propose to deal with this land privately, and with the approaches to the Thames Embankment; by privately, I mean for private buildings?—The plans were shown as available for either one pur-

Mr. J. Pennethorne.

26 April 1869.

pose or the other. The pink upon the plan "A," which was presented to Parliament, and upon the plan I have just been describing to you, will correspond.

1997. This plan did not take the blue?—No, it did not take the blue at all, nor did it interfere with the offices which, at that time, were the temporary Foreign Offices, and now are the offices of the Board of Trade.

1998. That you propose to deal with by letting it out for private purposes?—It will be available for both purposes; this plan was for making a road directly facing the Horse Guards, because such a road had been contemplated by the Board of Works, and it was thought a desirable thing.

1999. In this plan for laying it out for private buildings, or for other purposes, you, I see, contemplated two approaches to the Thames Embankment, one direct from the Horse Guards to the Embankment, the other almost parallel with it, diverging towards the Embankment, towards Whitehall-place?—Through Whitehall-place; the Metropolitan Board were to make a road, according to the Act of Parliament.

2000. And this other you proposed?—It was proposed in the one plan, but not in the other.

2001. You availed yourselves of the ground in possession of the Crown, to lay it out, either for private or for public buildings?—Yes.

2002. In laying it out for private buildings, did you contemplate eventually using all which is on this piece which you have been describing hitherto upon the plan, for public buildings?—No, I confined myself on this plan entirely to the ground that is available for use at the present time.

2003. You did not contemplate any general plan of which this was to form the beginning?—No.

2004. Then this year have you, in reconsidering this plan, laid it out with a view to any more general scheme?—Yes.

2005. This year you contemplate laying out land which is now available with reference to a general scheme, which will ultimately embrace the whole of the Crown property, or, perhaps I should say, the greater portion of it, which you have described to us, and which is coloured blue and pink upon the rider plan, which you have laid before us?—Yes; I have not been instructed to do it by anyone, but knowing that the subject was under contemplation, I have done so.

2006. By "subject under contemplation," do you mean the subject of public buildings or of roadway and approaches to the Embankment?—First of all, the question of having public buildings upon the site is under consideration, and the improvement of the whole locality has been under consideration, and the formation of a road from Charing-cross to the Embankment; taking all these questions together, I thought I could not do wrong in considering the subject, and preparing myself for any questions which might be asked me.

2007. Then this plan you do not bring forward as a plan which has been submitted to any public body, but simply as your own idea, from your own experience in managing this Crown land, as to how this Crown land could be advantageously laid out in the interest of the public?—Exactly; I have not shown this plan either to the Commissioner of Works or to the Commissioner of Woods.

2008. You bring it forward in your private capacity as a Witness before this Committee with reference to the approaches and laying out of the ground?—Yes; but principally with reference to the approach from Charing-cross.

2009. Will you explain this new plan, which you now produce for the first time; we will begin with the roadway. I see that you contemplate by this plan an approach to the Embankment from Charing-cross, and you contemplate, apparently, that that approach should avoid Northumberland House, and should have a curvilinear form?—Yes.

2010. You simply take a small portion of Northumberland House Gardens, leaving the house untouched?—Leaving the house untouched.

2011. The whole of the house you leave untouched?—Yes.

2012. What extent of the garden do you take?—A very small portion of the angle of the corner, furthest away from the house.

2013. This approach that you propose would necessitate the taking of all the houses; apparently by this ground plan all the houses between the corner of Northumberland House, and a considerable distance down Charing-cross, until we come opposite the Admiralty, will have to be taken?—Yes.

2014. What portion of that would be Crown land; I mean the frontage towards Charing-cross?—The boundary of the Crown land is shown by the dotted line which passes very nearly down the centre, for a considerable distance of the curved road.

2015. Then all this to the south of the curved line would be Crown property?—Yes; and all the land to the north belongs to various individuals.

2016. Which land would be acquired?—Yes.

2017. Lord *John Manners.*] Both would have to be acquired, would they not?—Both would have to be acquired to carry out this plan.

2018. *Chairman.*] The portion that is white, belonging to the Crown, that is to the south-west of the dotted line, is held under leases, I think you told us just now, of considerable length?—All the part facing Whitehall is held under long leases; the remainder is held upon only short leases.

2019. Then I see there is a very narrow strip of land that runs to Whitehall-place, which is on the ground now occupied, I suppose, by Mr. Gore's office?—By the Commissioner of Woods office.

2020. You contemplate, I see on this plan, to round off at that part, so that what is now the narrowest part of the approaches would then become the widest?—Yes; looking upon it as an absolute necessity that there should be a road from Charing-cross to the Embankment at this point, there appeared to be only two ways of doing it, the one the straight road that was proposed by the Metropolitan Board, and the other the curvilinear line shown here.

2021. You have assumed, have you not, that it is essential for the communications of this metropolis, that somewhere in the neighbourhood of Northumberland House there should be an access to the Embankment roadway?—Yes, I consider that it is quite essential, and that the greater part of the money that has been used for the formation of the Thames Embankment will be thrown away unless a good approach from Charing-cross is made to it; at present it is without any approach.

2022. Starting

2022. Starting with that, you have laid out what you consider to be the best approach to the roadway, under the circumstances?—Yes.

2023. Will you describe that approach from Charing-cross, if you please?—Then the choice lay between the straight road and the curved road; the objections in my mind to the straight road were, first, that it starts from higher ground, I should say it is about five feet higher than the circular road; it starts also on the steep slope of the hill, and therefore, at the end next Charing-cross, the whole of that is objectionable; next it comes to a very sharp angle under the arch of the Hungerford Railway-bridge, which is also objectionable; thirdly, it would form a bad angle going to the south as well as to the east.

2024. And would remove persons going south further from the roadway?—Further away a great deal; then, naturally, as you are higher at the west end you have a greater descent to go and that inclination becomes steeper than the inclination of this curved road. While the curved road is only nine inches in 100 feet, this would be 13 inches in 100. It would be steeper than the curved road; and being able to enter into the curved road upon a lower level—on almost a dead level—and working round on to the Embankment, instead of going on to it at an angle, were to my mind all reasons for choosing this line. Then there is another very important question as I think, which is, that it widens Charing-cross, and this is a very great reason for adopting it. As we know, in 12 or 18 months from the present time the whole of the north block of Parliament-street will have been pulled down, and then that will have become a wide handsome road.

2025. By the north block you mean between Parliament-street and King-street?—Yes.

2026. When will that be pulled down?—In 12 or 18 months.

2027. Is that purchased?—All the leases are being purchased, and the freeholds are purchased, and probably in a short time the block will be all down. Then, after that is all done, after Whitehall and Parliament-street have been made a fine magnificent street, coming from Trafalgar-square, improved as it will be by the National Gallery, you will have that miserable narrow neck of Charing-cross, therefore it appeared to me absolutely necessary for the improvement of that part of the metropolis that we should make all these improvements work together. Therefore, for the improvement of Whitehall and the formation of the way on to the Embankment, and also for the obtaining of a fine site for public buildings, that line to my mind is the best.

2028. Mr. *Layard.*] You say, "you will have so and so;" who do you mean by "you"?—Whoever forms the road.

2029. Do you mean the Metropolitan Board of Works?—When I said "you," I was addressing myself to the Chairman.

2030. *Chairman.*] You meant the public generally?—That I should think would depend upon the arrangements to be made; it would become a question whether the work should be done by the Metropolitan Board of Works, or whether it should be done by the Government. I know nothing about that: I merely put it forward as a plan, without saying by whom it should be done.

2031. Then you came to the very reasonable conclusion, as many people would suppose, and as I suppose myself, that if Parliament-street is to be widened, as it is to be, that these fine buildings, the India House, and any other public buildings which may be erected in continuation of the India House on one side of it, being erected, it is perfectly impossible that the approach to that part of London should remain as it now is between Cox's and Drummond's, that is to say, a narrow gut of 45 feet for a carriageway?—It is now oftentimes blocked up by the traffic, therefore it must be widened eventually.

2032. And if it is to be done, in your opinion enlarged space should be acquired on the east, and not on the west, that is to say, on the side of Cox's, and not on the side of Drummond's?—Yes; because it works in with the Embankment approach also.

2033. It not only works in with the Embankment approach, but it works in, does it not, better with the line of roadway from Whitehall to the Admiralty?—Much better. The line shown upon this plan is guided by the line of Whitehall Chapel, which, would be the keynote to the whole plan and design of the building.

2034. It would work admirably as a roadway to the Embankment, and would give you facilities while you were on that Embankment towards the City, to the north from Westminster-bridge, and over Westminster-bridge to the south?—Yes; and then there is another reason which is in my mind: I do not know whether I should mention it; but, in the year 1847, the Government came to the determination to erect a new bridge, called the Charing-cross-bridge, exactly at this point, and they went so far that the plans were all prepared, and notices were given, and an arrangement was made for making a handsome bridge there. That would have gone forward, only it was finally determined to rebuild Westminster-bridge instead. This (*handing in a plan*) was the deposited plan at that time, and some day or other that may come to pass.

2035. I see upon the plan, as laid out by you, between your curvilinear roadway and Northumberland House there is a little bit coloured green at the rounded off angle that is now occupied by buildings?—Yes.

2036. According to your plan you propose, apparently, to give Northumberland House a portion of the land in the rear as an equivalent for the part of the garden which you take?—Whether it would be an equivalent or not I do not know, but I think everything should belong to Northumberland House bounded by that road (*pointing on the plan*).

2037. At present the buildings in the rear of Northumberland House are of the meanest possible description?—They are very bad.

2038. So that although Northumberland House has a view of the river, it is the most unsightly of all views, over rubbishing buildings?—Undoubtedly.

2039. If your plan of this roadway which touches Northumberland House were to be executed, Northumberland House at the back would look first on to its garden, then over this roadway, and then on to these public buildings which you propose?—Yes.

2040. That is looking south-east?—Yes.

2041. Now at the bottom of Northumberland House there are some blocks which are tinted pink, three in number?—Yes.

2042. I see they are separated by a street or roadway at the bottom of Northumberland House-gardens, across which you propose to have

Mr. *J. Pennethorne.*

26 April 1869.

a communication?—Only because it exists at present.

2043. You assume that there will be buildings upon these blocks marked pink?—I should think that there will be; whether there will be upon the piece at the back of Northumberland House will be a question for arrangement.

2044. Mr. *Gregory.*] How large is that piece?—It is a large piece of ground, I daresay large enough for 10 or 12 first-rate houses.

2045. *Chairman.*] Does that at present belong to Northumberland House?—No, I think not, they are lime wharves, and there is a farrier's shop.

2046. That is the building, but to whom does the ground itself belong?—To the Duke of Northumberland.

2047. The *solum* is his?—Yes.

2048. And the pink, is that the Duke of Northumberland's also?—I cannot tell you the exact boundaries upon this plan. I think part of it is the Duke's, and part belongs to the Metropolitan Board.

2049. You anticipate the extension of Craven-street and of Northumberland-street to your approach?—Yes, both those streets, simply for the sake of the communications.

2050. Would that be available for carriages?—Yes.

2051. The gradient will admit of that?—Perfectly; the gradient is much easier for those two streets by this plan; upon the straight plan it would be almost impossible to continue them.

2052. An objection has been taken to the straight roadway to Northumberland House, that it would expose the monstrous erection of the Charing-cross Railway Station; that would be so, would it not?—Yes.

2053. Your curvilinear approach would enable the station to be more easily masked, would it not?—It would bring a large quantity of buildings between the road and the shed or station.

2054. To mask it with buildings for its whole length would be almost impossible, I suppose?—I do not think you could completely mask it.

2055. On the plan of the straight road?—Yes.

2056. But would there be any difficulty in masking it if the curvilinear approach was adopted?—I think buildings erected between Northumberland-street and Craven-street would in a great measure hide it.

2057. Buildings erected on those two south-easternmost blocks marked pink, would in no way affect the view from Northumberland House, whatever height they might be?—No, Northumberland House would look on to the new buildings of Whitehall.

2058. What do you propose with regard to the new buildings; do you propose to concentrate public offices there?—That is going beyond what I think I am at liberty to touch upon.

2059. I mean as a private individual?—I think it would be a very fine thing to have public offices, in that situation; it is available for them, and for this reason also, that every one of the sites next the river on the Embankment I think ought, if possible, to be appropriated to public buildings.

2060. Have you calculated the extent of office accommodation you could get on the land coloured pink there?—No, not altogether; I should be prepared to do so, but you can tell at once that it would be something very large by comparing it with what has been built at the Foreign Office as shewn by the same plan.

2061. Mr. *Layard.*] Has not Mr. Barry prepared a scheme for the erection of public offices on that site?—I have not seen it, and I am not aware of it.

2062. *Chairman.*] You contemplate an entrance, I see, in the centre of Whitehall-yard, directly opposite the Horse Guards?—Yes, but not as a public thoroughfare; it would be a thoroughfare in the same way that people go through the Horse Guards.

2063. You have no plan, I suppose, as regards architectural elevations, or anything of that kind?—No.

2064. And I suppose you probably assume, by what you have done here, a sort of revival of the Inigo Jones' plan, Whitehall Chapel being your keynote?—I think that having that building, we ought to work it in.

2065. And perhaps you think that would be a more appropriate place for working that in, than any other portion of the Embankment?—Yes.

2066. Perhaps you think, that having Whitehall Chapel as the keynote here, it would be a very appropriate position for working out Inigo Jones' idea at this part of the metropolis, rather than on the Embankment, architecturally speaking, is that your opinion?—That would depend entirely upon what you mean, because when you speak of Inigo Jones' design, you mean classical architecture, and there is no reason why classical architecture should not be as available in one part of London as another.

2067. No doubt, but still you have the keynote struck in Whitehall Chapel, which at present is an isolated building?—For these buildings having Whitehall Chapel as the keynote, I think it would be advisable, as far as the plans of the buildings will admit of it, that that should be adopted.

2068. Mr. *Layard.*] I presume you mean the actual plans and elevations of Inigo Jones which are now preserved?—I think you could adopt the architecture, and adopt the proportions; but you could not adopt the building itself.

2069. Lord *John Manners.*] The building was designed for a specific object, namely, a royal palace?—Yes; and all you could do would be to take the details and parts and make use of them.

2070. *Chairman.*] Have you made any calculation as to the probable cost of this roadway?—No; all I can say is this, that when the bridge that I have told you of was contemplated, the cost of the line, at that time, which runs in that direction at the side of Northumberland House, was about 250,000 *l.*, from which there were deductions for ground, which brought it to 200,000 *l.* altogether.

2071. Mr. *Tite.*] You mean to say that was the estimate?—Yes.

2072. *Chairman.*] With reference to that calculation, what was then proposed took, apparently, the buildings not belonging to the Crown, or land not belonging to the Crown, between Northumberland House and the dotted line which does belong to the Crown?—Yes.

2073. And also a portion of the Crown land?—Yes.

2074. The 200,000 *l.* was spread over both?—Yes.

2075. Without deducting the return?—Yes, which would be now a good deal more.

2076. Owing

2076. Owing to the rise in the value of property, or any other circumstance?—First of all, this plan would take more property, because it takes the houses in Charing-cross; it is not so much the rise in the value of property, although that is considerable, as the rise in the mode of making claims, and the way in which they are now enforced. You are obliged to give a great deal more upon compulsion now than you used to do.

2077. You consider the advantages of this plan to be very great over the direct approach?—Yes.

2078. I need not ask you, therefore, if they cost the same money, which you would prefer; of course you would prefer the curvilinear line?—Yes.

2079. Supposing it were shown that the cost of the curvilinear line would exceed the cost of the direct line, should you still consider its advantages such that it would be better to pay more for it?—I think it has so many other advantages that if it cost more it would be still well worth the difference in money, whatever it might be; supposing it were 100,000*l.* more, it would be well worth the money.

2080. And that whether you look to the ornamentation of the metropolis, or the convenience of the roadway with regard to its general access to the Embankment?—Exactly.

2081. Mr. *Layard.*] Can you not give us some idea of the expense; would it amount to a million?—Oh dear no.

2082. Would it amount to 500,000*l.*?—I should think not; but I have made no estimate, therefore what I say ought not to be taken.

2083. *Chairman.*] Could you go into that calculation, and put in a sort of estimate at the next meeting of the Committee?—It is a very difficult thing to give that sort of estimate.

2084. Mr. Alderman *Lawrence.*] I think, in your view, it is merely a question of time; you consider that that widening must be done at some time or other, whether there is a roadway there or not?—Yes.

2085. *Chairman.*] What is that circular mark that you have there meant to represent?—It would be a public monument; whether it would be King Charles or anything else would be another question.

2086. Supposing, as has been stated to this Committee, putting aside the question of the construction of your proposed plan for public buildings, it were to turn out to be the case that the construction of the straight line with its advantages or disadvantages, as the case may be, would cost 200,000*l.*, and that the construction of the curvilinear line would cost 400,000*l.*, which should you say was the most advisable to construct in the interest of the public generally?—First of all, I do not believe there would be anything like that difference between them; and under any circumstances I do not think it is a question of money. The one, to my mind, is so much more advantageous than the other that for those advantages I think it ought to be taken in preference.

2087. Now with reference to the question of cost, you say that you estimated 200,000*l.* as the cost of a bridge across the Thames, somewhere in the direction of Northumberland House, to the south-west of Northumberland House; was that your own estimate?—Every house was valued in detail, the goodwill and expenses; it was an estimate that was made for the Government, and upon which the Government proceeded to go to Parliament, and gave the notices.

2088. And so it was an accurate estimate?—Yes.

2089. How many years ago was that?—It was in the year 1847.

2090. What do you suppose has been the rise in the value of property in London, during the last 20 years?—I should say that the property now would be quite worth one-half more, taking the goodwill of the businesses and everything; to any estimate that was made at that time, I should add 50 per cent.

2091. So that what you think you estimated then accurately at 200,000*l.*, ought to be put down now at 300,000*l.*?—I should make that addition to the estimate of 20 years ago.

2092. Lord *John Manners.*] But your present plan includes a good deal more than was then suggested?—It does.

2093. Mr. Alderman *Lawrence.*] Supposing this road were made according to your plan, the Thames Embankment having already been made and the Crown property being within that circle, do you consider that the value of that is four times as great as it would have been if this road and the Embankment had not been made. Supposing this road to be made, and this Embankment having been made, and that the whole of this is Crown property, I ask whether that additional piece of land you get up to the Embankment is not four times the value which it would have been supposing there had been no roadway and no Embankment, and it had remained in its original state?—I do not think I could say anything of the sort, because there is no reason why a great deal of it would not have increased in value. There is also the part which on the rider to the plan was coloured blue, and which is let out in leases for 50 years, which would not have increased in value to the Crown.

2094. But you will have to get possession of that to make this roadway?—Yes.

2095. I am speaking of this plot of land as it is; and I ask whether you do not consider it four times the value it would have been in its original state?—I think any opinion given on such a point as that would only deceive the Committee.

2096. Then I will put it in this way; it would be of considerably greater value?—The Crown property; that is the ground within these four roads will, of course, be considerably increased in value by the formation of the circular road.

2097. And by the Thames Embankment?—Clearly.

2098. Then I was going to ask if this narrow portion of Charing-cross is widened so as to be of the same width as Whitehall, do you not consider that the whole of the Crown property here will be increased in value by that narrow portion being widened?—The whole of the property will be increased in value, but it is not Crown property.

2099. If this portion of Charing-cross is widened, the whole of the property on the west side of Whitehall from Charing-cross to Charles-street will be increased in value?—Yes.

2100. And the greater portion of that property either belongs to the Government or to the Crown?—Yes.

2101. And a large portion of it is occupied by

Mr. J. Pennethorne. 26 April 1869.

Government public buildings?—A great portion of it.

2102. *Chairman.*] I presume you contemplate some day or other opening up the Mall into Charing-cross; if the Mall was continued to Charing-cross, would that pass through Crown property?—The greater portion of it.

2103. What portion?—As far as Spring-gardens, but the part facing Charing-cross is not Crown property.

2104. But the continuation of the line of the roadway would be north of that part which goes into Spring-gardens, would it not; it would not touch Drummond's?—The continuation of the Mall to Charing-cross could not take place without taking some portion of private property.

2105. Would there be much Crown property taken in that way?—Yes, there would be a great many houses in Spring-gardens.

2106. Are the leases of those houses falling in?—Some of them are.

2107. When would that property be available?—The leases are very uncertain; some are long dates and some are short.

2108. Have any new leases been granted lately?—I think there was one for Sir John Guest's house.

2109. Now, passing from your plan of laying out this block of ground between the Duke of Buccleugh's house and your curvilinear road, as public buildings, would you explain to us, supposing it were not so devoted to public buildings, how you propose to lay it out with reference to private houses; would you still propose the same main line?—That would require a great deal of consideration; I should always propose the same line of road.

2110. Would you propose the same line of road by Northumberland House?—Yes, exactly.

2111. And would you propose the same road between the Duke of Buccleugh's and the other buildings?—No; in fact, I should do nothing more than take one of the plans of last year, either one or the other, and make the road work round into the end of Whitehall-place, leaving Whitehall untouched, and not interfering with any property north of Great Scotland-yard; this plan might remain exactly as it was proposed before, and not interfere with Whitehall-place.

2112. I presume you will lay this plan before the Committee?—Yes.

2113. Is this ground with the curvilinear approach to the Embankment, and the Crown property, laid out with the view of the concentration of public offices on what we may call the Whitehall site?—Yes.

2114. Will you likewise prepare a plan for us laying out this ground as you would think most advisable for private dwellings?—

2115. Lord *John Manners.*] I will ask you one general question; if the line of road shown here is carried into effect, in your opinion, as I conclude, it would be no longer necessary for the Metropolitan Board to make that line coloured red shown on the large map?—Certainly not.

2116. And it would no longer be necessary, or indeed possible for them to open Whitehall-place as a line of communication with the Embankment?—The form of this circular line would not prevent the continuation of Whitehall-place into it.

2117. Therefore the Metropolitan Board would be saved the expense, both of the proposed red line to Wellington-street, and whatever expenditure might be incurred in opening out Whitehall-place?—Yes; both of these might go towards this circular line.

2118. Mr. *Layard.*] Have you taken into consideration the propriety of constructing the proposed road, coloured red on the Embankment, in the abstract, without reference to the line you have just been explaining to the Committee?—Only in a very general way.

2119. From your knowledge of the wants of this part of the metropolis, I mean as regards thoroughfare and traffic, is that road necessary, in your opinion?—I do not think that that is the place for it, nor do I think that at the present moment it is possible to determine exactly where it should be; looking to the plan generally, or rather to the skeleton plan, I think that the communication between the Strand and Fleet-street and the Embankment ought to be somewhere between the east end of St. Clement Danes Church and Temple-bar, that is, opposite to the proposed Courts of Law, if they are built on the Carey-street site.

2120. I presume you mean somewhere about Essex-street?—Not perhaps in the line of Essex-street, but somewhere near that position; but where it should be will depend entirely on what may be done with reference to the Courts of Law.

2121. As regards the partly reclaimed land, over which this proposed road is to be carried, do you think that that might be more advantageously used than being used for a road of that kind?—I think it would be far better that the site should be appropriated to the erection of a public building.

2122. Have you thought of the kind of public building you would put there?—No; but I think to a certain extent you are tied down by the Act of Parliament. The Act of Parliament says distinctly that the ground is to be vested in the Metropolitan Board of Works for the purposes of public recreation or ornamental gardens, either one or the other.

2123. I am presuming now that Parliament can undo what it has done, and that that part of the Act can be repealed?—Well, I think that Parliament has already determined that it must be either a building for the purposes of public recreation or an ornamental garden, whichever the Metropolitan Board consider of most advantage to the public.

2124. You have been present during the sittings of this Committee, and you have heard a suggestion which has been thrown out, that a museum of natural history should be placed upon that site; do you think that that is an appropriate site for such a museum?—I think it is a very proper site, indeed, for it, and that it should be built on high ground, as a high building, because then it would correspond and agree both with Somerset House and with the railway shed; I think the wings ought to be brought forward as nearly as possible to the front of those buildings, but that the centre part must of necessity be set back, because a large part of the ground is now occupied by the railway, and you cannot, with advantage, build over the railway, therefore the greater part of that ground must be kept as garden on account of the railway being there.

2125. Then you are decidedly of opinion, that if Parliament is willing to do so, it would be advisable to stop the making of that road, and to appropriate that site to a public building?—I am quite of that opinion.

2126. Mr.

2126. Mr. *Tite.*] I think the report which has been produced through a Return moved for by Mr. Gregory exactly 12 months ago, on the 24th of April 1868, was made by the order of Mr. Gore?—Yes.

2127. Now I perceive that in both these places, A and B, you do not interfere with the land between the Embankment and the plots coloured red on both plans; in the one case you show an ornamental garden, and the rest you have coloured green, what does that mean?—An ornamental garden.

2128. And the rest?—This land coloured green is appropriated to the houses.

2129. Not the whole of it?—Yes; that is Lord Gage's house, as far as that line (*pointing to the plan*).

2130. The whole of it in width?—The whole of it in width is appropriated as garden ground to the houses in Whitehall-gardens.

2131. However, be that as it may, your altered plan which you have now produced, and which you say is without authority, but which is your own suggestion, in order to meet the possible requirements of this Committee, would cover the whole of that land with buildings?—Yes.

2132. That is on the assumption that the Crown have a right to cover that land, as against the determination of the Metropolitan Board of Works?—Quite so. I never heard that there was any doubt upon the subject, that the Crown had the full right to build upon that ground up to the line of the road.

2133. In the first instance, the Metropolitan Board of Works had to buy it, and there was an easement over it?—It has never been bought by the Metropolitan Board.

2134. Then what has been bought?—The foreshore that was not in front of Crown property.

2135. But as you come up to Westminster-bridge, that is in front of the Crown property?—The Metropolitan Board of Works did not buy that. They had a right granted to them by the Crown to make their roadway over the foreshore, and part of the ground not required for the roadway was left; where the foreshore was not in front of the Crown property, it was sold to the Metropolitan Board.

2136. What was sold?—The rights of the Crown, and of the Conservators of the river in the foreshore.

2137. What was claimed for that?—I do not remember that there was any actual claim; but there was a negociation; I thought it was worth more, but the sum finally agreed upon was 1,000*l.* an acre.

2138. In what way was that agreed upon. Was it referred to arbitration or was it settled by a jury, or how?—I think in a great measure the evidence of Mr. John Clutton and Mr. Hunt settled it.

2139. Were they arbitrators or what?—No, it was settled by Mr. Oakley and myself as arbitrators.

2140. However, you are not very well able to explain what it was you had to sell, nor what you did sell?—We had to sell the rights of the Conservators and the Crown in so much of the foreshore as was not situated in front of Crown property; the foreshore was considered valuable, because there was always power to embank it, and every year certain portions were embanked, and profits were derived from it.

2141. Nothing of any consequence?—I think very often it was 100*l.* a year; what they sold or licensed each year, one year with another, brought in something like 100*l.* a year.

2142. However, you decidedly prefer, with reference to the road, the curved line to the straight one?—Decidedly.

2143. Lord *Sandon.*] Your plan of the curved road would not be interfered with by pushing your buildings further forward or back on the plan, so that you put that aside?—Entirely.

2144. Of course by your plan you sweep away very important frontages, which increase the expense of your plan very much; have you ever thought of the expediency of making the ground floor of great Government buildings into shops, so as to decrease the expense?—I do not think it would be feasible.

2145. You are aware, I daresay, that in many continental cities that is done?—In a general way we look upon the ground floor as most valuable for offices.

2146. But when you are embarking in such very expensive proceedings, should you not say that that is a proposition worth entertaining?—Yes, but I doubt whether it would be found to answer.

2147. Mr. Alderman *Lawrence.*] I think I understood you to say that you thought the roadway which has been sanctioned by Act of Parliament at present unnecessary; I mean the roadway coming out at Wellington-street?—Yes.

2148. You have also been asked whether, if a public building, such as a building for the accommodation of the Natural History Museum, were placed adjacent to that roadway, that building should not be placed upon the low level of the Embankment, but should be placed on the high ground?—I think it should be both; I think the wings in all probability should come forward on the east side to accord with Somerset House, and on the west side to shut out the railway station, and that then the approach being on the high ground, the building would be on the high ground, but that there would be also, in all probability, a lower storey, overlooking the river, which would have the gardens in front of it, and would look from the Embankment as on the low ground; therefore it would be, as I began by saying, both on high ground and on low ground. I have only given you crude ideas, but if Mr. Waterhouse is examined before you, he, no doubt, will explain far better than I can his views with reference to that building.

2149. Then I take it that some portion of the land already covered with buildings, such as Adelphi-terrace, would require to be taken, so as to place the building on the high ground?—I think it is very likely that portions of the existing buildings would require to be purchased.

2150. I believe you are the surveyor, both to the Woods and Forests, and also to the Office of Works?—Yes.

2151. With respect to the Embankment of the River Thames in front of the Crown property, the foreshore was the property of the Crown, and the Conservators of the River Thames?—Yes; part was the property of the Crown, and part was the property of the Conservators, subject to their paying to the Crown one-third of the profits arising from it.

2152. When you speak of the foreshore, do you mean the whole of the land between high and low watermark?—Yes.

2153. Is any portion of that land between high

Mr. *J. Pennethorne.*

26 April 1869.

high and lower watermark reclaimed within the Thames Embankment Act?—Yes.

2154. What were the proportions of the ownership of that land before it was reclaimed?—The foreshore in front of Crown property belonged absolutely to the Crown: the other foreshore belonged to the Conservators, subject to the payment by them of one-third of the proceeds to the Crown.

2155. When it was valued for the Metropolitan Board of Works to pay the price of the foreshore, how was the sum that was paid apportioned?—Two-thirds was paid to the Conservators and one-third to the Crown.

2156. With reference to the land that was reclaimed which belonged in the proportions you have stated, before it was reclaimed, and when the money which was paid for this land was apportioned in the way you have described, two-thirds to the Conservators and one-third to the Crown, what became of the land that was reclaimed?—A great portion of it is the very land upon which that red road now passes.

2157. I am talking of the portion of land in front of the Crown property?—The land in front of the Crown property was never sold, but was retained by the Crown.

2158. Did not the foreshore in front of the Crown property stand in the same position, relatively to the public, as the foreshore in front of other property does?—It belonged to the Crown absolutely; the Conservators had no interest in it.

2159. Were not the Conservators entitled to two-thirds of the value of the foreshore in front of the Crown land?—I think not; they were only entitled to the proportion in front of other property.

2160. Do you consider that when the arrangement was made for establishing the Conservancy Board, by which two-thirds of the rights of the Crown with respect to the foreshore were ceded to the Conservancy Board, any limitation was made in respect of that two-thirds with reference to any position of the Crown property which had frontage on the river?—That is going into a question with which I am not acquainted.

2161. Then if there were no such question the Conservators would have the same right to the two-thirds of the foreshore in front of the Crown property as they had in front of any other property, if it were not reserved?—I am not aware of the reservation; in fact I know nothing upon that subject further than that the Crown was absolutely entitled, under the Conservancy Act, to the foreshore in front of its own property.

2162. But supposing they were entitled to two-thirds of the foreshore, is there any reason why they are not entitled to two-thirds of the land that was reclaimed?—I do not think they were entitled to it, but that is a question which the solicitor to the Commissioner of Woods could answer better that I can.

2163. At any rate, the result of the arrangement has been that for the whole of the foreshore in front of property not belonging to the Crown, the Crown has received one-third of the value of that portion of the foreshore?—Yes; the Crown was entitled to it, under the Conservancy Act.

2164. And one-third also of the value of the foreshore in front of the Crown property, and also the whole of the land that was reclaimed of the foreshore in front of the Crown property?—The land in front of the Crown property has remained to them. The land in front of other properties was sold by the Conservators, who retained two-thirds of the proceeds, and paid the other one-third to the Crown.

2165. Then has the Crown received no compensation whatever for the Embankment being made in front of the Crown property where they have the land?—No, the Metropolitan Board of Works were allowed to carry the roadway over the foreshore to the width of 100 feet, or whatever it is, and whatever land was left the Crown takes, if it is in front of its own property.

2166. The Crown has received no compensation for the foreshore in front of their land, or for water rights, or in any shape or form; it has received no compensation whatever for the Embankment having been made in front of the Crown property?—None that I am aware of; I should like to have made myself acquainted with these subjects, and if I had known I was going to be examined upon them, I would have done so, because I am now speaking from memory upon points with which I was never well acquainted.

2167. *Chairman.*] Who are the Conservators of the River Thames?—They are a Board of which the Lord Mayor is Chairman.

2168. Are they elected by the ratepayers?—Oh, no.

2169. They do not in any way represent the ratepayers, or the interest of the ratepayers?—No.

2170. So that whether it was a question as regards these water rights and foreshores of the division between the Crown and the Conservators or not, it was a question which only affected the ratepayers, inasmuch as they had to pay the money?—They had to pay the money, and they got the land for it.

2171. Excuse me, you say the ratepayers paid the money and got the land; how did they get the land? I thought they were debarred from the use of the land?—No, the land is to be used for ornamental gardens or for the purposes of recreation.

2172. Mr. *Tite.*] But you say you can build over it?—No, that is the Crown.

2173. *Chairman.*] The ratepayers had to pay the Crown and the Conservators, and they were barred in the use of what they paid for, that is to say, they could only apply the land to certain purposes?—Yes.

2174. And those not the most remunerative purposes?—No.

2175. Therefore, so far, they could not recoup themselves by any use to which they could apply that land?—No.

2176. On the other hand the Crown obtained money from the sale of those rights, allowing the ratepayers to make this Embankment, but retaining all its own powers of building or doing what it chose with the land which came to it by this arrangement?—Yes.

2177. Therefore, the Crown, *qua* the Thames Embankment, and the water rights, stood in a very much more favourable position than the ratepayers?—The Crown retained its own land with power to build upon it, because it had the power before of using the land, and no change whatever was made with reference to the land belonging to the Crown; in other parts the land was bought by the ratepayers at a certain price, and it was determined by Parliament that it should be used for the purposes of recreation and not for the purposes of building.

2178. It

2178. It does not matter by whom it was done, or how it was brought about, whether by Parliament, by the Crown, by the Conservators, or by arrangement amongst them altogether. The facts are as I stated, that the Crown acquired land which is extremely valuable, with power to do what it chose with the land, and the ratepayers acquired land at very great expenditure, in the use of which they are barred?—That is not exactly correct, because the Crown, after giving up to the ratepayers so much of the shore as they required for the roadway, was compelled by the Embankment Act to annex much of the residue at a fair and reasonable rent as garden ground, to the houses in Whitehall-gardens.

2179. They were compelled to annex certain portions of this land which did not exist before, because it was worthless mud, as ornamental ground to their houses?—Yes.

2180. If they had not done that, and if they had had the power of building over this land, they would have had to pay to their own lessees compensation, like any other proprietor would have done?—They would have had to pay compensation.

2181. And they would *pro tanto* have injured the value of their property during the currency of the lease; and at the end of the 50 years' lease, the Crown will have the full advantage of the reclaimed land, of the gardens that existed beforehand, and of the houses, to do what it likes with for its own advantage?—Yes; 50 years hence.

2182. Mr. Alderman *Lawrence.*] Do I understand you to say, that the Crown had the control over this foreshore in front of its own property, and that it could have built upon that foreshore at any time, if it had been so disposed?—Wherever there were not houses existing, as there are in Whitehall Gardens; all those houses they had let with a right of frontage to the river, therefore they could do nothing with that land.

2183. *Chairman.*] Not during the currency of these leases?—Yes.

2184. Mr. Alderman *Lawrence.*] But my question is, supposing any of those houses happened to fall in hand to the Woods and Forests, do you consider they had the power to build upon the foreshore of the river at any time when they thought proper?—Always; provided, they did not injure their own lessees; they have done so in several cases. At the Duke of Buccleugh's there were two distinct Embankments made (I am now speaking of 30 years ago), and at Fife House there were large embankments also made.

2185. But after the Conservancy Board was appointed, after the long law suit that had gone on for some 20 or 30 years between the City and the Crown with reference to the soil and right to the bed of the river, when the arrangement was made as to the formation of the Board of Conservancy, two-thirds of the foreshore being allotted to the Conservancy Board and one-third remaining with the Woods and Forests, do you consider that after that time the Crown had a right to bring forward any building in front of the Crown property as far into the river as it chose, without the consent of the Conservators, or without paying any amount to them for it?—The foreshore in front of Crown property was reserved to the Crown under the arrangement in question, and I always understood that the Crown had a right to embank, and had a right to go into the river; whether or not the Conservators had control over the extent to which they were to go is another question.

2186. *Chairman.*] There is one other point with reference to this: the ratepayers, as represented by the Metropolitan Board who reclaimed this land, were, as you have said, debarred by Act of Parliament from applying it to the most beneficial uses; that is to say, *qua* the reduction of rates. *Plus* that, is it not the case that the maintenance of that land, as regards ground for ornamental purposes, whether those ornamental purposes take the form of terraces, gardens, or tumbling greens, is thrown upon the rates also?—Yes.

2187. So that not only were they debarred from the beneficial use of this land, but it was practically and permanently charged with considerable expenditure from the rates for its maintenance?—Yes.

2188. Mr. *W. H. Smith.*] When you speak of the Crown you speak of the Treasury, do you not?—The Crown property is under the Commissioner of Woods, subject to the control of the Treasury.

2189. The surplus funds go into the Treasury, do they not?—Yes.

2190. So that the increased value of the Crown Estate is an increased value given to it by the ratepayers of the metropolis, and at their expense?—Well, it is one of those contingent advantages that come to many other proprietors in London; the same that has happened to the Duke of Bedford and to a great many other gentlemen who have had their properties improved.

2191. But the cost has been very considerable upon the ratepayers, and the gain is entirely to the Crown?—I do not see that; the inhabitants of London gain a public highway on and over the Crown property, and the Embankment has not increased the value of the Crown property.

2192. Mr. *Tite.*] It is the practice of the Crown never to sell any land, excepting land which is wanted for public improvements, is it not? They retain all the rest themselves?—Yes.

2193. And therefore they retain such advantages as belong to it, in themselves, and not in those who purchase land for public improvements?—Well, I do not think they carry that system any further than any other large landed proprietor would do.

2194. They do, for this reason: a private person may propose a clause in an Act of Parliament that that should be so; the Corporation of London may propose that that should be so. I know in my experience they have been distinctly refused, and the Drapers' Company have been refused, the Crown having the power to veto a Bill, unless those clauses are introduced, after it has passed the Committee?—Of course in the Crown there is always a power of veto, but I think it is very seldom used; I do not know a case in which it has been used.

2195. Mr. Alderman *Lawrence.*] I may take it that the Woods and Forests in any bill for public improvements which affect their property always insist upon special clauses being put into that Bill, beyond the clauses which are put in for any private holder of property in which the improvements are made?—I think generally they do.

REFORM CLUB PALL MALL

Monday, 3rd May 1869.

MEMBERS PRESENT:

Mr. Buxton.	Lord John Manners.
Mr. Cowper.	Mr. Alderman Lawrence.
Mr. Dilke.	Mr. Layard.
Lord Elcho.	Mr. William Henry Smith.
Mr. Gregory.	Mr. Tite.
Mr. Beresford Hope.	

LORD ELCHO, IN THE CHAIR.

Mr. HENRY COLE, C.B., called in; and Examined.

Mr. *H. Cole*, C.B. 3 May 1869.

2196. *Chairman.*] I NEED not ask you whether you know, or have had to do with the question of erecting a museum of natural history on the ground at South Kensington, which was occupied by the Exhibition Building of 1862? — I am acquainted with that proposal.

2197. Plans have been drawn out for that, have they not?—There have been several competing plans brought before a committee, of which your Lordship was chairman.

2198. Captain Fowke's plan has been adopted, I believe?—Yes; I have a very small plan here, just showing the places where it was intended to put the building for the natural history museum, according to the plans which Mr. Cowper, then First Commissioner of Works, proposed (*plan handed in*).

2199. This is the plan which has been drawn out for the transfer of the whole natural history collection from the British Museum?—That plan shows in block the site proposed for the natural history museum, and also the uses of the ground at the present time.

2200. Have you considered the possibility and the advantages, or disadvantages, that will attend the transfer of the natural history collection to a site on the Embankment in lieu of its transfer to Kensington; I mean the site between Charing-cross-bridge and Waterloo-bridge?— Assuming that the space on the Embankment is sufficient, which I do, then I think the public advantages are much in favour of the natural history collection of the British Museum being located there rather than at Kensington.

2201. What are those advantages, in your opinion?—In the first place, it gives another museum in another part of London, as I venture to hold the opinion that over-concentration is very inexpedient.

2202. That is the evil from which the British Museum has suffered for a long time, and which has now come to such a crisis that it is necessary to break it up?—I think the only salvation for the British Museum, as regards its collections, is to disperse them reasonably; another advantage of putting the building on the Embankment, in my mind, is that it would give to the inhabitants of the South of London a museum which they could easily approach. Without entering into the question of suburban museums at all, a national museum on the Embankment would be virtually a good local museum for the South of London. Another reason is, I think, that it gives an opportunity for putting a fine building in a fine situation; and I think it is much more logical, in the way of arrangement, that the Natural History Museum should be on the Embankment than that it should be mixed up with industrial sciences and arts at Kensington. Those appear sufficient reasons to guide me to a conclusion in preferring the Embankment.

2203. It would be, to a great extent, more accessible in the position in which it now is with regard to the population than it would be at Kensington. I do not mean by that that the population would not find its way to Kensington, but practically, as regards the centre of civilisation, it would be more central on the Embankment than it would be at Kensington?—With your Lordship's leave, I object altogether to the word "central"; I do not know what is the centre of a district of 30 or 40 miles round, which would be equally convenient to all; but I do not hesitate to say that the Embankment has superlative advantages of land and water communication, and in that respect is better than Kensington.

2204. I do not say whether the objections which have been raised to the transfer of the museum to Kensington are right or wrong, but it is the case, is it not, that objections have been raised to that transfer on the ground that it is taking away this museum from the centre of population to a comparatively suburban district, that is the argument which has been used?—That is the argument, but it is full of fallacies.

2205. The fallacious persons who use this fallacious argument, if the museum is transferred from its present site to the Embankment, ought to be satisfied, ought they not?—You would gratify their prejudices.

2206. Of course you naturally have studied the plans which were designed by Captain Fowke, and which were exhibited before the Commission, to which you have already referred?—I have.

2207. Do you think that those plans, as they now stand, would be available, and would be suitable to the Embankment, or that they might be very easily adapted to this change of site?—Captain Fowke, when he made his plans, showed, I think,

I think, 10 modifications of them; it will be important for the Committee to have before them the printed paper which Captain Fowke submitted to the Commission.

2208. Has that paper been laid before Parliament?—I think it has never been laid before Parliament.

2209. Is it accompanied by plans?—The plans, I suspect, must be in the Office of Works; Captain Fowke showed how you might do little or much, just according to your funds, without great damage to the plan itself. I am of opinion that you are not likely to get a better plan than Captain Fowke's for the Embankment; and with all submission to the architectural profession, I think it is open to doubt if you will get as good a one. It is made, and you can fully judge of it. It can be modelled, I believe, and it fulfils, or very nearly so, all the requirements of the men of science; if not, it can easily be made to do so; and, on the whole, I think it would be a very fine building on the Embankment. I should like to put in a paper that Captain Fowke printed on the subject of this plan (*handing a paper to the Committee*).

2210. I see this paper is what was sent in evidently, with the plan to the Commission?—Exactly.

2211. You wish this put in the Appendix?—If you please.

2212. You have talked about a model; I suppose at Kensington you have great facilities for the construction of models?—Yes; we never do anything without three or four models.

2213. Acting upon that excellent principle, which I wish was more general, would you have any difficulty in laying before this Committee at some subsequent date, a model of Captain Fowke's plan, adapted to this new ground?—I should have the greatest difficulty in doing so, unless the Committee will find the funds, because we are in a state of destitution; we should have no difficulty, if the Committee would arrange with the Treasury, and it were desired, in making a model of Captain Fowke's plan.

2214. What do you suppose would be the cost of it?—I think a mere rough block model, making use of the reduced drawings, might perhaps be made for 15 *l.* or 20 *l.* A detailed model would cost much more.

2215. Do you think there would be any difficulty in framing by it correct estimates as to what the cost of the building would be?—Not the slightest.

2216. You state that, I suppose, in consequence of having already gone into the question of estimates with reference to this building, or a similar building, so that you have the data whereon to form an estimate?—I believe it is perfectly possible to make an estimate for that, or for any other building, and to tie up the contracts with such restrictions that the estimates cannot be exceeded without the consent of the paymaster.

2217. That is as regards the construction of the building itself?—Yes.

2218. Have you found in the building which you have constructed at Kensington, that you have been able, as you say, so to tie up the contracts that the estimates have not been exceeded?—Certainly.

2219. And they have been erected within the sum which you expected?—Always, so far as I know; I can give the Committee a very remarkable illustration of the value of models, and of taking great pains before you begin a building: that is with regard to the arcades of the Horticultural Gardens: there the arcades were more or less the repetitions of certain quantities. First, the usual plans were made; next, the drawings were enlarged to the full size; thirdly, a model was made; then, finally, a block was made the full size; and that which cost, perhaps, at the beginning, 400 *l.* or 500 *l.*, in the result had the effect of preventing the slightest change whatever, after the thing had been settled. The same is now being done with regard to the large hall which is being built there: just in the same way a series of models is being made; you know exactly what you are going to do, you know exactly the cost of your decorations, you make contracts with the different people; and the result is, that in that case the expenditure of 200,000 *l.* will probably be a small per-centage below the estimates.

2220. Then your experience in the system of models, as opposed to the system of drawings and plans, is that a very great eventual saving in the expenditure of public money is effected by the use of models?—A very great and effectual saving, added to which the paymasters are really able to understand what is going to be done.

2221. Besides the saving in money, there is much less probability, is there not, of a mistake being made in the building itself?—Very much less probability, indeed; it is your own fault if you have a mistake.

2222. That is the result of your own experience, and you are naturally conversant with these matters. Do you believe that the experience of other countries, in the matter of models, will bear out what you have just stated; take, for instance, France?—In the case of France, some three or four years ago, I saw a model 120 feet high, for a new arch of triumph near the Bastille; the whole thing was so completely worked out by means of plaster, paint, and wood, that you could take a photograph of it, and you would not know whether it was the original or not. You could judge of the size of all the parts and all their relative proportions, one to the other; I quote that as a very notable instance. Another one, which you may see at the present time, is the model for the new Opera House, in Paris. A model is made of the whole thing on a comparatively small scale, although it is a very large model; and very large models are also made of the different parts. Besides that, I think I may say that it was the practice of Sir Charles Barry to do as much as he possibly could by having full-sized models before he came to a decision. Then, you know, we are fortified by all the precedents of antiquity. We have the Cathedral by Wren, and we have models upon models of churches built in Queen Anne's time; therefore it seems to me a very mistaken way of going on to judge by mere abstract lines on paper, when you can have proper models.

2223. The experience of this country in bygone times shows that models were resorted to, and beneficially resorted to, judging from the result of the buildings you have just referred to as having been made on a model scale. Your own experience of this country likewise leads you to the same conclusion; and also you have come to the same conclusion with reference to structures in other countries. With reference to the other public buildings, take for instance the

Mr. *H. Cole*, C.B. 3 May 1869.

Foreign Office, do you know whether any model of that was made?—I have no knowledge upon the subject, but I do not believe there was one.

2224. But you would strongly advise that whoever has the charge of the erection of public buildings in this country should spend money liberally in models with a view to building it?—I should so strongly advise it that I would make it law by Act of Parliament.

2225. You have said that you kept these contracts down by certain stringent rules. Is there anything with reference to that, with a view to economy in these matters, that you would wish to bring before the Committee?—It rather depends on the Committee; I have my own views on the subject, and if they are worth having I will put them in.

2226. Will you kindly state them, because I think this is an important point?—I should like to put in a paper which I drew up some months ago upon the measures to be adopted for preventing excess over the original estimates of the cost of public buildings. If the Committee will allow me I will hand in this paper (*handing in a paper*).

2227. You put in this, and it is upon these conditions, as laid down and signed H. C., 27th of January 1869, that you have proceeded, and I may say proceeded so satisfactorily, that in no case in any building at Kensington has the estimate been exceeded?—The principles that we have proceeded on at Kensington are stated with reference to Kensington; in this paper of December, 1867, I go a little further into the subject. This refers to public buildings not at Kensington, with which I have nothing to do (*handing in another paper*).

2228. What is the position of the land that was intended, and that is as yet intended, to be the site of the Natural History Museum at Kensington?—Physically it is a wilderness, legally it is in the possession of the nation, subject to the condition of erecting buildings for the purposes of science and art upon it.

2229. When you say it belongs to the nation, it could only be disposed of then by the nation, for the purposes of science and art?—The legal position is a curious one. The nation is now the proprietor of that land, with the condition that it is only to be used for the purposes of science and art. What else can be done with it is a matter for the Government and for the Commissioners of the Exhibition of 1851 to determine.

2230. That is a legal engagement entered into by the nation when it bought that land, but with whom did it enter into the engagement that the land so purchased was only to be used for the purposes of science and art?—The Commissioners of the Exhibition of 1851 and the Commissioners of Public Works entered into that engagement on the 14th September, 1864; it is printed as Appendix D to the Fifth Report of the Commissioners of the Exhibition of 1851, and you will find the whole of the conditions laid down in that paper.

2231. Then the owners of that land, previous to its sale to the nation, were the Commissioners of the Exhibition of 1851?—Yes.

2232. That land was purchased with the surplus funds of that Exhibition?—Yes.

2233. And the Commissioners sold it to the nation on those conditions to which you have just referred?—Yes.

2234. The nation therefore could only apply it to the purposes of science and art. For any other building purposes it is unavailable?—It is unavailable if this indenture is to be kept to.

2235. Supposing the nation wished to apply it to other purposes, they must obtain the assent of the Commissioners of the Exhibition of 1851?—Yes.

2236. They could step in and stop all proceedings, and in that case, I suppose, the land would revert to the Commission, the Commissioners repaying the money which had been paid for it?—I presume so.

2237. Do you think that land has increased or diminished in value?—I think since it has been originally purchased the value has increased fourfold. The average value of an acre when the purchases were originally made, was about 5,000 *l.*, and the very lowest price that the land has been sold for at the present time has been 24,000 *l.* or 25,000 *l.* an acre. Since 1864, I do not think much change has taken place in the value.

2238. How many acres are there?—Sixteen.

2239. And what was given for them?—I think 120,000 *l.*

2240. For the 16 acres?—Yes.

2241–2. Have you at all considered what should be done, or what could well be done, under the restrictions which are imposed upon the possession of the land with reference to the purposes of science and art, in the event of its not being used for the purposes of the Natural History Museum?—I think that the Government should at least reserve a considerable portion of it for the purposes of collections connected with industry. We have at the present time in the buildings which were used for refreshment in the last Exhibition of 1862 models of the Admiralty, and of private shipbuilders' yards. We have also an exhibition of war material from the War Office. We have also machinery given and lent to the museum, and also a complete collection of matters relating to the construction of objects, models of buildings, and so on. We are squeezed for room to accommodate them. They could be very much extended and the collections completed if more space were provided. My own impression is that it would be wise to build on the south side at the back of this building sufficient public buildings of a decent character which would make in point of fact a Conservatoire des Arts et Métiers.

2243. You mean at the entrance opposite Cromwell-road?—Yes; not, of course coming up to the ground in the front, the way the old Exhibition did, but immediately at the back of the refreshment rooms.

2244. Am I to understand that for purposes immediately connected with your museum, you are at present restricted as to space?—Very much so; we are smothered.

2245. That is to say, when you have completed your building with objects which are cognate with your museum and collections which ought to be there, if possible, for which there would be no room; is that so?—Certainly the building contemplated on the block of buildings forming the South Kensington Museum proper would be wholly inadequate for providing for the collections which are now temporarily deposited in the refreshment rooms overlooking the Horticultural Gardens.

2246. Then you would recommend that a portion

portion of this land should be reserved for those purposes?—Certainly.

2247. What portion of the 16 acres?—I should say about six acres.

2248. Lord *John Manners.*] Will you point out on the little map which portion you wish reserved?—The green portion.

2249. *Chairman.*] Not the part next Cromwell-road, but the part at the back, by the Horticultural Society's Gardens?—Yes.

2250. What would you propose to do with the remainder?—If I were quite free I should sell it back to the Commissioners of 1851, for them to dispose of it as best they thought fit, for the purposes of science and art.

2251. Mr. *Gregory.*] How much would that leave?—About 10 acres.

2252. *Chairman.*] Those 10 acres would not be all available, because at the back of the Horticultural Society's Gardens there must be an approach?—Certainly; and they would have to be laid out in a handsome way.

2253. Mr. *Gregory.*] How much space did the last Exhibition building occupy?—Sixteen acres, *plus* the space at the sides which went by the name of the two annexes. I should think altogether it would be about 22 acres.

2254. *Chairman.*] Would you point out what you mean upon Captain Fowke's plan?—With reference to what I said before, this set of plans shows the various modes by which the buildings could be economised (*producing several plans*); for instance, that (*pointing to a plan*) forms the whole plan, and Captain Fowke proposed that only that pink piece should be done. If these plans be at all contemplated for the Embankment, I would venture to recommend that they be lithographed and put into the Appendix, because that would give the views of Captain Fowke as to what modifications it was possible to make upon his plan; I do not see down here the elevations, but perhaps you will not object to refresh your memory with these plans. I do not put them in as plans, in my opinion, quite suitable for the Thames Embankment, but as furnishing the basis of a very fine building, which might be modified according to the necessities of the case.

2255. You put these plans in?—Yes, I think these ground plans are very desirable to be put in. I have one or two points further to mention with reference to the plans. I think that one advantage of this plan, which of course might belong to another, is that it could be erected in materials which, more than any other materials, defy the persecutions of the London climate. Captain Fowke contemplated that it should be executed in red brick and terra-cotta. Both those materials, I think, speak for themselves as the best building materials for London. If the experience of 4,000 years is of any value in this age of doubt, you can bring evidence that under every condition of climate the most durable thing that we know is a brick. I believe the Roman and the Egyptian bricks are two of the most durable pieces of human manufacture. Our experience shows us that brick lasts very long. With respect to terra-cotta, if the terra-cotta be well made it is a great deal more durable than granite. I affirm, as a scientific proposition capable of demonstration, that it is a great deal more durable than granite; and as to Portland stone, that goes to limbo in a great deal less time than terra-cotta. The disadvantage of terra-cotta is that unless it is well made it is apt to go like stone, and therefore it requires great care on the part of the architect, to see that it is well made; another advantage of terra-cotta is that you can have the exact work of the artist upon it. I say that any such art as may happen to be on the building at Kensington could not have been executed by the hand-power of this country unless it had been made in terra-cotta. We went through the experience of seeing what the very best mason and stonecutter that we could find in London would do with one of these models; in the first place he charged four times as much, and in the next time he emasculated and utterly destroyed the thing, when he did it. I think therefore that if you wish to have the best art work that England can produce, terra-cotta is a material that affords you the opportunity.

Mr. *H. Cole*, C.B. 3 May 1869.

2256. With reference to terra-cotta and stone, you have had now some experience in Kensington with regard to their relative durability, that is to say, you have had terra-cotta exposed to the atmosphere for several years?—Yes; eight or nine years.

2257. And in the same building where you have had terra-cotta, you have likewise string courses of stone?—Yes.

2258. Can you speak as to the appearance relatively presented by the string courses of stone and the string courses of terra-cotta?—Terra-cotta keeps its colour; and we find that it is easily washed, while the Portland stone is altogether begrimed and very difficult to wash. If the Committee think it worth while to come and see with their eyes the difference between the durability of the one and of the other, there are the examples at Kensington.

2259. Mr. *Layard.*] When you produce those plans of Captain Fowke, I presume you do not suggest that these very plans and blocks of buildings should be adopted for the Embankment site; you merely mean that the style of architecture and the general arrangements of the buildings should be adopted?—I go further than that, and I should say that the main elements of his plan should be adopted.

2260. What do you mean by the "main elements"?—I should say the long line of building with or without the centre adapted to it, according to the new conditions or otherwise; I do not think there is any building in London of that style of architecture that is as good.

2261. You do not mean to say that it would be necessary to throw out the two wings?—Not at all. I should be sorry to see the plan hashed up into some other notion.

2262. Have you yourself been on the Embankment site?—Yes.

2263. Do you think it, considering the sites that are available for public buildings in London, one of the most desirable sites in the metropolis?—I think so.

2264. And you are of opinion that a road carried from Hungerford-bridge to Wellington-street would be a waste of that site, I presume?—Well, I have not thought of it from a utilitarian point of view, but from an artistic point of view, I think it would be very ugly.

2265. Mr. *Tite.*] Do you contract for your works?—Yes, as far as possible.

2266. And do you divide the contract into specific trades, or take it as a whole?—As much as is advisable into specific trades. At this moment we have three contracts for terra-cotta: one in

Mr. *H. Cole*, C.B.

3 May 1869.

Scotland, one in Blackfriars-road, and one in the Midland counties.

2267. *Chairman.*] Who is your Scotch contractor?—I cannot tell the name, but it is a new firm, who are trying to make terra-cotta, and can make it very well: we have a contract for iron with Cochrane's, who get some of their iron from Belgium, and some they make themselves, and we have a contract for red facing bricks; we buy our bricks direct from Fareham, but we have a contract with Messrs. Smith and Taylor for the construction of the work, and for the carcase of the building generally.

2268. Mr. *Tite.*] Are those contracts the result of competition, or do you make a bargain without competition?—Whenever we can get a competition we do so; indeed, I may say, in all cases there is competition. For the School of Naval Architecture, and for the museum offices now in course of erection, Messrs. Trollope, Messrs. Lucas, and three other firms, competed with Messrs. Smith and Co.; and there were six competitors for the carcase of the Bethnal-green Museum. Messrs. Perry obtained that contract. It does occasionally happen that having begun a work and employed a terra-cotta manufacturer to make the models, we employ him to execute the remainder of the terra-cotta of the same pattern required for the building without a specific competition. With respect to red brick, we are compelled to proceed differently: there is only one place where we can get the red bricks that we want.

2269. Your engineer or architect makes the estimate, and you carefully prepare the plans and contracts, and then you make the best bargain you can?—Yes.

2270. What is this building, the name of which I cannot read (*pointing to the plan*)?—They call that "The Royal Albert Hall of Arts and Sciences."

2271. Was there any competition for that building?—I am not responsible for that, nor is the department.

2272. Messrs. Lucas are building it?—I should not like to give any particulars about that, because it is not in my department at all.

2273. With regard to this terra-cotta, do you think you could build St. Paul's with terra-cotta?—Yes.

2274. What, with columns and capitals?—Yes; they built Pompeii with terra-cotta, where there are columns quite as big or bigger than those of St. Paul's.

2275. They are not in terra-cotta, are they?—They are red brick, but that is terra-cotta; I saw them three months ago.

2276. Do you think you could do that?—Certainly.

2277. Do you think you could erect a building of that kind in terra-cotta?—Yes, I believe so.

2278. With regard to your own experience in terra-cotta, I suppose it has not been very extensive?—It has been for 10 years.

2279. You know that Coode and Seely tried to introduce it?—Yes, I know that, and I know that their terra-cotta is as fresh now as it was when it was put up 100 years ago. If you look at a lodge, which there is in Merrion-square, Dublin, you will find that lodge is built with terra-cotta, Portland stone, and granite; and the only part that retains its appearance is the terra-cotta.

2280. Are you aware of any defects in Coode and Seely's terra-cotta?—Lots, when badly made.

2281. Mr. Alderman *Lawrence.*] Suppose this building to be built on the Thames Embankment, between the railway station and Wellington-street, how would you propose to place it? Would you propose it to come near to the roadway of the Embankment, or on the high ground, leaving the open space in front that is now clear to be converted into a garden ground with terraces?—Well, I have not been called upon to consider that question, and an off-hand dilettanti opinion is not worth much; but I should like some garden ground preserved about it in some way or other.

2282. If the question of expense were not considered, do you not think it would be more advantageous that the building should be placed on the high ground, and the present buildings which now occupy the space there, be removed, and the space that is clear be left still open as an enclosure, and laid out in walks and terraces in front?—I think the more you can mask the ugly buildings which have revealed themselves by the Embankment, the better; which of course implies that there is ground in front, and that ground I should be glad to see laid out in gardens; but how exactly to adapt the building to the spot, I should be sorry to give an opinion now.

2283. Are you aware that the ground which is open in front is reserved at present by Act of Parliament for public use, and is not to be covered with buildings?—No, I am not aware of that.

2284. Lord *John Manners.*] Are you a Commissioner of the Exhibition of 1851?—No, I am not.

2285. Then any information you have been good enough to give us upon the relations between the Commissioners of the Exhibition of 1851 and her Majesty's Government, is information which you derive from general knowledge?—From the Blue Books.

2286. You have told us that you would wish the six acres of property which now belongs to the Government at South Kensington to be reserved for the purposes of your own museum?—I think about that quantity.

2287. And you contemplate the necessity of building upon those six acres speedily?—Yes; but I am sorry to say that the buildings which are now on their legs are stopped for want of funds.

2288. But as far as your view is concerned you would wish these six acres to be utilised as soon as possible?—Yes.

2289. Are you able to tell us at what you estimate the cost of covering those six acres with buildings?—I can give you a very safe unit, and that is 1 *s.* a cubic foot, and then if you supply the length, the breadth, and the height, you will easily know how many of those shillings you can spend.

2290. With respect to the 10 acres, I understood you to say that you would suggest that they should be sold back by the Government to the Commissioners of the Exhibition of 1851?—That is my opinion.

2291. But not being a Commissioner, perhaps you can hardly tell us what is the view taken by the Commissioners of 1851 as to their lien on the land, in the event of the Government declining to use it for purposes connected with science and art?

art?—I would rather leave that to Mr. Lowe and the other Commissioners.

2292. Mr. *Dilke.*] Do you consider it an essential of that building of Captain Fowke's that it should be only two storeys high, or three storeys high; two, I think, is the centre part?—That depends upon those who are going to use it.

2293. Would it not make a complete change in the system of lighting the collection, if it were more than height; would not one of the two floors be entirely wasted?—No; you will see at once, if you take any portion of this building, that the lower part is side-lighted and the upper part of the building, again, is side-lighted; and if you put a third storey upon it it would be lighted like the other two storeys. There are other parts behind which are altogether top-lighted, and if you put your top floor high up, it would be as inconvenient as the Law Courts are supposed to be with the hundred steps up to them.

2294. Would it not be an inconvenience in that plan, if it were adopted on the now proposed site of the Embankment, if it was an essential of that plan that the building should be of a low character with top-lights, and that the site requires a high building in order that it may be properly seen from the Thames?—I have not studied that question, with reference to the height, but unless that building contemplates giving a great deal more accommodation than Professor Owen wants for his Natural History Museum, you might take such portion of the building as would suit the purposes without altering it a bit.

2295. In what position is the land which was occupied by the annexes to the Exhibition of 1851, now standing?—It is at present rather a seedy garden.

2296. I mean as to the legal position?—It belongs to the Commissioners.

2297. Is that reserved for the purposes of art and science in the same way?—Yes.

2298. How many acres is that?—I should think 13 or 14 acres.

2299. Are you aware whether they have any plan for dealing with that?—I think they have got some projects before them.

2300. Do you contemplate using the old refreshment-room buildings in with your new building?—Yes.

2301. Is it not a fact that they are in a very insecure position?—No.

2302. It is stated that they were built merely for temporary purposes?—It is very difficult to build anything for a temporary purpose; I never heard of a building where you could hit the exact time that it was temporary.

2303. You think they could fairly be used for that new building?—Yes.

2304. Mr. *Beresford-Hope.*] We understand that you do not think either that this building, whether temporary or not, or that the buildings that can be put on the existing Kensington Museum site, are sufficient for your collection?—I must ask what you mean by "this building"?

2305. In the building which Mr. Dilke has just been talking of, the refreshment rooms; the buildings on the present South Kensington site are not sufficient for your growing collections, as I understand?—They are wholly insufficient. If you are to take up the sciences applied to industry as well as art, the South Kensington Museum proper will be devoted, in my opinion most properly, to representing art applied to industry, and we are now using the refreshment room for the illustrations of science applied to industry, and to make that complete we want much greater space.

2306. I suppose if you get the six acres you would have no objection to the ground facing the Cromwell-road being, if Parliamentary leave could be obtained, devoted to private houses?—My own personal feeling would be to keep as much ground vacant as possible; but if there were good reasons for altering the size of the main block, which at present consists of 50 acres, into 40 acres, I do not see much against it.

2307. Do you think a sufficient reason for the alteration would be that the ground having been once bought, it would be required to buy ground again at a high price, in order to get these buildings on the Embankment?—I apprehend the process would be this: if the Government are not going to use this land themselves for the purposes of science and art, they would let the Commission have it back, and the Commission would pay them probably the value that they paid for it, and then there would be so much money to the good of the Embankment site.

2308. That is to say, there would be 16 times 5,000 *l.*?—It is rather more than that. Of course they would pay the proportion of it that they took; that is, if they received 120,000 *l.* and they retook ten-sixteenths of it, it would be that proportion they would have to pay.

2309. Would it not be much more just to the public, if a Parliamentary release from that obligation could be obtained, that the land should be left at an improved value in the hands of the Government?—It would give so much more money. I do not know, if the Government intend to keep it themselves, whether they had not better keep it altogether; I think the Government is not quite so straitened as to wish to build private houses on a plot of ground like that.

2310. *Chairman.*] But that is a matter upon which the Commissioners will speak, and which you are not in a position to speak upon yourself?—No.

2311. Lord *John Manners.*] You have already told us that you thought the six acres which you propose to reserve are not too much for the present wants of your department?—Not for our own present and future wants, I should say.

2312. I wanted to know whether you propose to build upon them, if you can now, or whether you would regard them as sufficient for all future probable wants of your department?—I believe that the best possible thing would be to keep the whole of that ground vacant; but if you are constrained to turn it to any account at once, then I think that six acres, plus the refreshment-rooms, would make a very handsome Conservatoire des arts et métiers.

2313. You would prefer, looking forward to the future, that the 10 acres should not be sold for private purposes?—I should, if an arrangement can be made between the Commissioners and the Government.

2314. Mr. *Buxton.*] Did I understand you correctly to say, that if the ornamentation of the South Kensington building had been in Portland stone instead of being in terra-cotta, you estimate that it would have cost four times as much?—Yes, it is a fact that it would.

2315. You say that positively?—Yes.

Mr. *H. Cole*, C.B.

3 May 1869.

2316. Are you acquainted with Sutton-place in Surrey that was built with terra-cotta?—Yes.

2317. You are aware, I have no doubt, that it was built in the time of Henry VIII. with terra-cotta on the edge of it, and that ornamentation is as good now as it was then?—Where the terra-cotta has been properly made, it is as good now as it was 300 years ago; but where it is not well made, it crumbles away like stone.

2318. I believe the best terra-cotta is put into a furnace at white heat for three days, and therefore it must be a very hard material?—Oh yes, it is very hard; it will turn any knife.

Professor OWEN, called in; and Examined.

Prof. *Owen*.

2319. *Chairman.*] HAVE you had your attention directed—as, indeed, since you have been in this room it must necessarily have been directed—if not previously, to the question of this site between Charing-cross and Wellington-street or Waterloo-bridge as regards the British Museum natural history collection?—Yes.

2320. Do you think that this would be a suitable site?—Granted sufficiency of space, it would be a very suitable site.

2321. The only question in your mind is as to the sufficiency of space?—I really do not know that it is the only question, but it is the only element which I should require in order to form a positive opinion, so as to be able to give an answer to your question.

2322. Assuming that the space were sufficient, having to choose between Kensington and this site, which would you prefer?—I should prefer this.

2323. What would be your reasons for preferring this to Kensington?—From its being in a very central situation, and being more likely to be convenient to the visitors, and to the students resorting to such a museum.

2324. It would be central, you think, and therefore more advantageous to the visitors and students; it would have also great convenience as regards access, would it not, by river, road, and rail?—Exactly so.

2325. To men of science generally, and to students, do you believe that this site for the natural history museum would be preferable to the Kensington site, assuming of course the space to be sufficient?—From general knowledge, I should say so. I have not had an opportunity of discussing it specially, but, from general knowledge, I should have no doubt about it.

2326. At any rate, your own opinion, setting the question of space aside, which is a *sine quâ non*, is in favour of this site in preference to the other?—Certainly.

2327. Mr. *Layard.*] You are of opinion that the natural history collection ought to be separated from the art and archæological collections of the British Museum?—I have never had any other opinion, in reference to that question, than that there should be a sufficient space allotted to the natural history somewhere; but of course if that space could be obtained with still greater proximity to the library, which is one of the conditions which leads me to prefer the site now mentioned, from its being nearer to the great collections of books than Kensington is, I do not know but that I should prefer its continuing in connection with the collections that you have just referred to, if adequate space could be obtained at Bloomsbury.

2328. I suppose if a separation be decided upon, in your opinion, the Thames Embankment site would be the most proper site?—Certainly.

2329. Of course you have had opportunities of judging of the interest taken by the working classes in natural history collections?—I have.

2330. And you consider that the Embankment would be more accessible to the working classes than any part of London?—Undoubtedly; on the ground which led the Prince Consort, 10 years or more ago, to suggest that if any part of the great collections in the British Museum should be separated and go westward, it should be the sculpture and art department, and not the natural history; namely, because the natural history collections are more interesting and instructive to the trade classes and the wage classes who are living more in the middle and eastern parts of London.

2331. Probably, taking into consideration the means of access, the position on the Thames Embankment is the most central in London?—It seems decidedly so.

2332. Both for the south and north of London? Exactly so.

2333. *Chairman.*] Do many persons come to the British Museum from the south of London?—I think on the days when the middle and wage classes have the opportunity of coming, far greater numbers come from the south and from the east, than from the extreme west; we have very large, in fact, crowded numbers of such classes on those days.

2334. Mr. *Cowper.*] Would they be able to come from localities from which the river steamers proceed?—Exactly so.

2335. Do you attach much importance to keeping the collection of natural history from the soot which floats in the atmosphere of London?—That is the aim of most of our arrangements for the preservation of specimens; the aim of our arrangements in making our cabinets, both the floor cabinets and the wall-cases, is to have the glazed covers and doors, with hinges, constructed on the best mechanical plans, in order most effectually to exclude dust.

2336. Your present arrangement with regard to cabinets is such, that you do not think it of much importance whether there should be more or less soot in the atmosphere, such a difference as might arise, whether you take a position nearer the suburbs or nearer the centre of the smoke-producing town?—Exactly so; I do not think that the difference is such as to affect the question of locality, especially when one further considers, looking back to the history of the Museum, that the locality originally selected for it was on the ground of its being out of town, and that it has now become almost the very centre of the metropolis.

2337. Mr. *Tite.*] I believe you have always advocated a division of some sort of the great collections of the Museum?—No, indeed: I have continuously and earnestly advocated a provision of

of that space which will save my successors from the very great difficulty and trouble which, for 10 or 12 years past, we have had to contend with, for the want of it; and any expression in favour of separation has been solely under the belief that it was essential to obtaining for the natural history the space requisite.

2338. If you could enlarge the site of the British Museum, which you evidently could do at no very great cost, taking the surrounding houses; is that a plan which you would recommend, taking it altogether, for giving you sufficient space?—If you suggest a comparison, there is certainly that one element of proximity to the library, which would guide my choice.

2339. You would like that?—It is of very great importance to the students of natural history to have ready access to the library.

2340. That perhaps led to your suggestion of sending away the sculptures and that class of interesting objects in order to keep the natural history collection where it is?—That was not a suggestion of mine.

2341. I understood you in your evidence to say so?—No; it was a suggestion first made by the Prince Consort.

2342. Not by you?—Certainly not.

2343. Mr. *Cowper.*] Will you state, according to your present views, what area you think necessary for properly providing for the natural history collection?—Mr. Hunt, in 1863, went carefully into all those details and questions with me, and ultimately embodied them in a plan, which is printed in a Parliamentary paper. He arranged the building for present actual wants on a space of three acres, and I asked for two additional acres for later additions, looking forward to the next 30 years.

2344. Is that your present view of the subject?—It is so.

2345. Do you think that you might be able to do with a less portion than three acres for the present, provided you had five acres in the whole?—No; I think that Captain Fowke, who went over the same elements, and they are very multifarious, and were all very well considered, and whose plan was ultimately perfected, as regards the detailed application of the several galleries, by Mr. Waterhouse, came to a building covering just the same space as Mr. Hunt's, namely three acres.

2346. That being a building of two storeys lighted from above?—Yes; chiefly so lighted.

2347. Do you think that it would be possible, if there was a difficulty in getting the space, to have a third storey, without unduly interfering with the mode of lighting the galleries?—No; I do not think that would work.

2348. But you consider it of importance that the general lighting of the collections should be from the ceiling?—In the main, but not wholly; there are certain galleries which, perhaps for reasons which I could give, and have given elsewhere in detail, are better lighted in the other way; both these things were very carefully considered and tested by experimental plans, and I believe that point may be regarded as settled.

2349. Mr. *Tite.*] With regard to this library of which you have spoken, would there be any difficulty in getting a sufficient natural history library in connection with the museum?—Both the plans which I have referred to include room or space for such a library as we should require.

2350. It is not very extensive, I suppose, when compared with the other enormous library?—Oh, no; I only desire to repeat that which I have stated in my former evidence, that Sir Joseph Banks acquired, for his time, the best library of natural history that had ever been collected together, and it is the only part of the library at the British Museum that is catalogued in a printed catalogue, which can be used by naturalists in the most effective manner. The catalogue was made by Dryander, a pupil of Linnæus, and it is entitled, "Catalogus Bibliothecæ Historico-naturalis Josephi Banks"; it is in five 8vo. volumes, which always fetch a high price in the market; for every naturalist is glad to get those volumes, on account of the facility of reference to the sources of information on any particular topic of natural history. The next point is, that Sir Joseph Banks bequeathed his natural history collections, with this natural history library, to the British Museum, knowing well that to work his natural history collection such a library must be part and parcel of it. I do not think, looking to the codicil of his will, which effected that transfer, that in equity it could ever be supposed that the Banksian library should be separated from the natural history collections. If it be determined that the natural history collections are to be separated from the British Museum, the Banksian Library ought to go with them; every book is stamped with Banks's name, and they are distinct from the rest of the library by virtue of that printed catalogue, which gives the number of every one of the books. If that be done, a great difficulty, and the main one affecting the balance of the question whether the natural history collections should remain at Bloomsbury, or whether they should be taken anywhere else, is settled, because the Banksian Library includes books that I could not, in all probability, get again in my lifetime, for they are, many of them, old and rare books, monographs, and theses, and special memoirs of that sort, which are not in the market. I could get every natural history work since the date of Banks's demise easily enough, but for reference to many books which are essential to every naturalist I should be compelled to go to the Banksian Library, wherever it is; and I need not say that would be a very great drawback to the scientific utility of the natural history severed from the Banksian Library; but a drawback which would of course be diminished in a ratio according to the approximation of the natural history collections to Bloomsbury.

2351. *Chairman.*] What is the number of volumes in the Banksian Library?—I do not know; I have not got the number; a reference to the catalogue, which extends to five closely printed volumes, would supply the information to the date of its publication, but Sir J. Banks continued to add to the library as long as he lived.

2352. Mr. *Beresford-Hope.*] Is the Dryander Catalogue drawn on such a principle that it could and might be extended to the subsequent additions to the library?—No doubt; it is made on such a principle, with indexes and cross references, that if any naturalist wants to get the recorded information on any one species of plant, animal, or mineral, he can work it out by that catalogue more easily than by any other arrangement that has been adopted.

2353. May I ask, then, which would be the more advantageous, supposing the natural history

Prof. *Owen.*

3 May 1869.

tory collection to leave the British Museum, to let the Banksian Library go with it, or keep the Banksian Library with the natural history library at the museum, extending Dryander's Catalogue, so as to have a uniform catalogue of the whole collection?—I am not quite sure. If the question relates to the extension of the plan of Dryander's Catalogue to the whole of our enormous collections of books at the British Museum, I am not competent to offer an opinion.

2354. You would, of course, prefer to remove the whole natural history library with the natural history collections; that in your mind would be the best thing of all?—If the natural history collection be removed, I consider it most important that the Banksian Library, at all events, should go along with it.

2355. *Chairman.*] You told us that in the three acres, there was a calculation which included the library?—Yes; in all the plans.

2356. Did that include a library of the size of the Banks's Library?—Quite so.

2357. So that it is a further matter to be considered, that it is understood that you are to have a library, and it has been calculated upon the plans, but whether that library is to be the Banks's Library or some other, is a matter for which you can make arrangements afterwards?—That part of the plan, viz. the library, has been sanctioned by the trustees, and other authorities, with reference to every plan of a museum of natural history that has been worked out, and to which I have already referred.

2358. Mr. *Beresford-Hope.*] I suppose you are aware that there is a precedent for that at Oxford in the natural history library being included in the Radcliffe-buildings, and the remainder of the library being part of the Bodleian?—I am very glad to hear of any precedent that may support my view.

2359. You are not aware that the University of Oxford, having a very large collection of books and two buildings to put it in, adopted that system of classification, concentrating their collection of books upon natural history in the Radcliffe cupola?—I know that the Radcliffe Library has been very advantageous for the advancement of natural history.

2360. Mr. *Gregory.*] You made a calculation, I think, some time ago, that the cost of the library for the natural history museum would be 30,000*l.*?—It would depend upon whether we had to purchase the whole of the books, which comprise that magnificent collection of Sir Joseph Banks. If we have not to do that, it would very much modify the estimate; still, the works on natural history, essential to its study and advancement, which have appeared since Sir Joseph Banks's time, would now run up to a large figure.

2361. With regard to the exhibition of objects in the natural history museum, you are perfectly satisfied with the side-lights for a very large portion of your exhibition, are you not?—Not for what one would call a very large portion of the bulk of the natural history. The side-lights are adapted for the geological masses, for the larger fossils, and for the larger objects of natural history, the mammalia for example.

2362. Or osteology, for instance; that would be a large proportion, would it not?—Certainly, it is a large proportion with regard to mass, but not with regard to number of specimens.

2363. If a large amount of skylight were required or available, do you not think that the light which would be obtained from this place by the river side, which you would be perfectly sure of for ever, would be much better than the chance of being built near, if you went down to what are at present called the suburbs?—No doubt that is another element in favour of the river site.

2364. Because what are suburbs now will probably in a very short time be the heart of a new metropolis?—Yes.

2365. Mr. *Dilke.*] Would it not be the case that if a building were erected on the Embankment site, it would have to be run up to a considerable height, to suit the ideas of taste, with regard to the river frontage, that seem to prevail?—A building of two storeys, as far as I can judge from the plans which I have seen, appears to include all the architectural considerations or elements that would be required with reference to the site. I speak with great diffidence on any purely architectural question; but the edifice, on either Hunt's or Fowke's design, is not a low building, because the galleries are lofty, and on many grounds they require to be so.

2366. Mr. *Beresford-Hope.*] I suppose that there would be comparatively little inconvenience in the books being on the basement floor, and being lighted by side-lights?—Very little, if any.

2367. And therefore you might gain your elevation and gain your additional library space too?—That is an architectural consideration, against which I know of no technical objection.

Sir Roderick Impey Murchison, called in; and Examined.

Sir *R. I. Murchison.*

2368. *Chairman.*] I believe you are one of those who, at one time, whatever your present views may be, were very much opposed to the removal of the natural history collection from the British Museum; indeed, I believe it was mainly, or in a great measure, through yourself, that a petition was drawn up and presented to Parliament against that removal. That is so, is it not?—Yes; it is so.

2369. Has your attention been called to this site on the Thames Embankment, with reference to the natural history collection, and do you think it suitable?—I have accidentally had my attention called to it. I have been a trustee of the British Museum for 17 years, and having been for 16 years on the Standing Committee, I am necessarily acquainted with all the questions connected with the proposed removal to South Kensington. Your Lordship was quite right in what you said, that I took as active a part as I possibly could in preventing the dislocation of what I considered to be a grand and unrivalled national establishment; and I did so for various reasons, not only scientific. I was then backed by 120 men of science; I say backed, because I happened to write out that petition to the Government which was presented to Mr. Disraeli, then Chancellor of the Exchequer, and afterwards printed by the order of the House of Commons 11 years ago. I wrote the whole of that petition myself

myself, except one paragraph, which was written by Professor Owen, who was at that time quite as firm an advocate for preserving the Museum *in situ* as I was.

2370. Having been opposed to the removal of the natural history collections to South Kensington, I ask you whether you have considered this site, with reference to the removal of those collections, and whether your objection to their removal from the British Museum still holds, or whether you think that this site is suitable for the erection of such a museum?—I have no hesitation in saying that my personal opinion is that the Thames Embankment is a very good site; but being a trustee of the British Museum, I do not speak with the voice of other trustees, although I happen to know, from conversations with two or three of the influential trustees, that they seem to hold the same opinion as myself.

2371. In all respects you think it is a much more suitable site than Kensington?—Infinitely.

2372. What are your reasons for that?—My main reason is this: I have here the petition before alluded to, and after giving a variety of scientific reasons which I will not now read, I call the attention of the Committee simply to this point: "Whilst such are among the prominent reasons against the removal of the natural history collections from the site where they have been established for upwards of a century in the centre of London, we beg to add the expression of our opinion that such removal, particularly if to any situation distant from that centre, would be viewed by the mass of the inhabitants with extreme disfavour; it being a well-known fact that by far the greater number of visitors to the Museum consists of those who frequent the halls containing the natural history collections, whilst it is obvious that many of those persons who come from the densely-peopled districts of the eastern, northern, and southern parts of London, would feel it very inconvenient to resort to any distant locality." That is in the petition, and that is the main ground, at this very moment, for my approval of the building upon the Thames Embankment, which is almost as central, although perhaps not quite so, as the present British Museum. I think if you take the compass you will find it is in as nearly as possible a central position.

2373. It has great advantages, as I suppose you are aware, as regards approaches by river, road, and rail?—Particularly with regard to steamers, and the people going up and down the Thames. And if the trust of the British Museum is to remain as it is, the site would be very convenient to the trustees, the distance between the two buildings being small.

2374. It would be convenient to the trustees, and it would be convenient also to men of science, would it not?—Yes.

2375. More so than Kensington?—Most unquestionably.

2376. As regards the masses of the population, you think it would be rendered more available for them than if it were to be transferred to Kensington?—I feel quite certain that if we look to the great advantage of a central position for the masses, particularly to large bodies of working men, if this had been properly put forward some years ago, no metropolitan Member, except, perhaps, if Chelsea had then been a borough, would have consented that his constituents should see transferred to a suburban district the very collections in which the largest masses of the people take the greatest delight.

2377. Then is your opinion, for the reasons you have just given, so strongly in favour of this site, as compared with the Kensington site, that if it were believed that it would render the erection of a building more costly there, through the purchase of land, or from any other cause, you would still think it a justifiable increase of expenditure to incur on the part of the nation?—If the object be to diffuse natural history science in the most effective manner, and to instruct the great masses of the people, I say it will unquestionably be very well worth while to incur the expense.

2378. You heard a question put to Professor Owen as regards light and air on that space; that would necessarily be as good as possible, would it not, from having a broad roadway, with some unenclosed ground and the river in front of the Museum?—Yes.

2379. In fact, there would be more space there between the Museum and any building than could possibly be got on the Kensington site?—I think, my Lord, you are as good a judge of that as myself.

2380. Lord *John Manners.*] I think the petition to which you have referred was presented some 10 years ago, was it not?—Eleven years ago.

2381. Was the system of underground railways in operation at that time?—No.

2382. Supposing a person having seen the collections at the British Museum wished to see the natural history collections after their removal, which would he find it most convenient to get to, the new site on the Thames Embankment or the site at South Kensington?—I cannot answer that question precisely; but I will say that my great reason for advocating the conservation of a central position was, as I have already explained, for the convenience of the lower orders, and the vast number of the class of shopkeepers, many of whom have collections of natural history objects. All these people, who live in the centre of the town, attach themselves particularly to the natural history department of the British Museum, and in fact the natural history rooms are always crowded in the proportion of four to one, as compared with the halls containing ancient sculpture. These people have no taste for Phidias and Praxiteles, but they have an intense love of natural history; and it was on that ground more particularly that I always advocated a central position. These same people would think a great deal of the 6*d.* they would have to pay by the underground railroad.

2383. Are you aware that, practically, great numbers of working people do travel in third-class carriages on the underground railway?—I know not the statistics on that point.

2384. How near is the station of the underground railway to the British Museum?—I really have never gone by it.

2385. Mr. *Tite.*] In point of fact, you believe that the great crowds of people who go to the Museum, walk?—Yes.

2386. That is your impression?—I am sure 15 out of 20 walk; and walk in their working dress, and come in easily and habitually.

2387. But if a man can cross a river, and come to the site of a museum for a penny, that, I suppose, would be an advantage which he could manage to afford, and it would be a great conve-

Sir *R. I. Murchison.*

3 May 1869.

nience to him?—Very great, indeed. The same people who came from the south of London before will find the new site much nearer.

2388. With the additional facility of conveyance, if they can afford it?—Yes.

2389. Mr. *Gregory.*] I think, in former days, the scientific trustees, and I am speaking of the scientific trustees alone, were unanimously opposed to the removal of the natural history collections to Kensington, were they not?—I think there can be no doubt that the scientific trustees were, as you say, opposed to it, and in point of fact, those of the Standing Committee who opposed any breaking up of the Museum were as 11 in 15; therefore we had then a very large majority decidedly opposed to all dislocation and breaking up of the Museum.

2390. That comprised all the scientific trustees, I think?—All of them.

2391. Of course you have had an opportunity of consulting the opinion of the scientific trustees, are they unanimously of opinion that the Thames Embankment would be an eligible place for a natural history museum?—I have already answered the Chairman, by saying that the subject has never been brought before any meeting of the trustees in an official manner.

2392. Not officially, but unofficially?—After the meetings I have talked with four or five of the trustees, at different times; I do not like to mention names now, but if mentioned, they would, I am sure, carry great weight.

2393. And they are in favour of the Thames Embankment site?—Yes.

Professor HUXLEY, called in; and Examined.

Professor *Huxley.*

2394. *Chairman.*] YOU have been in the room, I think, during the time that Professor Owen and Sir Roderick Murchison have been giving evidence upon the subject of the transfer of the natural history collections to the Thames Embankment site; do you, generally, agree with the evidence given by them?—I am not quite sure that I invariably heard what was said by those gentlemen; but I think the site itself is an exceedingly good one for the purpose.

2395. Do you think it a good one for its purpose *per se*, as compared with the Kensington site; which would you prefer?—There are two points to be considered with regard to the natural history museum. From the one point of view one looks upon it as a great object library for the use of men of science. In respect of that purpose, it does not much matter where the Museum goes; it would do as well at South Kensington as at the Embankment, or where it now is. The great thing that is wanted, with regard to that object of a museum is, a thoroughly new organization and re-arrangement. But with respect to the other purpose of the Museum, which is to serve as an exhibition for the instruction of the great masses of the people, especially of the poorer classes, I do not think there can be any rational doubt as to the advantage of its being on the Embankment rather than at South Kensington.

2396. In your opinion one of the great objects of a museum would be much better fulfilled if it were placed on the Thames Embankment site than if it were at Kensington?—Certainly.

2397. Looking at the importance of that object, supposing it were to be shown that the cost of the erection of such a building on the Thames Embankment site were to be greater than at Kensington, would you consider the advantages to be so much greater as to justify that expenditure?—It would, of course, depend upon the amount of the expenditure; but anything in reason, or moderation, might, I think, be expended. I may, perhaps, mention to the Committee that the other day I took part with Sir Roderick Murchison in receiving a deputation of working men who were desirous to have evening instruction in science. It was suggested to them that they might perhaps be able to get such instruction at the South Kensington Museum; and one of the members of the deputation at once replied, "Sir, it might just as well be at New Zealand as South Kensington for our purpose, because we cannot get there."

2398. So that at South Kensington evening classes could not be of much practical advantage to the working men, but if you had a museum on the Thames Embankment, evening classes would be opened with great advantage?—The statement that was made by these men was that any situation between Jermyn-street and Clerkenwell would be suitable. That was their definition of the region that would be convenient for them; and they said, very naturally, that it makes all the difference whether you have to walk for a mile, or three or four miles, in order to obtain instruction.

2399. This would really not be literally between Clerkenwell and Jermyn-street, but it would be a very central situation, infinitely more central than the South Kensigton site?—I apprehend, with regard to the question of easy access, that there is no situation in London which is at all comparable with this, because there would be a river landing, as a matter of course, and the locomotion on the river is cheaper than anywhere else. No man can travel so far for a penny in any other way as he can on the river.

2400. Mr. *Layard.*] Do you know whether there were any working men from the south of London in that deputation?—There was a very large number represented, and I suppose the deputation must have represented the interests of the south of London men, as well as that of the others. I do not at all imagine that these men meant to say that it must be in the line between Jermyn-street and Clerkenwell, but what they meant to indicate was what, for them, would be a central position.

2401. *Chairman.*] You have spoken as to the general advantages of this site. As regards the light, it would be the best light that one could ever hope to get in the metropolis, I presume?—I think it would be; but the preference there is not, perhaps, quite so absolute, because fog often hangs on the river. But, on the whole, taking the chances of being built up, I think it is as good as any other site.

2402. That is to say, there could be no building to interfere with the light for many hundred feet across the river?——

2403. Mr. *Layard.*] I think that the naturalists were divided into two great parties, as regards the locality for a new natural history museum, the South Kensington, and the anti-South Kensington, were they not?—Hardly. The history of that is a little curious: Sir Roderick Murchison referred just now to a memorial drawn up by himself many

many years ago, which was signed, I think, by nearly the whole of us; that memorial was strongly in favour of keeping the whole of the collections together at Great Russell-street; but the persons who signed that memorial, as is the case with all memorials, did by no means all of them exactly concur in the precise reasons which were set forth in it. A great many of us, of whom I was one, (and I believe the great majority of naturalists still entertain the same view), were of opinion that there was not the slightest necessity to remove the collections; but that if a proper principle of arrangement were adopted, and no extravagant demand for space were made, there would be ample room to arrange the collections in a most admirable manner on the present site, and which would be at less cost than removing them. I believe a great number of us signed the memorial on the ground that we did not believe in the necessity of removing; that it would be a costly matter; and that the collections, in all probability, would be worse arranged where they went than where they were before. However, that document was interpreted by the authorities, as I understand, in the sense of a strong desire to keep the collections where they were, without reference to anything else; and when some of us found that out, we were so much displeased at this interpretation being put upon our signatures, that we presented a separate memorial to the Chancellor of the Exchequer of the day, to state that in our mind the question of site was of extremely little importance as compared with the question of organization, and we proposed a plan of organization. At that time (1858), and ever since, it has been the opinion of many persons that it was useless to argue the question of site any further, because the Government had made up its mind that the collections were to go to South Kensington. But I do not hesitate to say, from what I have heard from my brother naturalists, that supposing the collections are to be removed from Great Russell-street, we look upon the Thames Embankment as one of the best places to go to.

2404. In fact, supposing there are two parties amongst the naturalists, they both combine to accept the Thames Embankment site?—Quite so; but I do not think there were two parties; I think all working naturalists would have agreed that the thing to secure was, in the first place, a thoroughly careful organization; and in the second place, they would have agreed upon the absence of any necessity to move the collection at all.

2405. Supposing the demand for room for the archæological and art collections in the British Museum to be so great that no space is left for them without removing the natural history collection, you are of opinion that the Thames Embankment would be the best site for a museum for that collection, if such removal were carried out?—Certainly.

2406. Did you hear Professor Owen's evidence as regards the space required?—I am familiar with Professor Owen's views upon that subject.

2407. He stated, I think, that three acres would be required at once, and a prospective two acres to be added hereafter, is that in your opinion sufficient, or is it too much, or too little?—My views are unfortunately very much at variance with those of Professor Owen on that subject, and in that I may say I am upon the side of all the working naturalists in the country. I think I am right in saying at the present moment that we are all in favour of one principle of arrangement. I do not know what Professor Owen's views may be at present, but in those which he has published he has adopted a totally different principle; and the practical difference which would be made by carrying out the one or the other of those two principles is enormous. According to what Professor Owen has published, the demands for space which he makes are based upon the principle of exhibiting all specimens, of allowing everything to be seen by the public. I do not desire to dispute the weight which ought fairly to be attached to Mr. Owen's judgment, but as a matter of fact, all of us who are conversant with the organization of museums are on the other side; we maintain that the carrying out of that principle would involve an enormous unnecessary outlay, that it would make the collections wearisome, and of very little use to the public, and would at the same time, interfere with their usefulness to the working men of science. We, on the other hand, advocate the principle of what is called the "typical arrangement," by which I do not mean a small and scanty arrangement, but an arrangement for making a full and ample exhibition arranged in such a way as to be instructive to the public, and keeping a great mass of specimens which are of no use or intelligibility to the public in a compact form, for the use of men of science. The proposition to exhibit every specimen in the collection is to naturalists very much the same as if a librarian should say that in a public library it was necessary to have every book open, so that every one could read it. You spoil your books, you make an exhibition totally useless to the public, because they do not want to read all the books, and you render the books *pro tanto* inaccessible to persons who really want to consult them. The same thing will happen with regard to the natural history collection if the principle of universal exhibition is carried out. The great majority of the objects will be spoilt by exposure, the public will be utterly bewildered, and men of science will not be able to have ready access to the specimens which are requisite for their use. The whole demand for space turns upon which of these two principles you adopt. If you adopt Professor Owen's plan, I think his proposition with regard to the space required is a moderate one. I think you might take 10 or 15 acres, even; in fact there would be no end to the space required. If you adopt ours, as I stated to a Committee of the House of Commons 15 years ago, you might make the finest exhibition the world has ever seen, upon a space equal to five such galleries as those which at present constitute the bird room in the British Museum, which, as far as my recollection serves me, is 300 feet long by 50 feet wide. To give an idea of what I mean, I may say that the floor area of the bird room is equal to the whole floor area of the College of Surgeons' Museum, which is one of the finest of its kind in the world. I have always maintained that if a space equivalent to five of these galleries could be applied for this purpose, they would afford ample room to make one of the noblest and most instructive zoological museums that can be imagined. The superficial area of that room is about 15,000 square feet, I think.

2408. You think, if we could provide on the Embankment site three or three and a half acres of ground, they would be amply sufficient for the erection of such a building as a natural history museum, including such a library as Professor

Professor *Huxley.*

3 May 1869.

Owen has mentioned?—Yes, I have not the least doubt of it; but it all depends upon the principle I have mentioned being carried out.

2409. I have had an opportunity of speaking to you privately upon this matter, and we discussed a plan to make the specimens accessible at the same time to the public and to students, by so arranging the cases that there should be a passage behind them in which students could remove and examine the specimens. Thus the cases would open behind and not in front, and the public might pass through the galleries without interfering with the students; do you think that for that system this space would be sufficient?—Yes, I have strongly recommended the carrying out of that principle in the new museum at Manchester, upon which I have been consulted. I have not a doubt that it would be the best and most convenient structure that could be adopted.

2410. Mr. *Cowper.*] Do you attach importance to top-lighting of the galleries?—Very great importance; I should have none other but top-lights if I could construct a museum according to my own notions.

2411. But, with reference to the mammalia and other large objects, side-lighting, I presume, would be sufficient?—I think a side light is a very uneconomical light, and, upon the whole, is a bad light, and that there is no need for adopting it.

2412. Do you attach much importance to the library being in contiguity with the natural history collection?—It is absolutely necessary that there should be a good working library for the use of the curators of the museum, and for parties who come to consult them. I should say that what is really indispensable is to have on the premises of the museum a working modern library, a post-Linnæan-library, because there are very few zoological books written before the time of Linnæus which have any other than an antiquarian value. The whole science of zoology has been re-created in the course of the last century, and all the books which we are in the habit of consulting and working with in order to determine the species of an animal, or a plant, or a mineral, with very few exceptions, are books which do not date much beyond the commencement of this century. You want a modern library, and above all things a periodical library.

2413. And the purchase of this modern library, I presume, would not be a difficult or an expensive matter, supposing that all the same books were left in the British Museum?—No, it would certainly not be a very expensive matter; I should be sorry to give any sort of estimate, but still the expense would be moderate as an item in the endowment of the whole place. For example, in the School of Mines, at present we have a very good periodical library, and I think our grant for library purposes is about 500 *l.* a year. I do not mean to say that would be sufficient for such a library as we are now contemplating, but that would give some sort of a notion of the amount required.

2414. From what you have said, then, you do not think the building ought to be more than two storeys high, in order to be lit from the ceiling?—Strictly speaking, I think it ought to be only one storey high. If I could construct a building according to my own plans, I should have it some 30 or 40 feet high, with a gallery running round, somewhat like that of the College of Surgeons. That is one of the best rooms for a museum that I am acquainted with, one in which the light is admirable, and in which there is one of the greatest possible economies of space.

2415. That is a building which, externally, appears to possess two storeys?—Yes, it would appear so.

2416. Mr. *Tite.*] Then the space you would require would be six times 15,000 feet, which is two acres?—Yes; but I speak purely and simply with reference to the zoological collections. If you propose to add the collections of fossils and minerals, you must have other galleries for that purpose.

2417. Do those collections need top-lighting as well as the zoological collection?—I think a top-light the best.

2418. Do bones, for instance?—A top-light is, in my judgment, the best for mounted skeletons.

2419. You want the same sort of light for them?—Yes.

2420. What space would you require for fossils?—I should think you might get ample lodgment in a single additional gallery, like that I have just mentioned, properly arranged and properly utilised.

2421. Of course the library and the officers' premises would have to follow?—Yes.

2422. Probably three acres might include it all?—Yes. I reckon that five times the space at present occupied by the bird-room in the British Museum (taking that space at 15,000 square feet) would suffice for the erection of a building in which the largest zoological collection that can ever be formed may be displayed and preserved in the manner most advantageous to the public and to men of science. Thus, for zoology, I ask, say, an acre and three quarters; I should provide another 15,000 square feet for the fossils, and half as much for the mineralogical collections; and half as much for the botanical collection, if any such collection is to be taken to the new site. This makes a sum total of about two acres and a half, and half an acre for margin, offices and residences, and the like, and I believe that ample provision will be made not only for all present, but for all future needs of a great national natural history museum. In saying that, I think the building ought to be of only one storey and top-lighted; I mean so far as it is devoted to museum purposes. But I think that the museum galleries might be conveniently supported on a side-lighted ground-floor, which would afford ample room for the library and offices.

2423. Mr. *Layard.*] Of course, when I asked you the question about the space, I meant to include all the natural history collections, together with the collections of mineralogy, zoology, geology, osteology; in fact, everything that appertained to the department of science in the British Museum?—My first answer had reference entirely to the zoological collection; but if you wish to add the other collections I should say, speaking roughly, another couple of galleries, making, say, seven altogether, would be sufficient; but that is, of course, a mere estimate, and a very moderate one.

2424. Mr. *Gregory.*] Do you know what the ground-space at Leyden is?—I do not remember.

2425. In the plans that you propose, you have no doubt, that as far as regards the scientific student, it is much the most convenient and the best for him?—Yes.

2426. And as regards the general public, who must

must also be consulted, do you not think that certain forms and objects of natural history would be more calculated to instruct and attract them, and would have a far more powerful effect upon them, and be far less likely to bewilder them, than an immense number of specimens, varying in so minute a degree that nobody but an experienced naturalist would observe their variations?—Undoubtedly; every person who has thought out clearly how to use a museum as an educational institution, must be aware that that purpose cannot be carried into effect except by adopting the typical system. Take a working man, who comes on Easter Monday into the bird-room of the British Museum; I do not know how many species are exhibited, but certainly there are several thousand, among which he loses himself. A museum, to educate through the eye, must have all its parts arranged as a lesson, so as a man walks through a gallery, he may, by using ordinary trouble and intelligence, take away with him some notions of the habits and organisation of the animals exhibited.

2427. Would you exhibit a typical arrangement both of species and striking varieties?—Certainly; I should have specimens to exemplify all zoological truths of primary importance.

2428. You would have the remainder, I presume, in drawers, where the student could take them out, handle them, and examine their structural differences?—Quite so; the fact is, that stuffed birds are of very little use to students. Every working ornithologist, for example, keeps his collection in drawers, and never dreams of stuffing his birds.

2429. I suppose you are aware that there is a very large quantity of specimens in the natural history museum which are not only unnecessary to be exhibited, but are what may be called duplicates?—It is very hard to say, unless one had gone carefully over the collection, what could be called duplicates, because it is very desirable often to have a number of specimens of the same objects, even if it be only for the purpose of proving that there is no variation.

2430. Those of course it would be unnecessary to exhibit?—Quite so.

2431. I do not know whether you are aware that Professor Owen gave evidence before a Committee of this House to the effect that he had sufficient duplicate specimens which were not required, to stock four or five museums?—I was not aware of that.

2432. Lord *John Manners*.] The system of arrangements you advocate would necessitate a passage at the back of each gallery, would it not?—Yes; in fact there would be a series of alternating galleries, small and large, the small galleries for the curators and the large galleries for the public, and the access to the specimens would be from the curators' galleries in the rear; the face of the case would be turned towards the spectators, and would be like a large shop-front, one mass of plate glass.

2433. I think you were in communication with Mr. Waterhouse in the course of last year upon that very point?—I was requested to look over the plans with him in company with some other naturalists, and point out to him what my views on the subject were.

2434. So that Mr. Waterhouse will be able to tell us how he proposes to meet that view which you have placed before the Committee?—No doubt.

2435. Mr. *Tite*.] Have you been in communication with him?—Yes; I think last year I was requested to put myself in communication with him.

2436. Mr. *Buxton*.] Have you found from your experience that the working men take an interest in museums?—They take an immense interest in them.

2437. And that most of the people are able to take an intelligent interest?—I think it depends upon the sense in which you use the word "intelligent"; I think that they come to natural history from their love of collecting insects; from their love of pigeon fancying, and things of that sort. But with the present system of arrangement of the specimens in museums, it is impossible that they should take a very intelligent interest, because the arrangement of the museum does not appeal to their intelligence.

2438. But you think it has a cultivating effect upon them?—No doubt.

2439. They come with sufficient intelligence to derive a benefit from what they see?—Yes, but I think that that amount of benefit might be almost indefinitely increased by adopting a proper system of arrangement.

2440. Mr. *Layard*.] Another great advantage of the arrangement that we have discussed of, having galleries behind the cases, would be that it would enable the museum to be opened every day in the week?—Quite so.

2441. The public need never be excluded?—The public never need be excluded; while, on the other hand, the men of science need not be excluded. The Committee will understand the amount of annoyance which is occasioned to a man of science who goes to a museum on an open day to study a specimen, when, before the case has been opened two minutes, he has an assemblage of people, each with a pair of eyes staring as hard as he can to see what he is about, so that anything like a careful examination under these circumstances is very difficult.

2442. Therefore this arrangement would be equally advantageous to the public and to the naturalist?—Quite so.

2443. Mr. *Gregory*.] There is so much misrepresentation with regard to this restricted system which you advocate, that I must ask you one question about it, to make matters clear: in your plan of course you intend that there shall be a very liberal exhibition indeed of all that is beautiful and striking; you do not at all mean to restrict yourself just to one or two specimens of different classes of birds, for instance, but you mean to take as many species as will really illustrate the whole of the class, which would be for the advantage of the museum as well as for the instruction of the public?—I entirely object to the term "restricted system," which has been applied to this method; it is a word which has been very skilfully chosen, on account of, if I may so say, its injurious connotation. If you set before a man an enormous repast, enough for 50 men, and then take away 48 out of the 50 shares you put before him, you cannot be said to restrict his dinner; he has as much left as he can possibly digest; and those who advocate the typical system propose simply to carry out that principle in its application to a museum. You do not take away from a man anything that he can make use of by exhibiting a typical series of objects, but, on the other hand, you enable him to turn to the best possible account those things which you place before

Professor *Huxley.*

3 May 1869.

before him; and you take away the great element of confusion which is introduced, by putting before him a number of objects he cannot comprehend. I would ask the Committee to consider for a moment what can be the use of turning out before an assemblage of miscellaneous visitors to a museum 20,000 or 30,000 species of beetles? What possible use is it to a visitor to have before him this great series of insects, which for the appreciation of their differences require careful individual study? The result of making such an exhibition is, that you spoil the insects, you weary the spectator, and at the same time you prevent the entomologist who wants to consult the collections scientifically, from having access to them whenever he wants it. When I speak of a typical collection, it must be understood that the collection would still retain a marvellous series of objects; it is not as if one meant to make a small or starved exhibition; it would still occupy a very large space, and in many respects would be much more complete than it is at present. For example, instead of having 10,000 stuffed birds to show, I should propose to exhibit perhaps a couple of thousand, in such a manner as to teach the most important peculiarities of the whole class of birds through the eye.

2444. Mr. *Layard.*] You mean admirably stuffed and set up specimens, giving their characteristic features as much as possible?—Quite so, with the skeletons, the conditions of the young, the nests and the eggs, so that a man could carry away a notion of what birds really are; at present he leaves the bird room with a sort of phantasmagoria of feathers in his mind.

2445. Mr. *Tite.*] Can you quote cases of museums abroad which are arranged upon the plan which you urge?—No; there is no museum in existence which is so arranged, and I believe that is the great cause why museums are as ineffectual and comparatively useless for educational purposes as they are.

2446. I am speaking of those at Leyden, Berlin, and at Paris; are those arranged upon your principle?—No, but then it must be recollected that those museums are in a great measure, if not entirely, devoted to scientific purposes.

2447. Mr. *Layard.*] They are not so much open to the public as they are here?—I hardly know that, but I think they are much more meant for scientific purposes.

2448. I think the Jardin des Plantes is only open on certain days, and some formalities are required to be gone through in order to get there?—I should have no hesitation in saying that this plan, both for scientific as well as popular purposes, is the best.

2449. Lord *John Manners.*] I think I understood you to say that the student would be allowed to have the specimens he wished to examine removed from the case, in order to study them in some room provided for the purpose?—Yes, the access to the case being from the back, the case would always be accessible, and, without removing a specimen of which only a cursory inspection was required, a student could examine it from the inside.

2450. I understood you to say that was very objectionable, because the students hence found themselves the objects of study on the part of the public?—I do not think the objection is so much to being an object of study as to have a number of people crowding about you; but if there is a good thick plate of glass between you and the public you must be very sensitive indeed to care much about their looking at you.

2451. Mr. *Beresford-Hope.*] Are your narrow galleries which lie between the cases to be each accompanied by a private gallery?—No; I should dispose the galleries alternately, so as to have only a double set on the outside.

2452. How far will that system co-exist with having exhausted air cases for some of the rarer specimens?—You could have them inside the other cases, I should put them all under cover; I would not have a single specimen except under glass.

2453. Not even the large camel-leopards?—No; I would make no exceptions.

2454. Mr. *Gregory.*] Are there any foreign natural history museums arranged on the typical system?—No, not that I am aware of: but I think I ought to add that, in my judgment, a proper system of arranging museums has never yet been carried out; in all these things we are growing and learning, and I think that a proper arrangement of a museum for the education of the public is yet to come.

Mr. Alfred Waterhouse, called in; and Examined.

Mr. *A. Waterhouse.*

2455. *Chairman.*] You have turned your attention, have you not, to the adaptation to this site of the plans which have been prepared for a natural history museum?—I have.

2456. By this site I mean the reclaimed land between Charing Cross Railway and Waterloo Bridge?—Yes.

2457. You have been in communication with the Office of Works upon this subject, have you not?—Yes.

2458. Mr. *Layard.*] I think you were selected as the architect to erect the natural history museum?—The First Commissioner of Works in 1866, Mr. Cowper, did me the honour to request me to carry out Captain Fowke's plan.

2459. We presume that the building you were requested to erect was to have been on the Kensington site?—It was.

2460. Have you prepared plans and elevations for that site?—What I first did was to prepare estimates for carrying out the portion of the plan which was then intended to be first erected, and to exhibit those plans to the trustees of the British Museum and the professors there, and to see what modifications were required in order to make these plans suit their views.

2461. And you have prepared plans in accordance with the views of those professors, and they are perfectly satisfied with your plans?—I prepared a modified design with that object in view, with which the professors expressed themselves satisfied.

2462. I think when I came into office I had the pleasure of communicating with you with regard to the possibility of transferring the museum of natural history from South Kensington to the Thames Embankment site, between Charing Cross and Waterloo Bridge?—Yes; I was honoured by a communication from you on that subject.

2463. In

2463. In consequence of that suggestion, you were good enough to look into the subject?—I did so.

2464. Will you kindly state to the Committee what the result of your examination of this proposed scheme is?—I found that in the site which you brought under my notice, there was amply sufficient space for the museum as intended; not Captain Fowke's museum, which was on a very much larger scale, but for the museum which was approved by the trustees and professors of the British Museum, and also for a roadway behind that museum up to the Strand.

2465. As an architect, is your opinion more favourable to the Thames Embankment site than the Kensington site?—I am very strongly in favour of the Embankment site.

2466. Do you think that a very fine edifice, a great ornament to the metropolis, could be erected on that site?—There is no doubt of it.

2467. Have you drawn out any sketch or plan of your views on the subject?—I have only made some block plans to show how the museum might be adapted to that site.

2468. Will you tell the Committee whether you propose, in erecting this building, to place any part of it on the reclaimed land, or is it to be erected entirely upon land now covered with houses?—There are various ways of treating the question, but my impression is that a satisfactory building might be erected upon the reclaimed land, and the ground occupied by the wharves and the old low buildings, which you will see on the model, and which used to skirt the water side. Another way of treating the scheme and securing a more imposing building would be to set it further back from the roadway, getting, in all probability, a more efficient street, behind the building, up from the Embankment, to the Strand, but which would encroach more or less upon the valuable property on the high level.

2469. How many acres does that building cover which you have sketched out on the reclaimed land?—Three acres.

2470. And that, according to the information which you have received from those professors with whom you have been in communication, would be sufficient for the erection of a natural history museum?—I gathered clearly from the trustees and from the professors that the plan, as submitted to them, was quite sufficient, and this is quite as large, if not larger, than that.

2471. As far as internal arrangements are concerned, you could adapt the plans that you have already prepared for the South Kensington site to this new site?—Very easily; but I think I should say, that the last South Kensington plan would want some modification if it were to be adapted to carry out Professor Huxley's views.

2472. But you would have no very great difficulty in doing that, I presume?—None whatever.

2473. Have you combined with that building any gardens or terraces with flowers?—Yes; there would be a considerable space of unoccupied ground which might be devoted to gardens.

2474. Lord *John Manners.*] Are you confining yourself now to the lower level?—I will explain the plan. This, No. 1 (*pointing to a plan*), is what I may call the most modest scheme, which places the building within about 40 feet of the Embankment roadway. The building in this case presents a nearly unbroken façade following the curve of the Embankment road. The centre line of the building passes also through the centre of the landing stage which is midway between Waterloo Bridge and Hungerford Bridge.

2475. *Chairman.*] What is the width of your terrace?—About 40 feet.

2476. Lord *John Manners.*] Is this entirely on reclaimed land, or are there any houses?—By far the greater portion of the site is reclaimed land; the rest is occupied by the low buildings shown in outline merely. The buildings which you see shaded are valuable property on the high level, but all down below may be termed rubbish.

2477. Mr. *Layard.*] This plan, No. 1, does not contemplate touching, as far as the building is concerned, any of the valuable property behind the reclaimed land?—If the building were erected without the road at the back being taken into consideration, none of that valuable property will be touched.

2478. This building, I understand, occupies a space of about three acres?—The building itself, coloured red, occupies about three acres.

2479. And on either side you have gardens?—Yes.

2480. You are aware that upon this part of the Embankment site it is intended to construct a road which is to connect the bottom of Hungerford Bridge with Wellington-street?—Yes.

2481. Supposing such a building as you propose were erected, could you, if such a road were afterwards found to be necessary, provide for it?—Yes; a road might be constructed behind the building very much on the old line, kept on a slightly higher level, and then it might be carried on a viaduct, as the road was at first proposed, over the burial ground of the Savoy Chapel, and so join the Strand at the junction of Wellington-street.

2482. Therefore this building would, in no way whatever effect the question of the road, supposing a road were afterwards found necessary, except that you would have to purchase some valuable property on the high ground?—Yes, that is so; but this was not the scheme proposed by me in drawing out this plan; it was to avoid touching the Savoy altogether, and to make a means of communication with the Strand by way of Adam-street.

2483. By this plan, have you any access to the Strand by a foot or carriage-way?—Yes, by means of this road which connects it with the Strand, in the first place, by means of Adam-street, which is kept exactly as it is at present, with regard to levels, but which may be widened by the pulling down of some of the houses on the Adelphi-terrace side.

2484. What is the present width of that street?—I should suppose it is between 20 and 30 feet wide.

2485. It has been objected that a building erected upon the reclaimed land would be very low, and would not be of sufficient importance to render it really an ornament to the metropolis?—On the contrary, I suppose that the building would be placed upon a terrace, either as high, or very nearly as high as the terrace in front of Somerset House, which is 29 feet above the Embankment roadway.

2486. Therefore, as regards a fine architectural effect, you do not find any difficulty in constructing a museum according to this plan?—None whatever.

2487. Lord *John Manners.*] In the event of this

Mr. *A. Waterhouse.*

3 May 1869.

this building being placed on piers or arches at the height of 29 feet above the Embankment-roadway, how high would it come in front of Adelphi-terrace?—The level of the ground-floor in each case would be three or four steps above the level of the street in front of Adelphi-terrace.

2488. What would be the distance between the back of the building and the front of the houses in Adelphi-terrace?—On the average it would be about 100 feet.

2489. How do you propose to carry this road, coloured brown, into Adam-street?—It would rise with a gradient of one in 32 from the Embankment roadway, coinciding very nearly with the level of the lower end of Villiers-street, and joining to Adam-street at its present level, so as to effect no existing level prejudiciously.

2490. How do you deal with that terrace now in front of the Adelphi?—We leave it as it is for about three-fourths of its length, and for the remainder pull down the balustrading in front of it, and unite the terrace with the new road.

2491. In your estimate do you allow anything for the possible compensation to the owners or occupiers of houses in the Adelphi?—No; I believe that has been gone into, but not by myself.

2492. *Chairman.*] What space of ground would you leave on each side for gardens?—About an acre on one side and three-quarters of an acre on the other.

2493. Mr. *Cowper.*] What is the use of that part of the proposed road which is east of Adam-street, provided you make a communication with the Strand by Adam-street?—I presumed that there might be a certain amount of traffic from the Strand to the Embankment, going eastward, though of course not so much as the traffic going westward, and that it would be desirable to have a considerable space between the building and any other buildings. This space might be as well appropriated to a road as to any other purpose, and such a street might, if desired, be easily connected with the river end of Cecil and Salisbury-streets, and the Savoy, because the roadway, as projected, happens to work into the existing levels of those streets.

2494. Mr. *Layard.*] There will be an access by Villiers-street, too?—Yes.

2495. Mr. *Cowper.*] Will you kindly explain what the communication will be from the high ground at Adam-street to the road?—We should communicate with the Embankment from Adam-street, behind the building, either to the left or to the right.

2496. Then I understand that the centre of the road being on the level of Adam-street, there would be a rapid gradient down there?—There would be a gradient, but not a rapid one.

2497. Mr. *Beresford-Hope.*] How would you deal with the line there (*pointing to the map*); would it be a vertical wall?—The retaining wall supporting the roadway above the garden on either hand should, I think, be stepped up.

2498. Presenting a vertical face to the Embankment?—Presenting a vertical face to the Embankment behind the gardens.

2499. Lord *John Manners.*] As I understand it, your plan would show several communications between the Embankment roadway and the Strand?—Precisely so; by the Savoy, Cecil-street, Salisbury-street, Adam-street, and Villiers-street.

2500. Will you explain a little more than you have done, how your proposed or suggested communication between Wellington-street and your new road at the back of the natural history museum would be accomplished?—I propose no communication between Wellington-street and this road further than that which exists at present; that very steep road between the Savoy Chapel and the Lutheran Chapel.

2501. I understood you to say that a road could be taken over that part (*pointing to the plan*)?—It would be simply doing what was proposed by the Metropolitan Board of Works, and which was abandoned.

2502. But that is not their present scheme?—Their present scheme is, I believe, to go through Lancaster-place, which would be as easy, only this roadway descending from Adam-street to the Embankment westwards would have to be given up, and from Adam-street we should have to rise very slightly up to Wellington-street.

2503. Mr. *Tite.*] Then, in point of fact, to carry out that plan, you would obliterate the view from the houses in Adelphi-terrace?—That would be so.

2504. And, of course, that could not be legally done without buying those houses?—I should think, as we are more than 100 feet from the houses, we could not destroy any of the needful light and air.

2505. Lord *John Manners.*] Have you, or has any other gentleman, made an estimate for the purchase of the houses shown in this line on the plan?—Mr. Hunt made an estimate of the value of the houses to the west of Adam-street, when it was thought, as we originally did, that the space chiefly below them would be the best place for a museum, but I believe that no estimate has been made for the purchase of the houses pointed out by your Lordship.

2506. Mr. *Cowper.*] Do I understand from this plan, that you have to purchase these houses marked blue that front the river between Adam-street and the Savoy?—That would only be in the event of this roadway being made, which is no part of the museum scheme.

2507. If the roadway is made, then it would become necessary to purchase all these frontages to the river, which are marked blue?—That is my notion.

2508. It would be necessary; you could not do it without?—No.

2509. Lord *John Manners.*] Unless the roadway is made, would there be any convenient access for the people coming from the north of London to proceed to the museum?—Yes; they might enter opposite the end of Adam-street; I think I ought to add to what was said before, that after all the projected street down from Adam-street to the foot of Charing Cross Bridge will be the most important, and at the same time will not affect the houses, whereas the street from Adam-street to the foot of Waterloo Bridge appears to me to be of secondary importance.

2510. Mr. *W. H. Smith.*] That is to say, the roadway from Adam-street westward will be made at very small cost, while the roadway from Adam-street eastward is of less importance?—Certainly.

2511. Mr. *Beresford-Hope.*] Do you adopt that curved line from the museum, because it would look best, or in order to coax the ground?—Because I thought it would look best; I think that a long building on this site should, as far as possible, conform to the line of the Embankment.

2512. This is a block-plan of several buildings, not

not one continuous building?—It is one continuous building.

2513. With the façade slightly curved, and not straight?—Yes.

2514. Mr. *Tite.*] As an architect you would think nothing of that?—I think the effect would be satisfactory.

2515. Lord *John Manners.*] What do you say as regards the entrances?—The entrances, as I thought, would be all on the Embankment level.

2516. *Chairman.*] You mean under the terrace?—Under the terrace, which would be 24 feet above the level of the Embankment.

2517. Mr. *Cowper.*] Will any portion of your building be over the railway?—In this scheme no, but I cannot say that the line of rails, as shown on this plan, is as now intended.

2518. But even in this, your plan touches the edge of the railway?—It comes within a few feet of it.

2519. Although not actually over the railway, the foundations would interfere with the railway, would they not?—I could arrange that they should not; that this wall should be carried down quite independently without at all affecting the permanent way.

2520. What are these steps which I see on the plan?—They lead up to the terrace from the Embankment.

2521. Mr. *Beresford-Hope.*] The terrace is only accessible to foot passengers from that building?—Yes, I so intended it; it would be only those who wished to enjoy the prospect that would care to go up these at all.

2522. The object of the terrace is to give a good basement to the building?—Yes; architecturally.

2523. Mr. *Layard.*] You might easily connect these streets with the building by bridges?—Yes.

2524. Mr. *W. H. Smith.*] This building will not act as any screen to the Charing Cross railway tube?—Yes it will; if you are standing under Waterloo Bridge you will only just see the great arch.

2525. Lord *John Manners.*] But when you go further westward how will it be?—Of course as you go further west and beyond the museum, the station roof developes itself.

2526. With reference to screening that tube, can you explain what will be the practical value of the building as suggested?—That you will not see the railway station at all.

2527. From where?—From the Embankment below Waterloo Bridge.

2528. But how far, 10 yards, 100 yards, or 1,000 yards, or what will be the actual space, that will be screened by this building?—The ground is all on a curve here, and what it does at one point it does not do at another; but I noticed under Waterloo Bridge that there would be only just the mouth of the station visible.

2529. Now, I want to ask a question or two about the railway; you bring your building close to the railway, although not actually over it?—Not actually over it.

2530. Do you propose to make your foundation as deep as the foundation of the railway?—Yes, either as deep as that or below it.

2531. Do you contemplate having an area between your building and the railway, or not?—No, not at the corner.

2532. Are you of opinion that your building will be quite secure from all vibration or annoyance of any kind, without the interposition of an area between it and the railway?—I should suppose so.

2533. Have you turned your attention much to the question of vibration or annoyance from the immediate proximity of a railway?—No; I cannot say that I have as yet turned my attention much to this subject.

2534. Would you be surprised to hear that in the opinion of some eminent scientific people it is thought advisable to take a precaution of that kind?—I should not be at all surprised, and I should think it desirable to take every possible precaution at that corner. The project is, I believe, to have a railway station here, and if the railway station be close to this point, I apprehend there will not be much vibration from the working of the trains.

2535. *Chairman.*] Have you been in communication at all with Mr. Fowler, the engineer of the railway, with regard to these plans?—I have not seen Mr. Fowler on this subject.

2536. Are you aware that there is an open space required here for ventilation?—Yes; I thought that difficulty might be overcome by taking the foul air up through the building and out at the top.

2537. Using your building as a ventilating shaft?—A small portion of it.

2538. But you have not communicated with Mr. Fowler?—I have not.

2539. Lord *John Manners.*] You have said that the plans submitted to us show a slight deviation in the authorised line of railway?—Yes.

2540. Can you tell us to what extent that deviation extends?—It is very slight. The line under the bridge is the same in each case, but coming eastwards my line, instead of following Mr. Fowler's, is shown a little out at one point, and a little further in at another.

2541. Is your line within the line of deviation?—I am not aware what the line of deviation is. I do not think it is shown on the plan of the Board of Works.

2542. How near is the line of your building to the authorised line of railway?—The authorised line of the railway comes under the building.

2543. How near is the proposed corner of the building to the proposed line of railway in your plan?—About 10 feet at the corner.

2544. Would that 10 feet give you sufficient width for an area?—I think it would.

2545. Mr. *Tite.*] It is only at that point where there is any pinch?—Only just at that one point.

2546. With reference to Adelphi-terrace, you think that your building would cut off the view of Adelphi-terrace, which is not a legal liability, but that it would not interfere with the light and air of Adelphi-terrace?—I do not think it could interfere with the light of the houses.

2547. The distance being how much, measuring at the narrowed point?—Ninety feet.

2548. Mr. *Cowper.*] What is the distance between the centre of your building and the railway, after it is deviated?—Fifty-five feet.

2549. *Chairman.*] And at the extreme end, how far is it?—Seventy feet.

2550. Mr. Alderman *Lawrence.*] Are you aware whether there is any building so near the Embankment wall proposed, in the whole line as this

Mr. *A. Waterhouse.*

3 May 1869.

this building?—Somerset House is a parallel case.

2551. Is this the same distance as Somerset House?—About the same distance.

2552. Mr. *Layard.*] Now take No. 2 plan, if you please; will you be good enough to explain that?—No. 2 plan resembles plan No. 1 in most respects, except that the centre part is pushed back so as to give a more broken line of front and a garden in the centre; the roadway behind, in consequence, is thrown further back, and very valuable property is cut into. Adelphi-terrace would have to be purchased in this case, I believe, and the railway would have to be under one of the wings of the building.

2553. *Chairman.*] Is this the railway company's own line?—No; there is rather more deviation here than there is in No. 1 plan.

2554. Lord *John Manners.*] Why is that necessary?—Because I did not want the line of the railway to cut the line of the building obliquely—on the skew.

2555. Mr. *Layard.*] You would have more garden also?—Yes, there would be rather more garden in this plan.

2556. As regards the railway, it goes under part of the building, you say?—It goes under one wing.

2557. *Chairman.*] In this case I see that in the centre, instead of having your access to the building from the Thames Embankment roadway under the terrace, you have a footway leading from the roadway, with a flight of steps right and left, which lead you on to the level of the building to the terrace?—Quite so; and there would be an entrance there, either on the level of the terrace or on the level of the Embankment, whichever was preferred, and also one from Adam-street, at the ground-floor level.

2558. You have a terrace in front here; does that go through or under arches?—Yes, it goes under the arches, on either side of the entrance.

2559. So that the whole thing is a terrace, and a person could walk from one end of the building to the other?—Yes.

2560. Mr. *Layard.*] Which do you consider the best plan, architecturally speaking?—I think this (Plan No. 2) would be the most picturesque.

2561. Lord *John Manners.*] Has Mr. Fowler been consulted about this deviation?—Not by me.

2562. Mr. *Layard.*] Now take Plan No. 3; will you describe it?—This is another scheme very similar to the last, except that the building is divided into three blocks, with corridors on arches connecting the three together, and then the gardens in front would be connected with the gardens at the back by roadways under the arches, and there would be a flight of steps down to the garden on either hand of the central block from the street behind.

2563. Mr. *Gregory.*] That would be open underneath?—Yes.

2564. *Chairman.*] This one is more in conformity with Captain Fowke's plan than either of the other two, is it not?—Yes, inasmuch as his plan was cut up into blocks.

2565. And this also (Plan No. 2)?—Yes.

2566. Mr. *Layard.*] It occupies the same space, I suppose, about three acres?—Yes; they occupy all about the same space.

2567. And with reference to the architectural appearance, what do you say?—I think this would be almost better than plan No. 2, but it would be more expensive.

2568. Mr. *Beresford-Hope.*] Have you ever thought of the plan, with a view of masking the railway most completely, of putting a more square building at the western end, leaving the eastern portion more open?—We did think of that at first, but there seemed a great advantage in having the buildings comfortably placed, as it were, between the two bridges, and moreover even in the scheme for pushing the building as close as we could get it to the Charing Cross Railway, we never got it nearer than this plan shows it.

2569. Lord *John Manners.*] What is the height of your building?—The ground floor would be about 28 feet from the Embankment, and then the rest of the building, I think, would be about 70 feet high to the parapet.

2570. Mr. *Layard.*] About the height of Somerset House in fact?—Rather higher than Somerset House.

2571. *Chairman.*] Now what do you say with reference to plan No. 4?—This is a more ambitious and a more complete plan; the roadway would be about the same gradient as it is at present, but Adelphi-terrace is entirely swept away.

2572. I do not think we need go further into that, but we will go back to plan No. 1?—Very well.

2573. Mr. Alderman *Lawrence.*] Do you not apprehend, if the building is placed there, that as each train passes it will be heard throughout the building?—I should not think it would be heard throughout the building.

2574. Lord *John Manners.*] You have not paid particular attention to that subject?—It is very difficult to answer a question of that sort.

2575. Mr. Alderman *Lawrence.*] If you had simply to carry out your own views, would you not much rather prefer placing this building at a much greater distance from the Embankment?—It is so kept back on one of these plans; but I should say if it had been carried much further back, the space would necessarily be devoted to gardens and the trees would shut out the view of the building.

2576. You prefer having it further back than in the No. 1 plan?—I am not sure that I should.

2577. Does it not from the west end of the building leave exposed the whole of the ragged part of this old building towards the Embankment westward?—Yes; directly you pass through the bridge.

2578. As you proceed along to the Embankment, coming eastward, the building will not shut out from view all the old buildings?—Well, I thought it did; there would be very little left.

2579. Then this building will not be covered on this side, from the river, and only a small portion of the ragged buildings that at present exist will be completely screened?—True, but then the museums would occupy the principal portion of the space between the bridges and would be so important as to catch the eye in preference to what there might be unsightly behind or on either side of them.

2580. Mr. *Cowper.*] Now, in these three plans you have placed your building in the centre of the space between the two bridges; I presume with a view to its appearing in a symmetrical position to a spectator who would be on the river?—I thought the advantage in point of effect of its being placed somewhere near the roadway between

between the two bridges would be apparent to everybody.

2581. Taking the point of view of a spectator walking along the road, would it not produce as good an effect if it were placed, not in the centre, where you must purchase a great deal of very valuable property, but on the western end, where you have much more space, since a person taking up a position with his back towards Waterloo Bridge, would not be aware that the building was at all in a central position with reference to the lines of the existing building corresponding; there appears to be nothing like centrality, to a person on the roadway?—The building is placed immediately opposite the landing-stage, which is already constructed exactly midway between the two bridges.

2582. Is there any one point on the roadway where a man can, at the same time, see both the bridges?—Not on the roadway.

2583. *Chairman.*] Is there not in all these matters a sort of inner conscience as to whether a thing is clearly central or not?—In such a question there undoubtedly is.

2584. Mr. *Cowper.*] Is it not an entirely artificial assumption that the framework of your picture is to consist of these two bridges, when no one on the roadway can see those two bridges at the same moment?—I admit that from the roadway between the two bridges the advantages of a central position are less obvious, but I think that the effect from either of the two bridges of the building being placed centrally will be quite obvious.

2585. *Chairman.*] Is there not another point; a landing pier implies landing, does it not?—I believe so.

2586. And probably a great number of people will land at that pier?—I think so.

2587. If they land at that pier with their back to the river, and they look towards your building, as you have designed it, they will see the centre of that building exactly opposite to them?—Yes.

2588. And they will see to the right and left an equal distance of that building, and to a certain extent an equal amount of space on each side?—Yes.

2589. If, on the other hand, this building is squeezed up to the left, people standing in the same position with their back to the river would look, not at the centre of the building, but at the centre of the wing, or some other part, and then they would see most of these buildings away to their proper left, to use a military term, and a much larger space on their right than on their left?—So I have always thought.

2590. Therefore, to any person standing there or landing, it would have a most lopsided appearance?—Certainly.

2591. Mr. *Cowper.*] But assuming that, instead of taking the landing-pier as the centre of the place to be dealt with, you take it as the eastern extremity, and take the space for building, bounded on the east by the landing-place, and on the west by Charing Cross Bridge, would you not be able then to place the building at the spot so assumed without the expensive destruction of a number of buildings which are to the east of Adam-street?—I believe there would be almost room to get the building in the position you indicate.

2592. *Chairman.*] But would there be quite room for it; it all turns upon that?—(*After measuring upon the plan.*) No, we could not get it in.

2593. You could not get it in even by taking it right up to the pillars of the bridge?—I have not taken it quite up to that; I have left about 30 feet.

2594. Does that leave room for your roadway?—No.

2595. Mr. *Cowper.*] On the other hand, would you not get a greater depth of building in that position than where it is now?—You might get a rather greater depth from front to back, particularly at the western end.

2596. Mr. *Tite.*] How are you to get the roadway?—In such case we could not have a roadway.

2597. *Chairman.*] You have had in view, I presume, to a great extent, this point which has been raised, that unless there is some public building to act as a screen, the public on the roadway would be left, as regards this building, to the chance creation of private speculation, which may or may not be ornamental?—Quite so.

2598. Your object is to have, as far as possible, a screen between this building and the railway?—Yes.

2599. And if this building were to be, as suggested by Mr. Cowper, transferred from a central position further westward, all that lies to the eastward, beyond the part where the building ceases, would be left, as I have said, to the chance creation of private building speculation, which would be totally unscreened on that side?—So I feared; that instead of a well-balanced composition, we should have an unsightly arrangement.

2600. Mr. *Beresford-Hope.*] Will you look out of the window, where you will see St. Thomas's Hospital, taking that as a datum point, how much further back would the building be from the Embankment than that hospital?—I believe the hospital comes right up to the Embankment; therefore this building would be about 40 feet back.

2601. Taking it from the water to the most prominent face?—I should say 100 feet further back than St. Thomas's Hospital.

2602. Mr. *Cowper.*] Suppose the building were erected much closer to Charing Cross Railway than is now proposed, would not Adam-street well supply the communication to the Strand?—It might be moved 100 or 150 feet nearer the railway station, and still retain that communication.

2603. *Chairman.*] You have not given us an estimate of the cost of this building; have you made any estimate of it?—I have; I apprehend plan No. 1 would cost 582,000 *l.*

2604. Did you hear Mr. Cole's datum for estimates?—I think I heard him mention 1 *s.* per cubic foot as his datum.

2605. Is your estimate about that rate?—Some of the work is estimated at more, and some at less.

2606. What does that total of 582,000 *l.* include?—The building, terraces, and steps.

2607. And the garden?—Not the garden.

2608. And no roadway?—Nor the roadway.

2609. Have you calculated what the addition of the garden would be?—It would be very trivial, but I have not gone into it.

2610. What would be the roadway?—I have not gone into that question.

2611. This is the cost of building: there is no question of compensation for damage done

Mr. A. Waterhouse. 3 May 1869.

to houses, or any question of compensation for the vaults, or whatever they may be?—No.

2612. Now, take plan No. 2, and give us the same estimate, applied in exactly the same way to that plan?—That is 697,000 *l.*

2613. That is exactly on the same basis as the first?—Yes.

2614. That is to say the gardens are not laid out there either?—The gardens are not laid out; it is simply the building work.

2615. Now, take plan No. 3; what is your estimate for that?—That is 694,000 *l.*

2616. Mr. *Beresford-Hope.*] That is 3,000 *l.* cheaper than plan No. 2?—Yes; there is a little difference in size, but of course these are merely rough estimates.

2617. *Chairman.*] I think you said an estimate had been made by some one as to the purchase of the buildings?—Mr. Hunt made an estimate as to the cost of the property here, and the amount of compensation which would be likely to be required for removing some of this property.

2618. No one has made an estimate, that you are aware of, as to the cost of purchasing this property?—I believe nobody has.

2619. Mr. *Cowper.*] Will you just give us the number of square feet covered by the building?—My design for the South Kensington building amounted to 132,000 superficial feet; and for the building on the Embankment, according to plan No. 1, it would be 133,000 superficial feet; according to plan No. 2,148,000 superficial feet; and plan No. 3 the same.

2620. Lord *John Manners.*] Can you tell us what your estimated cost of the building at South Kensington was?—That was 495,000 *l.*

2621. Therefore the building at South Kensington would be about 100,000 *l.* cheaper than any of these three plans?—Yes; roughly speaking it would be.

2622. Mr. *Beresford-Hope.*] Not 100,000 *l.* cheaper than plan No. 1?—Plan No. 1 amounted to 582,000 *l.*; the increase of cost, of course, results from the much greater depth that we shall have to go for the foundations and sub-structure upon the river site than upon the other.

2623. You account for the difference by the necessity in the one case, of going very deep for your foundations?—Yes; and for the necessity, architecturally speaking, of a sufficiently high platform.

2624. May I ask whether that would apply, in your opinion, to any public building erected on the line of the Embankment?—That is my impression, but I apprehend that, to speak definitely on the subject, one would have to make observations.

2625. *Chairman.*] Have you ever constructed a building on this site?—No.

2626. Or at Kensington?—Yes; I know very well the ground at Kensington.

2627. But you do not know the Embankment?—No.

2628. Mr. *Cowper.*] Is a large portion of it owing to the basement which it is necessary to place there, in order to enable persons to see the building to advantage?—The expense is involved in two ways: first, the depth of the foundations, which I apprehend will be necessary; and, secondly, the height to which it will be necessary to raise the building above the Embankment, in order to secure an adequate architectural effect, and that space above the Embankment will, of course, be made use of.

2629. *Chairman.*] On this plan (No. 2) the terraces are separate and disjointed; there is no continuous terrace?—No, there is not.

2630. If desired, could that be done?—Yes.

2631. Here is a terrace with no mode of access to it (*pointing to the plan*)?—That would be approached from the building.

2632. Mr. *Cowper.*] Supposing it were possible to obtain a site on the high ground, by the purchase of the houses which now stand between the Embankment and the Strand, should you not be able to produce a better architectural effect by building on the high ground, rather than on the low level?—Seen from distant parts of London, of course there would be a great advantage gained by putting the building on a higher level, but I doubt very much whether, taking it as a part of the scheme of the Embankment, the effect would be improved by making it further from the roadway.

2633. *Chairman.*] What is the width of your terrace in plan No. 3?—I think 30 feet.

2634. At the wings?—Yes.

2635. Mr. *Beresford-Hope.*] But less in the centre?—Less in the centre, of course; there is no reason for that except that it was made just the width these towers would project.

2636. *Chairman.*] They might be as broad as you like?—Yes.

2637. Mr. *Beresford-Hope.*] Can we take that perspective here, as the general idea of plan No. 3, *mutatis mutandis*?—To a certain extent you might; supposing you were to reject this block of buildings at the back, you might assume that that perspective of Captain Fowke's building would be something like the effect of the group shown on plan No. 3.

2638. Mr. *W. H. Smith.*] Connected with the corridors, I suppose?—Yes.

2639. Mr. *Beresford-Hope.*] In preparing these designs, do you consider yourself bound to carry out the general notion of Captain Fowke, or have you arranged these plans entirely on your own idea?—First of all, I considered myself bound to carry out Captain Fowke's design, but when the matter was referred to the British Museum, and Captain Fowke's arrangements were found to be so far from what the trustees wished to have, it became necessary to re-model the interior, and to a certain extent the exterior with it.

2640. Then you consider that, morally speaking, the Office of Works and yourself are absolved from the debt to Captain Fowke's memory?—I suppose the Office of Works do feel that they are, because it would be impossible to carry out his plan.

2641. It has come back then to the ordinary condition of a building proposed on a site which is dropped, and you put a fresh building on a fresh site?—Yes; and to suit fresh requirements.

2642. Mr. *W. H. Smith.*] You said just now that the cost of the building on the Embankment would be, speaking roughly, 100,000 *l.* more than that at South Kensington?—Yes.

2643. But your design for the building on the Embankment involves a basement which is not given in South Kensington; is not that so?—Not altogether so; at South Kensington there would be a basement of about 15 feet in height, but on the Embankment there would be a basement of about 30 feet in height.

2644. That, of course, would amount to a much more useful basement than the basement at

at South Kensington; it would amount virtually to another floor?—It would.

2645. Mr. *Alderman Lawrence.*] Did I understand you to say that the line you have taken is the line of the building of Somerset House, not the line of the terrace, but of the building?—The line of the building; there would be a terrace in this case similar to the terrace in front of Somerset House, and then the building would be set back, as Somerset House is set back.

Mr. *A. Waterhouse.*

3 May 1869.

2646. No part of the building would come forward nearer the river than Somerset House?—I believe that in no case does it come up to the Embankment wall, nearer than Somerset House does.

Mr. WILLIAM HOOPER, called in; and Examined.

2647. *Chairman.*] I BELIEVE you are Churchwarden of St. Paul's, Covent-garden?—Yes.

2648. Are you aware that a petition has been presented to Parliament with reference to the approaches from the Strand, from the direction of Covent-garden to this Embankment roadway?—Perfectly.

2649. That petition, as far as I gather from reading it, is mainly with reference to a foot access, is it not?—Yes, a foot access.

2650. I suppose, if it were known that there would be no difficulty about foot-access from that part of the Strand to the roadway, there would be no objection on the part of the inhabitants of Covent-garden to the erection of a museum on that ground?—I am not quite sure of that. The understanding that exists with respect to the Embankment is that there should be no buildings whatever upon it. When I say, "the understanding," I mean, of course, the understanding of the public.

2651. That is provided for by the Act of Parliament?—Yes, by the Act of Parliament, and there is that understanding.

2652. Would the inhabitants of Covent-garden object to that understanding being departed from?—I do not think the inhabitants of Covent-garden would be by any means alone in an objection of that kind.

2653. Who would be with them?—I think the metropolis generally, in every part.

2654. Would you yourself be opposed to it?—Certainly I should.

2655. On what ground?—Because I wish to have as much open space as I can without being encumbered with buildings.

2656. Then you would think it better to have this site occupied by a roadway slanting diagonally across it?—I should have no objection to that, because the roadway would only interfere with it for a very short distance.

2657. It would interfere with it for its whole length, would it not?—The idea of it would be nothing, except as a roadway.

2658. Whatever the breadth of the road is, it is taken out of this open ground?—Yes; but I would prefer having an approach in that way from the Strand.

2659. But that is a question of approaches; we were talking of the question of the open ground: you think that, with a view of having open ground, it would be worth while to sacrifice a portion of it which is required for this roadway?—I think so.

2660. Which, according to the Act of Parliament, is to bisect it diagonally?—Yes.

2661. I gather from your evidence that individually you are opposed to any building upon that ground?—Yes.

2662. But you appear here on the question of approaches?—Yes; we have no approach from the northside whatever.

Mr. *W. Hooper.*

2663. And your petition was in favour of approaches for foot passengers?—Well, we did not go into that question officially, but it is simply this, that we shall have some sort of access to the Embankment which we have not now, of a character of which we can avail ourselves.

2664. Then your petition would be perfectly satisfied if there are ample approaches for passengers by foot from the Strand to the roadway?—Well, I am not quite sure that I would go so far as that, because we have a very strong feeling in favour of that viaduct. We were quite satisfied with the original proposition.

2665. You have not petitioned in its favour?—The petition does not state that, but we go upon the question of approaches.

2666. The petition, I think, refers to foot approaches?—Well I do not think it can bear that exact inference.

2667. I will read the petition: "That whereas the question of the projected viaduct from Lancaster-place to the bottom of Villiers-street has been referred to a Select Committee of your honourable House, and whereas the Metropolitan Board of Works have declared their indifference to the question, and whereas your petitioners apprehend that the projected viaduct may be abandoned, your petitioners therefore humbly represent to your honourable House, that in this case great inconvenience will result to your petitioners, and to the inhabitants of a large part of the metropolis on the north of the Strand, who will be deprived of the advantages which they are entitled to expect for the ready use of the Embankment, both as a thoroughfare and as a place of healthful recreation for their families:" that is a question of the healthful recreation of their families which would not be affected by that viaduct?—It would be affected by the building and by the viaduct also, because the roadway leading from Lancaster-place towards Charing-cross, would be on an incline, and would be as fine a promenade as we have within a mile of our locality. That small incline would form a very nice promenade indeed, independently of the access to the Embankment.

2668. "Inasmuch as there will be no access to the Embankment by a public thoroughfare from the Strand for the long distance between Norfolk-street and Villiers-street, both of which are themselves small streets, and the latter especially narrow, mean, and already much crowded with the traffic of the Charing-cross railway station and the Hungerford foot-bridge, the only other access from the Strand, during this distance, being liable at any time to be closed to the free use of the public, and at all times adapted for the use of foot passengers only, viz., the steep and narrow stairs at the northern end of Waterloo-bridge, which are usually in a foul condition"; are you aware that under the Act there is a power of closing the streets that lead on to the Embankment?

Mr. *W. Hooper.*

3 May 1869.

ment?—Yes, the Marquis of Salisbury has that right with regard to Cecil-street and Salisbury-street.

2669. So that as things now stand this viaduct will be open, but the streets laterally will be closed?—The opening of the side streets is quite unimportant, because the streets themselves are inconvenient as approaches; they are narrow, and the pavements are very narrow.

2670. They are not inconvenient for foot passengers?—I do not know that, because two persons can scarcely pass on the foot pavements, they are so narrow.

2671. But practically there is no carriage traffic on those streets, therefore you may say that the whole street is available for foot passengers, is it not?—Well, people do not generally like to walk upon paved surfaces; I should not like to walk in the middle of the street.

2672. Have you ever been abroad?—Yes.

2673. Have you looked at this plan (*referring to a plan*)?—I have heard of it, but I have not looked at it.

2674. As a dweller in Covent-garden, fond of recreation, and evidently appreciating the beauties of the metropolis, do you not think that that plan would be preferable to having the ground laid out in ornamental gardens, as is proposed with this slanting road?—I must say I do not fall in with that. I have heard all the evidence that has been given by Mr. Waterhouse, and all the evidence which has been given by the other gentlemen this morning on the subject, but I do not fall in with it.

2675. It is just a matter of taste?—It is something rather more than taste, I think, and I think I shall have a good many on my side in that opinion, that it would be much better to let the museums remain where they are, or carry them elsewhere, than to bring one of them to the banks of the Thames, just where we are looking for a breath of fresh air.

2676. Will you have no fresh air from the river when this building is opened?—The whole of the space will be encumbered with buildings, and we have buildings enough in that neighbourhood already.

2677. But you see, according to this plan, it is not encumbered with buildings?—I hear that this involves a building in front of Adelphi-terrace. I presume it is known what are Captain Drummond's rights with respect to Adelphi-terrace; indeed, I think the Embankment Act states them: that no building shall be made to interfere with his view of the river.

2678. Then the substance of your evidence is, that you wish this roadway to be made; that you think a museum there would be very undesirable; that the museum had better be transferred to Kensington, instead of being placed here; and you think, with reference to the recreation of the people and the ornamentation of the metropolis, it would be better to have this land so reclaimed utilised in the way proposed by the Act of Parliament, by a roadway being made, and being laid out in garden-ground of some sort or other, in preference to the plans which have been laid before the Committee by Mr. Waterhouse?—That is the substance of my opinion.

2679. Mr. *W. H. Smith.*] You see that plan; that is the original plan (*pointing to a large plan on the wall of the Committee-room*)?—Yes, I recognise it.

2680. It was intended to put buildings on the other side, according to that plan; do you approve of that suggestion?—I approve of the original idea of having no buildings whatever upon the Embankment, because we have quite enough buildings about there already.

2681. *Chairman.*] I will ask you one question with reference to these plans: you observe that all of them, Nos. 1, 2, and 3, as described by Mr. Waterhouse, are so laid out that they would admit of a roadway communication being made between the Embankment and the Strand, in the rear of the building?—I did not so understand that. I suppose it is between this part (*pointing to the plan*) and Lancaster-place.

2682. Not there, but down Cecil-street?—But that is the Marquis of Salisbury's property, and there are his rights to be consulted.

2683. You must not assume that: that may or may not be; of course those legal private rights will have to be dealt with, but I am asking you irrespective of any question of private rights, as this plan is laid down you will observe a roadway is proposed to go round the back of this building on both sides?—Yes.

2684. Where does Covent-garden come; is it opposite Cecil-street or Adam-street?—Opposite Cecil-street to Wellington-street.

2685. So that a person in Covent-garden, according to this plan, would be able to get on to the Embankment roadway opposite this building at the end of Cecil-street; if he wished to go to Westminster-bridge he would turn to the right, and if he wished to go to the City he would turn to the left. As at present that is designed, it would give a more direct communication, would it not, between Covent-garden and the Embankment than the diagonal roadway for which you have petitioned?—No, my Lord, I think not; and, besides, we should be behind the buildings.

2686. You have just stated that Covent-garden is opposite Cecil-street?—It is opposite the part from Cecil-street to Wellington-street.

2687. This communication is directly opposite Cecil-street in the other case. You are an inhabitant, and want to get to the Embankment to go to Westminster-bridge, and if you are to go along the Strand until you come to Wellington-street, you would turn down Wellington-street until you come to the opening of this Parliamentary roadway?—That admits of some question, because Covent-garden lies here (*pointing to the map*).

2688. But you observe what I am calling your attention to, that these plans all contemplate, if it is found to be necessary, the formation of a roadway which will give, not one, but several approaches from the Strand to the Embankment?—I think I understood that there was a communication with Adam-street.

2689. Adam-street, Cecil-street, and some other street here besides Villiers-street, and those other streets leading down there?—Adam-street is 50 feet above the level.

2690. You did not, I think, quite understand Mr. Waterhouse's evidence, which is that this roadway is to be brought up to the level of Adam-street?—Then it would be 20 feet above the level of Cecil-street.

2691. Mr. *W. H. Smith.*] You see this is the summit level of the Embankment here, and it will rise to that point, and then descend from that point (*referring to a plan*)?—But what descent will it be there; it will be about 100 feet down

down to these streets, and there is at least 30 feet difference in the level of those two streets.

2692. *Chairman.*] It is so laid out; I merely tell you the fact that this roadway gives these several communications, whereas, according to the roadway of which Covent-garden is in favour, there would be no lateral communication with the Embankment roadway at all from the Strand, but you would have to go along Wellington-street before you could get on to it at all; and then any person there wishing to go on to the Embankment to get under Waterloo-bridge, would have to drive round by Charing-cross-bridge; so that, practically, I think you will see that, as regards the convenience of access, this plan would be a greater convenience, and the access from Covent-garden 1,000 to one better than your own present plan, of which you are in favour; therefore your objection would resolve itself into a question whether this ground is occupied by buildings or left unoccupied?—I am not by any means convinced with regard to that matter, I confess; when I look at these very streets, Adam-street, Cecil, and the other street, and find them varying so much in levels, and a distance of not more than 50 feet between one and the other, that plan appears to me to be altogether impracticable.

2693. Mr. *Cowper.*] The vestry of St. Paul's, Covent-garden, who have petitioned against the abandonment of the viaduct and roadway, have done so upon the plea that they wished to have that access to the Embankment, both as a place of recreation and as a thoroughfare. Will you state on what ground it is that they are so anxious to have all this reclaimed land preserved as a place of recreation? Do they expect that great numbers of people will resort to it as a place of recreation?—We have not a breath of fresh air within a mile of us, and we supposed that when this Embankment was proposed, we should get some. We were quite content with the charges that came upon us. By the by, they are not much, but we have had before us the viaduct plans from the beginning, and we have had now the change. We find that the first plan cannot be carried out; we are quite content with the second, and we are satisfied that so far as a healthy promenade is concerned, we shall have a very much better one with the viaduct than without it.

2694. Supposing your plan of recreation be taken away from you for the purpose of erecting a museum of natural history, should you be satisfied with the exchange?—Certainly not, because we have the British Museum within about the same distance in the other direction.

2695. Then you think that a museum, instead of being placed on the ground reserved for recreation, should be placed on some other spot which is not of use for the recreation of the metropolis?—Any other spot than that.

2696. You have been asked whether you do not think the recreation ground would be diminished by the road which was to pass along it; are you of opinion that that road would be a portion of the open space and of the recreation ground, and would rather facilitate the convenience of the public in enjoying that space than otherwise?—I was going to observe that a large proportion of this viaduct would pass through land which is now covered with houses, besides a portion of the reclaimed ground; you will observe that the roadway does not strike the reclaimed land until it comes to the end of Cecil-street, or opposite the end of Cecil-street, so that this, in point of fact, will be no invasion of the reclaimed land until it comes on to an embankment about 15 feet or 20 feet high, diminishing to zero.

2697. Upon that model it appears that the green grass is to slope by a gradual descent from the roadway on each side; would not the roadway be part of the recreation ground?—If you chose to make it so; I only speak of a pavement 12 feet or 15 feet wide on each side, which would afford a very healthy and nice promenade, nothing intervening, between that and the river.

2698. In laying out the recreation ground there must be some gravel-walks for persons to pass along; may not those gravel-walks be as well placed by the side of the carriage-road as in any other part of the ground?—You may place them where you please, because I presume if we had a carriage-road we should also have a paved pathway by the side of it.

2699. Then you do not consider that the roadway is a diminution from the recreation ground, but a part of it?—No, I do not think it would be a diminution at all; I think it would be utilised, especially as it would afford an opportunity of communicating between the Strand and Westminster, without going round the western part of the Strand.

2700. Do you think that of importance to the convenience of the public as a thoroughfare?—Well, probably I am not called upon to give an official opinion upon the matter, but my private opinion is that it is of importance, and it would be exceedingly useful; but I think no great weight can be attached to my opinion upon that subject.

2701. Mr. *W. H. Smith.*] You quite understand that if this land is appropriated for the purpose of a natural history museum, there would be a great gain to the ratepayers of the metropolis in the amount they will have to pay for it?—The land being paid for by the wine and coal dues, it will make no difference whatever what the proportion is.

2702. Then, in giving your evidence as to the appropriation of this land, you have been under the impression that the ratepayers of the metropolis will not be benefited by the erection of a public building upon it?—I think not; I am of that opinion.

2703. That there will be no repayment to the ratepayers of the metropolis of the cost of this land?—I think not.

2704. We have it in evidence that the road will cost 230,000 *l.*, and we also have it in evidence that the value of land varies from 100,000 *l.* an acre to 150,000 *l.* an acre in this part of London for the purpose of public buildings. Now, assuming that the scheme which is now before the Committee will save the metropolis the cost of the road, which is 230,000 *l.*, and that it will involve a payment to the metropolis of the usual cost of land for the purposes of public buildings, which may be taken at 100,000 *l.* an acre, or say for three acres 300,000 *l.*, taking the cost of the road and the cost of the land together, the contribution of half a million of money towards the improvements of the metropolis that must be made, and which will come out of the ratepayers' pockets, are you still prepared to say that in order to reserve the whole of this land for the purposes of recreation and fresh air, as you term it, it would be better that the metropolis should forego

Mr. *W. Hooper.*
3 May 1869.

forego the half-million sterling to be contributed in this way to the fund for improvements?—I think you are putting side by side what comes from the Treasury and what really comes from the metropolis. Now we do not pay all the taxes; we pay a good many, but not all, and a large proportion of this 300,000 *l.* which you speak of which would be paid for land elsewhere would be paid by the Treasury.

2705. The whole of the cost of this improvement; the roadway, which is 230,000 *l.*, will come out of the purely metropolitan funds?—The cost of the viaduct will come out of the metropolitan funds beyond all question, but it will only be a prolongation of the wine and coal duties, because the wine and coal duties will be continued until all the expenses attendant on the Embankment are paid.

2706. You are very well aware that you, as a ratepayer of the metropolis, and those who follow you, will have to pay these charges, and if by saving the making of this road you can economise an expenditure of 230,000 *l.*, and receive for the ground on which the building is erected, say 300,000 *l.*, will that alter your view of the expediency of the appropriation of this ground for public purposes?—Not at all; besides, with respect to receiving it, I do not know who is to pay it, or how we are to receive it.

2707. Mr. *Cowper.*] Does not the money which will be spent in making this roadway come from the fund that is called "The Thames Embankment and Metropolis Improvement Fund"?—It comes from the wine and coal dues.

2708. Does not that fund arise from the coal and wine dues?—Yes.

2709. Supposing the Metropolitan Board of Works are relieved from the necessity of expending the sum estimated at about 230,000 *l.* in this way, out of the coal dues, have you any expectation that that money will be spent in relieving the expenditure from a totally distinct fund, namely, that fund which arises from the payment of the metropolitan rate?—Not at all; the money will simply not be spent, and that is all.

2710. It may or may not be spent in other metropolitan improvements which will not be provided for by the metropolitan rate?—No; it may not be spent at all.

2711. *Chairman.*] At any rate, if these coal and wine dues have to be kept on for the purposes of the Embankment, for a certain time, they are a tax on the inhabitants?—They can only be kept on a year or two longer.

2712. At any rate, during this year or two while they are kept on, they are a tax on the inhabitants?—Yes.

Mr. Edgar A. Bowring, C.B., a Member of the House; Examined.

Mr. *E. A. Bowring,* C.B., M.P.

2713. *Chairman.*] You were Secretary to the Commission of 1851, were you not?—I have been Secretary to the Commissioners ever since February 1850.

2714. And are still?—On my election as a Member of the House of Commons, I placed my resignation in the hands of the Commissioners, but the necessary arrangements for my retirement have not yet been completed, although they will be shortly. Therefore at this moment I still hold the office of secretary.

2715. We are anxious to know from you the exact position of this ground which was purchased, after the Exhibition of 1862, by the nation; I mean the land where the Exhibition building stood?—The Committee are aware that when the Government originally negotiated with the Commissioners for the purchase of that piece of land, there was a building upon it; the intention of the Government then was to buy both the land and that building, which they meant to turn into a building for the purposes of science and art. The House of Commons discussed the two matters separately: first, the question of buying the land; and, secondly, the question of buying the buildings upon it; the House of Commons declined to buy the buildings, but agreed to the purchase of the land from the Commissioners, subject to the conditions stipulated for by the Commissioners, those conditions being that the land which was worth about a quarter of a million sterling, and certain buildings of the value of nearly 30,000 *l.*, which still remain there should be permanently applied to purposes of science and art. The Commissioners felt that as this land was subject to a very heavy mortgage, they would not be justified in making a present of it to the nation, but they felt justified in letting the Government have it at a price very much below its value.

2716. What proportion did the buildings bear to the land?—These were not the Exhibition buildings at all, but the refreshment-rooms of the Exhibition; the Commissioners kept in their own hands the central portion of those refreshment-rooms, and sold the Government the two side ones. In round numbers the value of the whole was put at about 50,000 *l.*, of which we retain about half, and the Government had about half.

2717. The central part is now the property of the nation?—The central part of the old refreshment rooms is now the property of the Commission; the two wings were thrown into the purchase on the part of the Government.

2718. These buildings you valued at how much?—280,000 *l.* for the land and buildings together.

2719. And you sold them at how much?—120,000 *l.*; and the arrangement was embodied in a formal deed of sale, which I hold in my hand, in which there is this clause: "Provided always, nevertheless, and it is hereby agreed and declared, that the said lands and hereditaments hereby conveyed shall be permanently used for a purpose or purposes connected with science or the arts." The Commissioners felt it necessary to impress upon the land the same kind of general condition with reference to its permanent employment for the promotion of science and art, as that for which they were themselves incorporated.

2720. The nation was unfettered as to the mode of applying this land, subject always to the conditions of its being applied to the purpose of science and art?—Precisely.

2721. According to that the nation is wholly barred from disposing of the land for any other purpose than the purposes of science and art?—Entirely.

2722. I presume that the Commission would have a right to judge whether it was a *bonâ fide* purpose

purpose of science and art to which it was desired to apply the land?—Clearly.

2723. Do you know whether the Commission would be willing to take that land off the hands of the nation?—That matter has not yet been discussed by the Commissioners in any official way, and of course I am not in a position to commit them on the subject; until last autumn it was understood that this land would be employed for the purposes for which it was originally purchased, one of those being the erection of a natural history museum; and the late Government, previous to its retirement from office, was in communication with the Commissioners upon the subject. Now we understand there is a question raised before this Committee of giving up that scheme altogether, and of employing some other ground for the purpose of the natural history museum, in fact, to transfer it to the Thames Embankment.

2724. It has been stated in evidence by Mr. Cole that the Commissioners still retain in their own hands these strips of land which border the Horticultural Gardens on each side?—What we called the annexes to the old Exhibition; those are still the absolute property of the Commissioners.

2725. Have the Commissioners, in consequence of the intention of the Government, as generally believed, to erect a natural history museum on this site, which they had purchased from the Commission, laid out that annexe ground in any way as part of a general plan?—They felt their hands very much tied by the long-continued indecision of the Government and Parliament on the subject. The land has been in the possession of the Government for five years, and no single step has been taken, therefore the Commission has been very much hampered in knowing how to deal permanently with the rest of their land.

2726. There is no definite plan at present?—A plan has been brought under their consideration, which probably they will be discussing next week, but at the present moment I cannot say that there is any plan which I am in a position to bring under the notice of the Committee.

2727. Do you consider that that land has risen in value?—Very greatly.

2728. Has it risen in value since the sale in 1862?—It is constantly rising in value, year by year; in fact, the whole of the land in South Kensington is constantly rising in value.

2729. And you reckon that the land which you retained in your hands, that was used for the purpose of these annexes, has risen in value since 1862?—Unquestionably.

2730. That is the part coloured green, outside the Horticultural Gardens?—All the part so coloured is in the hands of the Commissioners; a portion of it is let to tenants, who can be dispossessed at any time.

2731. Lord *John Manners.*] In the event of the Government deciding not to build a new museum on ground at South Kensington, what will be the opinion of the Commissioners as to the engagements entered into between them and the Government, to devote that ground to the purposes of science and art?—As the Government are not bound to put this particular building, the Museum of Natural History, on that site, of course their view will depend somewhat on what the Government intend to put there instead; originally there was a scheme that a patent museum was to occupy a part of the site, and the Government might propose to put that there, or some other building connected with science and art; as long as they do that, the Commissioners are not in a position to raise any question; but if the abandonment of this scheme for a national history museum is to imply that the Government have no longer use for this land, it will be a serious question for the Commissioners to consider whether it will not become their duty to enter into negotiations with the Government as to the use of the land.

2732. *Chairman.*] There is no stipulation as to the use of this ground with reference to any time?—No; except that it is provided that it is to be permanently used, which does not mean that the Government shall keep it lying entirely idle, as it is now.

2733. I suppose there is nothing to prevent the Government taking a lesser portion of these 16 acres, applying that to science and art, and offering the remainder to the Commission?—I apprehend there is nothing to prevent such a negotiation being entered into.

2734. Lord *John Manners.*] In the event of such a negotiation being entered into, the Commission would not feel it to be equitable that they should be asked to pay any higher price for the land than that at which they sold it to the Government?—I consider the Commissioners would then be relieving the Government from a difficulty by taking back a certain portion of the land and repaying the Government the price they paid for it.

2735. *Chairman.*] What do you consider is the rise in the value of land there since 1862?—We sold this by the acre, and we now always estimate it at so much per foot frontage; it was estimated then at so many thousand pounds per acre.

2736. Have you made any sales since then?—There have been no actual sales since then, except of the small freehold plots on which the houses stand. The price of those plots is not in proportion to the acreage, but in proportion to the ground rent of each house.

2737. Mr. *Cowper.*] Supposing the Government were to determine that it is not desirable to spend the public money on this ground for the purposes of science and art, but were to restore it to the Commissioners of the Exhibition of 1851, would those Commissioners be still under the necessity of using the land, so far as they used it at all, for the purposes of science and art?—The Commisioners are not bound to employ any portion of their land directly for science and art purposes.

2738. They would be free with reference to the use of the land, or they might sell it just as they thought best?—According to their discretion, clearly; they have already disposed of their outlying land on building leases.

2739. The obligation would simply rest on them that whatever funds they obtained from the land should be employed for the purposes of science and art?—Precisely.

Mr. Edward Creasy, called in; and Examined.

Mr. *E. Creasy.*

3 May 1869.

2740. *Chairman.*] You are, I believe, Secretary to the Metropolitan Board of Works?—Yes.

2741. Will you state to the Committee what powers the Board possesses with regard to opening communications with the Embankment between Essex-street and Westminster-bridge?—Under the original Act the Board possesses certain powers of communicating with the Embankment roadway which have since been altered by the Act of 1868, which now governs the Metropolitan Board of Works, that is, the 31 & 32 Vict., c. 3; it is called "The Thames Embankment (North and South) Act, 1868." The first point at which a communication has been considered is one which I believe your Lordship is acquainted with, nearly opposite the end of Charles-street and adjoining Whitehall Club; that, as I believe you are aware, is now under the consideration of the Board.

2742. The land between that club and the roadway, I see, is now clear of buildings?—It is clear of buildings, but is the property of the Board.

2743. How do the Board now propose to deal with that?—That is now under discussion as to the advisability of opening a roadway to Parliament-street through that piece of land.

2744. I have heard it stated, that, in order to make the traffic at the corner of Westminster-bridge really possible, it will be necessary that traffic coming along the Embankment roadway and going to the House of Commons, or going along Victoria-street, should be diverted in that direction?—Precisely; that is the allegation in the memorial which is now before the Board, and which they are now considering.

2745. Is that a memorial from the police?—No, from the district board.

2746. You consider that some lateral communications between Parliament-street and the new roadway will be indispensable at that part?—The Board are now considering that, and they are collecting evidence to see whether that is the best point, and whether it is advisable, and so forth; the question is now under consideration. The next point is Richmond-terrace; but that cannot be extended on to the Embankment, because the Crown property intervenes between it and the Embankment roadway, and under a clause in the Act of 1868, as in all these Acts, the Board are prohibited from taking any of the Crown land without the consent of the Commissioners. The next point is Scotland-yard; no communication could be made there by reason of the restriction contained in the Act for the protection of the property of the Duke of Northumberland.

2747. Lord *John Manners.*] You have passed over Whitehall-place?—Whitehall-place the Board are already carrying out; steps are being taken to carry that out; that is part and parcel of the plan which you see coloured red.

2748. *Chairman.*] Now we come to Great Scotland-yard; there you are barred by what?—By Section 9 of the Act of 1868 "the Board shall not take under this Act any land of the Duke of Northumberland, his heirs, sequels in estate, or assigns, other than land which they were authorised to take under the Embankment Act of 1862, except so much of the piece of land numbered 17, in the parish of St. Martin-in-the-Fields as lies within the limits of deviation shown on the amended deposited plans"; and the same restriction applies to Northumberland-street.

2749. Is that always a restriction in favour of the Duke of Northumberland?—Yes; precisely the same clause.

2750. Now, with regard to Craven-street; there is no communication at Craven-street, is there?—Yes, Craven-street is provided for; we have power with regard to the extension of Craven-street, and the Board intend exercising that power under Clause 28 of the Act of 1868.

2751. That in any case you are going to do?—Yes.

2752. Would you make this communication whether the diagonal roadway under discussion is made or not: supposing this roadway between Charing-cross Railway and Wellington-street were to drop, would that communication be completed?—I assume that it would. Of course the subject of the abolition of that roadway has not yet been officially before the Board, but I assume that, in any case, Craven-street would be completed. The next is Villiers-street; that also would be a communication which would be continued.

2753. But if this road is not made, there will be no communication then?—Oh yes; we have power still to carry that down, because that crosses only the piece of land marked white on the plan, which is our own property, and the land coloured green, which is the reclaimed land. We have still a power, and no doubt the Board will exercise that power. With regard to the next street, Buckingham-street, we have no provision and no restrictions, and whether the Board would carry that down to the Embankment in the case of the roadway being abolished, I do not know, but I should think probably not, because Villiers-street would answer their purpose, and Buckingham-street, for the purpose of traffic, would be very inferior. The next streets, Church-street and Robert-street, are impracticable in consequence of the levels.

2754. Then, as at present advised, you have no road from the Strand after Villiers-street until you come to Wellington-street?—Except some steps at the end of Adam-street, which are provided for specially by Section 26 of the Act of 1868.

2755. Then there is no communication, as far as the Metropolitan Board of Works is concerned, for either foot or carriage traffic, except there?—Except there. Then we come to the question of the Salisbury estate.

2756. Which commences where? There is Salisbury-street and Cecil-street, and the block of buildings to my right is part of the Salisbury estate, is it not (*pointing to the plan*)?—Yes, but the clause especially refers to Salisbury and Cecil streets. They cannot be extended, because Clause 29 of the Act prohibits the Board from taking any other land belonging to the Marquis of Salisbury than such as is required for the approach road to Wellington-street, and to connect that street with Cecil and Salisbury streets would necessitate the purchase of land from the Marquis of Salisbury beyond such limit.

limit. So that, without the consent of the Marquis, we are absolutely prohibited from extending these two streets. The next communication is Savoy-street, and that is to be passed under the approach road to Wellington-street.

2757. That will only be a foot communication?—That will only be a foot communication.

2758. Where will that join the Embankment?—Where no other property intervenes.

2759. You go past the German Chapel?—Yes.

2760. Is that land delineated white the property of the Board?—That property is not specified in any other way, and therefore we assume it to be the property of the Board, and that they could make that approach; at the same time, there would be still some doubt whether the Duchy of Lancaster would claim that. There is no clause vesting that in the Board; but it is not specially provided for, and apparently the general tenour of the Act is, that all property not specially provided for the Board should have power of exercising rights over, but still the Duchy of Lancaster might possibly claim that.

2761. If a roadway is made, there would be a foot access under that roadway, and if the roadway is not made, there could equally be a foot access to Savoy-street?—Yes.

2762. And carriage access there would be impossible?—It would be impossible, on account of the levels.

2763. Now will you proceed further eastward?—Then we come to the other side of Somerset House, and beyond Somerset House the three streets, Surrey-street, Norfolk-street, and Arundel-street were proposed to be approached by a roadway, rising from the Embankment up to the level of the foot of this street.

2764. Is that now part of the plan?—That will not in any way be interfered with, unless the project of building the new law courts be carried out.

2765. That would be a carriage roadway?—Yes.

2766. That would give access by that rising road to these three streets, Norfolk-street, Arundel-street, and Surrey-street?—Exactly; it forms a sort of summit level.

2767. There are no clauses with reference to the Duke of Norfolk's property barring you in any way with reference to those three communications?—Not in any way; they are provided for and defined in the plan referred to in Section 60 of the Act of 1862. Then we come, last of all, to Essex-street. There is no special provision with regard to Essex-street; but, as you are aware, we have already formed a temporary communication and footway for the purpose of affording access to the pier at that point for foot passengers.

2768. Through whose property have you done that?—It is on the reclaimed land; there is no intervention.

2769. Before that it was a foot access to the foreshore?—Yes.

2770. And now you have made it across the reclaimed land?—Yes.

2771. I suppose you are of opinion that Essex-street is perhaps about the best site in that part for a great roadway communication?—Oh yes, it must be the means of communication.

2772. It is the natural outfall of the Strand traffic in that quarter?—There is no other.

2773. Looking to the other end, from your knowledge of this district, and having had so much to do with all these metropolitan improvements, are you of opinion that it would be very desirable to have an approach to the Embankment somewhere in the direction of Northumberland House?—Clearly something from that point is absolutely necessary.

2774. With a view to the communication with the metropolis, do you consider that an approach by Northumberland House is more essential than this diagonal roadway?—Oh dear, yes; that approach through Northumberland House is the real access for the great mass of the population to the Embankment.

2775. One would be arterial and the other merely local?—Yes.

2776. Did you hear the evidence given by the churchwarden of St. Paul's, Covent-garden?—Yes.

2777. Do you agree with his views?—Not in the least.

2778. Do you think that the inhabitants of that district generally would agree in his views?—I should imagine not.

2779. Are you of opinion that this ground could be best devoted to such a plan as has been laid before the Committee by Mr. Waterhouse in his Plans, Nos. 2 and 3, combining a museum with a garden and ornamental terraces and grounds, likewise showing the capabilities of making a roadway in the rear communicating between the Strand and the Embankment on both sides?—That plan seemed to me to be a very excellent idea for occupying that site, and at the same time to combine with it what is wanted in the way of communication.

2780. Is there any other point which you think it desirable to bring before the Committee?—Mr. Smith was anxious that I should put in one supplementary section to those which the Chairman of the Board of Works handed in, giving the levels of Water-street and Strand-lane; he said we had not given that information, therefore he asked me to be prepared with that, and to hand it in.

2781. Have you had any communication with Mr. Fowler for the Metropolitan Railway people, with reference to these ventilating shafts, recently?—Not since this Committee has sat.

Monday, 10*th May* 1869.

MEMBERS PRESENT:

Mr. Buxton.	Mr. Alderman Lawrence.
Mr. Cowper.	Mr. M'Clean.
Lord Elcho.	Lord John Manners.
Mr. Beresford Hope.	Mr. William Henry Smith
Mr. Layard.	Mr. Tite.

LORD ELCHO, IN THE CHAIR.

Mr. ALFRED WATERHOUSE, called in; and further Examined.

Mr. *A. Waterhouse.* 10 May 1869.

2782. *Chairman.*] AT the last meeting of the Committee it was arranged that you were to meet Mr. Fowler in the interval between that meeting and this, and were to let us know to-day whether any arrangement had been come to by you with him with reference to the line the railway was to take, having regard to the intended site for the building proposed to be erected for a museum of natural history?—Since Monday I have seen Mr. Fowler on the subject, and I understand from him that although the lines of the railway have been determined upon, and a certain amount of work which I understood him to say would not amount to many hundreds of pounds, had been already done, yet that there was nothing in the projects which were laid before you on Monday which could prevent the line of the railway being departed from, so as either to avoid the building altogether in one or two cases, or to run under the building, parallel to its front, in others.

2783. In fact, from your communications with him, you feel that there would be no difficulty in the railway so accommodating itself to your plans as to enable the plans which you submitted to the Committee to be carried into effect?—Precisely so; in no case would the railway be a difficulty.

2784. With reference to the question of vibration of buildings by the passing of trains, you have probably studied the evidence which has been given upon that point before the Committee?—I have heard of the evidence, but have not read it.

2785. Do you believe that you could so construct your buildings upon the plans which you have submitted to this Committee that they would not be injuriously affected by any vibration from passing trains?—Yes; I do think the building might be so constructed that it would not sustain any injury.

2786. That it would not be injuriously affected?—Not by trains drawing up at the station.

2787. Or by the noise or vibration of passing trains?—Precisely.

2788. Have you communicated at all with Mr. Fowler upon that point?—Yes, I have spoken to Mr. Fowler upon the subject.

2789. And that is the conclusion to which you have jointly come?—Yes.

2790. With reference to a plan which you submitted to the Committee, numbered by you 4, but which they did not go into at their last meeting, it has been since thought desirable that the Committee should have that plan before them: will you kindly lay it before us, and give any explanations of it that you think desirable?—Plan No. 4 differs from the other three which were submitted to the Committee on Monday, in this important particular, that it has no back elevation of architectural pretension. It is intended that the back elevation should not appear from any road, but that the roadway should be brought up with a bolder sweep than in the former cases, cutting, as it necessarily would, more into the property at the back, but allowing for a crescent of houses, or other buildings, on either side of the roadway.

2791. I see by this plan that your crescent sets right through the centre of a block of buildings, commonly called Adelphi-terrace?—It does.

2792. And it would take, I suppose, a considerable portion of the good buildings on the proper left of Adelphi-terrace?—Exactly so.

2793. This plan which you have laid before us has a cresent at the back of your building, which cresent I imagine will face to the north?—The street front of it would face to the north.

2794. That is to say it is the side next the Strand, which will be the front?—Yes; and by so doing it masks the back of the Museum.

2795. So that the backs of this public building and this crescent will mutually mask each other?—Quite so.

2796. I do not know whether you have gone into the thing narrowly, but I suppose you calculate that, by the sale of the large block of new residential buildings which you propose to erect, you will be able to recoup yourself for the purchase of the ground necessary to erect those buildings?—I think that the re-sale of the land for such erections would be likely to recoup the cost.

2797. And likewise with regard to the buildings you purchase to make this road?—I think that

that would be possible, because all the houses would have excellent light, and form a first-class thoroughfare.

2798. Have you gone into it all so as to be able to give a definite opinion upon that point, as to whether it would be a scheme that would pay?—No, I have not.

2799. You have no estimates of that?—I have made no estimates of the value of the property which would be destroyed.

2800. Then I gather from your evidence generally, that you lay four plans before the Committee; and that you can speak confidently with reference to the cost of the buildings which you yourself propose to erect, but with reference to the purchase of the land which may be required in the rear of the building, either for this crescent or for the formation of the roadway; those are points upon which you do not speak?—It is so.

2801. That is a matter to be determined by a proper surveyor, and upon estimates and plans being gone into more definitely, which you do not profess to have done?—That is so.

2802. And you feel confident as regards your own estimates of this building, whether it takes the form of Plan No. 1, No 2, No. 3, or No. 4, that your estimates are correct?—Yes.

2803. With reference, however, to this No. 4 plan in which the idea is, that by the purchase of a large portion of buildings and the creation of this crescent, the cost will be recouped; you do not speak positively as to that, any more than you do as to the general cost of purchasing land in the rear of the buildings?—Precisely so.

2804. But this plan is framed, to a certain extent, upon the basis of recouping yourself by the sale of the property?—It is.

2805. It is upon that principle, to a certain extent, is it not, that the Metropolitan Board of Works carry on their operations?—I believe so.

2806. All that you wish to be held responsible for is, the accuracy of your own building estimates with reference to the erection of a museum?—Exactly.

2807. We have had your Estimates for Plans Nos. 1, 2, and 3; but we have not had your estimate for No. 4; will you kindly give us that?—My estimate for Plan No. 4 is 603,000 *l.*

2808. Is that for the building itself, irrespective of any roadway?—Irrespective of any roadway, or any other building.

2809. It includes, however, the laying out of the gardens, according to your evidence on the last occasion?—I think, if I said it included the laying out of the gardens, I meant that it included the retaining walls and terraces.

2810. This plan would give you a continuous terrace along the whole front of the building?—Yes.

2811. Would there be an access through?—There would be an access from the Strand for specimens.

2812. Do you propose by this plan that the crescent in the rear of the building shall have any foot access or cart access from the Strand?—Yes; I intended a cart entrance there for specimens, for, in fact, workpeople and the like; a private entrance.

2813. Would it be possible, in the rear of the building, by that private entrance, to have any public foot entrance?—I think it would be quite possible, but I doubt its expediency.

2814. If not, persons going to the Museum would have to go round by the Embankment roadway?—Precisely.

2815. This plan, No. 4, gives a roadway which branches off from the rear of the Museum to the Strand, diagonally, to the left, towards Charing-cross; that is to give a communication from Charing-cross to the Embankment roadway, continuing towards the city, I suppose?—It would be, rightly speaking, a continuation of Pall-mall in front of the National Gallery, and along Duncannon-street.

2816. Where would your carriage-approach to this building be?—From the Embankment.

2817. Would any carriage be able to drive up to the building?—It is not so shown here, but it might be so arranged.

2818. According to this plan, as I read it, no person on a wet day could get to the Museum without getting wet; he could not drive up to it?—It is not so shown on that drawing, I must admit, but I ought further to explain, that although this entrance is intended primarily for a private entrance, there is no reason that I can see why it should not be a public entrance as well; the only objection to the scheme would be, that it was not intended that the façade should be interesting, because it would be hid from the street.

2819. Would there be anything in the gradients to render it impossible or difficult, by sacrificing in this plan a portion of the centre of the crescent, to have an entrance at the back of the Museum?—With a quadrangle there would be no difficulty in doing that.

2820. So that you would require an entrance façade of a very small extent there, masked right and left by walls or other arrangements, which would give, would it not, an access to the back of the building for carriages, and would obviate what at present appears to be an objection to the plan, namely, that on a wet day nobody could get to the Museum without being wet?—Certainly.

2821. Mr. *Beresford Hope.*] This plan, I observe, has the advantage of having the profitable ground behind, Plan No. 3 was artistically the most satisfactory, from the wings being separated by open loggias; could you adapt that treatment to this place?—I think there would be a difficulty in adapting No. 4 Plan to No. 3, because the open loggias would expose just that which we want to mask.

2822. Mr. *Layard.*] May I ask whether you have no means of utilising the basement to a considerable extent, for offices connected with the Museum, and whether you could not diminish the upper part of the building, and yet be able to afford accommodation for everything necessary for a Museum of that kind?—I think it is quite possible, if you had only the accommodation which was suggested by Professor Huxley last Monday to design the building with a materially smaller superstructure.

2823. You heard Professor Huxley's evidence?—I did.

2824. He seems to think that three acres is really more than is required for the exhibition of all necessary specimens of natural history?—Yes, I think that was so.

2825. And you could, I presume, further reduce your building to meet his views, supposing those views be adopted by the Government?—Nothing

Mr. *A. Waterhouse.*

10 May 1869.

Nothing would be easier than to reduce the building in size.

2826. And you could utilise the basement?—To a great extent; the exterior also could be utilised, but the difficulty with regard to the basement is, that we could not get any light from the top, and should be compelled to avail ourselves of side lights.

2827. Mr. *Tite.*] But you might have areas?—We might; but in drawing my plans I was thinking of a building to be lighted without areas, the exterior being two stories in height, and then in the centre lighted galleries merely.

2828. Mr. *Layard.*] I understand you to say, that you would have it somewhat similar to the Geological Museum, with galleries round?—Each separate top-lighted gallery might be treated so.

2829. Then you might utilise your basement upon all four sides almost?—Yes. I propose that there should be gardens or an area at the level of the basement floor all round.

2830. You would have no difficulty in utilising your basement?—Certainly not.

2831. Mr. *Cowper.*] Do I understand that the object of having a basement is, to raise your building so high, that it may mask the private houses from the spectator's view who stands on the embankment?—The first object in having the basement, I apprehend would be, to impart a suitable dignity to the building itself, and then, secondly, it would make the building more completely mask the other buildings at the back and sides of it.

2832. Supposing, instead of having the building on the low ground, you were to place it on the higher ground by purchasing the houses which stand along this high ground, would you then be saved from the expense of erecting a basement?—To a great extent, I apprehend that we should be; we certainly should not have to go down nearly so deep as we should if we built near the water-side; but then, of course, we should have the very much increased cost of the property to contend with.

2833. But if you built on the level of Adelphi-terrace, your building would be already in so commanding a position, that it would be of sufficient height without erecting an additional basement to raise it higher?—Yes, I apprehend it would.

2834. *Chairman.*] What is the depth of your building in the centre; I mean simply the building itself, from front to back?—One hundred and eighty feet.

2835. Mr. *Layard.*] May I ask if you are aware whether the foundations of Adelphi-terrace are not on the river deposit, so that the foundations would require to be as deep there as they would be further in advance?—They are an immense depth, but whether they were carried down for the purpose of securing a proper foundation, or for the purpose of utilising space which could be approached by cartways upon a lower level, I am not aware.

2836. Mr. *Beresford Hope.*] You do not know what the formation of that ground was, before Adams built that place?—I do not.

2837. Mr. *Cowper.*] Must not that which was the ancient shore of the river afford a better foundation than the reclaimed land, which has been only recently artificially filled up?—Yes.

2838. *Chairman.*] Do you know how deep the foundations of the wall are upon which Adelphi-terrace stands?—I do not.

2839. If you take from the corner of where the Adelphi buildings are, and measure directly backwards to the Strand, how far would that take you; would that touch the block of buildings in the rear of John-street?—It would carry the museums back to the front wall of the building of the Society of Arts.

2840. So that, practically, to erect this building on the same line as the corner of the Adelphi-terrace, you would require the whole space of the buildings between that and the Strand?—Yes, to take it right back to the front of the Adelphi buildings.

2841. To have a space in front of the entrance you would require, practically, to clear away the whole block of buildings to the Strand?—Or at any rate the whole of the buildings facing John-street.

2842. Mr. *Cowper.*] Suppose the site given to you to cover, were between John-street and Duke-street north, and the reclaimed land on the south, could you not, on that space, afford all the accommodation that is necessary for a Natural History Museum?—There would be just about enough room for a museum, if placed between the Charing Cross Hotel and Adam-street, and between John-street and the front of the low buildings which stand in front of Adelphi-terrace.

2843. *Chairman.*] If what has just been suggested were the case, there would be no means of making a roadway in the rear of that building as represented in your other plans; the right wing of that building would abut on the Charing Cross Railway Terminus, and the whole of the left part of this ground facing the river would still be in its present state with unsightly buildings upon it, or be left to the chance of private speculation?—Yes; one could not make the road in question, and it would leave the worst of the present unsightliness untouched.

2844. And it would not in any way mask Charing Cross Railway Station?—No; because it would be 190 feet behind the front.

2845. Mr. *Cowper.*] Then supposing, instead of bringing the new building close up to the Charing Cross Railway, Villiers-street were left as it is, but widened, and if the building were set a little back from Duke-street to John-street, would you not have a proper access to it from the Strand, by means of John-street and Duke-street?—You would certainly have an access to it from the Strand along Adam-street.

2846. Then, supposing it were thought desirable to have a frontage the whole length of the embankment between Charing Cross and the Savoy, could you not then extend your building along the whole frontage which is occupied by these houses, as far back as the street, prolonging John-street, which would go to form the boundary, and then would not that make a good site?—The difficulty would be that John-street would fall east and west from Adam-street.

2847. *Chairman.*] Is it not the case that from the corner of Adelphi-terrace, from John-street towards Charing Cross, there is a very rapid descent indeed down to the level of Villiers-street?—Yes, it is so.

2848. Mr. *Cowper.*] I am assuming that Adam-street would still continue as the chief means of communication between the new buildings and the Strand; your only difficulty then would lie in regulating the varieties of level upon which you would have to build, but that, I presume, is a difficulty which would not be insurmountable?—I do

I do not see any insurmountable difficulty in continuing the front of such a façade up to the Savoy, nor in carrying the street by a continuation of John-street behind the building down to the Savoy Chapel, but it would have to fall from Adam-street to the Savoy Chapel, because there is a difference in level there of about 20 feet.

2849. Lord *John Manners.*] Would not the fall be greater than is shown in this road here?—No, it would be just the same.

2850. Mr. *Cowper.*] By such an arrangement, would it be necessary to encroach at all upon the ground which has been reserved, by Act of Parliament, for the public enjoyment of the people?—The buildings would all be behind that space (*pointing to the Plan*), if it be that coloured green on the large map.

2851. Will you tell me what proportion of the land proposed to be dealt with by this plan is ground which is already covered with houses, premises, or wharves?—From a quarter to a third. I am speaking now of Plan No. 3.

2852. And what proportion of it do you think is occupied by residential houses?—I should say hardly any by dwelling-houses; they only touch the site of the building at one or two points. There is one house here, and that is another house (*pointing to the Plan*).

2853. Then it is not possible to build a new house close up to the existing houses, and as you must purchase the area round your building, I would ask how much of the residential property is touched by the road which encircles the proposed building?—Perhaps I might answer the question by saying that at the end of Salisbury-street and Cecil-street the roadway would cut into the houses about 60 feet.

2854. And the corner of the block of buildings of the Adelphi-terrace would also be taken away?—It would.

2855. Do you think that would involve the purchase of the whole block?—It would involve the purchase of the front row of houses.

2856. Lord *John Manners.*] Which, of course, is the most valuable?—I do not know what their relative values are.

2857. According to that plan, would not the whole of the Adelphi really have to be bought; will not this plan entirely alter the lines of the existing Adelphi-terrace?—My impression was, that it would be the most economical mode of treating the question, to purchase the whole of the Adelphi-terrace.

2858. Mr. *Layard.*] Supposing this road were not considered essentially necessary, could you do without it?—I am a little doubtful whether by the carrying out of Plan No. 3 strictly as it is shown here, it would be possible to do without the south corner of Adelphi-terrace.

2859. Mr. *Cowper.*] Will you state how near your proposed building comes to that corner?—Thirty-two feet.

2860. Mr. *Beresford Hope.*] That would be too narrow for a street?—If two houses were taken off along the width of Adelphi-terrace, in order to make Adam-street of sufficient width for an approach, it would do.

2861. Lord *John Manners.*] Is there not a large hotel there?—I believe there is.

2862. Mr. *Buxton.*] Would it not be a very much more economical and a much more feasible plan, not to attempt anything at the back of this building at all; it would save all the immense expense of making this roadway, pulling about all these buildings, and at the same time it would be making this building an ornamental front, which you must do if you have a handsome roadway in front of it, and you might have a perfectly plain back to the building, as plain as any of our backs?—There is no doubt that some considerable expense would thus be saved.

2863. Mr. *Layard.*] But if you could carry out the suggestion I made, of reducing the size of the building, you might increase the size of the road without advancing upon Adelphi-terrace?—Yes, we might.

2864. Lord *John Manners.*] In the event of your building being so placed with a non-ornamental back to it, would you not have equally to purchase the houses in the Adelphi-terrace and other houses in the corresponding line, in consequence of the provisions of the Thames Embankment Act?—We should have to do so, undoubtedly, if the scheme were not curtailed with regard to size. In the case of Plan No. 1, it strikes me that there would be no purchase of valuable property required in order to carry out a scheme like that; because Adelphi-terrace would be, at its nearest, between 90 and 100 feet from the building; that is to say, if two houses were taken in order to improve the width of Adam-street, otherwise it would be about 32 feet. Then the houses at the end of Salisbury-street and Cecil-street would come within about 40 feet of the building, and that would be the nearest point where any property of value would approach the building.

2865. Mr. *W. H. Smith.*] Those houses in Salisbury-street and Cecil-street are not of any great value, I think?—I believe not.

2866. Lord *John Manners.*] According to Plan No. 1, would not the building rise up in front of the houses in Adelphi-terrace?—It would rise up in front of them, and would obstruct their view of the river, but it would not interfere with their light.

2867. But under the provisions of the Thames Embankment Act, are you of opinion that a great building rising up at a distance, even of 100 feet, in front of Adelphi-terrace, would give a claim for compensation to the owners of those houses?—I am not able to answer that question.

2868. *Chairman.*] Referring back to Plan No. 3, you have been asked whether the building might not be put on the original shore of the river, instead of being on the reclaimed land; I see that the original shore does not run parallel at all with the present line of the Embankment?—It does not.

2869. Do you think it desirable that any public building erected on this site should be parallel to the new line of the embankment?—I think it is most important that it should.

2870. With a view to architectural effect, it is most important that it should be parallel with the new line of the Embankment and the river, and not with the old river shore?—Most undoubtedly.

2871. If you were to do what you consider to be essential, namely, to erect this building parallel to the new front, and not along the old river line, that it would necessitate, would it not, throwing back the left of that building, and cutting considerably into the block of houses in the rear, between the left of the building and the Strand, and it would entirely throw forward the right of the building, and by so throwing it forward,

Mr. *A. Waterhouse.*

10 May 1869.

ward, throw it in front of the old river shore?—It would; but it need not cut very much into this property on the left, because it might be wedge-shaped.

2872. But, unless it were wedge-shaped, that would be the effect; this plan, as at present designed, would necessitate what I have stated?—It would.

2873. Mr. *Cowper.*] But supposing the object were not strictly to follow the existing line of the houses, but if it were still to preserve a considerable recreation ground, might you not put your building in a parallel line with the embankment, without interfering materially with the recreation ground by encroaching upon the reclaimed ground to the west, but not encroaching upon it to the east?—Yes; I think that could be done. The greatest objection which appears to me as likely to arise from an irregular plan is with regard to the internal arrangements; because, instead of having the galleries, which would be seen from end to end, perfectly rectangular, we should have them of irregular figures.

2874. *Chairman.*] A wedge-shaped building would be very awkward, both with regard to internal arrangements and architectural effect?—For this particular building it would be very awkward.

2875. Mr. *Tite.*] Is it not pretty clear, from the evidence of one's senses, that Somerset House and Adelphi-terrace were not built with a view to using the original level of the shore; but, in point of fact, were, by the architects, raised on very extensive and costly basements, with a view of bringing them up to the level of the high land, indicated by the course of the main streets, the Strand and Fleet-street; is not that clear from the architectural construction of those buildings; there is an enormous basement at Somerset House; there is an equally enormous basement at Adelphi-terrace; and, although perhaps you do not know it, there is a very large basement indeed in Salisbury-street; therefore the Savoy Chapel and the Lutheran Chapel being down at the ancient level, does not all that indicate that it is an artificial level, created for a particular purpose?—No doubt.

2876. Therefore, if you avail yourself, by purchase, of the site of the Adelphi-terrace, it does not carry you beyond where the Adelphi-buildings themselves extend; but you would have to continue a basement very much of that kind over the low ground, either east or west, if you occupied it?—I presume so.

2877. That being so, with regard to your plan, a basement must be created if you mean to raise the main floor of the building to a level with the Strand, or Fleet-street, or to the higher level; and, as I understand your explanation, it would be then convenient that you might come in from that level, not at a very great descent, but probably a very moderate one indeed, to the main floor of your building?—From the Strand, yes.

2878. And underneath there would probably be an enormous basement, like the basement which was created to construct the area of Somerset House?—Exactly so.

2879. And you cannot escape from those conditions?—I do not think we can.

2880. Therefore, if you went back, as has been suggested, and bought first Adelphi-terrace, and the houses between that and the station buildings of Hungerford Station, you would still have to continue that terrace very much with the same view and to the same extent?—I do not quite follow you.

2881. I mean, if you go down that street there is an immense dip right down to the natural level of the land, as it was in the time of the Duke of Buckingham?—From John-street to Villiers-street.

2882. Would you not have to continue the line of Adelphi-terrace right along that face?—Yes, if you put the building to the west of Adam-street.

2883. The point of all these questions is, that you should have the building back, in order to retain the land in the front for recreation purposes; if you do that, you must continue an arched level of the same nature, of the same extent, and of the same character, as that which forms the basement of Adelphi-terrace?—I do not see that there is any help for it.

2884. That being so, do you think otherwise than in your Plan No. 1, which is a very moderate and reasonable one, that the land could be more economically and more wisely used than to put a building to a considerable extent upon the reclaimed land, with the gardens at the end, and the gardens in the front, combining the two uses, and to a great extent abandoning the park-like character of the land which has been created?—My impression is that that is the most economical and the best way of laying out the ground.

2885. *Chairman.*] That is Plan No. 1?—That is Plan No. 1; but I should say, just correcting the question of the Honourable Member on one point, that it does not provide for any garden in front of the building, but only for a broad terrace.

2886. Mr. *Tite.*] But at each end there are gardens?—At each end there are considerable portions of ground devoted to gardens.

2887. To what extent?—About an acre and a-half altogether.

2888. At each end?—No, the two together.

2889. *Chairman.*] Would not a portion of the land which is shown on this Plan, on the right of the building, as available for garden ground, be required for a ventilating shaft for the railway?—A certain portion of the garden would be required.

2890. Of the garden ground on the right of building?—Yes.

2891. Mr. *Tite.*] With regard to the portion to the eastward, it would not be required, because the railway keeps clear of that?—It does.

2892. If this street going up to the Hungerford Bridge level, running down at the back, and coming out at an increased level at the east end were abandoned, would not that give you a very much increased area for ornamental ground?—A very much increased area. There is no reason why half the scheme should not be carried out, and not the other; that is to say, the road might be carried down to the foot of Charing Cross-bridge, which would be the much more useful street of the two, and the other portion might be abandoned altogether.

2893. Is it not quite possible, by giving up this street to the west (increasing thereby the space to be given to the public), and by improving Adam-street, and giving a fair area at the bottom of it for carriages to turn in the front of your building, to leave the spaces which are now occupied by the road very much as I have suggested?—For recreation ground, certainly.

2894. It

2894. It would be possible to come down there and make an area in front?—Yes.

2895. If that were done, probably it would diminish the claim for compensation by the owners of the adjoining houses, by the giving up that ground for ornamental purposes, instead of the purposes of a roadway?—It very likely might.

2896. Do you know practically that the houses in Adelphi-terrace, built on this system of arching, are settling in all directions, and that there is not a party wall in its original state?—I have seen indications of that in walking through the buildings.

2897. Have you seen the same thing in Cecil-street?—I never noticed it there.

2898. Would not that induce a belief in your mind, inasmuch as the building of foundations in the time of Adams was not very thoroughly understood, that very likely they are laid on timber, and the timber is rotten; from the sinking of the party walls to the extent, and in the way in which you have seen it, do you think that that sinking is ended?—I have not looked at it with that view, therefore I should not like to answer the question.

2899. But the fact is, that the houses are settled in all directions?—I have seen several of them in that condition.

2900. Mr. *Cowper.*] Supposing the road to the east of Adam-street were abandoned, would not this piece of land to the east of the proposed museum, which is now marked out as recreation ground cease to be recreation ground, because by the Act of Parliament it is destined to be built upon, and those premises which are proposed to be taken for the road would be left as they are if the road were abandoned?—It is quite true that this bit to the east is marked on the model as a portion of the ground which is to be built upon, but the very fact of supposing the museum to be placed where it is, midway between the two bridges, supposes that a certain amount of the land (in fact, this very land which is shown as intended to be re-sold for building purposes) should be converted into gardens for the public, and for securing light and air for the building.

Mr. *A. Waterhouse.*

10 May 1869.

2901. Therefore it would be necessary for the Government who erect the museum to purchase half-an-acre of land for the purpose of throwing it into garden ground?—Either half-an-acre or a certain portion of half-an-acre.

2902. Supposing the road which is marked out to the west of Adam-street were abolished, would not the piece of ground which it was suggested might be thrown into recreation ground be ground which must be purchased for the purposes of the Metropolitan Board?—Yes.

2903. Does not the slope of this ground between Charing Cross and Waterloo Bridge resemble, in its general features, the slope of the ground to the east of Somerset House which it is now proposed to use for the erection of the Law Courts?—I believe it does, generally speaking.

2904. We may assume that as Duke-street and John-street are at an intermediate level between the Strand and the reclaimed ground, so Howard-street is at an intermediate level between the Strand and the reclaimed land at the bottom of Norfolk-street?—I believe it to be so, but I do not know what the level of Howard-street is.

2905. Then would not the considerations which have induced the Government to propose to erect the Courts of Justice between Howard-street and the reclaimed land, apply in a similar way to this piece of ground between John-street and the reclaimed land, which would be a somewhat similar sort of land?—I do not quite understand the question.

2906. I mean in this way, that the ground slopes down from John-street to the level of the river, and that the building probably would not be erected at the height of Adelphi-terrace, but would be at an intermediate level between the top of the Embankment and John-street, and the streets to the west of it?—I do not know the Howard-street site at all intimately; but I think there is this difference between the two, that here the level of the streets is all artificial, whereas my remembrance of Howard-street is that it is on the natural level.

Mr. Superintendent WALKER, called in; and Examined.

2907. *Chairman.*] YOU are a Superintendent of the Police, and, in that capacity, I presume have had great experience with regard to the regulation of the traffic in the metropolis?—I have.

Mr. Superintendent *Walker.*

2908. It has been your duty to regulate that traffic on many occasions?—Yes.

2909. You are conversant with what is proposed with reference to the Thames Embankment and this roadway which is being made, under an Act of Parliament, from Charing Cross Bridge to Wellington-street, Strand?—Yes.

2910. Are you of opinion that any communication is necessary between Hungerford Bridge and Westminster Bridge, near the Parliament Houses?—Yes.

2911. Do you think that, as at present arranged, persons coming from the east, would be able conveniently to travel in carriages along the new roadway on the Embankment as far as Westminster Bridge and turn off there, and then drive into the square of the Parliament Houses?—I think it would be exceedingly difficult to cross the line of carriages proceeding from Westminster to Lambeth; they would cross at right angles.

2912. That is to say, you would have a continuous stream from Belgravia all coming down Whitehall and proceeding over Westminster Bridge to the south side of London, and persons coming in carriages along the new Embankment road would have to cut that stream in order to get to their proper side of the road to go to the House of Commons or Belgravia?—Quite so; and it would increase our present difficulty in regulating our traffic at the end of Bridge-street.

2913. You already find the traffic very great over Westminster Bridge, I presume?—Very great indeed.

2914. Have you made any calculation with regard to it?—Yes; on one occasion, by order of the late Commissioner of Police, we were directed to count the number of vehicles and the persons on foot who passed over Westminster Bridge in 24 hours, hour by hour. I venture to submit to the

Mr. Superintendent *Walker.*

10 May 1869.

the Committee a copy of these returns that were made out on the 11th of June 1865. From six a.m. on the 10th, to 6 a.m. on the 11th of June 1865; this return shows that there were on that day 13,119 vehicles which passed over Westminster Bridge.

[*The following is the Statement referred to :—*]

Metropolitan Police Office, June 1865. } *W. Harris,* Inspector.

2916. *Chairman.*] Have you any suggestion to make with reference to an approach to the Embankment from the direction of Parliament-street, other than any at present proposed by Act of Parliament?—It will be necessary to form a line from the Embankment into Parliament-street, but certainly not lower down than Derby-street.

2917. Is that at the corner of the new club?—It is.

2918. Then you consider, with reference to traffic going from the east to the Houses of Parliament that it is essential, in addition to the present proposed roadway, that there should be a roadway from Parliament-street by the new Whitehall club to the embankment roadway?—I consider it most necessary.

2919. In

2919. In that case there would be not only the traffic continued from that branch on to the corner of Westminster-bridge, which would only be traffic going to the south of London, but there would be all the traffic going to Belgravia, or going to the Houses of Parliament, which would turn off at the spot indicated by you?—And would fall at once into its proper side.

2920. Would you consider it, with reference to the general communication of the metropolis, very desirable that there should be a roadway to the Embankment somewhere in the direction of Charing-cross or Northumberland House?—Yes, I think that would be absolutely necessary in order to relieve Whitehall of a portion of the traffic, at any rate.

2921. You consider an opening of some kind or other there absolutely essential?—I do.

2922. Do you know the district of London lying to the east of Essex-street, between the Temple and Somerset House?—Yes, I do.

2923. Would you consider it very desirable that there should be some communication in the neighbourhood of Essex-street on to the Embankment roadway?—I do.

2924. Mr. *Cowper.*] You say it would be most convenient that the traffic coming from the east, and going to Parliament-street, should come by Derby-street, instead of coming up to Westminster-bridge; what course would you take in order to separate that traffic, and to induce persons to go through Derby-street, and turn round to the right, instead of proceeding, as they would naturally do, to the bridge; how could your police separate such traffic?—By a notice placed at the corner, or by a semaphore.

2925. But if the people disregarded this notice, as they would very likely do, the object you desire would not be attained?—No, it would not. I do not think that we should ever be able, or that it would ever be wise, to take proceedings against persons for disregarding such a notice; but I think the convenience of the route would be so apparent that every person driving would take advantage of it.

2926. But as it is not shorter, and as people are inclined to go straight on, instead of turning to the right, when they would gain no time by turning to the right, do you not think that it is very desirable that the bulk of the traffic should go straight on?—I do not; and I think, at the same time, that that route would be considerably shorter.

2927. *Chairman.*] They would find out very soon, would they not, that in the one case there was a stoppage and in the other there was not?—Yes.

2928. That is to say, they would very soon find out that if they went along the Embankment, as at present proposed, to Westminster-bridge, they would encounter this line of vehicles and so might be stopped, but if they turned off to the right they would get a much more convenient line?—Yes.

2929. And you generally find, do you not, that the traffic follows the most convenient line?—We do; and I think, if you will glance at the map, you will find that, passing from the Embankment into Derby-street and into Parliament-street, and so on to Westminster, Millbank, Great George-street, or the Broad Sanctuary, you would save some little distance, as well as many obstacles, by not coming up to the bridge.

2930. Mr. *Cowper.*] Upon the map before me it looks rather longer, but have you taken any measurement to inform the Committee what are the relative distances of the two routes?—I have not done so.

2931. On the south side of Westminster-bridge, the vehicles going to and from Stangate, cross the traffic of Westminster-bridge at right angles; has any inconvenience been found at the junction at the right angle?—I think not.

2932. Is not that an analogous case to what would occur at the north when the Embankment roadway reaches the traffic that goes across the bridge at right angles?—The traffic into Stangate is very small.

2933. Then going a little further south, we find other streets that cross at right angles; would you find any inconvenience there?—At the corner of the York-road there is a very difficult point for traffic, particularly traffic proceeding at speed to the railway.

2934. And we might judge by what occurs at the corner of York-road what would occur here?—I do not know that the two cases would be quite analogous, because we lose the traffic passing into Stangate when we reach the York-road.

2935. Lord *John Manners.*] At present Parliament-street opposite Derby-street is inconveniently narrow, is it not, for the traffic that goes along it?—Yes, during six months of the year.

2936. Any additional traffic therefore thrown at right angles upon Parliament-street would increase the present inconvenience?—It would.

2937. But supposing all the houses that lie between Parliament-street and King-street are removed, and a very wide street is made there, then I apprehend all the advantages which you have suggested, would be gained by opening a communication from the Thames Embankment by Derby-street into Parliament-street?—They would.

LIST OF APPENDIX.

PLANS

Delivered in by Mr. *James Pennethorne.*

To the Chairman of the Hungerford Bridge and Wellington-street Viaduct Committee. App. No. 2.

My Lord,

HEREWITH I have to lay before you two Plans, viz.:—

No. 1. A Plan prepared as directed by you, to show a Curved Road from Charing Cross to the Thames Embankment, without reference to other subjects.

No. 2. The Plan for the same Road, laid by me before the Committee on the 19th instant, and to which my evidence refers.

With regard to the two improvements shown by the Plan No. 1, I think that, although no Estimate has been made, it might not be unreasonable to expect the Costs to be as follows:—

	£.
1. For the Curved Road from Charing Cross to the Embankment, after taking credit for the returns - - - - -	200,000
2. For the widening of Charing Cross - - - - -	150,000
TOTAL Net Cost of both - - - £.	350,000

I have, &c.

29 April 1869. (signed) *James Pennethorne.*

LIST OF PLANS.

No. 1.—Copy of Plan B, ordered by the House of Commons to be printed 7th July 1868, with an addition thereto of a Curved Road from Charing Cross to the Thames Embankment Railway, also of Charing Cross widened from Northumberland House to Whitehall Place.

No. 2.—Plan for a Curved Road from Charing Cross to the Thames Embankment Roadway, and also for widening Charing Cross.

COPY OF PLAN. B. *Ordered by the House of Commons to be printed 7th July 1868 with an addition thereto of a Curved Road from Charing Cross to the Thames Embankment Roadway also of Charing Cross widened from Northumberland House to Whitehall Place.*

The four plots of ground colored Blue containing altogether about 10000 yards sup.e would be available for letting for building purposes.

The part colored dark Green would be left annexed to Northumberland House. The figures (4.0) shew the levels above Trinity datum.

James Pennethorne
April 29: 1869.

Nº 2.

Plan for a Curved Road from Charing Cross to the Thames Embankment Roadway, and also for widening Charing Cross.
The part colored Red shews how if this plan should be adopted the whole of the Crown Whitehall Estate could be laid out for the erection of Public Offices as a revival of Inigo Jones's design for Whitehall Palace.

N.B. The dotted Blue lines shew the straight line of Road proposed by the Metropolitan Board of Works.
The figures (4.0) shew the levels above Trinity datum.

James Pennethorne
April 29th 1869.

Appendix, No. 3.

PAPERS handed in by Mr. *Cole*, C.B., 3 May 1869.

(*Private and Confidential.*)

MEMORANDUM on Measures to be adopted for preventing Excess over the Original Estimates of the Cost of Public Buildings. App. No. 3.

1. THE system of paying an architect by a per-centage on the sum expended on a building, places him at once in a wrong position with regard to his clients. An architect's interest and his duty are thus diametrically opposed.

2. Again, if he be at all eminent, however well disposed he may be to consult his clients' interest in preference to his own, he has, in the present day, so much work on hand that it is absolutely impossible for him to pay proper attention and to do justice to all that he undertakes. Hence arise the constant complaints of ill-arranged buildings—ill-adapted to their objects because ill-considered. His designs, of which all but the general outline are probably the perfunctory work of pupils and assistants, require constant alterations and additions as the work proceeds, and eventually the original estimates are enormously exceeded, to the architect's pecuniary advantage.

3. In a private building the strong personal interest of those who have to pay does to some extent keep the architect in check. In the case of a public building there is no such interest, nor is there a sufficient concentration of authority or technical knowledge in the department for whom the building is being constructed to have any control. It is therefore essential in the case of a public building not to leave the whole matter in the hands of the architect, but to appoint some competent person to act on behalf of the department concerned, to formulate its views and requirements, and to see that they are complied with, not only in the original design, but as alterations suggest themselves in the progress of the work.

4. For this purpose it would appear most desirable to select an officer of the Royal Engineers. The Government can always obtain information as to the qualifications of officers of Engineers, their services can be commanded at a moderate cost, and they can return to their corps when no longer required.

5. It would appear then that the requirements of all public buildings should be definitely laid down by the heads of departments who are to occupy them, in concert with some officer of Royal Engineers. These should then be placed in the hands of an architect, the officer of Engineers being responsible for seeing that the architect duly provides for the requirements.

6. Or, it would be still better, before any architect had been engaged, that preliminary plans and sections should be prepared by the officer of Engineers; and that a rough block model should be made, to enable the unprofessional persons who are interested to understand what is meant by the plans and sections.

7. After it is agreed that such plans, sections, and block model, fulfil the requirements of the case, then and not till then, the architect should be called upon to enter upon the artistic completion of the exterior and interior.

8. The officer of Royal Engineers and the heads of departments for whose use the buildings are made would see that in any change proposed by the architect the necessary conditions are all maintained.

9. Tenders might then be obtained for as much of the construction of the buildings as would not be likely to be modified during the progress of the work, accompanied with schedules of prices sufficiently full to embrace all the trades likely to be required for the building.

10. At different stages of the progress of the work a surveyor should measure up the work and advise whether the contract in respect of cost is being maintained, and no deviations from the contract should be allowed which had not received the previous authorization of the officer of Royal Engineers.

11. The contracts should be drawn in such a manner as to render the decision of the officer of Royal Engineers and the surveyor on the value of the deductions from and additions to the original contracts binding on the contractor.

12. The remuneration of the architect should not be based upon a per-centage of cost. He should have a fixed liberal salary, to last for a definite period.

13. As well for artistic as economical considerations it is important that his whole time should be at the service of the Government, and that he should not undertake any other work whatever during the period of his engagement with the Government. It would be preferable to have the whole time of a talented young architect than a portion of the time of an architect in full practice,

App. No. 3.

much of whose best time must be spent in travelling by railway, and who must trust to assistants. If, as is probable in some cases, an architect must be employed whose whole time cannot be given to Government, then care should be taken to have a talented architect who can be constantly supervising the work.

14. The payment for all drawings, models, &c., made by the architect's assistants, should be paid direct by the Government to them.

15. The mode in which it is the custom to prepare plans and models of the buildings at South Kensington Museum is described at page 200, Appendix D. 15th Report of the Science and Art Department for 1867–8.

27 January 1869. *H. C.*

General Method of executing Buildings at the South Kensington Museum.

1. General principles of the nature of the accommodation required in the buildings, such as size of courts, corridors, lighting, &c., are discussed between the director and the engineer. [A Royal Engineer.]

2. The engineer then prepares experimental plans and sections, having regard, primarily, to the above requirements, and secondly to decorative construction subject to these requirements. At this stage the engineer consults with the artists and modellers to be subsequently employed on the architectural details. [Several plans generally prepared.]

3. Block models are then made, but without inserting architectural details. [Several models are generally made, and experiments tried and discussed with the director.]

4. When the block model has been settled the structural plans are finally made by engineer, and working drawings proceeded with.

5. To obtain the architectural and decorative details, structural plans with sketches are sent to the studios of artists, who are as well both modellers and painters.

6. The engineer, in concert with the artists, settles the architectural details, which are generally submitted to Inspector-General for Art for suggestions, but the engineer remains solely responsible. [Many experiments by drawing and models are made.]

7. Architectural model with details are prepared. [Numerous experiments are made, frequent discussions are had with Inspector-General for Art and others, and no trouble or cost are spared at this stage before the decision is finally made.]

8. If necessary, an architectural drawing to the full size in perspective is made, and put up and subjected to criticism.

9. Plans being finally settled, quantities are taken out by the surveyors, and a limited competition among contractors invited.

10. Models of the architectural details are made in artist's studio, superintended by the engineer.

11. By taking all this trouble and incurring the cost of experiments, failures and alterations are very much avoided and final economy is insured.

12. The highly decorative buildings at South Kensington in terra-cotta and red brick have cost under 1*s.* the cubic foot, exclusive of mosaics, decorative paintings, and the like. This is below the cost of an ordinary London house of the first class. After six years the surfaces and colour, terra-cotta, and brickwork are but slightly affected by the smoke and atmosphere, compared with Portland stone.

REPORT

FROM THE

SELECT COMMITTEE

ON

HUNGERFORD BRIDGE

AND

WELLINGTON-STREET VIADUCT;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed,*
2 *August* 1869.

Tuesday, 23rd February 1869.

Ordered, THAT a Select Committee be appointed to inquire into the Roadway and Viaduct proposed to be made on the Thames Embankment from Hungerford Bridge to Wellington-street, Strand, and whether the Site might not be more advantageously occupied by some Public Building; also to inquire whether any, and if so what, controlling power over Public Works in the Metropolis is vested in and exercised by any Government Department.

Tuesday, 2nd March 1869.

Ordered, THAT the Select Committee do consist of Seventeen Members.

Committee nominated of—

Lord Elcho.	Mr. Beresford Hope.
Mr. Layard.	Mr. Buxton.
Mr. William Cowper.	Viscount Bury.
Lord John Manners.	Captain Dawson-Damer.
Mr. Bentinck.	Viscount Sandon.
Mr. Sclater-Booth.	Mr. M'Clean.
Mr. Tite.	Mr. Alderman Lawrence.
Mr. William Henry Smith.	Mr. Dilke.
Mr. Gregory.	

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Thursday, 11th March 1869.

Thames Embankment.—*Ordered,* THAT the Petition from St. Paul's, Covent Garden, against Abandonment of proposed Roadway, be referred to this Committee.

Tuesday, 23rd March 1869.

Thames Embankment.—*Ordered,* THAT the Petition from the Vestry of St. James, Westminster, for delay of Roadway until further inquiry has been instituted as to its necessity [presented 19th February], be referred to this Committee.

Tuesday, 6th April 1869.

Ordered, THAT it be an Instruction to the Committee that they have power to inquire and report as to all the lateral Communications intended to be made with the Embankment Roadway.

Friday, 9th April 1869.

Ordered, THAT it be an Instruction to the Committee to inquire and report specially to The House whether any Public Buildings now existing or that may hereafter be erected on the Thames Embankment Site, are likely to be injuriously affected by the Metropolitan District Railway, or by any other Railway or Railways now in progress or sanctioned by Parliament on the Embankment; and, if so, whether it would be possible, in the construction of the Railways, to guard against such injury.

Monday, 10th May 1869.

Ordered, THAT the Committee have power to report their Opinion and Observations, together with the Minutes of Evidence taken before them, from time to time to The House.

SECOND REPORT.

THE SELECT COMMITTEE appointed to inquire into the ROADWAY and VIADUCT proposed to be made on the THAMES EMBANKMENT from HUNGERFORD BRIDGE to WELLINGTON-STREET, STRAND, and whether the Site might not be more advantageously occupied by some Public Building; also to inquire whether any, and if so what, controlling power over Public Works in the Metropolis is vested in and exercised by any Government Department; and who were instructed that they have power to inquire and report as to all the lateral Communications intended to be made with the Embankment Roadway; and who were further instructed to inquire and report especially to The House, whether any public buildings now existing, or that may hereafter be erected on the Thames Embankment Site, are likely to be injuriously affected by the Metropolitan District Railway, or by any other Railway or Railways now in progress or sanctioned by Parliament on the Embankment; and, if so, whether it would be possible, in the construction of the Railways, to guard against such injury;—HAVE made further progress in the Matters to them referred, and have come to the following RESOLUTIONS, which they have agreed to report to the House:—

1. THAT no general control over works and buildings in the metropolis, constructed under Parliamentary sanction, is at present vested in any Government or public officer or department, other than that now exercised by Departments of Government over the buildings that are under their superintendence.

2. That the design and execution of unsightly works, such as the Charing-cross Railway station, and the railway bridges across the streets and roadways of the metropolis, as well as the juxta-position of the London, Chatham, and Dover Railway Bridge, and the New Blackfriars Bridge, across the Thames, may be reasonably attributed to the fact that railway, gas, water, and other public companies, or corporate and chartered bodies have not been hitherto required to deposit any designs, elevations, or models of projected works or buildings when applying for Parliamentary powers.

3. That having regard to the improvement of the metropolis, and as a security against its further disfigurement, it is desirable that whenever any public company or corporate body applies for Parliamentary powers to enable it to execute any works, or erect any buildings in the metropolis, or to raise money for the execution or erection of such works or buildings, it should, before coming to Parliament, deposit at the office of the Commissioners of Her Majesty's Works and Public Buildings, plans and elevations, designs or models, in like manner as railway companies are now obliged to deposit plans and sections at the Board of Trade, and the Committee recommend that the Standing Orders be amended, so as to effect this object.

4. That the First Commissioner of Works should Report to Parliament on such plans and elevations, designs or models, and that such Reports should be referred to the Committees on Private Bills in the same manner as the Reports from the Board of Trade and Admiralty are now referred.

2 *August* 1869.

PROCEEDINGS OF THE COMMITTEE.

Monday, 7th June 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. Tite.
Mr. Beresford Hope.	Mr. Bentinck.
Lord John Manners.	Mr. M'Clean.
Mr. W. Cowper.	Mr. W. H. Smith.
Mr. Buxton.	Captain Dawson Damer.
Viscount Sandon.	

Sir *J. Thwaites* examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 14th June 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Sir Charles Dilke.
Mr. W. Cowper.	Mr. Alderman Lawrence.
Mr. Bentinck.	Mr. Beresford Hope.
Mr. Gregory.	Lord John Manners.

Mr. *W. Cowper* (a Member of the Committee) and Mr. *Layard* (a Member of the Committee) were severally exaamined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 21st June 1869.

MEMBERS PRESENT:

Lord ELCHO in the Chair.

Mr. Layard.	Mr. Beresford Hope.
Mr. W. Cowper.	Mr. Buxton.
Mr. Gregory.	Mr. Tite.
Mr. Alderman Lawrence.	Sir Charles Dilke.
Lord John Manners.	Mr. Bentinck.
Viscount Sandon.	Mr. Smith.

Lord *John Manners* (a Member of the Committee) and Mr. *Henry Cole*, C.B., were severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 28*th June* 1869.

MEMBERS PRESENT:

Lord Elcho in the Chair.

Lord John Manners.	Mr. Bentinck.
Mr. Alderman Lawrence.	Mr. Gregory.
Mr. Beresford Hope.	Mr. Layard.
Mr. M'Clean.	Mr. Buxton.
Mr. W. Cowper.	Mr. William Henry Smith.

Mr. *William Corrie* examined.

Mr. *Beresford Hope* handed in a portion of an address delivered by him as President of the Institution of British Architects, in the year 1865.

Mr. *Redgrave* examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 2*nd July* 1869.

MEMBERS PRESENT:

Lord Elcho in the Chair.

Mr. M'Clean.	Mr. Gregory.
Mr. Buxton.	Mr. Beresford Hope.

Mr. *Beresford Hope* (a Member of the Committee) and Mr. *George Russell* were severally examined.

[Adjourned till Friday, the 30th instant, at One o'clock.

Friday, 30*th July* 1869.

MEMBERS PRESENT:

Lord Elcho in the Chair.

Sir William Tite.	Mr. Sclater-Booth.
Lord John Manners.	Mr. Alderman Lawrence.
Mr. Layard.	Mr. Buxton.
Mr. William Cowper.	Mr. Bentinck.
Mr. Beresford Hope.	Mr. W. H. Smith.

Motion made, and Question, "1. That no general control over works and buildings in the metropolis constructed under Parliamentary sanction is at present vested in any Government or public officer or department, other than that now exercised by the departments of Government over the buildings that are under their superintendence"—(The *Chairman*)—put, and *agreed to.*

Motion made, and Question proposed, "2. That the design and execution of unsightly works, such as the Charing-cross Railway Station, and the railway bridges across the streets and roadways of the metropolis, as well as the juxta-position of the London, Chatham, and Dover Railway Bridge, and the New Blackfriars Bridge, across the Thames, may be reasonably attributed to the want of such control; railway, gas, water, and other public companies, or corporate and chartered bodies, not having been hitherto required to deposit any designs, elevations, or models of projected works or buildings when applying for and obtaining Parliamentary powers"—(The *Chairman*).

Amendment proposed, to leave out the words " want of such control," in order to insert the words " the fact that"—(Mr. *Buxton*)—instead thereof.—Question put, " That the words proposed to be left out stand part of the Question."—The Committee divided:

Ayes, 4.	Noes, 6.
Mr. Layard.	Lord John Manners.
Mr. W. Cowper.	Mr. Bentinck.
Mr. Sclater-Booth.	Sir W. Tite.
Mr. Beresford Hope.	Mr. W. H. Smith.
	Mr. Buxton.
	Mr. Alderman Lawrence.

Words inserted.—Other Amendments made.—Main Question, as amended,—put, and *agreed to.*

Motion made, and Question proposed, " 3. That, having regard to the improvement of the metropolis, and as a security against its further disfigurement, it is desirable that a general control over all public works and buildings in the metropolis should be vested in some public officer or department of the State"—(The *Chairman*).—Amendment proposed, to leave out from the words " desirable that" to the end of the Question —(Mr. *Buxton*).—Question put, " That the words proposed to be left out stand part of the Question."—The Committee divided:

Ayes, 2.	Noes, 8.
Mr. Layard.	Mr. Cowper.
Mr. Beresford Hope.	Lord John Manners.
	Mr. Bentinck.
	Mr. Sclater-Booth.
	Sir W. Tite.
	Mr. W. H. Smith.
	Mr. Buxton.
	Mr. Alderman Lawrence.

Another Amendment proposed, after the words " desirable that" to add the words " whenever any public company or corporate body applies for Parliamentary powers to enable it to execute any works, or erect any buildings in the metropolis, or to raise money for the execution or erection of such works or buildings, it should, before coming to Parliament, deposit at the office of the public officer to be appointed to control such works and buildings, plans and elevations, designs or models, in like manner as railway companies are now obliged to deposit plans and sections at the Board of Trade, and the Committee recommend that the Standing Orders be amended, so as to affect this object" —(*The Chairman*).—Question proposed, " That those words be there added:"—Whereupon Amendment proposed to the proposed Amendment, by leaving out the words " public officer to be appointed to control such works and buildings" in order to insert the words " Commissioners of Her Majesty's Works and Public Buildings"—(*Mr. Buxton*)—instead thereof.—Question, " That the words proposed to be left out stand part of the said proposed Amendment"—put, and *negatived.*—Question put, " That the words ' Commissioners of Her Majesty's Works and Public Buildings' be inserted instead thereof."—The Committee divided:

Ayes, 7.	Noes, 2.
Mr. Layard.	Lord John Manners.
Mr. Cowper.	Sir W. Tite.
Mr. Sclater-Booth.	
Mr. W. H. Smith.	
Mr. Beresford Hope.	
Mr. Buxton.	
Mr. Alderman Lawrence.	

Amendment, as amended, *agreed to.*—Main Question, as amended, put and *agreed to.*—

" *Resolved*, 3. That having regard to the improvement of the metropolis, and as a security against its further disfigurement, it is desirable that whenever any public company or corporate body applies for Parliamentary powers to enable it to execute any works, or erect any buildings in the metropolis, or to raise money for the execution or erection of such works or buildings, it should, before coming to Parliament, deposit at the Office of the Commissioners of Her Majesty's Works and Public Buildings, plans and elevations, designs or models, in like manner as railway companies are now obliged to deposit plans and sections at the Board of Trade, and the Committee recommend that the Standing Orders be amended, so as to effect this object."

Motion made, and Question, " 4. That the First Commissioner of Works should report to Parliament on such plans and elevations, designs or models, and that such Reports should be referred to the Committees on Private Bills in the same manner as the Reports from the Board of Trade and Admiralty are now referred"—(Mr. *Cowper*)—put, and *agreed to.*

Motion

Motion made, and Question, "5. That the First Commissioner of Works is the public officer in whom this power of control should vest"—(The *Chairman*)—put, and *negatived.*

Motion made, and Question proposed, "6. That having regard to the duties that would thus devolve upon the First Commissioner, and to the greatly increased responsibilities of his office, it is desirable that greater importance and influence should attach to it"—(The *Chairman*). —Amendment proposed, after the first word "That," to insert the words "the evidence taken before the Committee tends to the conclusion that"—(Mr. *Beresford Hope*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 4.	Noes, 4.
Mr. Cowper.	Mr. Sclater-Booth.
Lord John Manners.	Mr. W. H. Smith.
Sir W. Tite.	Mr Buxton.
Mr. Beresford Hope.	Mr. Alderman Lawrence.

Whereupon the Chairman declared himself with the Ayes.

Other Amendments made.—Main Question, as amended, put.—The Committee divided:

Ayes, 3.	Noes, 5.
Mr. Cowper.	Lord John Manners.
Sir W. Tite.	Mr. Sclater-Booth.
Mr. Beresford Hope.	Mr. W. H. Smith.
	Mr. Buxton.
	Mr. Alderman Lawrence.

Motion made, and Question, "7. That there should be a Parliamentary Under or Assistant Secretary"—(The *Chairman*)—put, and *negatived.*

Motion made, and Question put, "8. That having regard to the extensive and varied character of the public works and buildings in the metropolis that would thus be brought under the control of the First Commissioner of Works, and looking to the harmonious and popular, as well as to the efficient, exercise of such powers of control as it is proposed to confer upon him, it is desirable that he should be assisted by a Board or Council of Advice, representing; 1. The City of London; 2. The Metropolitan Board of Works; 3. The Royal Academy; 4. The Institute of Architects; 5. The Institute of Civil Engineeers"—(The *Chairman*)—The Committee divided:

Ayes, 3.	Noes, 6.
Mr. Layard.	Lord John Manners.
Mr. Cowper.	Mr. Sclater-Booth.
Mr. Beresford Hope.	Sir W. Tite.
	Mr. W. H. Smith.
	Mr. Buxton.
	Mr. Alderman Lawrence.

Motion made, and Question, "9. That each of these public corporate bodies should name three of its members, from whom the Government should select one to represent his Corporation or Institution on the Board or Council of the Office of Works—" (The *Chairman*)—put, and *negatived.*

Motion made, and Question, "10. That the Members of the Council should serve for three years, at the expiration of which time they should vacate office, but be eligible for nomination"—(The *Chairman*)—put, and *negatived.*

Motion made, and Question, "11. That the Members of the Council should be paid such annual salary, or in such manner as may be deemed most advisable, and that they should be summoned to meet at such times as may seem to the First Commissioner to be necessary or desirable"—(The *Chairman*)—put, and *negatived.*

Motion made, and Question, "12. That a record should be kept of all the proceedings of the Council of Advice, to be annually laid before Parliament"—(The *Chairman*)—put, and *negatived.*

Motion made, and Question, "13. That the resolutions or opinions of the Council should not be considered as binding on the First Commissioner"—(The *Chairman*)—put, and *negatived.*

Question, "That the foregoing Resolutions be reported to the House"—put, and *agreed to.*

Ordered, To Report, together with Minutes of Evidence and an Appendix.

LIST OF WITNESSES.

MINUTES OF EVIDENCE.

Monday, 7th June 1869.

MEMBERS PRESENT:

Mr. Bentinck.	Mr. Layard.
Mr. Buxton.	Mr. McLean.
Mr. William Cowper.	Lord John Manners.
Capt. Dawson Damer.	Viscount Sandon.
Lord Elcho.	Mr. William Smith.
Mr. Beresford Hope.	Mr. Tite.

LORD ELCHO, IN THE CHAIR.

Sir JOHN THWAITES, Knight, re-called; and further Examined.

Sir *J. Thwaites* Knt.

7 June 1869

2938. *Chairman.*] THE Thames Embankment, as you stated in the first part of the inquiry of this Committee, has been conducted under an Act of Parliament entirely by the Metropolitan Board of Works, has it not?—Yes.

2939. That Act of Parliament, as far as I gathered from your statement on a former occasion, in no way laid down what the nature of the work should be, *quà* the design or the material of which the river wall and other portions of the work were to be constructed?—It did not.

2940. The success of that work is universally admitted; indeed it is universally stated that there is no such river-wall in the world as the one which has been erected by the Metropolitan Board of Works, and the success of that work is due entirely to the action of the Board and of their engineer, is it not?—It is.

2941. The design might have been an ugly one, and the material, instead of being granite, might have been concrete or brick, or any other material, might it not?—Yes; it was competent, of course, for the Board to have constructed it of brick, simply putting in wooden fenders, in the cheapest possible form; but the Board took another view of its public duty.

2942. The Board took an æsthetic view (that being the cant word at present in these matters) of the Embankment, and they thought it right, did they not, to spend more money than would have been absolutely required for the purpose, in order to make it an ornament to the metropolis?—Yes.

2943. Parliament took no account, and had no control of the matter, when once the Act was passed; and the Government Office of Works did not interfere in any way, I believe?—No.

2944. And they have no power of doing so at the present moment, had they been so disposed?—None whatever.

2945. You had to do with the Crown in the construction of this Embankment, the Crown being represented by the officer of works; did the Crown interfere in any way in the construction of this Embankment?—No; there was no interference as to the structural works.

2946. With reference to the land which belongs to the Crown, and which is at present in the possession of their lessees, did they lay down any conditions as to the form which your works were to take, æsthetically?—With the exception of the outer wall, the general line which was defined in the Act of Parliament, subject of course to the approval of the Commissioners, no conditions were laid down.

2947. Which wall is that?—The wall fronting the property that is between the road and the property given up to the Crown.

2948. Is that the wall on the left as you go towards the City?—Yes.

2949. You say that the form of that wall, and the design of it, were laid down?—We had to submit to the Commissioner certain designs for his approval; that was a condition under the Act of Parliament.

2950. The Act said that with reference to the Crown property the designs were to be submitted to the Commissioners, did it not?—Yes; that is not at all an unusual thing; the Committee are aware that all Crown property is very delicately hedged in in every Act of Parliament, and this is but a fair illustration of the ordinary legislation on Crown rights.

2951. The design was by the Act of Parliament

Sir *J. Thwaites*, Knt.

7 June 1869.

ment to be submitted, not for the approval of the Commissioner of Works (that office now being held by the Right Honourable Member for Southwark), but of the Commissioner of Woods, Mr. Gore, was it not?—I think it was Mr. Gore, of the Office of Woods, but I am not quite sure.

2952. That office represented the Crown as a proprietor, did it not?—Yes, in the person of Mr. Gore.

2953. It was not in the interest of the public, but in the interest of the Crown, as a proprietor?—Yes.

2954. So that, as regards the whole length of the design in which the public have an interest, the Act of Parliament laid down no rule; but as regards the private interest of the Crown (if, one may so speak), there was a rule laid down, and the works were not sanctioned until they had been approved by the person representing the Crown; that is to say, as regards that portion of the Embankment which formed a wall adjoining the private property of the Crown; was that so?—Yes. We were under an obligation by that Act of Parliament, to give up the land to the Crown lessees up to the side of our roadway, and involved in that was the liability to build a wall, subject to the approval of the Commissioner of Woods.

2955. The Board of Works has been in existence a good number of years, and they have conducted other great metropolitan improvements, have they not?—Yes.

2956. What other great works are there which have been conducted by the Board?—The formation of public streets, the widening of existing roadways, the formation of public parks, and matters of that kind.

2957. Was the Islington Market under the Board at all?—No; that is under the Corporation of the City of London.

2958. The building at the terminus of your sewer was built, I presume, by the Board?—That was entirely under the control of the Board.

2959. That, apparently, has considerable architectural features; and that again was erected, I presume, without any supervision or control of any sort or kind; you might have made that an un-ornamental, instead of an ornamental building, might you not?—No doubt.

2960. But you took the same æsthetic view of your duties as a public Board in that instance as you did in the construction of the Embankment?—Quite so.

2961. Therefore, as regards the Board, no control of any sort is exercised over them as regards the character of their works?—None.

2962. As regards the expenditure of money by the Board, do you know at all what the sum is which the Board has expended altogether in public improvements since its existence?—About ten millions.

2963. I think you stated, in your former evidence, that there was no check whatever at present on the expenditure of the Board, except ignorance and impatience of taxation on the part of the taxpayers, which is shown by the difficulty or the impossibility of collection?—That is an ample check.

2964. There are a great many works in this metropolis, public, semi-public, and private; we will begin, if you please, with what may be called purely public works, Government works and buildings, such as the Foreign Office, the India Office, the Treasury, the National Gallery, and the British Museum, which are at present works conducted exclusively by the Government, are they not?—They are.

2965. The Metropolitan Board of Works has nothing to do, and the ratepayers of the metropolis have nothing to do, with those works; they are entirely under the Government, are they not?—Under some department of the Government.

2966. Under the Government, subject only to the control of Parliament. The money is voted by Parliament, and Parliament so far has a control; that is so, is it not?—I understand with regard to large public buildings, such as the Foreign Office and other works of considerable cost, that the habit of Government is to exhibit the plans in the Library of the House of Commons, and to take the judgment of the House itself as to the elevation and the internal arrangements.

2967. The only control is the control of Parliament, is it not?—Undoubtedly.

2968. The Goverment have uncontrolled power so far, except the check by Parliament over such matters as the form and design of the new park palings; that is so, is it not?—Yes.

2969. As to a portion of Park-lane, there was some question, was there not, of the Board of Works having something to do with the widening of the road or the position of the rails?—The Board undertook the widening of Park-lane, the Crown giving up the land necessary for the purpose of the footway.

2970. But the design of the railing was a matter which rested with the Office of Woods, was it not?—Entirely.

2971. As regards everything connected with the ornamentation of the metropolis, or otherwise, as the case may be, such as the railing round the Houses of Parliament, that is a purely Government matter, is it not?—Entirely.

2972. The design of the railings around the plots of grass, and the design of the lamps in Parliament-square, is a purely Government matter, is it not?—It is.

2973. Has the Metropolitan Board of Works anything to say to the position of the statues in the metropolis?—Not at all, except that we have some eligible sites on the Embankment to receive such statues.

2974. Has the Government power to give, through the Commissioners of Works, any site for a statue in any street in the metropolis?—No.

2975. We will take different statues: there is the great Guards' Memorial statue at the bottom of Waterloo-place; is that site given by the Government, without the assent of any other parties being required?—No; that would be under the control, I suppose, of the parish of St. James. Any work, part which is paved and lighted at the public expense, would be under the control of the vestries or district boards.

2976. So that, with reference to statues, it appears that there are some where the Government have control, and that, I suppose, is confined to the ground which is either the private property of the Crown, or under the immediate control and management of Parliament, such as Parliament-square. I am told that that ground on which Lord Clyde's and Franklin's statues stand is the property of the Crown; are you aware whether that is so?—I believe it is.

2977. So

2977. So that, with reference to the statues and fountains in Trafalgar-square, and such matters, the Board of Works has nothing at all to say?—Nothing whatever.

2978. And *quâ* those matters, they have no control as regards the ornamentation of the metropolis?—They have not.

2979. Now, I will take the semi-public works under Acts; we may consider a railway a semi-public work, as it is under a private Act, passed by Parliament, and the money is not the money of ratepayers, but of shareholders; at present is there any control that you are aware of over the works constructed by railways in the metropolis other than that laid down in the Acts of Parliament?—No doubt; there can be no control exercised except that which is embodied in the Act authorising the construction of the work.

2980. Then your Board has no control whatever, has it, over the construction of any railway works in the metropolis, unless specially given to you by Act of Parliament?—To a certain extent, we have, and that is the result of very hard fighting every Session; there is a strong railway interest in this House, if I may be permitted to say so, and they are impatient of control; and we have on every occasion, when a Railway Bill affecting the metropolis has been in Parliament, petitioned against the Bill, for the purpose of having a *locus standi* to secure certain things; first, that the construction itself shall be creditable, not a disgrace, to the metropolis, as many of those railway bridges are, with high girders of iron crossing the street; secondly, that the space shall be such as not to interfere with the public traffic; and, thirdly, that steps should be taken to lessen the sound, which is very dangerous indeed to horses driven under those railways; it is almost like a clap of thunder sometimes; in some cases we have obtained power from Parliament, and in other cases we have failed in obtaining power to control the railways; whenever we have obtained the power, we have exercised it, I think, with great advantage to the public.

2981. Mr. *Layard.*] Are not railway and other companies which come to Parliament for power to execute works in the metropolis, bound to deposit with you their plans and elevations?—For all works to be carried out in the metropolis, the parties are bound to deposit their plans with us, and then, of course, we petition the House, and we have to fight before Committees of Parliament to obtain the slightest control over the works of railway companies. The Committee are aware that the great object of a railway company is to lessen the span, and to put a large pillar on the side of the footpath, so that the foot passengers would have to pass through a sort of tunnel, which is extremely bad, in a sanitary point of view, and in a moral point of view; our object has been to secure control over the railway companies, so that they should span the whole street, and leave the area of the public way free to the public. We have also pressed the point that we should have control over the elevation, which, I need hardly say, is of the worst possible description which any one can imagine over our public streets.

2982. Mr. *Beresford Hope.*] Do you mean any one in particular?—No, I am speaking generally. There is very simple arrangement for the purpose of reducing the noise and excluding the water from percolating through and dropping on to the passengers; even where we have sought to control them with respect to those two points, we have had quite a struggle to get clauses inserted before Committees of this House.

Sir *J. Thwaite* Knt.

7 June 186

2983. *Chairman.*] You say that they are obliged to deposit their plans and sections; under what Act are they obliged to deposit them; is it under the Act which constitutes the Metropolitan Board?—No, it was an alteration in the Standing Orders of the House.

2984. Then you complain of the character of the elevation of their works; the deposit of plans required by the Standing Order does not extend to a deposit of elevations, does it?—No; nor would it help us very much, because they take the necessary power to construct, and resist any application of ours for controlling powers over them, and that has been the fight every Session.

2985. Whenever one of those railways comes even under the Standing Order, you have great difficulty in getting control in any way over the construction of their works; and that control never extends to affecting in any way the architectural elevation or character of the works; is that so?—It has in some few instances I believe, but as a rule, we fail to obtain that power.

2986. So that really it may be said that the Metropolitan Board has really no control over the character of the buildings, æsthetically speaking, erected by the railway companies?—That is so.

2987. Do you know if any other body has any such power?—No other body.

2988. The Committees of the House of Commons and the House of Lords, who sanction those works, take no cognizance of those points, do they?—No; I think that the only department would be the Board of Trade, and that would have reference to the laying of the rails, and the strength of the girders, and the public safety generally; there is no question of ornamentation.

2989. You have complained of the character of those buildings; do you think that the Hungerford Station is an ornament to the metropolis?—I think it is a disgrace to the metropolis.

2990. That photograph (*handing a photograph to the Witness*) gives a notion of the æsthetic character of that work, and of how far it is an ornament to the metropolis; what is your opinion as to the piers of Hungerford Bridge itself, under which those roadways pass?—A short time ago, prior to the fire, it was worse than this; there was a wooden structure extending considerably beyond the iron roof for the purpose of receiving continental luggage; happily that is burnt down and is gone.

2991. We have then as the result of this uncontrolled power of the railways to erect any monstrosity they choose in the metropolis, in the first place the Hungerford Bridge Station; I think the piers of Hungerford Bridge itself would rather come under that category, would they not?—They are a cheap form of construction.

2992. Cheap, but not ornamental?—I cannot say much for their ornamentation. With regard to this station, which is really an obstruction to light and air, as well as being offensive to the eye, I venture respectfully to say that I think the House itself should have interposed, and have restricted the right of the company to build, and that while they gave them the power to build the bridge over a river, they should have taken care and protected that bridge from being made

Sir J. Thwaites, Knt.

7 June 1869.

like old London Bridge, with a series of houses upon it.

2993. But I presume that when the House gave power to this railway company to construct this station in the centre of London, the design for this covered station probably was not submitted to the Committee?—I should think not.

2994. So that at present Parliament sanctions a railway station in the centre of London without in the least knowing what the architectural character of this station will be, and how far it will affect, as you have said, the light and air of surrounding buildings, and at present there is no control whatever over the erection of such a building; is that so?—There is not.

2995. That is one instance of the evils of the present system; let us go further down the river till we come to the London, Chatham, and Dover Railway; that railway has a station of a somewhat similar character, has it not?—It has.

2996. Generally speaking, though there is an attempt at ornament in two towers at each side, it is open to the same objections as the Charing Cross Station, is it not?—In degree it is, though the projections are less than at Charing Cross.

2997. You have no reason to doubt, I presume, that what holds good or bad, as you choose to view it, with reference to Charing Cross, and the control exercised by Parliament or any other body or person, holds equally good with reference to this Cannon-street Station?—No.

2998. There is an enormous station being erected by the Midland Railway Company at the present moment in the New-road; that station, I suppose, has been erected under exactly similar circumstances, and it may or may not be an ornament to the metropolis, it may or may not affect light and air, but *quâ* the Government, *quâ* Parliament, *quâ* your Board, or any other public authority, no control I suppose has been exercised over its construction and character?—No; your Lordship is aware that all buildings on railways, such as stations or sheds, are excluded from the operation of the Building Act; they may build any kind of building.

2999. In fact, as regards all the railway stations in the metropolis, what has been stated by you as being the case with regard to those three, namely, Charing Cross, Cannon-street, and the Midland Stations, holds good with regard to the rest of them?—Clearly.

3000. Does that include the Metropolitan Railway and their stations along the Embankment?—Yes.

3001. You have no control over the designs of those stations, have you?—No legal control.

3002. So that as regards the Metropolitan District Railway, you, having constructed this very fine Embankment with a very ornamental wall, they have complete legal power to construct any description of station they choose?—I think that is so. I am not aware of any special clause in the Act.

3003. Are you aware that in the case of the Crown property, where one of their stations is placed near Westminster Bridge, the Crown has exercised, through the Office of Woods, some control over the character of the station?—Yes; I believe it is the rule of all public departments connected with the Crown, that railway companies must submit works of that kind for the approbation of the department.

3004. So that here again we find that a railway company has uncontrolled power along the Embankment, which you have created at the public expense of the ratepayers of the metropolis, to erect, as far as you are concerned, any description, whether it is ornamental or otherwise, but that the Crown, where they erect their stations on Crown property, has a control, and has exercised that control, is that so?—I have no doubt that that is so.

3005. The Crown, I presume, only does this in the interest of its own property, so as to benefit that property as much as they can, as private holders of property?—That is the assumed motive. It is a rule, that whenever Government property is interfered with, certain clauses are prepared, and all parties are obliged to admit the clauses.

3006. So that what is done by the Office of Woods, is immediately done in the interest of the Crown as a proprietor, and if incidentally the public benefit by that, that is another matter?—I think the interference of the Crown has reference entirely to the protection of the property under the particular departments; but it has no regard to any special improvement as far as the public are concerned.

3007. You have spoken about the bridges across the different streets and roads in the metropolis; I presume that you consider that many of those bridges are very great disfigurements to London, do you not?—They are a very great disfigurement.

3008. There is one across Ludgate-hill; that is by way of being somewhat ornamental, and is open more or less; it is therefore less of a disfigurement than many others which I could mention; we will take the two railway bridges across the Waterloo-road; do you consider those two bridges ornamental?—By no means.

3009. Has any one any control over those bridges?—No.

3010. There are bridges of a similar character all over London, are there not?—Yes.

3011. In short, that is apparently the model æsthetic railway bridge, is it not, the Ludgate-hill Bridge being exceptional?—That is the exception, undoubtedly; there are bridges constructed for the purposes of railways in the metropolis which are not only hideous in design, but which are made at such a level that the railway company are obliged to depress the road; and, in some cases, a depression to the extent of three or four feet has taken place, so that the public have to go down into a hollow, and come up again, in order to keep the level of the railway, to give the headway required by the Act.

3012. I think the road leading over Vauxhall Bridge, on the Surrey side, has a depression of that kind, has it not?—I believe it has.

3013. Are there many of those depressions?—There are a great many where they are obliged to depress to sustain their level, and to give the headway necessary and required by the Act; I need hardly say that those depressions are very injurious to the road, and to the general traffic.

3014. The water necessarily lodges there, does it not?—Yes; I am bound also to say, with great respect to this House, that those points have been pointed out to the Committees, and yet those Bills have been sanctioned with those manifest deformities.

3015. I presume that the designs for those bridges were never before Committees?—The elevation and depression of the road must necessarily have been before the Committee, but the designs

designs for the bridges, I should think, were never before the Committee.

3016. Neither have they been, I presume, before the Metropolitan Board of Works, as they do not lay the elevations before you?—No.

3017. The Metropolitan Board of Works have constructed, have they not, a new road, or a new street, in Southwark?—Yes.

3018. The buildings there are of an ornamental character, more or less, are they not?—Yes, taking it as a commercial street. The elevations of those buildings are under the control of the Board.

3019. Was it subsequent to the erection of those buildings that the railway was made across that street?—It was subsequent to the erection of some of the buildings. It was a matter of very deep regret to us, after forming that street, at a cost of 500,000 *l.* or 600,000 *l.*, immediately the street was properly formed and paved a railway company obtained power to go over it; and really the Blackfriars end of that street is positively a tunnel; you have a series of bridges, one following the other, and it is a very great interference with the appearance of that street.

3020. Mr. *Layard.*] Therefore I understand you to say that, after a very large sum is paid out of the ratepayers' money for the construction of an ornamental or handsome street, the street is destroyed, so far as its architectural character is concerned, almost immediately by the construction of railway bridges over which you have no control?—That is so at the Blackfriars end.

3021. *Chairman.*] Before this railway was constructed, had you sold those houses?—No.

3022. Were they still in your possession when the railway was constructed?—Yes, the ground rents. The procedure of the Board is to let the ground on building leases, and, so soon as the ground rents are sufficiently secured by the erection of property, then to take them into the market and sell them. I have no hesitation in saying, that the return which the Board will realize from the formation of that street, and from the land on either side, will be undoubtedly greatly reduced in value from the fact of that railway, or those railways, having been carried over the bridge at the end of the street, especially those plots which are near to the bridges in question.

3023. Supposing that before the railway was made the Board had parted with the land, and some builder had taken it, and had built the houses, in that case the loss would not have fallen upon the Board, but upon the builder, would it not?—It would have fallen upon the Board to a certain extent, because the Board would have to take the secured ground-rents into the market, and anything which would interfere with the development of that street or the value of the houses would diminish the value of the ground-rents so taken into the market.

3024. Were you aware that this Bill was before Parliament, and were you aware of the nature of the works that this railway was going to construct?—No.

3025. What railway is that?—The London, Chatham, and Dover Railway, I think.

3026. How did it happen that this railway had not, under the general Standing Order, to submit their plans to you, as you told us in the early part of your evidence they had to do?—Their general plan would be submitted, but not the elevation of the bridges. We did all that we could before Parliament to prevent the mischief which has ensued.

Sir *J. Thwaites*, Knt.

7 June 1869.

3027. Did you resist this before Parliament?—Yes.

3028. And Parliament overruled your objection?—They not only overruled our objection, so far as the bridge is concerned, in really creating a tunnel at the end of that street, but an adjoining street was actually given up to the railway. The Right Honourable Member for Southwark will remember that a great deal of dissatisfaction was felt by the local people, and the Metropolitan Board of Works, on behalf of the metropolitan public, opposed to it in Parliament. They had power to close one of the streets leading out of Bankside into the Blackfriars-road, and it has been practically closed. They have tramways, and they run trains at the lower part, which practically closes it for all the heavy traffic which used to pass under that bridge.

3029. It is clear, I suppose, that if railways are to be admitted at all into or to run through London, they necessarily must cross streets and roads by bridges, unless they are underground railways?—Undoubtedly.

3030. Do you think that it is necessary, with a view to the strength and solidity of the line when crossing those streets and roads, that railway bridges should, as you express it, be thus hideous?—I think not.

3031. Do you think that your engineer, or that an engineer, if he were told that he must make his bridges across those roads not unsightly, but rather ornamental in their character than otherwise, would have any difficulty in making them ornamental, consistent with solidity, and the primary purpose of the railway?—I think not; I think it is a question of cost.

3032. There are some piles in the river near Hungerford Bridge; what are those?—Those piles were placed there by the directors of the Whitehall Railway.

3033. What is the Whitehall Railway?—It is a railway which I shall have a difficulty in describing; they propose to go down a tunnel or well in Whitehall, and to be blown across to the other side, and then to rise up to the level of the railways on the opposite side, where passengers can be taken over at an agreeable elevation, for a halfpenny. That will probably account for the piles sticking there.

3034. That railway company obtained an Act, and under that Act they commenced operations, and those piles were part of the operations; is that so?—Yes, I believe the whole thing is a failure; I suppose no one would have the power, until the statutory period has expired, to remove those piles.

3035. It comes to this then; that this Pneumatic Railway is empowered to construct certain works by Act of Parliament, a portion of which works consists in driving in the piles which we see there, for the construction of this underground pneumatic tube, or whatever it is; the railway fails, and the piles remain; you say that nobody has the power of removing the piles until the Act expires; when will the Act expire?—I think next year, if my memory serves me, it will expire, and then of course it will be a nuisance, and it is already a great interruption to the navigation;

Sir *J. Thwaites*, Knt.

7 June 1869.

navigation; the Thames Conservancy Board will have power then to remove them.

3036. So that that is only a temporary evil, but it may be removed next year?—Yes; the mischief is, that it may cause shoals to be formed in the river.

3037. There is a new Blackfriars Bridge being constructed, is there not?—Yes.

3038. By whom is that constructed?—By the Corporation of the City of London.

3039. Was that bridge constructed and designed before the London, Chatham, and Dover Railway Bridge was constructed?—I am not sure.

3040. They are close together, are they not?—Very close.

3041. They are about the length of this room from each other, are they not, or even less?—Hardly that distance I should think.

3042. Necessarily supposing both were beautiful, the effect of the one would destroy the effect of the other, would it not, taking it in an æsthetic point of view?—Yes, and they are not at the same level either.

3043. Then again, there was no control exercised over the railway by Parliament, and the question of the existence of the other bridge, erected as you say by the Corporation of the City of London, appears not to have been considered at all?—I do not know.

3044. Is the Corporation bridge paid for out of the City funds, or by a rate?—It is paid out of a large estate called the Bridge House Estate, which was left originally for the erection and sustentation of bridges.

3045. Are you aware whether the Corporation opposed this railway bridge?—I do not remember; it is a matter over which we had no control.

3046. Gas-works are under Acts of Parliament in the metropolis, are they not?—Yes.

3047. There is a large gas-work in what used to be called Alsatia, is there not, near Blackfriars-bridge?—There is.

3048. Does Parliament, in granting the concession of the erection of gas-works in such a place as that, in any way take cognizance of the nature of the buildings to be erected?—It is impossible to say what Parliament did at that period; they have been in possession of that ground now for a very long time.

3049. In the same way, waterworks might be erected in the metropolis, and they might or might not be ornamental?—It very frequently occurs that when a gas or a water company apply to Parliament they submit an elevation, but I do not think they are bound by clauses to carry out any particular elevation; it is merely to give an idea to the Committee of what they propose to do.

3050. Now, we will take another description of semi-public works, viz., buildings erected by chartered bodies, such as the Surgeons' Museum; I suppose that is a chartered body, is it not?—Yes.

3051. Are the Governors of St. Thomas's Hospital a chartered body?—Yes.

3052. St. Thomas's Hospital is erected by a chartered body, and it is erected immediately opposite the windows of the Houses of Parliament; do you know whether the Metropolitan Board of Works had any control whatever over the nature and character of that building?—No.

3053. Do you know if the First Commissioner of Works had any control over that building?—No.

3054. Do you know whether any Government officer, or any public body in the metropolis, had control over the nature of that building?—No.

3055. So that, as in the case of the Thames Embankment, that building might be ornamental, or it might be hideous, as you have described the railway bridges to be; and it would rest entirely with the Governors of St. Thomas's Hospital, I imagine?—Yes; but I think when this hospital is finished, it will not be hideous.

3056. Do you think that it will be rather ornamental than otherwise?—Very much so, I think.

3057. That is thanks to the Governors of St. Thomas's Hospital, and their architect, and no thanks to any organised system of supervision or control over public or semi-public works in the metropolis?—I think any public body, whether a chartered body or a representative body, on the whole, are sure to carry out public works in a creditable manner, speaking of course apart from commercial principles, which would prevail with a railway or a gas company.

3058. Mr. *Beresford Hope.*] Do you mean from the growth of public taste?—No doubt.

3059. Mr. *Layard.*] Did you not sell that land to the hospital?—Yes.

3060. Could you not have made some condition as to the architectural effect of the building?—No doubt we might have interposed and said we must have this style of building or the other; but our object was rather to get a fair and reasonable price for our land, believing as a public body that they would carry out a building which would be creditable; in fact, we were rather anxious to get them there as tenants in order that a building might be erected opposite to the Houses of Parliament that might be a credit, instead of those ragged walls which previously covered the ground.

3061. *Chairman.*] All private buildings are under the Building Act, are they not?—All private buildings, and all public buildings; all buildings other than railway buildings.

3062. Are the Government buildings under the Building Act?—No, they generally are exempt. The Government is a privileged body.

3063. So that all buildings, except Government buildings and railways, are under the Building Act?—Yes.

3064. Is the control exercised by the Metropolitan Board of Works?—The control is not a control over the elevation, but it is exercised by the Metropolitan Board, under its officers. We have about 56 district surveyors all over the metropolis. It is as to the thickness of the walls and the strength of the timber, and the general public safety; and of course the building has to be so constructed as to prevent the spread of fire.

3065. Lord *John Manners.*] You take cognizance, do you not, of projections interfering with the line of streets?—Yes, that is under the Metropolitan Local Management Act.

3066. *Chairman.*] Will you state exactly to what extent the Metropolitan Board of Works have power, under the Building Act, to interfere with the construction of buildings?—Under the Building Act there are certain rules laid down as to thickness of walls, and the cubical contents of the building, for public buildings also, and

and in combustible materials for stairs approaching public buildings, and all matters of that kind. The Board exercises a very extensive control over projections beyond the regular line of frontage; that is to say, supposing that in a row of houses A. should apply to us for power to extend his building beyond the regular line, we take care, of course, that light and air shall not be interfered with, nor the property of the adjoining owner destroyed by such a projection.

3067. Mr. *Layard.*] I presume you have no power to prevent a man building a house and then covering it with the most frightful advertisements, or figures of any kind he chooses, so long as there is no offence to public decency?—Clearly not.

3068. *Chairman.*] The powers which the Board exercise, to which you have just referred, are, I presume, under their own Act?—Under the Act of 1855, which constituted them.

3069. With regard to this question of control, does not the evidence which you yourself have given, and the state of things that we see in the metropolis *quà* those railways, and *quà* the non-interference of Parliament with the designs of railways, whether as regards stations or bridges, all point to the necessity of there being general supervision and control of some kind somewhere, though I do not say where?—There can be no doubt that there should be some control over public buildings generally in the metropolis, so that our streets may present a more creditable architectural appearance than, I am sorry to say, they do at present. A very great improvement has taken place undoubtedly from the general taste of the public being improved. The public are educated in reference to architecture, as they are in reference to any other branch of ornamental work. But there ought, unquestionably, to be a control, and that control, I venture to think, ought to be within the municipal authority of this or any other city.

3070. Lord *John Manners.*] Have you been able to investigate what is done in the other great towns of the kingdom, such as Liverpool and Manchester, by the municipal authority, the sort of authority to which you refer?—I am not sure as to the special authority of those corporate bodies, but I am speaking now on a general principle, viz., that if there is to be a control, that control should not be in the hands of a Government department, but in the hands of the representatives of the people. I think, in the first place, before you can approach the discussion of the formation of a special body, not being a representative body, there are two or three conditions which must be established. First, that you must establish the fact, that the municipal authority has had all the necessary power granted to it by Parliament for the control of those public buildings, and to prevent that, which we all agree it is most desirable should be prevented, in future; and that after that ample power so given by Parliament, that municipal authority has failed to exercise a spirit of sound judgment and taste. Therefore, it may be a question whether some distinct and separate body should be created as a semi-Parliamentary body, to control matters within London or any provincial town. But I think, before you can determine that question, you should clothe that municipal authority in the metropolis, or elsewhere, with a controlling power, and see how it would control, and if it fails, then it would be a question as to the formation of another public body. Then there is another point which weighs upon my own mind very strongly, viz., that before you discuss the propriety of appointing a distinct and separate body from the municipal or representative body, if this control is to be exercised by the Government, it can be only exercised on the condition that the Government contribute towards the municipal burdens. The old principle of taxation and representation must stand on municipal questions, precisely as it stands on imperial questions; and I think, thirdly, if it is contemplated to form this distinct body, it can only be formed by applying the principle to every town in the kingdom. I should protest, with all the respect due to this Committee, and to the House, most strongly against the formation of a special body in the metropolis to control the acts of a municipal representative body, who are spending the money of the public ratepayers, and who represent the public ratepayers in every department, because the inference from the establishment of such a body would be this: that the citizens of this metropolis were not equal to the discharge of the municipal duties, such as are discharged by the citizens of Liverpool, Glasgow, Edinburgh, and every other city; therefore I say, before I can bring my mind to discuss the propriety of appointing a distinct and separate body, one or all of these propositions must be established: first, that the principle is to apply to all towns throughout the kingdom, otherwise you are degrading the citizens of the metropolis: secondly, that there is no right, apparently, so far as I can judge, for the establishment of a Parliamentary control, unless Parliament itself contributes out of the Imperial revenue towards metropolitan burdens, and then I think there ought to be an absolute failure on the part of the municipal authority before you institute other proceedings and supersede them in their common rightful action. With regard to the Metropolitan Board of Works, your Lordship will permit me to say that a great many of the deformities which your Lordship has pointed out in the metropolis, are matters over which the Metropolitan Board of Works has no control whatever. Had Parliament given the Metropolitan Board control, a different state of things would undoubtedly have existed. I think that in all large towns there ought to be a power who should have control, especially over commercial companies, where the law of commercial profit seems to prevail over every other consideration. Then, with regard to the contrast which has sometimes been instituted between the metropolis and the continental cities, of course the habits of our continental neighbours so differ from the habits of the Anglo-Saxon race, so far as representative institutions are concerned, that one can scarcely discuss the question upon parallel lines. But, with regard to Paris and Brussels, I have some facts here which, if the Committee desire, I will give in confirmation of the general statements which I have made. The principal authority in Paris is in fact the Government. The ratepayers of Paris appear to have very little, if any, control over its improvements; and the only part that they are permitted to take in the improvements of Paris is very largely contributing towards the cost. I will take the Budget of 1866, which I have carefully examined and had translated. Your Lordship is aware that the Government, in issuing their Budget for the

Sir *J. Thwaites*, Knt.

7 June 1869.

Sir *J. Thwaites*, Knt.

7 June 1869.

the year, include in that Budget a certain per-centage, which is collected by the Government and paid over to the municipality; for instance, 5 per cent. on the land tax, which amounted to 21,820 *l.*

3071. *Chairman.*] Is that to the municipality of Paris alone?—It is levied and collected by the Government and handed over to the Municipal Fund of Paris alone. I am now speaking entirely of the city of Paris.

3072. But do you know whether the Government contributes to other municipal funds?—I will give you the facts as they came out in the Budget; they also include five per cent. on the tax on personal property, amounting to 12,180 *l.*; eight per cent. on the amount received from patents, 48,664 *l.* Those are licenses, in point of fact; an auctioneer, for instance, must have a license to exercise his calling. They include three per cent. on taxes for expenses, amounting to 44,664 *l.* Then there is a contribution by the State towards the cost of paving of 180,216 *l.*, and a contribution by the State towards the cost of the municipal police of 153,880 *l.*, making a direct contribution by the State to the municipality in the year 1866 of 461,424 *l.* Then there was a special grant in that year for what are called great improvements, of 352,000 *l.*, making in all 813,424 *l.* The receipt from the *octroi* and the other receipts of Paris for that year amounted to 5,366,440 *l.* In reading these figures one feels a kind of envy, but one's envy is somewhat reduced when one remembers the fact that the amount of direct taxation by the State per head in Paris is 17 *s.* 4 *d.*, and the indirect taxation is 3 *l.* 2 *s.* 10 *d.*, making, in point of fact, a taxation of 4 *l.* – *s.* 2 *d.* per head in Paris in the year 1866.

3073. Mr. *Layard.*] That includes lighting, water, and poor rates, schools, and many other things, does it not?—It includes everything.

3074. Have you ever made a calculation in London to include lighting, poor-rates, water, gas, and everything?—I think it is over 30 *s.* a head.

3075. Mr. *Tite.*] Is that, in your opinion, a fair average as regards the English rating?—I think so.

3076. Lord *John Manners.*] Are those figures from the Government Budget, or from the Budget of the city of Paris?—From both.

3077. The first from the Government Budget, and the second from the Budget of the city of Paris?—Yes; I have just taken so much from the Imperial Budget, if I may make a distinction, as has reference to the municipal budget, because they levy a per-centage for the municipality in the Imperial taxation. The population in Paris, in 1861, was 1,667,841, to which this taxation refers; that would be somewhat increased from 1861 to 1866, they having no census between the two periods.

3078. Mr. *Tite.*] What is the present population of London?—About 3,000,000.

3079. Then in Brussels I find that there is a contribution by the State of 280,000 *l.*, and 25 per cent. on the land-tax, making 9,000 *l.* more, with a population of 200,000, where the government exercises a considerable control over the municipal authority.

3080. Mr. *Layard.*] Are you aware whether the sum which you have mentioned as the contribution of Paris includes all expenses for buildings belonging to the State, such as the Tuileries and other buildings of that kind, or are they paid out of the revenues of the Emperor?—I think it comes out of what would probably be called the Imperial revenues; there is a distinction made between them and the taxation of the city.

3081. Could you furnish the Committee with the details of the nature of the expenditure in Paris, drawing a distinction between public and purely municipal buildings?—I will do so; we are in the habit of sending our annual returns to the several municipalities on the Continent, and they very kindly send us a copy; I have in my hand a copy for the year '66, which I will hand in.

3082. Mr. *Cowper.*] Does the expenditure for Paris include items which are not included in your calculation for London, such as the expenses of public worship and schools?—I will ascertain that more particularly.

3083. *Chairman.*] Can you state whether in France the State contributes in any way to the municipal funds of other large towns as it does in the case of Paris?—I am not able at this moment to answer that question.

3084. Do you know whether the State exercises any control over public buildings or public works in such cities as Lyons, Bordeaux, or Marseilles?—I do not know, but I will endeavour to ascertain that.

3085. I think from the statement that you have just made to the Committee, the conclusion one in the first place draws is, that looking to what has come out in evidence, and what we have seen for years before our eyes either existing or growing, or likely to grow, in the way of hideousness, it is desirable that there should be control somewhere; that, in your opinion, that control does not exist, and that it ought to exist in the municipality. By the municipality, I presume you mean as regards the metropolis irrespective of the City of London, the Metropolitan Board of Works?—Yes, of course we are in an exceptional condition in the metropolis just now, but, probably, we may be put straight by-and-by.

3086. And you propose that this municipality or the Metropolitan Board of Works should have control not only over works executed by itself, such as the Thames Embankment, and the building at Barking, or any other works, that it either does or may erect, but that it should likewise be the controlling power over railways, gas-works, water-works, and erections by corporate bodies, such as St. Thomas's Hospital, or any other chartered body?—I have rather laid down what I conceive to be a principle, viz., that the municipality should be the controlling body.

3087. And the principle upon which you would rest the giving of this power to the Metropolitan Board of Works is the principle of assessment, is it not?—Yes, and representation.

3088. That is to say, that where you have an assessment levied for these purposes on the ratepayers, where you have ratepayers choosing representatives within a municipality, there you should have a control, undoubtedly; but that it should be exercised by persons so chosen by the ratepayers to spend their money?—Yes.

3089. And that would naturally be the Metropolitan Board of Works?—Yes.

3090. We are looking in this matter to the (I do not like to use the word, but it is the word,) "æsthetics" of the question. The Metropolitan Board of Works is an elected body, is it not, chosen by the ratepayers?—Yes.

Sir *J. Thwaites*, Knt.

7 June 1869

3091. It does not follow that the persons chosen by the ratepayers should be necessarily persons who have any feeling or taste, or knowledge in these matters, does it?—It is just possible that such persons might be elected.

3092. Supposing that the rates were rising, and that it was a question of electing one of two candidates in a district to be a representative on that Board, one of whom we will assume to be my honourable friend the Member for the University of Cambridge, who is known to be very "æsthetic," and to have been President of the Institute of Architects, and to look more to the ornamentation of the metropolis than to the lessening of taxation; the other candidate being a "tribune of the people," who does not care two straws for "æsthetics," and who does not care whether the Embankment is built of granite, or of concrete, or of wood, or of brick, but who cares very much as to whether he and the other ratepayers pay five shillings in the pound, or one shilling in the pound; which do you think, under those circumstances, would be more likely to be elected?—That would depend, of course, upon the local circumstances.

3093. And the state of feeling at the time?—The state of feeling at the time and the popularity of the party; but I take it, that in all elected bodies, beginning with the House of Commons itself, while you may have rigid economists elected in district A, you may have more liberal and enlarged views prevailing in district B; and that when they meet as an executive body for the purpose of transacting the business of the nation, or the business of the district, you get a controlling element in all bodies which would prevent the principle of extreme economy prevailing; take, for example, my own Board; there we have parties from all districts of the metropolis; many districts are extremely poor, and there nothing is so popular as a reduction of the rate, and yet the Board in all its works has adopted the larger view, not only with regard to taste, but to the quality of the work itself. All foreigners have borne testimony to the works; they declare there is nothing like them in Europe, and I think that is evidence that a body can be popularly elected that would on the whole exercise good taste. We have on our Board, I am happy to say, a great number of gentlemen, not only of good taste, but professional men of the highest standing, beginning with our honourable friend the Member for Bath. We have three or four other architects on the Board, and other gentlemen capable of exercising taste, and they do exercise public taste. I hope I may appeal, without vanity, to the works of the Board, as a proof that we have exercised that public taste.

3094. I hope you will not misunderstand my question, because the whole Committee rests upon the fact that this magnificent Embankment, which has been constructed by the Board, has been constructed entirely *proprio motu* on their side, and irrespective of any Government control or the control of any other body; but what we have to deal with now in this question of establishing a control which you say is necessary, is to try and find where, with the greatest security for the æsthetics of public works and public buildings that control can most surely rest: you say (which is perfectly true, and must necessarily be true) that it does not follow that in an elected body a district representative would be sent up on account of his æsthetic knowledge or taste; it might be the reverse, he might be sent up there simply to cut down all expenditure, and to look to that, and that only; so much for the district representations; in a body so chosen it might happen that the majority were of that view, and that then came the election of the chairman; might it not happen, under the present constitution of the Board, that instead of having a Board which, as you have said, has a great feeling for the æsthetics of the metropolitan improvement, and instead of having a chairman who shows himself to be the worthy mouthpiece and agent of such a Board, you might have a Board the reverse of this, and a chairman chosen who would represent that Board in that sense?—I do not think there is any fear of that.

3095. But is there any security against it?—If the Board has succeeded under its present chairman, I do not think there is any fear for the future.

3096. The basis of my question is, that it has succeeded under the present chairman; but still there has been, under the present Board and the present chairman, an ignorance and impatience of taxation shown, has there not?—No doubt.

3097. You spoke just now, with almost a sigh, of the sum of 5,000,000 *l.* which is at the disposal of the municipality of Paris, implying that you wish you had the same free command of money here?—I did so because the possession of that fund would enable us to make such an impression upon the metropolis in a few years as would do us credit, I think.

3098. But you have already found a difficulty in getting money, I think, have you not?—No doubt; that is the great difficulty with all public bodies.

3099. And you are not quite clear as to the future, how the funds are to be obtained, are you?—We have gone on up to this time, and sufficient for the day have been the funds thereof.

3100. But I have seen reports of some meetings as to some doubts where the money was to come from, for the continuance of improvements on the scale on which they have been hitherto made?—That discussion had reference rather to a particular mode of inviting tenders. It was a small loan of 150,000 *l.*, and it was suggested, that instead of sending out communications to insurance offices and other public bodies, and inviting tenders for a loan, we should publicly advertise for this loan. A good deal of discussion arose upon that; because money-lenders, or rather money agents, sent in communications, not very specific in their nature, professing to be able to obtain money for us; and we found that they were mere agents, and really had no principal who had money in hand to lend, and the Board were placed in some little difficulty in accepting the tender of A, he not being able to carry out that tender. But it had not reference to the general capacity of the metropolis to raise its funds. We shall have a Bill before Parliament before long that will help us, I think, in that respect. The rateable property of the metropolis has increased during the last few weeks over two millions within the metropolitan area. Within the last few weeks we have re-assessed the county of Middlesex, and the addition to the rateable property within the metropolitan area, which is not co-extensive with the county of Middlesex, is 2,200,000 *l.*

3101. Mr. *Tite.*] Within what time?—I suppose

Sir *J. Thwaites*, Knt.

7 June 1869.

pose about four and a-half or five years; about the same as in Surrey. The rateable property of the metropolis must therefore now amount to 19,000,000 *l.*

3102. Mr. *Beresford Hope.*] Does that increase arise from an alteration in the principle of rating, or is it the result of a natural growth in the assessable value?—It is a growth; it is the rating for the whole.

3103. Mr. *Tite.*] It is a natural increase, you believe?—It is a natural increase; so that as regards the power of the metropolis to do its own work if it is left free, and such financial arrangements are made as to enable the Board to borrow its money, there is no doubt at all. We do not want the assistance of the Government; we are quite capable of carrying out our own works.

3104. Mr. *Layard.*] Have you generally found that in making arrangements for the construction of new streets or buildings, when you buy property under Acts of Parliament, or by other means, you can resell lands that you buy at no considerable loss, or sometimes even at a profit?—It is not our rule to dispose of land uncovered. We let for building purposes, and then sell after the houses are erected.

3105. Practically it comes to the same thing; if you have not obtained back your capital you obtain an interest on your capital, and eventually the capital itself; but do you find that you lose by those operations?—I do not know what you contrast it with; if you contrast it with the cost of dislodging all interests, beginning with the fee, and then taking the superior lessee and the sub-lessee, and two or three under tenants, and if you have to deal with all those interests, and then if you ask me whether we sustain a loss, I say that undoubtedly we sustain a loss.

3106. In the case of the new street in Southwark, for instance, what has been the result?—I should think the actual cost of the street must be 60 or 65 per cent. of the gross outlay.

3107. There was a loss where you cleared houses in order to avail yourselves of the space for the street; but taking in the land on either side, which you bought, and which you have now let out on lease or otherwise disposed of, do you mean to say you have lost upon that?—I think, if the question means this: what did the piece of land marked A, which was formerly covered by five or six houses, cost on purchasing the fee and purchasing the interest of the lessee and all other interests, and what can you sell the area of that land covered by the five houses for, and what would be the loss, I think the loss would be considerable.

3108. Have you ever calculated how much per cent. it is?—The principle of compensation under the Lands Clauses Act is this: in the first place, the price that you are obliged to pay for the houses and land in question is the highest possible price, and then you add, for compulsory purchase, 10 per cent. You can easily imagine, therefore, what the cost of getting rid of all those interests must be, and what a small proportion indeed must be the sum which you will get in return for the sale of the land in question. It is true that, in some cases, such, for instance, as the Mansion House-street, where we find a number of small houses at the rear, and we are taking sufficient land in front for the erection of a respectable class of building, we think we can take the houses at the rear, which are a small cottage property, as the case may be, where there is very little access, and that, contiguous to a fine open street, the ground has increased enormously in value without doubt; but, if you ask me simply the result, the loss must be considerable.

3109. Could you furnish the Committee with any general statement, without going into details, as to the actual net cost of the construction of that street in the City?—I think you may take it, as a rule, about 60 per cent.

3110. Mr. *Tite.*] With regard to Garrick-street, has not that been carried through without any cost to the public?—No.

3111. What has been the loss?—The total cost of Garrick-street was 508,002 *l.* of which only 52,745 *l.* 4 *s.* 10 *d.* was repaid by sale of ground-rents; the remainder was defrayed by the accumulated coal duties of previous years.

3112. Lord *John Manners.*] Am I wrong in supposing that the Duke of Bedford contributed to Garrick-street? — His Grace contributed 15,000 *l.* on account of the improvement in opening up his property.

3113. Mr. *Layard.*] I will take such an area, such as you have described in the City as opened up by the new street, an area densely covered with small houses of a poor description, and then apply that area without reference to the space given for any thoroughfare but to building good houses; do you suppose the loss would be considerable there?—The value of the land, as I said before, is so influenced by its position, near to what will be one of the most important streets in the metropolis, that the value has greatly increased; but if I were to deal with that land apart from the thoroughfare, and its advantages by its connection with that street, then the loss would be very serious indeed.

3114. *Chairman.*] Then we come to this; that although you have no doubt that the character of this elected Board in future, and the tastes and views of the chairman will be æsthetic, and that therefore the control, as far as æsthetic control is concerned, will be as efficient, and work as well in the future, as you believe it works as established at present, still it might be the reverse of that?—It is a very distant probability.

3115. That is another thing, but that it might be is clear; one never knows what the character of the next Parliament will be, when a dissolution takes place, although you may assume and reason; what might lead to this change might be this, ignorance and impatience of taxation, and the increase of rates beyond what people will bear; therefore you have no positive, certain security that in any Board such as yours you would have that æsthetic control which is required, though I grant you that you probably would have it; there was once, was there not, a control exercised by Parliament over your Board?—Yes.

3116. That control rested in Parliament by the original Act, did it not?—There was no control by Parliament; there was simply a certain veto exercised by the First Commissioner of Works.

3117. I think, if I recollect right, the Act was to this effect; that if the Board proposed an expenditure above 50,000 *l.*, the First Commissioner had a veto; and if the expenditure exceeded 100,000 *l.*, it was to be brought before Parliament, which practically gave Parliament a veto; that was so, was it not?—Yes; so far as that veto is concerned, it was perfectly idle; there is no improvement costing 50,000 *l.* for which the Board

Board must not go to Parliament for compulsory powers.

3118. But in the original design of Parliament, when your Board was first constituted, it was the intention of Parliament, was it not, that there should be a double control over your Board; in the first place that when the expenditure exceeded 50,000 *l.* the control should rest with the First Commissioner of Works, but that where it exceeded 100,000 *l.* the matter should be brought before Parliament?—I do not know what the intention of Parliament was except from the English of the Act itself, but I know what the intention of Parliament was in 1858.

3119. But the effect of the original Act was, as I have stated, was it not?—I believe it was so.

3120. Then we may presume, may we not, that it was the intention of Parliament that there should be those two controls?—It was a new body, and Parliament had no experience of the action of the body, and probably it was a precautionary measure and was deemed so by Parliament at the time; but in 1858 the working of those vetos was found to be so mischievous, that Parliament without hesitation repealed the whole of them, and from that date the actual works of the Board commenced.

3121. Parliament did require such control when your Board was first constituted, and subsequently in 1858 that control was done away with; was that so?—Yes, three years afterwards.

3122. Mr. *Layard.*] Let me put to you a case illustrative of the questions which the noble Chairman has put to you; the case of Finsbury Park is one in point. There, before the Act abolished the power of which the First Commissioner was possessed, he would have had a veto upon the construction of Finsbury Park; you deposited in the Office of Works a plan of that Park, approved by the First Commissioner of Works, and he would have had to see that you carried it out; by the Act of 1858 the power of the First Commissioner was taken away, and consequently he has now no control over it; is that so?—He would not have had before.

3123. Then what was the use of depositing the plans with the Office of Works?—It was a mere act of courtesy, I suppose.

3124. I think, under the Act, the First Commissioner had to approve of the plans for the park, had he not?—I think it might arise in this way; not because the First Commissioner had any veto over the plans proposed by the Board, but it was agreed under Lord Palmerston's Ministry, that the Government should contribute 50,000 *l.* towards that park. The Bill was brought in by some parties representing Islington and Finsbury, and other parishes, and was ultimately accepted by us. The Government were not able to carry the Vote in question, and the whole cost, therefore, of that park was thrown on the funds of the metropolis. It was not deemed right to make any alteration in the general description, because the Board had the power to take either 250, or 230, or 130 acres, as the case might be, and therefore the matter went on. The Board adopted the Bill, and under the first arrangement the Government having to contribute 50,000 *l.*, might be the reason why those plans were originally deposited in the Office of Works.

3125. *Chairman.*] The principle upon which you ground your position that this controlling power, which you say should exist, should be vested in the municipality or in your Board of Works, is the principle of taxation and representation; is it not?—Yes, consistently with the legislation of the country. In the case of Edinburgh, or Glasgow, or Liverpool, or any other large towns applying for powers, no question whatever is raised; they are left to their local Acts to carry out their improvements, Parliament clothing them with the necessary power.

Sir *J. Thwaites*, Knt.

7 June 1869.

3126. That is to say, you rest it on a double ground; you rest it upon the ground of representation and taxation, and you rest it on the ground of analogy: you say that it ought to be general, and that the metropolis and those other towns should be in the same position; that is to say, you put the metropolis on the same footing as Glasgow and those other places to which I shall come presently; from your own evidence to-day we learn, and we see with our own eyes, that the great evils of which we have to complain in this metropolis are not owing to the mismanagement of the Board of Works in the construction of their works, such as the Thames Embankment or the building at Barking for the sewage; but as regards railway stations, railway bridges, and gas works possibly, waterworks possibly, and St. Thomas's Hospital, as a semi-public corporate body; as regards obtaining control over railways, and over this description of property, and giving that control to your municipal Board of Works, the principle of taxation and representation would wholly fail, would it not?—Not at all; it directly applies. The object of controlling railways is to protect the interests of the general ratepayers as a principle, and sustain something like public taste in the construction of their works; surely the ratepayers, and the ratepayers only, I was going to say, or at least principally, are interested in that matter; and their representatives are the proper controlling body.

3127. No doubt they are interested æsthetically; but, unless they are shareholders of the railway, there is no question of rating in the railways; and unless they are members of St. Thomas's Hospital, there is no question of rates and representation with regard to St. Thomas's Hospital; resting your claim upon the mere question of rating would not affect those semi-public bodies who are not ratepayers, in that way, such as the railway and St. Thomas's Hospital, would it?—Supposing that they propose to erect a building generally offensive to the public eye, or in such a position as to interfere with light and air, or to interfere with the rights of adjoining owners of property, or to prevent any public improvement being carried out; all those questions, although the building itself is in the hands of a semi-public body, might seriously affect the public ratepayers, and the representatives of the ratepayers are of course the parties to step in and protect their interests.

3128. Still the two things would not be exactly on the same footing; between control over works which are paid for by the ratepayers, and control over works which are not paid for by the ratepayers, there would be a manifest distinction, would there not?—In degree, the ratepayers are interested in those works; and the proper parties to protect them are their own representatives.

3129. You say that the other ground upon which you rest your position is, that the practice should be universal, and that London should be treated precisely in the same way as Glasgow, or Edinburgh,

Sir *J. Thwaites*, Knt.

7 June 1869.

Edinburgh, or any other city; do you not think that there is a manifest distinction between the metropolis and other cities in the kingdom?—Yes; and I have endeavoured, before Committees of this House, to urge the distinction between the metropolis and the country, and to draw a conclusion from that distinction—referring to the manner in which the metropolis of France, for example, or Belgium, or of any other country, is dealt with—that the State should contribute something towards the embellishment of the metropolis, and not throw the whole burthen upon the ratepayers. But a different opinion prevails in this House, that the metropolis must take care of itself, and that it would be unjust to contribute towards the metropolis and refuse to contribute towards Manchester. That is a process of reasoning which one can understand; but, assuming that that principle is to prevail, and that the metropolis is to be put on a par with other towns, do not degrade the metropolis by instituting a controlling body here which you allege is not necessary elsewhere; because by this means you do degrade the citizens of the metropolis most frightfully, and I think that there would be such a protest against it as would make any law which was passed nugatory.

3130. You say that it would degrade the citizens, but might it not be the reverse; might it not be that the metropolis is so important that control ought to be exercised there, and that the best security and advice which can be got should be obtained to embellish the metropolis or guard against its being rendered unornamental, and while as regards provincial towns, you leave them to take care of themselves?—Every man in the metropolis would feel himself personally lowered in his own estimation, if he were deemed less capable of exercising municipal functions, than a citizen of Edinburgh, Glasgow, or Liverpool. That is my point. I do not carry my term of "degradation" beyond that.

3131. That would depend very much upon the constitution of such controlling body, would it not?—I venture to believe, that if the controlling body were formed to-morrow, the first thing that it would do, would be to disagree amongst its members. I believe that one would set up one style of architecture, and one another style. I am speaking in the presence of the present president of the Institute of Architects, and of the late president; but my experience proves to me, that a body so constituted would never work harmoniously; independently of which, the result, I think, would be to increase the cost of the works, and thereby to produce so great an amount of irritation, and so strong a feeling on the part of the ratepayers at their being put to such a cost, that the committee would not last very long after it was appointed.

3132. Mr. *Beresford Hope.*] Do you speak from experience of the taste-members of your own Board, when you speak of quarrelling over styles of architecture?—No; but I am speaking of gentlemen selected by their different qualifications as having different views. The Honourable Member knows pretty well the quarrel about different styles of architecture.

3133. The Honourable Member for Bath and myself may disagree, but we never quarrel. Why would there be a greater risk of quarrelling in such a body as I am on with him and yourself, in debating the styles of architecture, than in the Metropolitan Board of Works?—I think such bodies, as a rule, are subject to public opinion, and I do not think they would carry out a discreditable design, or if they did carry it out, I do not think they would carry out another, but I think that the gentlemen selected would be so much superior to the general public, that they would disregard public opinion, and exercise their own control, and we might have a contradiction in designing, and a result in cost which might be very unsatisfactory to the ratepayers, apart from the principle upon which I object to it, believing that it is unsound.

3134. *Chairman.*] Reverting to the question of principle, you are in favour of treating London in the same way as the cities in the provinces, with regard to local self-government; but at the same time you admit that you would wish to see London treated differently, and certain sums given from the public exchequer to great metropolitan improvements. I suppose that you consider the Thames Embankment such a general improvement as would have justified such an expenditure?—I have given up all hope of securing any contribution from the national revenue.

3135. Without indulging in hopes, have we not certain facts to go upon, which facts show that although London is in a different position from Glasgow, Edinburgh, or any other city which you may choose to mention, we have great public buildings erected in London at the public expense, such as the National Gallery, the British Museum, the public offices, the Jermyn-street Museum, the Law Courts, and the Kensington Museum?—Yes, no doubt.

3136. So that those buildings being either existing or in process of erection, and large sums of money being voted by Parliament, amounting to millions, you have the fact that as regards buildings, London is in a totally different position from Glasgow or Leeds?—Yes; only the Committee must remember, as regards the most costly part of those buildings, there is no revenue derived by the metropolitan authorities, because those buildings are not rated.

3137. No doubt, but we are upon the æsthetics of the question now. I do not say that they are all ornamental; some of them are, and we assume that they all ought to be. Now we come to parks. Is it not the case that you have parks in this city which are maintained, not out of the metropolitan rates, but out of imperial funds?—Yes.

3138. And that a very large sum of money is voted annually for the maintenance of the parks in London?—No doubt.

3139. So that besides the public buildings to which I have referred, you have another manifest distinction between the metropolis and between those local towns; and that therefore the principle of equality so far does not hold; that is so, is it not?—To that extent, no doubt.

3140. Lord *John Manners.*] To take the case of Edinburgh and the case of Dublin, are there not parks and gardens, and large public buildings maintained at the imperial expense in those two cities?—Clearly.

3141. *Chairman.*] Might I deduce from that, that Edinburgh likewise, as being the capital of Scotland, and Dublin, as being the capital of Ireland, are also exceptional cities, and that what holds good with regard to Leeds and Liverpool does not hold good on that principle with regard to Edinburgh and Dublin; but that Edinburgh, and

and Dublin, and London are, as a matter of principle, on the same footing; and that therefore there might possibly be a control exercised in Edinburgh and in Dublin, as in London?—But no control has ever been sought to be exercised over Edinburgh and Dublin, and I say none ought to be over London.

3142. Mr. *Layard.*] There being public buildings erected in London at the public expense, that is to say, out of the revenues of the empire, would it not be just that there should be some control exercised by the Government as representing the public, to prevent those public buildings being disfigured?—The Government do exercise control directly.

3143. For instance, take Trafalgar-square. Parliament has decided that that is the most advantageous site in the metropolis for the National Gallery, on account of its peculiar position at the end of Whitehall, and they have consented to the expenditure of a considerable sum of public money to secure that site; the Metropolitan Board of Works, or a private company, might obtain power to carry a railway right across Whitehall, where it joins Trafalgar-square, and utterly destroy the site, might they not?—I think that is really inviting a difficulty, without dealing with the present one.

3144. It is perfectly possible, is it not?—Yes.

3145. Mr. *Buxton.*] It could not be done without the consent of a Committee of Parliament, could it?—No; and you cannot touch Government property without the consent of the Crown, and without the Crown having control over it; and the Crown can make its statement to the House, and stop any Bill before its third reading.

3146. Mr. *Layard.*] The First Commissioner of Works would have no *locus standi* before a Committee upon a railway bill, would he?—But he can stop the Bill if it is to spoil a public building; you would not suggest that there should be a Committee of Taste to control the Office of Woods and the Office of Works, in the exercise of their duty.

3147–9. I do not mean spoil the building, but spoil the site, and consequently the effect of the building, after a large sum of money has been expended in order to secure it; you put the same case as regards your street in Southwark; you say you have gone to a great expense in building a street which is to be an architectural ornament to that part of London, and your design is completely destroyed by railway bridges over which you have no control; are not the two cases analogous?—If I had been the representative of a Government Department, I should have stopped that Bill, but being a much weaker vessel, the Bill passed, and the mischief was done.

3150. *Chairman.*] What occurred to your street might perfectly well occur with regard to a public building; that is to say, that a railway might go in a line so as not to interfere with the building itself, but that they might have one of those hideous structures which would destroy the effect of the building, without Parliament knowing anything about it, because the designs would not be laid before Parliament; might not that be so?—Surely Parliament before they sanction a line should make some inquiry; that is one of the difficulties with which we have to contend; of course unless we are to exercise confidence in the House itself, there is no protection.

3151. Mr. *Layard.*] As regards the Metropolitan Board of Works, the railway would be compelled to deposit in your office their plans; with regard to the Office of Works there is no such objection; therefore the Government have no knowledge whatever of what is taking place, and a Bill might pass through Parliament without the First Commissioner knowing anything about it, might it not?—That is very easily remedied by amending the Standing Orders, and making it compulsory upon all promoters of Bills to deposit plans in the Office of Works; that was the difficulty we felt, and we obtained the alteration in question.

3152. *Chairman.*] Supposing that it appeared desirable that some other body beside the Metropolitan Board of Works should take cognisance of these matters in London, I suppose you would naturally turn in the first place to the Office of Works?—I cannot turn to any, because I protest against all.

5153. Lord *John Manners.*] You have had experience of the control of the Office of Works, have you not?—I had two years on the gridiron.

3154. And you did not find that to work satisfactorily?—Very much the contrary.

3155. *Chairman.*] You have had the control of the Office of Works as hitherto constituted, have you not?—Yes.

3156. The constitution of the Office of Works is so far purely Parliamentary that the First Commissioner is appointed by the Government of the day; though, of course, they have been very fortunate hitherto in the person appointed, it does not necessarily follow that the person appointed to that office is a person who has turned his mind specially to the objects for which that office exists?—It may undoubtedly be an unsuitable appointment.

3157. Do you think that, considering the important charges which are placed under that office, of the supervision and erection of all those Government buildings, it would be desirable to make that office more important in the State than it hitherto has been, and to have something like a Minister of *Travaux Publics*, as they have in France?—If that question is put for the purpose of leading to an expression of opinion on my part, that a similar action should take place here to that which takes place on the Continent; then I should say by no means strengthen the Office of Works.

3158. Do you mistrust the Office of Works as connected with those æsthetic matters as hitherto constituted?—Pardon me; I make no allegation against the good taste of the Commissioners present or past, but I protest against their exercising powers which, under our form of Government and ideas of representation, they have no right to exercise, and which would be very strongly resisted if attempted.

3159. Supposing that it was determined by Parliament that there should be a control exercised over those works in the metropolis, and supposing that Parliament had determined that it was not to be your Board exclusively that was to exercise this control, should you think that a good Board might be constituted by adding to the present Office of Works a sort of council of advice?—I do not think a good Board could be formed, and that is my difficulty; when I say a good Board, I do not mean that it is impossible to find able men in the metropolis capable of exercising their taste, but I do not think that considering the peculiar taste they would have to

Sir *J. Thwaites*, Knt.

7 June 1869.

exercise, and the body they would have to control, a good working board would be formed; I think it would be brought to a dead-lock in less than two years.

3160. You do not think that either on the representative principle, on the *ex officio* principle, or the nomination principle, or a mixture of any two, or all three of those principles, a Board could be found which would work satisfactorily?—How are you to get another representative board of that class? You have one already.

3161. Why should you not, if you want a representative board, take certain bodies already existing, such as your own, the Metropolitan Board, the Institute of Architects, the Institute of Civil Engineers, and the Royal Academy; and why should not each of those bodies send a representative to form a sort of council of advice like the Indian Council, to assist the First Commissioner of Works, as the Indian Council assists the Secretary of State for India?—The cases are not at all analogous; the Government of India is one thing, and exercising an architectural taste in the metropolis is quite a distinct and separate thing. I believe in the first place, that they would disagree amongst themselves, and I believe, in the second place, that the cost of the metropolitan works would be greatly increased by the exercise of their veto. I might give you one instance; under this veto, Sir Benjamin Hall invited three engineers to prepare a plan for the main drainage; they did prepare a plan in competition with our own, and when that plan was presented, several discussions took place, and we very carefully took out the quantities, and estimated the cost of that particular plan produced by the nominees of the Crown, and the cost of that plan would have been eleven millions, whereas we have successfully carried out the main drainage for four millions and a half.

3162. Supposing that, instead of being nominated by the Crown, you took *ex officio* members, I should assume of course that the first *ex officio* member of such board would be yourself, or the chairman for the time being of the Metropolitan Board; taking then the President of the Institute of Architects, the President of the Institute of Civil Engineers, and the President of the Royal Academy; would not such a body as that give you, as regards æsthetics, a probability that the best advice which could be got in the kingdom would be on that board?—No doubt individually they would be very competent judges, but as to their practical working I have no faith whatever.

3163. You assume that everybody will quarrel except the Metropolitan Board of Works?—No; I think gentlemen having a special notion of their qualifications for a particular thing will assert that notion with more perseverance than representatives at a public board who might yield to public opinion; they would consider themselves rather above public opinion.

3164. Why should they assert their opinions with more perseverance than men chosen by districts to go to a certain board, and who are sent there to give effect to the views of their constituents?—I can just imagine that board meeting to deliberate upon a particular matter; a member takes a strong view in one direction, and another one of them says: "Now, gentlemen, we are constituted by reason of our special qualifications for this particular work; we are not to be led by public opinion, but to lead public opinion, and therefore we will force this upon the representatives of the metropolis, whether they will or not, and regardless of cost.

3165. The head of such a board would be a Government officer, and the metropolis has a considerable number of Members, has it not, in the House of Commons?—Yes.

3166. Of course the final decision would rest with the head of the board, the First Commissioner; this would only be a council of advice, whose opinion the First Commissioner would follow or not, as the Secretary of State for India does, if he thinks it right; but do you not think that the feeling of the ratepayers, and the representatives of the ratepayers, at present would be very much considered by the Ministry of the day?—It is just possible that he might take an exactly opposite view to the one which we might entertain, and he might say, "I feel it my duty conscientiously to carry out that particular view. I pay very great attention to the representations which you have made to me, but I have statutory responsibility upon me, and I must therefore report that such and such a thing ought to be done." I can quite conceive a conscientious Minister so reasoning, and reasoning against the interest of the ratepayers.

3167. You think that such a board would not work, and that the only board which would work would be your own board with this extended power: but supposing it were thought right that the Government should have a control, do you think that an *ex officio* board, such as I have referred to, would be better than a nominated board?—That is merely a choice of men. In a nomination they would be selected for their special qualifications, to which your Lordship has referred; and if they were *ex officio*, no doubt from the very position they occupy we have a right to assume that they would be properly qualified.

3168. By taking *ex officio* men in that position, who are chosen by the bodies whom they represent, you would, to a certain extent, have a representative element, in the first place in yourself, as the representative of all the ratepayers in London; in the President of the Institute of Civil Engineers you would have a representative of the Civil Engineers; in the same way with the Royal Academy, and in the same way with the Institute of Architects; so that you would have representative men of all the bodies sitting *ex officio* on the board, who ought really to have a voice on all those questions?—My vote would be as one to seven, or 10, or 12, as the case may be. Supposing the Engineers, as a body, were to take a notion into their heads to make a great display, now that they had metropolitan funds to deal with, and not a joint stock company, and were to say, "We will exercise our influence to induce the First Commissioner to carry out a particular form of structure," which was very expensive, or not at all appropriate, the ratepayers would be involved, of course, in very great additional expenditure, the carrying out of which might not even be as ornamental as a less expensive work.

3169. Why do you assume that the First Commissioner would be guided solely by the opinion of the Engineers?—I think that the First Commissioner, as an ordinarily modest man, calling eight or ten professional men to advise him, must necessarily be guided by their opinions.

3170. I have only mentioned four?—I think, if

if four eminent men were called in to advise the First Commissioner of Works, he must be a strong-minded man, and a man of very strong prejudice, unless he were to give way to the representation of those four highly professional and educated scientific men.

3171. Mr. *Layard.*] Would he not be pulled up by the Honourable Member for Westminster, and other metropolitan Members, if he threw away the ratepayer's money?—I would rather trust the Honourable Member for Westminster than many professional men.

3172. Viscount *Sandon.*] But the four nominees would all have to concur in order to overpower you?—No, I understand the proposition to be, that the veto is to vest in the First Commissioner, but that he is to have so many professional gentlemen of standing and known taste to advise him; I say the First Commissioner, unless he disregarded the opinion of all his council, must give weight to the statements made to him by the gentlemen selected for this special qualification; I am sure I would not serve on such a commission, unless one's opinion really had fair consideration; no gentleman having any self-respect would serve on such a body without his opinion carried a certain weight.

3173. *Chairman.*] Then, as you would naturally give the best advice you could to the First Commissioner, the First Commissioner on his responsibility would depart from that advice; but the probability is, that that advice would be so reasonable that he would generally follow it; of course you would not, in establishing such a board, lay it down as a *sine quâ non* that whatever the majority of that council, as I have called it, decided, the First Commissioner was *ipso facto* to follow?—I did not apprehend that, but still I think they would have such an influence with the First Commissioner that his individual opinion would be absorbed in the opinion of his council.

3174. Do you not think it very possible, that in the Parliamentary changes that take place, this office being made an office of convenience or necessity by the Minister of the day, sometimes it might be desirable on occasions to have such controlling power, so far as it is a moral control, over the action of the First Commissioner?—I do not think he ought to exercise any control at all except in his own department; the moral control would amount to nothing.

3175. Lord *John Manners.*] You have been asked as to a sort of Board of Advice to the First Commissioner, two members of which are to be the Presidents of the Institutes of Architects and of Engineers; am I right in supposing that those officers change very frequently?—The election of the President of the Institute of Architects is triennial, and of the President of the Institute of Engineers biennial.

3176. Therefore, out of this Board of four or five, two would necessarily be subject to very frequent change?—Constant change.

3177. I believe, at the present moment, we have the advantage in this Committee of two gentlemen who have been, or one of them is now, the President of the Institute of Architects; am I right in assuming it to be a matter of public notoriety, that the advice which they would respectively tender to the First Commissioner of Works in matters of taste would probably be diametrically opposed the one to the other?—It might be so.

3178. Mr. *Beresford Hope.*] Do you not think that your objections to such a board would be rather mitigated than increased by the infusion of new blood by rotation on such a body?—Nothing can mitigate that which is radically wrong in the foundation; the principle is wrong; it is quite clear that it is contrary to our accepted notion, and our perpetual practice of representation and taxation.

3179. May I ask whether your objection to the Board of Advice is based on your fear that it will be too strong or too weak?—My objection is not to the individuals composing that board.

3180. But with regard to a body constituted generally, as the noble Chairman has sketched out, do youthink it would be too strong or too weak?—It is quite clear that it would be stronger than the whole body of the representatives of the metropolis, because it would put a veto upon every one of their acts.

3181. The committee's advice would not necessarily be followed?—The First Commissioner, as its mouthpiece, would pronounce the veto.

3182. Would you prefer a First Commissioner to a certain extent kept straight by people who know something of the subject, or a First Commissioner appointed for political exigencies, and having his own uncontrolled way?—Nothing has got crooked, as far as I can understand, in the works of the Metropolitan Board. All around I hear nothing but general satisfaction with the works that the Board have carried out. Now what is to be put straight?

3183. The vexatious interference of railroads with Southwark-street, such as you quoted to us, and in which we sympathize with you, and help you in such a fight; do you think that a Minister, supported by a Council of Taste, could stand by you, and assist you in the case?—I think all we want is the ear of The House, when we make representations in the interest of the general public, and I venture humbly to submit that is the duty of The House to give effect to that which is represented as for the interests of the general public and the protection of the general public.

3184. Then may I, without offence, ask why such a representation was not successful in the case of Southwark-street, which you constructed?—I think Parliament, like every other body, has to learn, and I think examples such as that to which the honourable Member has referred, and to which the noble Chairman has referred to-day, will tend to educate The House itself up to a conviction that the representations made by the Metropolitan Board, or by public authority on these matters, should receive attention, and that they should be clothed with sufficient power to control that state of things.

3185. Mr. *Layard.*] Do you think that the relations between the First Commissioner of Works and the Chairman of the Metropolitan Board of Works could be improved, and that they could be put more intimately into connexion with each other, so that yourself, for instance, the chairman, might receive the official support of the First Commissioner?—Nothing can improve the relation between the First Commissioner and myself now; everything is most agreeable; everything that I desire to be done is listened to with very courteous attention; and all the help that I want in Parliament is given me.

3186. Our private relations have no doubt always been of the most amicable character, but I am speaking now of official relations; do you think

Sir *J. Thwaites*, Knt.

7 June 1869.

think that the two could mutually aid each other in any way?—I should be very glad indeed to have the First Commissioner an *ex officio* member of the Metropolitan Board.

3187. *Chairman.*] Do you think it would be a degradation to the Metropolitan Board, or to the ratepayers of the metropolis, if their chairman were to be an *ex officio* member of the consultative body of the First Minister of Works?—I do not think it would degrade the chairman to be associated with a number of gentlemen; but the Board itself would feel annoyed, I am quite sure, because a proposition was made some 12 years ago that the construction of the main drainage should be put into a commission of three; I was to have been one of that commission, and I then strongly protested against the principle, and it was given up.

3188. Mr. *Tite.*] Have you not found, as a matter of fact, in the various appeals that you have made to Railway Committees, in which you have stated that you have failed, very great jealousy on the part of those Committees to listen to the opinion of anyone, however officially placed, and a great tendency to act upon their own judgment, as led by counsel, or misled by counsel?—I think, so far as I am able to judge, that in Committees of this House the advice of any special counsel would be rejected, and Committees would assert their independence.

3189. Do you recollect the course taken by Sir Robert Peel, when he was chief Minister, with regard to all the railways then approaching London, and that he referred the whole of the Bills to Mr. Laing, and that I believe universally the reports which Mr. Laing made were rejected by the various Committees to which the schemes were referred?—The Committees of the House, as I am aware, are extremely jealous of any interference of that kind.

3190. *Chairman.*] I think you said, in answer to the honourable Member for Bath, that you think the recommendations of such a council or committee would not be attended to by a Committee of the House?—I hope I did not say that; I saw there was a jealousy on the part of Committees of this House with respect (probably I ought not to use the term "dictation," but) to suggestions to the Committee, who meet for the purpose of receiving evidence, and deciding for themselves; but I believe, from my experience of Committees of this House, that they would not favourably receive the report of such a commission.

3191. But supposing that concurrently with the establishment of such a council, it was in the Standing Orders that no railway could commence its operations, or be considered to have got its Bill, until it has satisfied this council that its works in the metropolis would not be injurious, but rather otherwise; do you think there would be any difficulty about it?—If your Lordship means that the House itself, in order to aid its judgment, and the judgments of its Committees, chose to appoint a dozen gentlemen who would be a kind of referees, who should examine those Bills, and report for the information of the House, of course I have not a word to say upon the matter.

3192. I mean that, as at the present moment, before a railway Bill can pass, its promoters have to satisfy the Committee that it has so far fulfilled the requirements of the Board of Trade and the referees, so, in addition to those requirements, it would have to satisfy the Committee that the First Commissioner and his council were satisfied with the elevations, and the nature of the works that were going to be conducted in and through the metropolis?—Upon that I am unable to give an opinion.

3193. Mr. *Tite.*] With regard to the disinclination of Committees of the House to adopt the advice of other men, you have spoken of your own case in Southwark-street; did you yourself give evidence upon that subject?—I do not remember at this moment.

3194. But the undesirableness and inconvenience of crossing that great street in the offensive way in which it was done, was strongly expressed, was it not?—Yes.

3195. Do you recollect any steps being taken with regard to the bridge across Ludgate-hill?—Yes; that was rather a matter within the jurisdiction of the Corporation of the City of London; but I remember the difficulty the Corporation had in getting anything like an ornamental bridge put there.

3196. Do you know that the architect of St. Paul's, Mr. Penrose, who is a very learned man, and myself, then president of the Institute of Architects for the first time, did our best in every possible way to prevent this bridge being built at all?—I think that was so.

3197. And that we argued conclusively that there was no necessity for the bridge, but that the railway could have been sunk under the street?—Yes, a little higher up.

3198. And that the Committee and also the board of the railway rejected the advice so given by two men possessing some claims to confidence, and the result has been exactly what we see in this photograph?—Yes.

3199. As to the constitution of the ratepayers' board, do you think it is the proper authority to determine upon those questions. I apprehend that that is resting mainly upon the irresponsibility of any council or appointed body of this kind to the public, except through the influence of public opinion, to exercise such a function in the metropolis?—That is one of my objections.

3200. Whereas you think that men elected (as I am) by a public election at certain intervals of three years, being thereby thoroughly responsible to the large district which they represent in the Metropolitan Board, would have a more useful influence than the mere nomination or representation that was brought about by the machinery suggested by the noble Chairman?—Clearly.

3201. Mr. *Buxton.*] Do you think that if the ratepayers of the metropolis select anyone to be at the head of the works done in the metropolis, the whole management of those buildings ought to be in the hands of those whom the ratepayers have elected, both as regards their appearance and in every other respect?—Yes.

3202. You think that is most consistent with the principles of popular self-government, do you not?—Clearly.

3203. And that if, on the other hand, those whom they select to carry out their works were subject to a council of the kind that has been proposed to-day, there would be no more security that that council would really exhibit very great taste than if it was left in the hands of those chosen by the ratepayers?—I think not.

3204. And that they would be almost certain to run the ratepayers into very great expense?—I think

I think that would be a tendency of the council.

3205. And that it might also interfere with the way in which the works were carried out?—Yes.

3206. Do you think, upon the whole, that it would be safer for the metropolis to have its buildings in one hand rather than in the hands of one set of functionaries to carry them out, and of another set to see that they were made beautiful in appearance?—I think so. If Parliament is satisfied that some additional control is necessary to protect the metropolis from that which we all concur in considering as an eyesore and mischief, then I think it ought generously to trust the representative body, and if that body fails to carry out its duties creditably, then to discuss the question of appointing a Council of Taste, or whatever it might be called.

3207. *Chairman.*] In the case of railways, and of St. Thomas's Hospital, it would not be the same body that would carry out the works, if you had the control, would it?—I am speaking of the representative body being the body to control.

3208. The Honourable Member for East Surrey said that it was desirable that the same body who had the control should have the carrying out of the works; the great evils we have found in the metropolis are the railways and those semi-corporate establishments, such as St. Thomas's Hospital, where, if the control were given to the Metropolitan Board of Works, it would not be the Metropolitan Board which would have the carrying out of those works?—No doubt my objections would apply with greater force in improvements which we should have to carry out at the expense of the ratepayers.

3209. Those works being only a small portion of the works in the metropolis?—I go farther, and I say that, if rule or control is necessary to be exercised over works other than those which are carried out by us, we, the representative body of the metropolis, ought to have the control.

3210. Mr. *Cowper.*] You do not consider that it would be any hardship upon a railway company to require them to include among the engineering plans which they submit to Parliament other designs representing the architectural elevations of stations, and bridges, and other works placed in prominent positions in the Metropolis?—I think not.

3211. Would it be any hardship that they should be required by Act of Parliament to observe those architectural elevations unless they were dispensed from the necessity to observe them by some competent and special authority?—I cannot answer that question, unless I know what is to be the authority.

3212. Supposing that that authority were the Metropolitan Board of Works, what professional assistance are the Metropolitan Board able to command, in order to assist them in deciding upon any points of difficulty which may arise?—In the first place we have very able permanent officers, and it is a matter constantly occurring that we are seeking the advice of first-class men in every profession (lawyers, engineers, or architects, as the case may be) to assist us.

3213. The Board have a paid professional architect; have they other officers with a professional knowledge of architecture besides their ordinary architect?—Yes, two or three; we have four members of the Board, I think, who are architects.

3214. At the present moment you have four members of the Board who happen to be architects by profession; but do I understand that there are four architects engaged on the staff of the Board?—There is the principal superintendent architect, and there are several subordinates who are architects by professional training and education.

3215. The architect of the Board is entirely occupied by that business, and does not perform any private work, I presume?—None whatever.

3216. As the control of the engineering works of railways is entrusted to the Board of Trade, because that department has under its direction military engineers, who have special qualifications to decide upon engineering points, would it not be right that control over architectural construction should be entrusted to persons specially qualified in that branch of knowledge?—We have both engineers and architects; the engineers are capable of exercising judgment upon the engineering question, which I apprehend has reference to the strength of girders and general construction, and the architect is competent to pronounce as to questions of general taste.

3217. Supposing that Parliament were to desire that the advice, in regard to these architectural elevations, should be given by gentlemen who are considered to stand at the head of the architectural profession, would the Metropolitan Board have any power of applying to them for their assistance?—I do not know to what assistance the Right Honourable Member refers.

3218. Supposing that Parliament should say that it was desirable, in regard to the public taste, that there should be a body of persons who would exercise a control over the architectural elevations of railway companies and other works, and that Parliament should consider that the architectural advice should be the first which the country could supply, that best assistance might be obtained in the form of a commission, which the Executive Government would assemble for the purpose of giving an opinion upon those cases; but if the authority were given to the Metropolitan Board, is there any way in which the Metropolitan Board could go beyond the boundary of their own staff and of their own number, and get the highest architectural opinion of the country to aid them?—Clearly, and that is what they are constantly doing.

3219. Is there any case where architects of eminence have been called in, to aid the Metropolitan Board on architectural questions, independently of surveying, and the purchase of property?—The necessity has not arisen for calling in any architect to advise us upon purely architectural questions, but surveyors we are constantly employing; for instance, Mr. Pownall, and others of the highest class.

3220. When you are speaking of the responsibility of the Metropolitan Board, I presume that responsibility is merely the responsibility which they have to the ratepayers who have elected them; have they any responsibility to Parliament?—No, entirely to the ratepayers.

3221. So that if Parliament were to desire that the body who should exercise control in these very difficult and delicate matters should

Sir *J. Thwaites*, Knt.

7 June 1869.

have that resposibility which is obtained by being represented in Parliament, and through Parliament, and its debates being controlled by public opinion, that sort of responsibility would not be conferred by the Metropolitan Board of Works?—If Parliament deemed it necessary to extend the powers of the Board of Trade for the purpose of dealing with the sort of difficulties which have been suggested, we can have no desire to interfere with it. All I protest against is a general council of supervision and control over a representative body in this metropolis. The Board of Trade does now exercise a certain control over railways.

3222. The Board of Trade now exercises control with regard to engineering circumstances; the Board of Trade are not competent to exercise any opinion that would be received with deference upon architectural questions; but would it not be right, to carry out the analogy, that another body, having functions analogous to those possessed by the Board of Trade in this respect, should be constituted, and should obtain the best possible architectural professional opinion?—If the Board of Trade, in the interests of the general public, desired the addition to its powers, not only with regard to engineering matters, but general architectural control, I have not a word to say against it; I have no objection to it at all. It is quite a distinct thing from that which has been suggested.

3223. You would not feel that any slight was thrown upon the Metropolitan Board if these powers of which we have been speaking were given to the Board of Trade; but you do feel a strong objection to its being given to the Office of Works; is that so?—No; I had the broad proposition put to me, whether, not only with regard to railways, but to all public and semi-public buildings, there ought not to be a committee or commission of taste to control and determine what should be the architectural elevation of these buildings; and against that I very respectfully entered my protest. With regard to the railways, which is only a part of the question, the Board of Trade exercising, as they do now, a control on the engineering part, I do not see why they should not exercise control, so far as the elevation of those bridges is concerned, to secure the points to which I have referred in my evidence.

3224. So that it would not seem to you in any way unconstitutional that whenever the powers of Parliament were invoked for the creation of any large building in a prominent position in the metropolis (whether it be a railway station, or a gas works, or any other building of importance, but it being always a building which required the intervention of Parliament) Parliament should create a board of advice or of control, to which all questions relating to architectural elevations should be referred?—Yes; the greatest possible objection.

3225. Then you draw in your own mind a distinction between railway works and gas works in that respect?—I draw a distinction between the general public buildings of the metropolis and railways, which are partly under the control of the Board of Trade now. The simple extension of architectural control and that of engineering is an extension which would not be offensive to the representatives of the metropolis; but if you travel beyond that, and include hospitals and other buildings of that kind, it becomes quite another question.

3226. Is the distinction which you draw, a distinction between those buildings which depend upon a private Act of Parliament, and those buildings which do not require an Act of Parliament?—There are very few buildings requiring an Act of Parliament to erect; gas works undoubtedly do, because they seek powers of control over the public streets and roads; but all ordinary buildings are carried out either by chartered bodies, or public bodies, or individuals, who do not require to come to Parliament at all.

3227. Then as far as the case is concerned in which Parliament gives fresh powers, what is proposed would be no very great innovation, would it?—Pardon me; I think that, so far as I have explained with regard to railways, there would be no objection; but there may be questions of gas works in which the ratepayers are deeply interested.

3228. *Chairman.*] Do you consider corporate property public or private?—Of course, so far as the Corporation are concerned, it is as sacred as my freehold, or the freehold of any other body.

3229. Mr. *Cowper.*] Then I understand that your difficulty arises in such a case as that of the St. Thomas's Hospital, where, though they are a corporate body, and have got possession of a very large piece of land, they had no occasion for a special Act of Parliament, and were, as you consider, in that respect in the same position as any private firm, or any private individual?—Clearly.

3230. In cases of that sort, do you think that it would be right to give to the Metropolitan Board a control over the taste, and the mode of carrying out the elevation of the buildings?—I think there would be a great advantage in having some control, so as to ensure something like uniformity; there is often a great difference in public buildings in the same street.

3231. Then the power which would be exercised would be analogous to that which the Crown exercises over houses built upon its property, or which the Marquis of Westminster exercises over the houses which he allows to be built upon his own land, would it not?—Yes.

3232. In those cases, the elevation is defined; and you think that some power analogous to that might be placed in a public body?—Yes, for public buildings.

3233. Mr. *Beresford Hope.*] Is not the objection which, as you have expressed, you feel at the interference of a minister or a council, to a certain extent removed, provided that the interference would not operate against the works of your Board, but would help your Board against interference from other quarters, as from railways?—As to the question which the Right Honourable Member has put to me with regard to railways, I think the power of the Board of Trade might usefully be extended (and to that we could take no personal objection whatever) so as to give them the control over the elevations of bridges over our public streets; but if it is a question of building gas works, or works of that kind, in which the ratepayers are deeply interested, we should object.

3234. Would you object to some department, either the Department of Works or the Board of Trade, having some power of interposing when gas

gas works might be erected in proximity either to some great building which you are erecting, or which the Government was erecting?—I suppose it would be competent for the Chief Commissioner of Works to make a representation to Parliament.

3235. But if it were not competent, would you be unwilling to see his hands strengthened in that respect?—We should not be unwilling to be assisted, either by the First Commissioner or by any other body; but we should be unwilling to be controlled in any way as indicated.

3236. Lord *John Manners.*] As to gas works, have there not been instances in which the First Commissioner for the time being did interfere and prevent gas works being placed in proximity to a public park?—Yes; in which we worked in entire accord.

3237. Mr. *Beresford Hope.*] Then, I gather, that your objection is rather to an undue control of you by the First Commissioner, than to a general superintendence exercised by the First Commissioner to prevent the metropolis being disfigured by the speculations of private individuals, or private companies?—So long as the First Commissioner does not tread upon the functions of the representative Board, we can have no objection, but we should be glad to have his co-operation; but immediately he gets within the sacred precincts of that which we deem to be our territory and our jurisdiction, then there would be the strongest objection, and I fear that objection would prevent the Act giving him such powers from working, because no Act of Parliament, unless it carries with it the consent of the people, will ever work.

3238. I suppose that, imbued as you are with sound constitutional principles, you would be as jealous of the First Commissioner interfering with the prerogative of the corporation of the City of London, as with your own?—Happily it is a matter upon which I have not to express any opinion.

3239. Supposing it to be a case of some metropolitan improvement on the borders of the City on which you and the corporation should get water-logged together, would you hail with satisfaction the advent of an arbiter, such as the First Commissioner might be, to keep the peace?—No; we would rather fight it out, as we have done before, and go on harmoniously afterwards. I should not at all like the idea of the First Commissioner interposing to determine what we should do, or what the corporation should do. I should feel for the corporation, just as I have felt for my own Board in that respect.

3240. *Chairman.*] With regard to that portion of the embankment which is between Blackfriars Bridge and the Temple, you came to a dead lock there in consequence of there being no power to decide between you and the railway company, did you not?—We came to a dead lock because Parliament refused to give us the power which we sought, of a control over that railway, and I remember our counsel, Mr. Phinn, stating to the Committee that we should be brought to a dead lock, and predicting the very class of thing which has occurred, namely, that the railway company might not be able to raise the funds, and that the works of the Board might be stopped; but if we had had twenty councils it would not have helped us out of the difficulty.

3241. Unless along with the council you had power given to the Commissioners?—No power on earth could have helped us, because the railway company has not the money. Parliament refused to give us control over them, and simply gave them five years to complete the works. The condition of the money market rendered it impossible for them to raise the funds, and we are brought to that position. You might have called the spirits, but they would not obey, and therefore the council would not have helped us in the matter, and we are still in that difficulty.

3242. Mr. *Beresford Hope.*] Then I gather, from what you have said, that the observations which you have made to the Committee have special reference to the prerogatives and functions of your own body, and that they imply no objection, on your part, to an interference on the part of the Minister with work of a semi-public character, for example, with St. Thomas's Hospital, or the new Royal Academy, or some of the great hotels of London, and buildings which possess an architectural and public character, though they are not technically public buildings?—I think, so far as the public buildings in the possession of the Crown, built and sustained from the national exchequer, are concerned it is quite clear that the Crown has now all the control which is necessary (and we have not, nor do we desire to have any control) with regard to all other buildings. If a control is to be established, that control ought to vest in the representative body.

3243. *Chairman.*] Do you think it would be possible to exercise control over such a building as an hotel?—That is entirely for Parliament to determine. I do not think it ought to be carried to a vexatious extent.

3244. We will not discuss as to where this controlling power should rest; whether it should rest with the Board of Works, or with the Office of Works, with or without a council; but supposing it is decided that there should be some control over public and semi-public buildings existing somewhere, do you consider that that control could be extended to private buildings, except in so far as it is now exercised by your Board, either under the Building Act or under your own Act?—It would never do to have a conflicting jurisdiction. You must have either one thing or the other.

3245. It is not a question of conflicting jurisdiction; but do you think that you could legitimately establish a public control in any way over private buildings?—It would be a conflicting jurisdiction, because under the Building Act and under the Metropolis Local Management Act, we are exercising now considerable control over private buildings.

3246. But your control at present over private buildings, does not extend to the architecture, or to the form of those buildings, does it?—No, but supposing that the First Commissioner were to step in while we were exercising our powers, and determined the particular form of elevation, it would be most inconvenient to have two public authorities.

3247. But do you think that it would be right or just, or possible, in a city like the metropolis, that there should be a body, whether the office of works or any other body, which should have the power to say to a man, "You must not only erect your building according to the Building Act, but it must be of such and such a form, and the architecture shall be so and so," and prescribe what

Sir *J. Thwaites*, Knt.

7 June 1869.

the architecture of the building should be?—No. Of course waiving the question whether it should be exercised by A or B, I think that any power of that kind must be guarded, so that it does not become vexatious to the general public; and if it is to be a control, it clearly ought not to be a control as to the internal arrangements of a man's house, so that if he chooses to have a library on the right hand-side, and a dining-room on the left, a public office should step in and reverse it.

3248. Do you think you could get that control as to private buildings?—With reference to the elevation, I think not.

3249. Have they that control in Paris?—I think they have.

3250. That is to say, I have a plot of ground in Paris and I wish to build a house upon it, cannot I build that house according to the designs of my own architect?—I think not.

3251. Do you think that the people of this country would stand such an interference as that?—I think there would be a very strong objection to control over the elevation of private buildings, and if given, it ought to be given under certain restrictions.

3252. Mr. *W. H. Smith.*] Do you think that it would result in an improvement in the metropolis if such a control was given?—In some respects it would, but I do not attach much importance to it.

3253. Would it not tend to uniformity, as in the case of the public buildings in Paris?—Yes.

3254. *Chairman.*] At any rate you have no hesitation in saying that the control should be exercised over what I have called public and semi-public buildings, such as railway erections, hospitals, the buildings of chartered bodies, &c.?—Yes, if a reasonable line can be drawn; it is difficult to determine what is a public or a semi-public building.

3255. With regard to private buildings, do you think that that line could be reasonably drawn also?—I think probably it might; I have no strong opinion that control would have very much advantage over the private houses of the metropolis; we are improving in taste every year.

3256. I suppose you have no doubt in your own mind really that Parliament would never give such power?—I do not think it would.

3257. Lord *John Manners.*] When a public body comes to Parliament and asks for compulsory powers, do you think it would be fair for Parliament to say, "We will have a control over the architectural character of the building you propose to erect"?—I think so.

3258. Mr. *W. H. Smith.*] Do you, in fact, find a considerable amount of irritation at the present time as to the power which the Metropolitan Board of Works possesses?—Yes, it is a power which would create a great deal of irritation if extended unreasonably, or capriciously exercised.

3259. At the present time is considerable discretion requisite on the part of the officers of your Board, in exercising the control which is necessary in the public interest?—Quite so.

3260. *Chairman.*] I will read to you a passage of the existence of which you were perhaps not aware, in the Report of the Royal Commission on the Royal Academy of 1863, of which commission Lord Stanhope was the chairman; in that report there is the following passage, "It appears to us that the advantages of the Royal Academy and of its council, on the plan that we suggest," (that was the addition of lay members) "would be extended to many other points besides the improved working of the academy itself. There has been a general, and as we think, a well-founded complaint during many years of the bad taste and utter want of system which have been displayed in the construction of our public buildings; that construction has depended too much on the rapid succession of the several politicians who have filled the office of First Commissioner of Public Works, and on the conflicting votes which, according to their recommendation, have been passed by the House of Commons. It seems to us that the Royal Academy, constituted in the manner we have proposed, and comprising within it some men of approved ability, not themselves artists, but entitled to pass a judgment upon art, would form a valuable permanent council of advice and reference in all matters relating to the fine arts, public monuments, and buildings. We think that the successive advisers of the Crown, far from feeling any jealousy of such advice, would welcome it with pleasure, as relieving themselves from questions of great embarrassment, and as likely to be conducive to a more satisfactory result in architecture and in art, than has at present been found attainable." Has your attention ever been directed to that passage?—I have not seen that, but of course that passage has reference to the Government First Commissioner seeking advice to enable him to pronounce upon any particular plan, it does not extend to other matters which are out of the hands of the Government.

3261. But having reference to that point to which it does extend, and putting aside the question of its being the Royal Academy, do you think that, irrespective of the position of the Metropolitan Board of Works, the views there stated are sound?—They may be sound, as to that to which they point, namely, that the First Commissioner should take counsel of eminent men, before he determined to spend the public money in the erection of a building, the elevation of which may not be architecturally good.

Monday, 14*th June* 1869.

MEMBERS PRESENT:

Mr. Bentinck.
Mr. William Cowper.
Sir Charles Dilke.
Lord Elcho.
Mr. Gregory.
Mr. Beresford Hope.
Mr. Alderman Lawrence.
Mr. Layard.
Lord John Manners.

LORD ELCHO, IN THE CHAIR.

The Right Hon. WILLIAM COWPER, a Member of the Committee; Examined.

Rt. Hon. *W. Cowper*, M.P.

14 June 1869.

3262. *Chairman.*] YOU for some time, as we are aware, held the office of First Commissioner of Works; that was, I believe, subsequent to the arrangement by which the original department was broken up into the Office of Works and the Office of Woods?—Yes.

3263. As First Commissioner, did you find either that you had any power of controlling the Metropolitan Board of Works in their expenditure, and in the character of their buildings or works, or that you had control over railways or any other public or semi-public buildings or works which were erected or done in the metropolis?—The First Commissioner of Works, in virtue of his office, has no such power. He may, as a Member of Parliament, exercise an influence in Parliament, but not in virtue of his office.

3264. In virtue of his office he has no control whatever, either over the expenditure or the works done by the Metropolitan Board of Works in this metropolis?—None.

3265. Some such power did exist, did it not, under the original Act which constituted the Metropolitan Board of Works?—Yes. In the original Act it was provided that the Metropolitan Board of Works, before expending a large sum of money, should submit their plans to the First Commissioner of Works, and obtain his approval, previously to applying to Parliament.

3266. Had you anything to do with the original Act which constituted the Metropolitan Board of Works?—No; that was in the time of Sir Benjamin Hall.

3267. You found that no such power existed; to what extent did your power, as First Commissioner of Works, extend in the management and control of public buildings?—The First Commissioner of Works has only control over the buildings which he is empowered to erect; for instance, any building on the Crown property, which is in his custody, or any buildings for which grants of money are obtained by Parliament, are managed under his responsibility; but there is no statutory or administrative authority over buildings in the metropolis which are erected by other persons independently of his department, and no such power exists in any department of the Government.

3268. You have heard the evidence which has been given before this Committee, by which, corroborated by what you have just stated, it appears that there is at the present moment in this country no controlling power over public works, or semi-public works in this metropolis, such as railways; do you think it desirable that there should be some such power vested somewhere?—It appears to me that when Parliament is called upon to pass an Act giving compulsory powers to anybody, such as a railway company, to erect any buildings in prominent parts of the metropolis, or other great towns of the country, it would be well if Parliament were to subject the ornamental buildings which would be erected in consequence of that Act of Parliament to some control.

3269. When you speak of ornamental buildings, I presume you do not confine that to buildings which are intended to be ornamental; but you refer also to such useful things as railway bridges and viaducts, which may or may not be made ornamental?—When a railway company apply to Parliament for a Bill to give them powers, they are bound to produce the plans relating to the construction of the proposed works. I think it would be a good thing if they were also bound to submit plans, showing the elevations of any buildings which they intended to erect in prominent parts of the town, and that those plans should be referred to a body of persons who should be authorised to report upon those plans in the same way in which the Board of Trade reports upon the engineering plans. Those reports would be presented to the Committees of the Houses of Lords and Commons, who had to consider the railway company's Bill; and thus there would be a security that the elevations of their stations and bridges, and other works should be carefully considered by the Committees as well as their engineering works. The Committees could hardly be expected of themselves to go into the details of what should be the elevation of a building, such, for instance, as the Charing Cross Railway; it would hardly be expected that a Committee should of themselves minutely examine the elevation which was intended for that building; but if those designs and elevations had been submitted to the First Commissioner of Works associated with a council, the Committees of the Houses of Lords and Commons might have had before them a question upon which they could easily have decided, as to whether they ought or ought not to have agreed to the present elevation of the railway station or bridge; and also, as many Bills contain provisions by which the Board of Trade and its officers are, after the passing of the Bill, to exercise some discretion over the works of the company, it might without inconvenience, be also provided that the

Rt. Hon. *W. Cowper*, M.P.

14 June 1869.

body which I have assumed to have been created should also, after the passing of the Bill, exercise some discretion over the elevation of the buildings to be raised. The body which I should think would be most convenient would be the First Commissioner of Works, with certain other persons associated with him for the purpose. The First Commissioner of Works could hardly be entrusted alone with a duty of this sort, which is rather a judicial duty than a duty of the Executive Government; and Parliament would naturally expect that with the First Commissioner of Works should be associated some persons who would share with him the responsibility which might be involved in interfering with the plans of the railway company. One would look out for some body in the country who were especially versed in artistic subjects, to provide the council which might be associated with the First Commissioner. I should suggest that, if the Royal Academy and the Institute of Architects were to be taken as the bodies who might most properly intervene in this matter, they should be each of them required to elect one person to be associated with the First Commissioner for this purpose. In the course of the evidence before this Committee, it has, I believe, been suggested that the presidents of those societies should be the persons to be associated with the First Commissioner; but I think that it would be a preferable plan to allow them to elect any members they chose from their own bodies. For instance, the President of the Royal Academy is selected generally for his proficiency as a painter, and for his being able adequately to represent the Royal Academy upon public occasions; but there might be at many periods men belonging to the Academy who would more fitly represent it for the especial purpose of considering the buildings which should be erected in the metropolis; and I think it would be wise to give to the Royal Academy the power of selecting that person whom they might think most capable, from his experience, from his having given his attention to the subject, and from his professional knowledge, to exercise a sound discretion upon those points. So, also, I should think that the Institute of Architects might often prefer that they should be represented in this matter by one of their members who did not happen at the moment to be the president of the society. I think that another member of such a council should represent the Metropolitan Board of Works; and there again I do not see that there would be any advantage in restricting the choice necessarily to the chairman; but I think it would be better to leave the Metropolitan Board either to nominate their chairman, or, if they preferred it, to nominate some other person belonging to their board, who had their confidence and who had special architectural knowledge, or a special interest in the embellishment of the metropolis. The Metropolitan Board of Works would represent the ratepayers of London; the First Commissioner of Works would represent the Crown and the feeling of the nation at large; and those who were selected by the Royal Academy and the Institute of Architects would represent the special architectural knowledge which one would desire to be brought to bear on this subject; a body so constituted might, I think, sufficiently command the confidence of the country and of the public to be entrusted by Parliament with the duty of endeavouring to prevent any such disfigurements of the metropolis as have recently occurred by the railway stations, by the Lambeth Bridge, and by the various viaducts which have crossed the various districts of London.

3270. It has been suggested that the Institute of Civil Engineers, as those questions refer very often to engineering matters, should likewise be one of the bodies which should, either through their chairman *ex officio*, or their president, or whatever he may be called, or through an elected person, be represented on this Board that you have suggested; what would be your view as to that?—The object we have in view is to secure an artistic consideration of great public works. It does not appear to me that the College of Civil Engineers would specially take that view of the subject; but they might rather take the view which is ordinarily adopted by the engineer of a railway company, who is thinking only of good construction and economy, and who is not thinking of the artistic effect which his buildings may produce upon the public eye. Therefore I should not see any reason why we should select representatives from the civil engineers.

3271. There are, no doubt, many instances of engineers who combine the two qualities to which you have referred; for instance, the design of the wall of the Thames Embankment, and the artistic work, is the result of having an engineer, Mr. Bazalgette, who has had the management of the whole thing; do you not think it probable that if such a council as you have suggested were appointed, knowing that it was for the purpose of controlling such artistic matters as you have pointed out, they would probably select from their body some person whose mind had been, more or less, given to that branch of engineering?—Although the deformities of which we complain have all been created by engineers, still it must be remembered that those engineers were acting on behalf of a body of persons whose money they wished to economise; therefore it is quite possible that when engineers were requested to view the matter in the light of the public taste, they might then be of use and rather prevent any economical disfigurements of the metropolis.

3272. *Qua* those engineering matters, any opinion given or decision come to by such a council would further be strengthened in the eyes of the public, would it not, by the fact that they had a distinguished engineer upon the council, who was master of all matters of construction?—Certainly.

3273. So that possibly it might be an advantage to consider whether the College of Civil Engineers should not have a representative on this Board?—Yes; I think it is a matter for consideration.

3274. Do you feel that if you had power to control those buildings and those railway works, while you were in office, aided by such a council as that, the position which you held as First Commissioner of Works would be an advantage to the public, and that you could have guarded against the evils which we all more or less deplore?—Yes; if any Parliamentary powers had been given to myself, when First Commissioner of Works, associated with the persons to whom I have alluded, I have no doubt that before the Charing Cross Station was erected it would have been quite easy, in communication with the engineers of the company, to provide all that was necessary for the company, and for the purposes

of

of the passengers who went by the railway, without erecting what is so very unsightly in that part of London; and that it was the absence of any such power to which we must attribute the very disagreeable character of that edifice.

3275. You saw the photographs which were exhibited to this Committee the other day, representing the two bridges of Blackfriars; one, the railway bridge, which has been constructed, and which has one elevation; and the other, the bridge being constructed by the Corporation of the City of London, which has a different elevation and a totally different style of architecture; the levels of the two bridges being different, and the distance between them being 20 or 30 feet. There is another photograph before you now; that is a very striking instance, is it not, of the result of the absence of such a controlling power, and as favourable an instance (if I may use the word) of the evils resulting from the present system as can well be presented?—It is very desirable that there should be some authority who could consider with the railway engineers and with the City, the possibility of so combining the two bridges as to produce a better effect than they do now; but of course that controlling authority would not have the power of interfering in any marked way with the engineering requirements of the railway.

3276. Might it not have been possible, instead of having two bridges in juxtaposition, the one destroying the effect of the other, even supposing both to be architecturally ornamental, perhaps to have combined the two as has been done at Newcastle where you have the railways at one elevation and the roadway at another below it, not only without inconvenience but with great advantage to the general traffic?—I do not think that the position of the railway would have enabled it to be placed so high above the bridge for ordinary traffic as to have produced a good effect. One must remember that unless the railway bridge was in a very considerable degree higher than the bridge for ordinary traffic, it would make the bridge for ordinary traffic very disagreeable.

3277. However the two might possibly be combined, as at Dresden and other places, might they not?—At all events, without being able now to speak of what might have been done, it is clear that there was no authority which could do anything in the matter.

3278. There are instances abroad, are there not, of this combination of the railway bridge and an ordinary bridge?—Yes; one simple way of combining them would be to widen the same bridge, and allow half of it for the railway and half for the ordinary traffic.

3279. At any rate, it would be better than what we see, would it not?—That is, perhaps, a very general proposition; but I will agree that something might have been better than what we see.

3280. You are aware, perhaps, that this subject was brought, to a certain extent, before the Royal Commission on the Royal Academy?—Yes.

3281. And you are aware that there was a suggestion contained in their report that there should be some such council established as that which you have sketched out?—I think the object of that report of the Royal Commission was to control the action of the First Commissioner of Works himself rather than to control the action of other bodies independent of him; and I see a good deal of difficulty in the adoption of their recommendation. The First Commissioner of Works, as an executive officer, must be left with a responsibility quite independent of any other body, or any other person outside the Government. The executive functions of the First Commissioner of Works are, first, to carry out the pleasure of the Crown with regard to Royal property; and, secondly, to administer the grants from Parliament which have been committed to his charge, and I think that in neither of those branches of his work could he properly be controlled by such a council as the Royal Commission on the Royal Academy seem to wish should be appointed to control his discretion.

3282. But, irrespective of such control, the passage to which I have referred shows, does it not, that, in the opinion of those gentlemen, with Lord Stanhope at their head, who inquired into the constitution of the Royal Academy, there existed a necessity for something being done to avoid those defects in public buildings which we all see, the suggestion being that it might, perhaps, be done through the Royal Academy?—I rather thought, from my recollection of the Report of the Royal Commission on the Royal Academy, that they were not speaking of buildings erected by railway companies, but rather of ordinary public buildings; and I do not think that their remarks were as well founded as they would have been if they had applied to such erections as the Charing Cross Railway Station.

3283. You would not propose, then, that this council of advice, the constitution of which you have suggested to the Committee, should control the will of the First Commissioner of Works further than advising, and it would be for him, on his own responsibility, to act in what way he thought best?—I see great difficulty in establishing any body to control the First Commissioner in the exercise of his own functions in his own department; but if Parliament should give to the First Commissioner of Works a power which he does not possess at present, namely, of controlling other buildings which are not at present in his department, then, I think, it would be very important that he should have associated with him some body of skilled persons who would command public respect.

3284. But that he should not be bound precisely by their opinion?—I think that he ought to be bound by their opinion if the powers allotted to him are of this deliberative and *quasi* judicial character. If he is to be controlling other bodies, perhaps, he ought not to be left free to act in spite of the opinion of the council that were associated with him.

3285. Then you would give him no discretionary power in that respect; but whatever the opinions of the majority of his council were, you consider that he must be bound to follow them?—I think he should have a voice with the members of the council, but that he ought not to be allowed to decide absolutely against the united opinion of the council that were associated with him.

3286. At the last meeting of the Committee, when Sir John Thwaites was examined, this same subject was under discussion, and he expressed a very strong opinion that any controlling power, such as you have suggested, over public works in the metropolis should be exercised solely by the Metropolitan Board of Works; do you agree in that opinion?—I cannot see any foundation for his

Rt. Hon. *W. Cowper*, M.P.

14 June 1869.

his assertion; the matters of which we are speaking now are not matters involving an expenditure of the rates of the metropolis; and, therefore, his argument that the Metropolitan Board of Works represents the ratepayers hardly applies. What we want is a body who would represent the public opinion in artistic matters, of the community at large, and that representation of artistic opinion might be got in a better way than by resorting to the Metropolitan Board of Works who are elected, not for that purpose, but as business men to manage the municipal affairs that are entrusted to them.

3287. So that you do not admit the argument that, because the Metropolitan Board of Works have the management of certain works which are constructed by rates raised from the metropolis, they ought to have charge of all artistic matters in the metropolis, overruling railways, gas works, waterworks, or any other public or semi-public undertakings?—The assertion seems to me to arise from a misunderstanding of the question at issue, and I think it unfounded.

3288. With regard to their works, such as the Thames Embankment, do you think that there should be some control (naturally you would not think, from what you have said, that the control should rest in the First Commissioner of Works) over the Metropolitan Board of Works itself?—I think that when the Metropolitan Board of Works go to Parliament for powers, Parliament may then fairly impose, as a condition of granting those powers, that the works to be erected under the powers of the Act should be subject to such a council as that to which I have alluded, with regard to its artistic effect and architectural appearance only. The Metropolitan Board of Works would be consenting parties to this transaction if it was imposed as a condition of their obtaining a Bill; but I should not propose that any general powers of interference with them should be given independently of the action of Parliament.

3289. You would not propose, then, that there should be any controlling power generally established by Parliament over the Metropolitan Board of Works, such as existed in their original Act?—Yes, I think that that would be a very proper provision to resume. I do not think that the repeal of those provisions was a wise proceeding. The difficulty that had arisen between the Metropolitan Board and the First Commissioner of Works, who was then controlling the works of the main drainage, arose, not from any necessity of the case, but from what I consider to have been an error of judgment in the case of the First Commissioner of Works, in assuming to himself the proposal of the scheme, and sending it to the Metropolitan Board of Works to accept or reject it. If the first Commissioner of Works had then kept within the provinces allotted to him by the Act of Parliament, I do not think the difficulty would have arisen which led to the repeal of that provision, and I do not see that it need arise when any First Commissioner of Works simply confines himself to the position of either approving or rejecting the plans submitted to him.

3290. Then, would you think it desirable that there should be a general pecuniary control, such as originally existed?—The control that first existed was in cases of very large works, which did practically require the assistance of Parliament. It did not extend to the ordinary operations of the Metropolitan Board of Works, but only to those great and special cases. It applied only to works that were to cost above 100,000 *l.*, and I think that provision ought to be renewed.

3291. There was another provision, that works above 50,000 *l.* in cost were to be referred to the First Commissioner for his consent; would you renew such a provision?—I think it would be expedient.

3292. You would have some control exercised by both the First Commissioner and by Parliament, or through Parliament by the First Commissioner over money expended in great public works?—Yes; considering that in this matter the First Commissioner of Works is representing the public, and the public interest, it is very desirable that in those very large works he should have the power of examining the plans of the Metropolitan Board of Works, and of objecting to anything that may seem to require to be stopped. I must remark that the veto exercised by Lord Llanover over the proposals of the main drainage rate were manifestly of use; for the first plan that he objected to would, according to his statement, have left the sewage of the town within the area of the metropolis; and in consequence of his objection, the Metropolitan Board of Works altered their plans, and carried the sewage to such a distance that it could not be brought by the reflux of the tide within a position where contagion might be spread by means of it.

3293. Do you think that it is an admissible argument that the metropolis stands precisely on the same footing in these matters as Leeds, or Glasgow, or Liverpool, or Manchester, or any other town?—I think all civilised countries acknowledge that the capital of the country stands upon a somewhat different footing from provincial towns; that the whole nation at large have an interest in, and a right to be heard upon, questions relating to their metropolis; but at the same time, I think that what is good for the metropolis might also be extended to other very important towns in the country.

3294. But still there is an important difference between the position of the metropolis and those other towns to which you have referred. In the metropolis you have public buildings of an ornamental character under a Government officer, which are erected by Parliament out of the taxes of the nation, and which are controlled by the First Commissioner of Works. In like manner you have parks which are a great ornament to the metropolis, which are under the control of the First Commissioner, which are kept in the beautiful state in which they are by money annually voted by Parliament; and I think a very large sum of money is annually voted for those purposes, is it not?—Yes; and most Englishmen feel that the honour of the country is more involved in good taste being exhibited in London, than in any provincial town; just as in France a Frenchman takes his pride in the beauty of Paris; and I think that in no country do the inhabitants ever place their capital quite upon the same footing as a provincial town.

3295. So that, even supposing the principle to be assumed as sound that those who pay the taxes should have the sole control in the various towns, and through their own municipal officers chosen by themselves, that principle requires to be very considerably modified when it is applied to the metropolis, especially here where there are

are large sums of money spent under the control of a Government officer for the benefit of that metropolis?—It seems right that in any very great work in the metropolis, the voice of the nation should be heard as well as the voice of the ratepayers.

3296. Do you think that Parliament should exercise any control through the First Commissioner of Works, and through such a council as you have suggested, over chartered bodies who come to Parliament for powers to erect buildings such as St. Thomas's Hospital or any other such buildings?—Certainly. I think that where a large building of such importance, owing to its position in the metropolis, or in any other large town, is to be erected by means of an Act of Parliament, the opinion of those Commissioners, and of the First Commissioner of Works, should be submitted to the Committees of both Houses of Parliament.

3297. I have in my hands a petition which has been sent to me for presentation to the House of Commons by the Society of Arts, in which they state: "That your petitioners, feeling regret at the want of system in the metropolis, whereby the erection of buildings of a public or *quasi*-public character is left to chance, and a comparison of London with other European capitals is rendered very discreditable to British administration, and having reason to apprehend that the site afforded by the Thames Embankment in the metropolis was in great jeopardy of being destroyed for want of a proper system of administration, appointed a committee, consisting of Lord Henry G. Lennox, M.P., Lord De L'Isle and Dudley, the Right Honourable W. Cowper, M.P., Lord Elcho, M.P., Baron Major De Rothschild, the Honourable Auberon Herbert, A.J., Beresford Hope, Esq., M.P., William Boxall, Esq., R.A., Sir William Bodkin, Assistant Judge, Hyde Clarke, Esq., A. Baillie Cochrane, Esq., Henry Cole, Esq., C.B., Lieutenant-Colonel E. F. Ducane, Sir C. Dilke, Bart., M.P., W. R. Drake, Esq., F.S.A., Lieutenant-Colonel Ewart, R.E., Edwin W. Field, Esq., Alderman Sir T. Gabriel, W. H. Gregory, Esq., M.P., Earl Grosvenor, M.P., G. F. Hayward, Esq., W. Haywood, Esq., John Locke, Esq., M.P., the Right Honourable Lord John Manners, M.P., J. E. Millais, Esq., R.A., S. Redgrave, Esq., Lieutenant-Colonel Scott, R.E., G. E. Street, Esq., A.R.A., Seymour Teulon, Esq., Sir Charles Trevelyan, K.C.B., Richard Westmacott, Esq., R.A., the Rev. Henry White, Joseph Whitworth, Esq., LL.D., Watkin Williams, Esq., M.P., to report upon the best way of dealing with the Thames Embankment, so that the opportunity might not be lost of making this noble site conducive to the embellishment and improvement of the metropolis"; you were a member of the committee which drew up this petition, were you not?—Yes.

Rt. Hon. *W. Cowper*, M.P.

14 June 1869.

3298. And it was in consequence of feeling the want of some such control as you describe the want of, that that committee was appointed, and that this petition has been drawn up?—Yes.

The Right Hon. AUSTEN HENRY LAYARD, a Member of the Committee; Examined.

3299. *Chairman.*] Do you think that a distinction can or cannot be drawn between the position of the metropolis in this matter of the raising of rates and the spending of those rates on public works by municipal bodies and of other towns in the kingdom?—I think that such a distinction can be drawn. In the metropolis a large amount of public money is spent upon public buildings; and I think it very desirable that the Government, through the First Commissioner of Works, should have the power of preventing even such a body as the Metropolitan Board of Works, elected by the ratepayers, from interfering with, and disfiguring such buildings.

3300. I presume you rest the distinction between the metropolis and other corporate towns in the kingdom on the grounds which have been stated by the Right Hon. Member who was last examined?—I am not inclined to go quite so far as the Right Hon. Member. I think there are objections to giving the Government, through the First Commissioner of Works control over the cities and towns in the kingdom, with perhaps the exception of Dublin and Edinburgh, which two cities may be looked upon as capitals; there would be some difficulty in controlling erections in other towns and cities in the United Kingdom, unless, as the Right Hon. Member suggested, they interfered with or disfigured public buildings which had been erected at the public expense, and under the sanction of an Act of Parliament.

3301. But I referred to the grounds of the distinction drawn by the Right Hon. Gentleman, the Member for South Hants, between the position of corporate bodies in London, with reference to these matters, and corporate bodies in other cities, those grounds being that the public money is voted by Parliament for parks, and for great public buildings, and that as to the metropolis, where the Houses of Parliament assemble, the whole nation is more interested, perhaps, in the ornamentation of that city than of any other?—I quite agree with the Right Hon. Member on this point.

Rt. Hon. *A. H. Layard*, M.P.

3302. Do you feel yourself, as First Commissioner of Works, that it is desirable that such controlling power should exist?—Most certainly.

3303. Do you think that that controlling power could rest with the Metropolitan Board of Works?—I think not. I have instanced a case in the House of Commons, no doubt an extreme case, but not an impossible one. Various sites have been recommended to Parliament for a new National Gallery, and some of those sites, I believe, to have been better than the site actually chosen. However, Parliament decided that the site in the metropolis best calculated for a National Gallery was Trafalgar-square, and that they were willing to incur a very largely increased expense in order to secure that site. To-morrow a private company might take power to construct a railway, say, uniting Charing Cross with the west end of London, and they might carry a railway bridge right across the entrance to Whitehall, near where Northumberland House stands, and completely disfigure a site which the nation has already agreed to pay a very large sum of money to obtain. The First Commissioner would have no power to stop a Bill for this purpose, except by an appeal to the House of Commons, unless he had a *locus standi* against the Bill, which at present he has not. The Com-

Rt. Hon. *A. H. Layard*, M.P.

14 June 1869.

mittee are aware that any company proposing to construct works in London are obliged to deposit their plans with the Metropolitan Board of Works, but they are under no such obligation to deposit plans and elevations with the First Commissioner. The consequence is that, officially, the First Commissioner has no knowledge of any buildings or works to be constructed. If public property under his control is to be purchased or actually interfered with, of course he receives proper notice, but if no property which is under his control is affected, he virtually has no knowledge whatever of what is about to take place, and a Bill might slip through Parliament, and, indeed, has sliped through Parliament, in which most serious damage may be done to public sites and public buildings.

3304. We see around in all directions the evils of the want of such a power, and you think that that power should be vested in the First Commissioner of Works; would you have him assisted by any council in such matters as were suggested by Mr. Cowper?—When I came into office this state of things appeared to me to be most unsatisfactory; and it is my intention to propose to Parliament in this Session to amend the Standing Orders which now compel the deposit of plans with the Metropolitan Board of Works, so as to extend those Standing Orders to the First Commissioner of Works. That, I think, is the first step to be taken. That would give the First Commissioner an opportunity of seeing what was about to be done, and of applying to the House or a Committee to check anything which he might think detrimental to public buildings, or a positive disfigurement to the metropolis. Perhaps, hereafter, I might be disposed to recommend some further measures to Parliament, but at the present moment I think that that is the easiest way of meeting the difficulty, and I think that it is one which Parliament might be disposed to adopt.

3305. When you speak of public works, do you confine it to railways?—To railways, gas works, water works, and all other public works in the metropolis.

3306. Works by chartered bodies?—I include all those works, the plans, sections, and elevations of which are now deposited with the Metropolitan Board of Works.

3307. Would you extend that to the Metropolitan Board of Works?—Plans must now be deposited with the Metropolitan Board.

3308. But would you extend that power so as to make it compulsory that the Metropolitan Board should submit their plans to the First Commissioner?—I should, certainly.

3309. Would you propose that?—I should propose it, but whether I should propose that this year or not I am not prepared to say.

3310. But are you clearly of opinion that the Metropolitan Board should be subject to certain control in those matters, like any other persons entrusted with the execution of public works in the metropolis?—Decidedly, on the ground I first stated, namely, the distinction between the metropolis and the other cities of the kingdom.

3311. Do you yourself approve of the First Commissioner being aided in any way by a council of advice in such matters?—I think it would be a great advantage if the First Commissioner could have a body of this kind which he could consult. It would be rather difficult to decide upon what particular questions he should seek the advice of a council. The First Commissioner has a great many duties to perform irrespectively of the control over public works; and, of course, with regard to those duties he would not think it necessary, and ought not to be obliged to consult any council. As regards the utility of such advice, I may state that I have already turned my attention to that subject. It is very desirable that the Royal sepulchral monuments of this country should be better looked after and preserved; and in order to obtain a list of such monuments, and the advice with regard to them of the persons best qualified to give it, I have written officially for information to the Society of Antiquaries. Again, when I first came into office, I consulted my honourable friend the Member for Bath, who is a Member of this Committee, as regards the Institute of Architects, of which he is the president, to ascertain whether they could assist me in various matters connected with public buildings in London; and I hope that he will be able to suggest some scheme which may enable me to avail myself of the assistance of that body. I do not at all object to the view taken by the noble Lord in the chair and by my right honourable friend, as to the desirableness of having a council composed of the representatives of such learned bodies; and I should suggest that a member of the Society of Antiquaries might well be added to it, if the First Commissioner has ancient public monuments under his care.

3312. Would you be of opinion that the views of this council should rule, or that the First Commissioner of Works should have a discretion, as to whether he would or would not follow the advice of such council?—I agree with my right honourable friend that it would be very inadvisable to let a First Commissioner throw responsibility upon a council; he alone should be responsible to Parliament. If his council were, as it has been suggested, like the Indian Council, he would still be responsible to Parliament, and I think that it would be very undesirable to give him the power of shifting that responsibllity upon anyone else.

3313. Are you in favour of doing away with the responsibility of the Minister, so that whatever the council decided the Minister was bound to do?—By no means.

3314. Mr. *Bentinck.*] Supposing the council as suggested to be constituted, in your opinion ought it to be obligatory or compulsory on the First Commissioner to consult that council upon any question with reference to a new building or other ornamental work, or should that power of obtaining their opinion be only discretionary with him?—I think it ought to be left to the discretion of the First Commissioner; I think he always would avail himself of the opinion of such a council. It would be rather difficult to make it obligatory upon him to consult them, because I think if you do so you take away from him the responsibility which he ought to have.

3315. Then, as I understand you, you would constitute the council, and then you would vest a discretion in the First Commissioner to consult them or not as he thought proper?—I think so.

3316. *Chairman.*] Your view generally as I gather is this: that supposing such a council to be formed, no matter how, whether by election or by the appointment of *ex officio* persons, it would be in the discretion of the First Commissioner

sioner to submit things to them for their opinion, and then, having got their opinion, he would act upon it or not, according to his discretion, he being responsible of course to Parliament for everything which he did for either following or neglecting their advice?—Yes.

3317. They being constituted I presume under a new constitution of your office by Act of Parliament?—It has been suggested that the council should be similar to that of the India Office; I do not see how it could be quite similar; the Indian Council, in the first place, is a paid council; the one proposed would not be and could not be a paid council. Again, in the India Office the council is consulted on all matters; in fact, it is, as the Committee are aware, the Secretary of State in Council who acts, and the council are divided, I believe, into sections for the management of all business. I do not think that such a council as has been suggested could advise the First Commissioner of Works in all his duties, but only in certain cases, when, for instance, public buildings were to be erected; and in those cases it ought to be left optional with the First Commissioner to consult this council; I think that he ought to be left to name this member of it, and he might be empowered to do so by an Act of Parliament.

3318. You are aware that the original control that was exercised by Parliament through the First Commissioner, and through itself over the Metropolitan Board of Works, has ceased; have you any instances that you could adduce of that control having at one time been beneficially exercised over any public undertaking by the Metropolitan Board?—I agree with the Right Honourable Member for South Hants, that the control originally given by Parliament was a wise provision, and I think that its repeal was not wise. I may mention as an illustration, the case of Finsbury Park, which was alluded to at the last meeting of the Committee. An Act was obtained for forming Finsbury Park in 1857. That Act was evidently obtained with the assent of the First Commissioner of Works, because in the preamble of the Act it is stated, "Whereas the Chief Commissioner of Works and Public Buildings has considered and approved the plans for the said proposed park." Those plans, so considered and approved, were deposited in the office of the First Commissioner; and I presume that Parliament was induced to pass this Act partly because those plans had been approved of by the Chief Commissioner of Public Works and Buildings, and because Parliament intended that he would see that they were carried out; but those plans have not been carried out. The Metropolitan Board of Works, instead of making a park according to the terms of this Act, have reduced the size, and have taken or intend to take from it a considerable portion of land, the most valuable part of that park, as it is alleged, to use it for building purposes. The north of the metropolis is much opposed to this. I have received one of the largest deputations that I ever had the pleasure of receiving, and a memorial signed by some 14,000 of the most respectable inhabitants, including the clergy of all denominations, and the leading people, of the district against this proceeding on the part of the Metropolitan Board. But I am advised that I cannot control the Metropolitan Board, as my power to do so was repealed by the Act of 1858; and that, although the Act of 1857, which enables the Board to make this park, seems to enact that the park should be laid out according to the deposited plans, I have no power whatever to interfere, and the Metropolitan Board of Works can do what they think fit.

Rt Hon. *A. H. Layard*, M.P.

14 June 1869.

3319. Is that in consequence of the repeal of the controlling power originally intended by Parliament to be exercised?—So I am advised.

3320. Do you know of any other instance?—I cannot at this moment mention any particular instance; but I think the evil shows itself in many ways.

3321. Now we will take the Thames Embankment, one of the most recent and successful of the undertakings of the Metropolitan Board of Works; are you of opinion that with regard to that Embankment, things might have been perhaps even better than they are, if there had been such control exercised by or vested in the First Commissioner?—I think you might have made it a finer work æsthetically. As an engineering work, it is no doubt one of the finest in Europe; it would be difficult to criticise it; but when you come to look into its details, I think that they might have been improved if the designs of the engineer had been submitted to such a council as it has been proposed to form; the architectural details are not perhaps as good as they might have been. I think the landings are in many places far from handsome; in some places they have almost disfigured the Embankment. If the Committee are acquainted with the landing place with a kind of low arch near Waterloo Bridge, I think they will agree with me. Again, the coping of the parapet appears to me not to be worthy of the Embankment; it might have been much bolder and more effective. Those are matters of detail, but still it shows that it is very important, as Mr. Cowper has suggested, to have men of taste united to the engineer. The engineering work is perfect; I have not a word to say against that, but I think if men of taste had been consulted, the architectural details might have been improved.

3322. A railway runs along that Embankment with openings for ventilation or ventilation shafts, and with the power of building stations; in the event of Parliament erecting either the Law Courts, or a Museum of Natural History on this Embankment site, those ventilating shafts and railway stations may be a disfigurement to such public buildings, may they not?—Undoubtedly.

3323. Have you at present any power whatever of controlling that railway?—I have no moral power, but the Metropolitan Railway Company have put a clause into their Bill in the House of Lords which gives me power in regard to the openings and station in this particular part of the Embankment. It is a curious fact, that although the Metropolitan Board have the power of coming to some agreement as regards the ventilating shafts, they have no control whatever over the elevation of the railway stations, and the company might raise railway stations to disfigure the Embankment to any extent.

3324. When you came to your office you made some changes, did you not, in the constitution of the office?—I did.

3325. To a certain extent one saw the germ of this council of advice in your appointment of a first-rate architect as one of the secretaries of your Board: I presume that you thought that such an appointment as that would be useful to the First Commissioner in all those æsthetic

Rt. Hon. *A. H. Layard*, M.P.

14 June 1869.

matters and questions of architectural improvement?—When I came into office it happened that a very distinguished public servant, Mr. Austin, who had been for many years secretary to the Office of Works, had resigned. I thought that there was a good opportunity of making some change in the department, and introducing into it an officer who might be useful in advising the First Commissioner. Up to that time there had really been little control on the part of the First Commissioner over our public buildings. It was not to be expected that Mr. Austin, whose position was more that of financial secretary, and who, in that capacity, had shown great ability, and had been of the greatest use to the public, could have any knowledge of architectural details. The consequence was that there really was no one to overlook the estimates, plans, and elevations of architects. No doubt Mr. Pennithorne was attached to the office as architectural adviser; but Mr. Pennithorne was allowed to practice himself as an architect under the Office of Works, and was employed in the construction of several considerable public buildings, of course he could not be asked to control his own estimates, or to criticise his own elevations, nor would he, as he told a committee appointed to inquire into the constitution of the office, give advice upon the estimates and elevations of a brother architect. The consequence was that the First Commissioner was practically without any power to control public buildings. The result of that state of things has been the enormous expenditure, as I think, lavishly wasted on the Foreign Office and other public buildings. Not that I mean that the estimates were exceeded, because the estimates for the Foreign Office were not, I believe, exceeded by a shilling; but still it appears to me that the plans upon which those estimates were founded were very much too grand, and that under proper control that building would have been a very different building from what it is. I felt that very strongly. It was difficult to find a man who would give a really reliable opinion upon such matters. It was necessary to find a gentleman who had great architectural knowledge, who was not a practising architect, who was entirely independent of the profession, who had weight and authority with the public, and who was a thorough man of business. Fortunately such abilities were combined in Mr. Fergusson, and, I believe, his appointment is generally approved. All I can say is, that I am convinced that during the short time Mr. Fergusson has been in the office he has saved many thousands of pounds to the public.

3326. What was wanted was practical knowledge of those matters of architectural detail and expenditure immediately under your own eye in the office?—Certainly.

3327. Mr. *Beresford Hope.*] Did you re-cast your office, or did you only appoint Mr. Fergusson with his special qualification in the same place as Mr. Austin had previously occupied?—Not exactly; Mr. Russell, who had been assistant secretary, was appointed to the office of secretary, but with a reduced salary. Mr. Austin received virtually 1,400 *l.* a year; 1,200 *l.* as secretary, and 200 *l.* additional for looking after the Government rating. The Government rating was taken from the office, and the salary was reduced to 1,000 *l.* a-year. Mr. Fergusson was appointed, on a salary of 750 *l.*, as secretary for works and buildings.

3328. It was a new office?—It was a new office. At that time I had hoped that a good deal of the routine work which was performed in the office might be dispensed with, or transferred elsewhere, and I proposed that the assistant secretaryship should be done away with, but the Treasury decided that that routine work should continue in the Office of Works, and, consequently, it was found absolutely necessary to continue the assistant secretary. I am sure that both my right honourable predecessors present will tell the Committee that the work of the office has enormously increased within the last few years; the multifarious duties put upon me are little known to the Committee, and they necessitate a very varied knowledge amongst those who are employed in the office.

3329. What became of the functions which Mr. Pennithorne had heretofore discharged?—Mr. Pennithorne will very shortly leave the office. It appeared to me that the consulting architect (for that was his nominal position) should not also be a practising architect. I thought it was not advisable that the gentleman whom we ought to consult about elevations and estimates should be himself constructing public buildings, and should be unable to give an opinion upon the plans and estimates of his brother architects.

3330. *Chairman.*] Was Mr. Pennithorne paid by salary?—He was paid by salary.

3331. Do you now consider that the consulting architect is Mr. Fergusson?—No, I do not call him consulting architect; on the contrary, I named him "Secretary for Works and Buildings," because it is not, in my opinion, absolutely necessary that the gentleman who may hereafter fill the office should be an architect by profession. Such persons as Colonel Fowke, or Colonel Scott, who is now at South Kensington, would be competent men in my opinion for this office.

3332. Mr. Alderman *Lawrence.*] Mr. Pennithorne is also, I believe, architect to the Office of Woods and Forests?—He is called, I believe, the surveyor.

3333. *Chairman.*] Have you a surveyor besides?—We have; Mr. Hunt is the Surveyor of the Office of Works.

3334. Mr. *Bentinck.*] Is Mr. Pennithorne's connection with your office, then, at an end?—Mr. Pennithorne will be employed like any other architect, and probably he will go on with the public buildings on which he is now engaged, such as the Record Office and the University Buildings.

3335. When these buildings are at an end, and when any new occasion arises where, under the old arrangement, Mr. Pennithorne would have been employed, he, as I understand, would no longer be employed?—Mr. Pennithorne would be employed like any other architect. He would come into competition with other architects, and his plans would be selected if they were considered the best.

3336. Mr. *Beresford Hope.*] Does the Office of Woods call upon you to provide the buildings on the estates under its management, or does it build its own buildings?—It builds its own buildings.

3337. Mr. *W. Cowper.*] Will Mr. Pennithorne continue to act as surveyor of the Office of Works for the purchase of property upon a fixed annual salary?—His fixed annual salary will cease, but he will be employed like any other surveyor, if his services are required.

3338. Lord *John Manners.*] When you stated that Mr. Pennithorne's remuneration was a fixed salary, did you mean that that was his sole remuneration, or does he receive the usual architect's commission on the public buildings which he is called upon to erect?—Mr. Pennithorne had a fixed salary of 1,500 *l.* a year from the Board of Works, and 800 *l.* a year from the office of Woods and Forests; and besides that, he had a per-centage of 5 per cent. upon the expenditure on all public buildings with which he was entrusted by Government. He has, as the Committee are aware, erected several public buildings, and upon them he has received this 5 per cent. I considered that that was not a right principle. I thought you ought to have a man to advise the First Commissioner and to form one of his official staff entirely independent of the profession, and who is not a practising architect; and that is the reason why I recommended that Mr. Pennithorne should not be employed upon a regular salary, but that he should be employed, like any other architect, when his plans and elevations were considered the best.

3339. *Chairman.*] Does Mr. Hunt, the surveyor, receive a fixed salary, or is he paid when he is called in to give an opinion or make calculations?—Mr. Hunt's salary was 1,000 *l.* a-year, and he could be employed to purchase or sell property for the Government; but in practice he was rarely so employed. His salary has been reduced; he has now a salary of 750 *l.* as surveyor to the Office of Works, and he will be employed in the purchase of property.

3340. Is Mr. Hunt's position at all changed by the appointment of Mr. Fergusson; does Mr. Fergusson do now the work which was previously done by Mr. Hunt?—No, there is no alteration in that respect.

3341. In consulting any Board such as we have discussed to-day, have you taken into consideration what would be the position of the City in the matter; the present City works, I believe, are entirely under the control of the City, and it might be desirable that there should be some representative for the City on such a Board, might it not, assuming the City to remain as it is now?—That is rather a difficult question to answer. Of course, if you put the City on the same footing as the rest of the metropolis it would be advisable to give the First Commissioner the same control over the City as you propose to give over the metropolis generally; but I do not know whether at present such a thing could be done. I think a good deal would depend upon whatever reform might take place in the constitution of the City.

3342. But, without giving the First Commissioner control, it might be desirable that there should be some sort of harmony with reference, for instance, to works such as might adjoin each other; two bridges might be near to one another; the one belonging to the City, and the other being within the metropolitan district, and it might be desirable to establish something like uniformity of action between those bodies, might it not?—My own opinion is, that it would be advisable that the Government should have some control. As an instance, when a great national monument like St. Paul's was about to be, I will not say disfigured, but when the view of it was about to be utterly spoilt from the only approach where it was well seen, by throwing a bridge over the bottom of Ludgate-hill, the Government might, I think, have had some voice in the matter.

3343. Are you clearly of opinion that it would be desirable that such a board should be paid?—I think that it would be very undesirable to have it paid.

3344. Do you not think that the responsibility of the board would be increased if it were a paid board?—I do not think their duties would be such as to render it necessary that they should be paid officers. They would be very rarely called in; the president, or any member of the council of the Royal Academy, or of any other equally distinguished society, would, I think, consider it an honour to be consulted.

3345. Is there any other point bearing either upon your own office and power, or upon the state of things in the metropolis with reference to public works or buildings on which you would wish to speak?—As regards great buildings in the metropolis erected by public companies, I think that, if the Government were enabled to exercise some control over their elevations, you would have a very great improvement in them. Some of the great railway stations in Italy and in France, as the Committee are aware, are very fine buildings, and an ornament to the cities in which they stand. I may mention the Great Northern of France Station at Paris, the station at Milan, and many others. I think we might have similar buildings in London if we had some control over them. Of course, if you leave it to the engineer, who looks, as Mr. Cowper says, merely to economy and to the immediate object in view, and does not care very much whether he disfigures the town or not, you will probably have very ugly buildings; but, with a very little care, and, I should think, at no great additional expense, you might convert railway stations into ornaments to the metropolis instead of disfigurements, as they now are. The bridges crossing public streets and roads, or the river might be very handsome structures. For instance, a Roman aqueduct is generally a very fine monument. I might remind the Committee of the aqueducts about Rome, of those constructed during the Lower Empire near Constantinople, and of others scattered about Europe and Asia. In England, indeed, you have bridges and viaducts which are ornaments to the country; and it is only in London, as it appears to me, that bad taste seems to flourish unchecked. The finest street in the Borough, as Sir John Thwaites has told you, is completely and utterly disfigured by those hideous iron boxes, which are called railway bridges. The very instance of this street, I think, shows that the Metropolitan Board of Works itself would derive an advantage if the Government had some control over buildings in the metropolis. Sir John Thwaites stated to the Committee that the Metropolitan Board of Works had gone to very great expense in making that street; that in selling land, or letting it for building purposes, they had made certain conditions as regards architectural elevation, in order to make the street as handsome as possible; and that they had succeeded in having some fine buildings. But the whole effect of that street has been destroyed, and the value of the property has even been deteriorated by two or three hideous bridges thrown across the streets by railway companies, over which the Metropolitan Board have no control. If the First Commissioner of Works could have had some control over the

Rt. Hon. *A. H. Layard*, M.P.

14 June 1869.

construction of those bridges, it would have been an equal benefit, it appears to me, to the metropolis, and to the Metropolitan Board of Works.

3346. I presume that you have no doubt that if such a council were to be constituted, a representative of the Metropolitan Board of Works upon it, would be a *sine quâ non*?—Certainly, I think that it would be most desirable on account of the ratepayers; I do not wish to exclude them; on the contrary, I think it essential that they should have some voice in such matters.

3347. Mr. *W. Cowper.*] With reference to the functions of the committee of advice, which you have recommended, would you desire them to consider, not only the structures erected under private Acts of Parliament, by persons independent of the Office of Works, but also the public buildings which may be erected by your own department?—My idea of a council of advice is simply this; that the First Commissioner, if necessary, should have the authority of Parliament (though he might, perhaps, do it without the authority of Parliament) to apply to such public bodies as the Royal Academy, the Institute of Architects, the Society of Antiquaries, the Institute of Engineers, and, of course, the Metropolitan Board of Works, requesting each of those bodies to name some one of their members, so as to form, as it were, a consultative council for the First Commissioner, who might summon such a council whenever he thought it necessary to take their advice. I would not make it obligatory upon him to take that advice; but I think that most men, when such a council decided that such a structure was good or bad, would act upon their advice; because, if he did not, and the thing did not succeed, no doubt considerable responsibility would fall upon him in the face of Parliament and the country.

3348. Then do you contemplate that if a council of advice existed you would submit to them the plans and elevations of the new public offices, and take their opinion upon them?—Certainly I should.

3349. It was the custom when I was the First Commissioner of Works, occasionally to call in three architects, and ask them their opinion upon a particular elevation; might there not be some advantage in being able to call in, upon a special occasion, the particular individuals whose opinions you thought would be most valuable to you upon that special occasion, rather than to be obliged to submit such a matter as that to a general and permanent body?—I think you might combine the two. I should be inclined, before I settled my elevation, to ask two or three gentlemen of high standing in the profession to advise me thereupon. I should always wish to see a complete model made of every public building, and I should then submit it to the council. I think it would carry very much more weight with the public than if you consulted two or three members of the profession.

3350. *Chairman.*] The tendency would be, that in the one case the private consultation of individuals and their advice would carry no responsibility with it, whereas the public consultation of a recognised council attaches responsibility to the advice given, and they advise under different circumstances?—No doubt private persons would merely look at it with regard to its purely architectural features, whereas such a council would also take into consideration the expense which would fall on the public or on the ratepayers.

3351. Mr. *W. Cowper.*] Supposing such a council of advice were in existence, would you contemplate that to them should be referred such questions as the erection of a railway station like the one at Charing Cross, by means of standing orders or other regulations of Parliament?—Precisely. Supposing that Parliament were to sanction what I propose, that is to say, that all companies erecting works in the metropolis, gas works, or bridges, or railway stations, should deposit their plans and elevations in the Office of Works, and that the First Commissioner of Works should approve of those plans and elevations, the natural thing would be to refer them to the council, and then, I think, you would have a great advantage if you had an engineer upon that council, because an architect might suggest something which to an engineer might be impracticable, and the engineer might say, "that would be a very fine architectural elevation, but practically it would prevent the work being carried out"; and therefore you might arrange on such an elevation as would at the same time be handsome, and yet not interfere with the object of the undertaking whatever it might be.

3352. Those two branches of operations would have this difference: that in the one case the council would be controlling corporate bodies, spending their own funds, and, perhaps, controlling them against their will, and in the other case they would be advising a Minister of the Crown as to the erection of works which were in his own department; do you not think that in the former case, where the council were acting in a more judicial way, they ought to have a concurrent voice in the decision with the First Commissioner of Works, while in the latter case their opinions should not control the Minister of Works, but simply strengthen his responsibility?—I think in both cases you merely want advice. I do not think that the First Commissioner should be under the control of such a council in any way, but that he should act independently. In the second case which is put, Parliament would have the control; for, of course, if an utterly unreasonable condition were placed upon a company they would appeal to Parliament, and would no doubt obtain relief; and naturally the First Commissioner would take care not to impose upon the company such a condition as might be an unreasonable one.

3353. Mr. *Bentinck.*] You are aware, are you not, that the Office of Works has always power to oppose any of those Bills in Parliament?—Yes; but the First Commissioner may not be aware that such a Bill is passing, or of the mischief that it may cause, unless the promoters of the Bill are bound to deposit plans and elevations, and to give notice to the First Commissioner. His attention may be called indirectly to it, but it is not the duty of the company to inform him.

3354. But surely all those great public works are matters of public notoriety, and the Board of Works has sufficient notice of those proposed large works, has it not?—Certainly not.

3355. I will give you an instance of my own knowledge; before I was in Parliament, I appeared as counsel before a Parliamentary Committee to represent the Board of Works, with another learned gentleman, on the ground that the railway bridge which they were making

across the Thames close to Chelsea Bridge was a work which ought not to be erected so near, and was likely to spoil what we said before the Committee was a magnificent structure; we came before the Committee; I held a brief sent to me by the Board of Works, and the result was that we came to an arrangement, and I believe that the railway bridge is the better bridge of the two: I do not wish to express any opinion against the appointment of a council on this point, but surely, as regards all those dreadful railway bridges to which you refer in Southwark, if the Metropolitan Board of Works took proper care, they would know that those bridges were about to be erected, would they not?—I think, in the first place, with regard to the Chelsea Bridge, you will find that it had to do with Government property. The Chelsea Hospital grounds are under the First Commissioner of Works, and consequently notice would have to be given to the First Commissioner that the Bill was introduced into Parliament, and he had a *locus standi* against it; but in a case where Government property under his control is not concerned he has no *locus standi*, and he cannot appear before the Committee. In the case of Southwark-street I should have no *locus standi* before a Committee; the Committee would not hear me. That is a matter which does not admit of doubt, because I have consulted competent authorities on the subject. I think that the case which has been put by the honourable Member is one in point, because there the Crown had a *locus standi*, and were able to control the erection of the bridge. It is of the iron bridges across the Thames, perhaps the best, and that may form the beneficial result of some interest on the part of the First Commissioner of Works.

3356. With regard to the railway stations at Charing Cross and Cannon-street, which have been so much objected to, do you think it would be possible, assuming that the erection of those stations was a positive necessity for the public convenience (as I suppose we must assume that it was), would it be possible for anybody to make them good, or moderately good, architectural works; that is to say, as regards what might be called the point of departure?—I think, undoubtedly, that if the First Commissioner, empowered by Parliament, was able to say to the company, "We are quite willing that you should erect a station for the public convenience on one of the most important sites in London, but at the same time it shall not be such a thing as to disfigure the metropolis," they would soon find a way to make a handsome building. As I have stated, there are in continenal cities exceedingly handsome stations, almost as large as those in London, the elevation of which was submitted to a certain Government control. I think that, with some modifications, you might have made, at Charing Cross, for instance, a decent building.

3357. You referred just now, in your evidence, to the Paris station of the Great Northern of France Railway, and you referred to the stone part of the building, which may or may not be good, architecturally considered; at all events, it has architectural pretensions: have you ever examined what might be called the point of departure, after you leave the station, where it is really a shed?—I cannot speak very positively, because one only has a recollection of such things; but, if I remember rightly, there is a long shed at the end. However, whatever that shed may be, it is entirely masked by the architectural elevation. I do not here give an opinion upon the details of that architectural elevation, but all I say is that it is a handsome building and is an ornament to the city, whereas the Charing Cross and Cannon street Stations are mere engineering constructions, and disfigure the finest part of London.

3358. I have no particular sympathy with the Charing Cross Railway; but, at all events, as regards the point of arrival, which is represented by the Charing Cross Hotel, they appear to have done their best by employing an architect who is a gentleman of considerable eminence in his profession, and desiring him to produce a design, that is to say, the design which you now see facing the Strand?—If they had masked the Thames side of the station as they have masked the Strand side, they might have prevented that hideous tubular shed from disfiguring the Embankment.

3359. Referring to the Great Northern of France Station, if you go into that station and look at the part of the station which corresponds to that part of the Charing Cross Station which is so much objected to, would you find that it is any better?—In this one case the tubular shed has practically only one front and that front is effectually masked by an architectural elevation; in the other case it has really a double front, and the front which occupies the most important position, that is to say, the one which faces the Embankment, is not masked. In the case of the Great Northern of France Station in Paris, there is a shed, as you state, but it does not abut on any prominent place; if it had abutted on the boulevard it would have been a most hideous object.

3360. You do not know of your own knowledge that the Great Northern of France Railway Station is an architectural design?—That really proves my case, because, of course, the fact of my not knowing anything about it, shows that that part which is necessarily ugly is sufficiently masked by the architectural façade to be kept out of sight. Whereas one is too well aware that the sheds at Charing Cross and Cannon-street are hideous objects, because that is patent to everybody.

3361. But can you ask a railway company to go to great expense to ornament their point of departure, when no other railway company is asked to do it?—I think you can. I think that if you give a railway company power to take a most important and prominent site in the very heart of the metropolis, in which public buildings are erected and maintained at the public expense, you may impose certain conditions upon them, as regards the architectural elevation, and they would find the means of complying with those conditions.

3362. Mr. *Gregory.*] In reference to this council which you propose should be associated with the Office of Works, would you think it advisable that the members of the council should be selected by societies, such as the Institute of Architects and the Royal Academy; do you think that it would be better that you yourself, as the Chief Commissioner of Works, should apply to certain gentlemen, and ask them to act as a council?—I am rather inclined to agree with my right honourable friend, the Member for South Hants, that the best plan would be to let the councils of the societies

Rt. Hon. *A. H. Layard*, M.P.

14 June 1869.

select the man whom they considered most competent to represent them; I think it would be safer.

3363. Then, would you propose that in cases of difficulty there should be written communications on their part, and that those communications should remain as documents in your office?—I should do exactly as I have done with regard to the Society of Antiquaries. I propose to introduce a Bill placing historical and Royal sepulchral monuments under the care of the First Commissioner of Works. The first step I have taken is to obtain a list of those monuments. Of course there is no one in my office who could give me that list, and I wrote officially to Lord Stanhope, the president of the Society of Antiquaries, and I requested him, to furnish me with a list of such statues and public monuments as he thought ought to be placed under the First Commissioner. He wrote to me to say that the Society of Antiquaries had appointed a committee to go into the subject, and would furnish me with such a list.

3364. Do you intend that to be a Parliamentary document?—Of course if Parliament chose to ask for it, I could have no objection to its production.

3365. Would you also have similar reports from this council, and consider them in the light of Parliamentary documents?—Yes. Supposing they should make a report, if any Honourable Member chose to move for a copy of that report, I should be quite ready to give it.

3366. *Chairman.*] I suppose they would keep regular minutes, like any other council?—Precisely.

Monday, 21*st June* 1869

MEMBERS PRESENT:

Mr. Bentinck.
Mr. Buxton.
Mr. W. Cowper.
Sir Charles Dilke.
Lord Elcho.
Mr. Gregory.
Mr. Beresford Hope.
Mr. Alderman Lawrence.
Mr. Layard.
Lord John Manners.
Viscount Sandon.
Mr. William Henry Smith.
Mr. Tite.

LORD ELCHO IN THE CHAIR.

The Right Honourable Lord JOHN MANNERS, a Member of the Committee, called in; and Examined.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3367. *Chairman.*] IT was, I think, when you held the office of First Commissioner of Works that a clause which was in the original Act constituting the Metropolitan Board of Works, and which gave Parliament and the First Commissioner of Works control to a certain extent over their expenditure of money, was cut out of the Act?—Yes; I think we had the hisiory of it very much from Sir John Thwaites, but I may as well, in confirming his evidence, state to the Committee what occurred. When we came into office in the spring of 1858 we found that the necessity for purifying the Thames, as it was called, had greatly increased; that the various plans which had been submitted by the First Commissioner to the Board of Works, and by the Board of Works to the First Commissioner, under the existing system, had simply produced a dead-lock, and that nothing whatever was done; and in the summer of 1858 the state of the Thames was such that very great apprehensions were entertained of the very serious consequences likely to result. It became necessary, therefore, to take immediate action, and the Government had to consider on what principle the dead-lock which had occurred should be removed. The first question which they had to decide was, whether this great work of purifying the Thames was a metropolitan or an Imperial question. We decided, and I think on grounds which were admitted generally to be correct, that it was to be regarded as a metropolitan, and not as an Imperial work. That being decided, it seemed to us that there could be no real difficulty in deciding the other subsidiary though still very important points. It being a metropolitan improvement, we held that it must be paid for out of metropolitan resources; and being a metropolitan improvement to be paid for out of metropolitan resources, we had no hesitation in coming to the conclusion that it must be carried into effect by metropolitan authorities; and that with that object, the metropolitan authority must have all the necessary powers conceded to it, and upon the metropolitan authority must be thrown all the due responsibility. Having decided those points, we proceeded to introduce a Bill into Parliament to carry our view of the case into effect. There was considerable discussion upon that measure. Great public attention was excited, as I have said, to the condition of the Thames. An important Select Committee had been appointed upon the motion of Mr. Kendall, the Member for Cornwall; and both Lord Palmerston and Lord Russell, who then sat in the House of Commons, served upon that Committee. But in spite of the conflicting evidence which was given before that Committee, we had no hesitation in proposing a Bill based upon the general principles which I have indicated, and that Bill received the general sanction of Parliament, and became law after two or three discussions. I may state, that, with reference to the veto theretofore exercised by the First Commissioner on any of the larger plans of the Metropolitan Board of Works, in the course of those discussions Sir Benjamin Hall, who had been the creator, so to speak, of the Metropolitan Board of Works, and who, by the exercise of his veto had ostensibly, at any rate, been the cause of the great delay in those works, stated, that he approved of the proposal of the Government to remove the veto of the First Commissioner, and that it would have been a source of great gratification to him had he not been compelled by the terms of the Act of Parliament to exercise his functions in that respect. With the result the Committee are familiar The great work was at once taken in hand, and has been prosecuted up to a very successful termination; and I cannot for a moment doubt, that had another policy prevailed, and had the Government endeavoured to enforce its own views on this point, or on that point, upon the Metropolitan Board, you would have had still further delays, and still further complications, and very likely we should have been still now lamenting the condition of the river Thames; I think that is all I have to say as to the reason which induced the Government of that

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

day and the Parliament of that day to remove the veto which the First Commissioner had upon the action of the Metropolitan Board.

3368. Then I gather from what you have just stated, that your view is that there should be no control whatever exercised over the expenditure of the Metropolitan Board of Works, either by Parliament or by the First Commissioner of Works, or by anybody acting on the part of Parliament?—I apprehend that Parliament always will exercise a control, and when it sees fit will enforce it for this very obvious reason, that whenever any great work is to be undertaken, the Metropolitan Board of Works, or whatever authority it is, must come to Parliament for compulsory powers. Therefore, the control of Parliament may be left out of consideration, I think, in this question; with respect to the Office of Works I entertain the most decided opinion, both on principle and from experience, that the First Commissioner of Works ought to exercise no control whatever over the Metropolitan Board of Works.

3369. In speaking of the control of Parliament, I referred not to that general control which Parliament of course does exercise and can exercise over any body, whether it be the Metropolitan Board of Works or any other corporate body that comes to them for power for any special works, but I referred rather to such general continuous power of control as was given by the clause, which required that whenever the expenditure exceeded 100,000*l.* the assent of Parliament was necessary?—I apprehend that in any great work undertaken by the Metropolitan Board of Works, or by any other public body, virtually they have to go to Parliament, and therefore I see no practical use in maintaining on the Statute-book a power which implies a doubt and distrust on the part of Parliament of this great municipal authority, to which it really intends to give the necessary power to carry those great works into effect; I think it invidious and useless.

3370. Sir John Thwaites in his evidence took the view that the expenditure of any monies raised by the metropolis for the purposes of improvement, or for other purposes, should be left entirely to the municipal authorities, as is the case in other provincial towns. Do you think that there is not a manifest distinction with regard to great works, and public improvements, and public buildings between the metropolis and other provincial cities, from the mere fact of London being the metropolis of the empire?—That point, of course, has had to be considered by different Governments which have existed, and I think you must take this as your basis of consideration: if you answer the question in the affirmative, and say that there is a difference between the metropolis and other great cities, you must concede the point that the Government shall accept the pecuniary responsibility which such an admission, I think, would carry with it. Governments hitherto have declined to take that view of the case, and have said, as we said, and as Parliament said with respect to this greatest of all the works, the purification of the Thames, that it was a municipal work, to be undertaken out of municipal resources, and therefore to be executed and controlled by the municipal authorities, and to that I adhere. I would draw no distinction between London, however great it may be, and I would not say provincial cities, but Dublin and Edinburgh, both of which are the capitals of kingdoms, and both of which contain public buildings, palaces, parks, and gardens, maintained at the Imperial expense.

3371. But before we come to other capitals I should like to hear clearly your view as to whether the circumstances of London are not such, it being the metropolis of the kingdom, that there is not a difference between it and provincial towns, such as Leeds, or Bristol, or any other town, *quâ* this question of municipal management; and whether there might not be a different system adopted in consequence of the different circumstances of two such cities as Leeds and London?—I should say not. I think the real comparison, if there is to be comparison, is between London and, as I have said, either Edinburgh or Dublin. But if you put the case as between London and Leeds, still I would say that I should be prepared to treat all the works which properly fell under the municipal authority of London precisely on the same footing as I should treat those that fell under the municipal authority of Leeds.

3372. Your ground being that the money is not contributed by the State to those improvements; but is it not the case that the whole nation does contribute very largely to the erection of buildings and to the maintenance of public buildings, and to the creation and maintenance of public works in the metropolis which it does not do in the provincial cities?—With respect to Leeds and the other great towns it is not the actual fact that the Imperial Exchequer is not called upon to pay for very considerable buildings in those large towns; we pay now for the Post Offices, for instance, and the offices which are connected with the collection of the Imperial revenue in those great towns are paid for out of the Imperial resources. Take the Post Office at Glasgow, for instance, and the Post Offices elsewhere; no doubt in many instances very important public buildings are erected under the present system in provincial towns at the Imperial expense.

3373. Still you could draw no comparison between Leeds and the metropolis in respect to the public buildings; there is no such public building as the Foreign Office, and no such public building as the Houses of Parliament, and no such public building as the National Gallery, and the Kensington Museum, and other great works of that kind which are paid for wholly out of National funds; besides I think something like 90,000*l.* is voted annually for the maintenance of parks in the metropolis?—Quite so; but again I see no reason, in the fact of their being public buildings, parks, palaces, and so forth, maintained at the public expense in London, why the proper duties to be discharged by the municipal authority of London should be interfered with by the Imperial Government.

3374. Those buildings are endeavoured to be made, I do not say always with success, ornamental, with a view of making the capital city such a city as the whole nation can take pride in; do you not think that if the public through Parliament and through the Government spend large sums on their capital for such purposes, it is desirable that somewhere there should be some control to prevent that capital being disfigured by other works undertaken by other bodies in that same capital as far as such a thing is possible?—That question really opens to my mind the converse of it; considering what some of the buildings

buildings erected by the Government are, might not the Metropolitan Board of Works, or the City of London claim that they should have a controlling power, in order to maintain the beauty of the metropolis which, in their opinion, may have been injured by the erection of some of the public buildings erected under the Government.

3375. No doubt it is capable of that view; but we will take those photographs which have been before the Committee of the railway stations on the Thames Embankment, at Charing-cross and at Cannon-street; there is also the case of those two bridges over the river at Blackfriars, one of them being a railway-bridge, passed by a Committee of the House of Commons, and the other a bridge erected by the corporation of the City of London, the two bridges close together, and the one necessarily spoiling the other; do you not think that those are very glaring instances of the result of the want of any system or of any control?—I quite think so, and I hope I shall not be misunderstood as objecting to some control being exercised over the buildings of great public companies which come to Parliament for compulsory powers. There I see, as I think, the propriety of a system, giving a controlling power somewhere.

3376. The instances which we have before us show the necessity of a controlling power somewhere; has your Lordship considered where that controlling power over such buildings erected by companies as you have described would best rest?—I should give it, on the principles which I have ventured to lay down before the Committee, entirely to the municipal authority.

3377. Then you would give control of all works, whether erected by the Metropolitan Board of Works itself or erected or constructed by companies, such as railway companies, waterworks companies, or any other companies, entirely to the Metropolitan Board of Works?—Yes. When I say control I am alluding to what I understood was spoken to here the other day, viz., that before any Bill is discussed in the Select Committee it should be shown to the satisfaction of the Select Committee that the metropolitan authority had approved of the buildings which were to be erected in consequence of the passing of the Bill. I do not go further than that; I do not propose to give any power to the municipal authority to interfere afterwards and say, "This is a building of which we disapprove." But I think we might fairly call upon the company to satisfy the Committee that they had submitted the designs of the buildings which they proposed to erect to the local municipal authority, and that the local municipal authority had expressed its approbation of them.

3378. Would you give no power or voice in the matter to any person speaking on the part of the Government?—I certainly would not.

3379. Do you propose that in such cases any plans for those railway bridges or any other works by any such companies should be deposited anywhere but with the Metropolitan Board of Works; or would you object to their being deposited with the First Commissioner?—I should object to that, for the reason that I fear that such a course would lead to great complications and delay and dissatisfaction.

3380. Do you not think that it might be desirable that the First Commissioner should have knowledge of where those railways are going, whether they are going near any of the public buildings under his charge, and whether, when the works are finished, they are likely to interfere with the elevations and effect of such buildings?—My experience would lead me to say that if a railway in London is to be brought near any public building in charge of the First Commissioner, he would be certain to obtain knowledge of that proposal in sufficient time to take action upon it.

3381. But how would he obtain that knowledge, except as one of the public?—As one of the public deeply interested in it.

3382. But how would he know what the form of those works was to be when completed, when even the committee which passes the Bill do not know?—But I have assumed that under the new system the local authority would have the power of interfering, and I think that the local authority is the proper authority for that power to be given to.

3383. Then the local authority would have information and knowledge given to it, and the local authority might or might not communicate that to the First Commissioner?—Yes; I apprehend that on those occasions there would be no practical doubt as to the First Commissioner being informed on that subject.

3384. Mr. *Beresford Hope.*] But what would be the harm of having this more accurate information derived from the drawings?—Because I think it is very important that the line of demarcation should be clear and distinct between the First Commissioner of Her Majesty's Works and Public Buildings, and the municipal authorities of London.

3385. Then you wish, in short, to limit the character and nature of the office to his being the First Commissioner for Her Majesty's Works, and not the minister for National Art and Architecture, that is your idea of the office?—That is the present historic character of the office, no doubt. Whether you might or might not advantageously alter and enlarge the character of the office is another thing, but practically, at this moment, the First Commissioner of Works is First Commissioner of Her Majesty's Works and Public Buildings, Parks, and Palaces.

3386. Mr. *Layard.*] Are you aware that, at present, a company bringing a Bill into Parliament for works in the metropolis is obliged to deposit its plans and sections with the Metropolitan Board of Works, and that such plans and sections are not deposited with the First Commissioner of Works, who, as representing the public, would have no official cognisance of them?—Yes.

3387. Therefore, the First Commissioner of Works, as representing the Government, would have no *locus standi* before any committee which had to deal with such a Bill, would he?—Clearly not, and that I think is right. What I should wish to do would be to give to the Metropolitan Board of Works a limited power as to the elevations which the different railway, gas and water companies, and so forth, may propose to erect, and I think that would be obtained by making it a *sine quâ non* that the consent in writing of the Metropolitan Board of Works to the proposed erections should be submitted to the Select Committee.

3388. You stated that you consider it the duty of the First Commissioner of Works to have the care of public buildings, do you not think that, having such care, he would have a right to see that any works undertaken by a company should not

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

not virtually disfigure those buildings, intercepting the view of them, for instance?—Clearly, I think he has that right now, as I understand it.

3389. In what way has he that right now?—In the case of the stations proposed to be erected near this palace, I think my predecessor, the Right Honourable Member for South Hants, arranged with the company what was to be the architectural character of the buildings to be erected.

3390. But was not that because the piece of land which they took belonged to the Westminster Bridge Estate, and that the Crown had a right therefore to enforce certain conditions as to elevations?—Certainly.

3391. If it had not been for that, I apprehend the Crown would have had no such right?—No.

3392. Mr. *Tite.*] I apprehend that the difficulty which we all feel is simply the one which has reference to railways; and that all those disfigurements in the metropolis, of which we have heard, and of which we have photographs, are all railway deformities. There is the bridge across Ludgate-hill, which the Metropolitan Board of Works opposed with all their might (at least, I did), and also the station, which is shown by the model now in this room, the station in the City, and the bridge in the City. They are all railways, in point of fact, that have gone wrong in those particulars of taste, are they not?—So far as I know that is the case; but I may remind the Honourable Member that gas works have from time to time been considerable sources of discussion in Parliament and elsewhere; and therefore I should not be prepared to say altogether that railways are the only cause of annoyance or disfigurement in the metropolis.

3393. It is perfectly possible that railways may have a very efficient control exercised over them by those who own the land. At Dulwich, for instance, railways cross the estate in all directions, and the Governors there (of whom I am a very humble one) have always made it a condition that the elevations of all the stations and bridges should be referred to the College, through their surveyor, who is Mr. Charles Barry. On that estate, I believe, it has been done creditably and nicely, in consequence of that power; and I suppose in like manner, if the Crown property is assailed by a railway, there is no reason whatever why the Crown should not have the same sort of control?—The Crown, at this moment, has, and exercises the most complete control over any railway or other company which comes on its land. I do not think that this Committee could strengthen the power which it now possesses, where its land is taken.

3394. Mr. *Layard.*] It is an extreme instance; but supposing, with that state of things, that a company should go to Parliament for powers to erect a railway bridge across Whitehall at the entrance to Trafalgar-square, do you not think that the Government ought to have a voice in the matter?—I think they would simply call upon Parliament to reject the Bill upon the second reading, if one can conceive such a case arising.

3395. *Chairman.*] Do you not think that it would be desirable to give the First Commissioner power of interference in the same way in which you propose that it should be given to the Metropolitan Board of Works in such cases?—I cannot say that I do, because the Metropolitan Board of Works is constituted now for the management of the entire metropolis; the First Commissioner of Works really only exercises his power for the property which is in his charge, and if you once departed from that principle, and said, "We will give the First Commissioner the power of interfering with railways, and other works of that kind which come near to public buildings, in charge of the First Commissioner," I think you would get into this very serious and practical difficulty, that you would have to draw a line, say within half-a-mile or a mile, or within 100 yards, otherwise you would extend his power indefinitely, and, as I think, upon a wrong principle all over the metropolis; therefore I should be prepared to take such an extreme case as that suggested by the Right Honourable Member for Southwark, and leave it to the ordinary sense of mankind; and I cannot for a moment doubt that if such a scheme was proposed the First Commissioner, or anybody else, would be very easily able to satisfy Parliament that it ought not to be carried into effect.

3396. But you have as yet, according to your own proposal, given him no *locus standi* before the Committee?—That is the view which I humbly take; I do not wish to bring the First Commissioner into anything like collision with the municipal authorities; I hold that if you want great improvements to be carried on satisfactorily in the metropolis, you must draw your line of demarcation very distinctly between the functions of the municipal authority and of the First Commissioner of Works, and I believe that by so doing you will produce that good feeling and harmony of action between two independent and therefore mutually respecting authorities, which you will fail to do if you bring them into collision with each other; that is my view of the case.

3397. Mr. *Layard.*] In the case which I instanced, the First Commissioner of Works would have no knowledge of a bridge being carried across Whitehall that would not be specified in the Bill; he would not appear before the Committee, if he knew anything about it it would only be by common report, and before it reached his ears the Bill might have passed the House, might it not?—I think not; there is the annual report prepared by the Engineer to the Metropolitan Board of Works of all railways projected in the ensuing Session of Parliament. The Board of Trade again has necessarily cognizance of every scheme which is proposed to be discussed in the ensuing Session of Parliament, and it seems to me that it would be very odd indeed if one department of the Government could not inform another of a proposed scheme which would materially interfere with the buildings in charge of that other department.

3398. Mr. *Beresford Hope.*] Do you mean to say that there is any architectural department in the Board of Trade which would ever care for that question?—I should say not.

3399. Mr. *Layard.*] Suppose, as has really happened, that a bridge were carried across Ludgate-hill, destroying the best view of St. Paul's in London, how should that be dealt with?—That was certainly very much discussed at the time; the Honourable Member for Bath, as he has stated, did all he could to oppose it; it was not want of knowledge on the part of the Government, or any Government department, which enabled that bridge to be erected; it was erected after great consideration, and for reasons which appeared

appeared to the two Houses of Parliament to be valid.

3400. *Chairman.*] Your objection rests broadly, does it not, upon the principle that the State does not contribute to the taxation, and that, therefore, it is the municipal body which ought to deal with those things?—That is my broad objection, in point of principle, and I say that it is supplemented by experience.

3401. Supposing that parties could be brought to agree to constitute some consultative body which represented all those various instances in the metropolis, and represented the interests of the nation in bringing about the embellishment of the metropolis, would you see any objection to the First Commissioner having such powers as have been suggested?—I should; I think that such a scheme would merely end by bringing in a new body, it being the admitted weakness of the municipal government of London that you have too many bodies interfering with each other at the present moment. I am not now going to give any opinion upon any of the schemes which have been submitted to Parliament for the reconstruction of the municipal government of this city, but I think that it is admitted by everybody that the conflicting jurisdiction of the city and the Metropolitan Board of Works, and vestries and parishes and district boards and so on, lead to very considerable delays and inconveniences of various sorts, and all the schemes proceed at any rate on the principle that it would be wise to concentrate authority, power, and responsibility in the government of the metropolis; but the scheme now suggested would only add one more element of confusion to those which already exist.

3402. When I referred to a scheme it was rather to the scheme suggested by the Right Honourable Members for South Hants and Southwark, viz., that the First Commissioner should have attached to the Office of Works a sort of consultative body, composed of representatives from the Metropolitan Board of Works, from the Institute of Civil Engineers, from the Institute of Architects, and from the Royal Academy; do you not think that a body of that kind so formed might be of great advantage in London, as representing all those various interests?—If the question is intended to apply to the Metropolitan Board of Works and the Corporation of the City of London I should answer decidedly in the negative; I do not think that it would be advantageous if it merely applied to the First Commissioner of Works. I entertain very great doubts as to how such a consultative body would really work and act; but of course it is for the Executive Government of the day to decide whether they think that the First Commissioner should have such a body to assist him in carrying out the works of his own proper department. However, I should object entirely to its having any influence whatever over the municipal authorities, for the reasons generally which I have indicated. I think those who have to pay for those great works should have all the power necessary for their execution, and that upon those men should be thrown the whole undivided responsibility of those great and costly works. I think that power, responsibility, and expenditure should all go together.

3403. You heard from Sir John Thwaites that this Embankment, which is a great success, might have been constructed, *quâ* the nature of the works, in any way which they thought most advisable; that is to say, that the wall, instead of being granite, might have been brick or concrete, or any other matter; do you not think that in a work of that kind, if you had a Board which took a mere mechanical, unartistic, economical view of the matter, it would be desirable to have some sort of control, so as to insure that a work of that kind did have some æsthetic qualities, and was made an ornament at the same time that it was made useful to the metropolis?—I really think the true answer to the question is the thing itself; you have this great work created under the undivided responsibility and authority of the Metropolitan Board of Works; and by the consent of all men it is a most splendid and successful public work; if you ask me what might have been the result if any other body had been called in to help, I think very likely that that work would not now be in existence, but that is merely matter of conjecture.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3404. Does the present constitution, that is to say, the mode of election of the Metropolitan Board of Works, give you any security that it would permanently retain that character which it presently possesses, of taking care that whatever it does will be done so as to make it an ornament to the metropolis, and that they will take the æsthetic points into consideration?—We have had now some eleven or twelve years' experience of the Metropolitan Board of Works; no doubt when it was first instituted it was a very great experiment; and in saying what I have said as to the advisability of removing the veto of the First Commissioner, I do not wish for a moment to imply that when Sir Benjamin Hall introduced his measure he was in the least degree unwise when creating for the first time such a body, in establishing a veto of that kind, but as I have said, he, in the debate of 1858, expressed his satisfaction that the veto was to be removed. I think all our subsequent experience shows that the Metropolitan Board of Works is alive to what are called æsthetic considerations affecting those great works, and I, for one, place very great confidence in their operations for the future.

3405. But is there any security in their constitution that that element would necessarily form part of their calculations?—I think we have quite as much security in the constitution of the Board of Works as we have in the constitution of the Office of Works. In addition to the concentration of authority, permanence and continuity of action are two very important elements in considering these questions. Sir John Thwaites has had the advantage, and the Metropolitan Board of Works has had the advantage, of his having been Chairman of the Metropolitan Board since it first came into existence. With respect to continuity of action, let the Committee look at what Sir John Thwaites has witnessed at the Office of Works; when he was first appointed Chairman of the Metropolitan Board, Sir Benjamin Hall was First Commissioner. He was succeeded by myself. In a year's time, I was succeeded by the late Mr. Fitzroy. In about another year Mr. Fitzroy was succeeded by Mr. Cowper. Mr. Cowper had a rather more prolonged reign, and at the end of that reign he again was succeeded by myself. Of course, on both those occasions it might have been anybody else. Then I am succeeded after two and a half years by Mr. Layard. Sir John Thwaites, therefore, in the course of some 11 or 12 years, has witnessed the

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

rise and fall of no less than six First Commissioners. I apprehend that that in itself is a very decided argument in favour of the maintenance of the undivided responsibility of the Metropolitan Board of Works, and not having it interfered with by the evanescent authority of ever-changing First Commissioners.

3406. Mr. *Cowper.*] The permanence of an officer may seem to be of great advantage, if that officer is moving in the right groove; but if he should not be in the right groove, is it not a great advantage that there should be an occasional change by which you may get an improvement upon the existing person?—I should doubt it; my experience leads me to say that whether a thing is abstractedly the very best thing which could be created or not, it is far better, having been once commenced, that it should be finished, than that you should have perpetual change, vacillation, and delay, and consequent expense in the construction of those works, of which I think I could bring several instances with which the Right Honourable Gentleman must be familiar.

3407. Are you not aware that in the Council of Advice which has been spoken of in this room, it was proposed that several of the Members should be at least as permanent as a member of the Metropolitan Board, who is elected only for three years, so that those persons who would be associated with the First Commissioner would have a very different tenure from us; and in that way would you not get the advantages both of permanence and of occasional changes?—If the Right Honourable Gentleman will explain to me who those permanent gentlemen are to be, I will give the best answer I can to his question.

3408. The persons to be permanent were to be those who were to be placed upon the Council by a vote of the Royal Academy, or of the Institute of Architects, or of the College of Engineers, and who would, therefore, not change by any alteration in the political affairs of the country. Would you not in that way get the permanent element which you desire to see exercising this control?—I apprehend that in that case you would, provided they were in a majority of the Council; but in respect of principle I should object altogether to interfering with the works which are to be paid for by the ratepayers of the metropolis. I am not now answering the question as to any advice which they might give to the First Commissioner; but I should object in principle, and also in practice, to any consultative body having any right to interfere with the expenditure of the money of the metropolitan ratepayers.

3409. Mr. *Tite.*] The plans and sections of all railways, and the plans of all gas works and water works, are arranged with particular care, and when those plans are deposited, as I think they are, with my Right Honourable Friend the Member for Southwark in his office, it has nothing whatever to do with the style of buildings which are to be erected. The elevations are not shown at all, and that is really the blot of the whole thing. Would it not be possible, by an alteration of the Standing Order, that railway companies should not only deposit at the office of the Metropolitan Board of Works or elsewhere plans and sections, but also sketches of the buildings, and designs of the character of the buildings?—I can see no reason why that should not be done.

3410. Would you see any difficulty or hardship in their being called upon to show what they propose to do, not only in an engineering point of view, but in an æsthetic point of view?—They come to Parliament asking for exceptional powers, and I see no objection to Parliament's imposing that precedent condition.

3411. Your Lordship has suggested that it is quite possible that the First Commissioner of Works might propose to erect buildings which might be as exceptional and as objectionable as some of those which have been erected by some of the railway companies; and if the one body is to look after the other, ought not somebody to look after the Chief Commissioner?—Certainly; I think that if you give a power of interference to the First Commissioner with the metropolitan authorities, you must give the metropolitan authorities a power of interference with the First Commissioner.

3412. *Chairman.*] But the idea is that this metropolitan authority, as I understand the Right Honourable Members for Southwark and South Hants, and as has suggested itself to me likewise, is that this municipal board being represented upon this council would, in all those matters, consult with the First Commissioner, and it would be for the First Commissioner to decide whether he would follow the advice of such council or not; but at any rate they would have a voice in the matter?—They would have one voice out of several; but in point of fact the consultative body has been described so variously that I am a little in doubt as to how it is proposed to constitute it. I am against consultative bodies having any power, and I have not yet heard it suggested by any Honourable Member on this Committee that a consultative body ought to have any power. If it has no power, I do not think it would work; and if it has power, it would clearly become the First Commissioner.

3413. Mr. *Cowper.*] You stated that in 1858, when you considered it right to repeal the veto which was given by the Statute of 1854 to the First Commissioner over the works of the Metropolitan Board of Works, exceeding 50,000*l.*, you were led to that course by the apprehension that if the Government exercised that veto it would also be expected to contribute funds; is there any necessary connection between the exercise of such a veto and the contribution of Imperial funds?—I should say so, most decidedly; in that very case the veto of the Government was exercised to compel the Metropolitan Board of Works to tax the ratepayers to the tune of, I think, 3,000,000*l.* more than the Metropolitan Board of Works thought advisable or expedient; therefore justice would have required that if the Government had insisted upon their scheme being carried out, the whole difference between the cost of the works, as estimated by the Metropolitan Board, and the cost of those which the Government compelled to be undertaken, ought in this case to have been defrayed by the Government.

3414. Mr. *Layard.*] But in that case, the Government did not exercise the right of veto, but actually proposed a plan of its own, did it not?—I think, technically, that was so; but I am not aware that the Government or the Parliament of the day, found any great fault with Sir Benjamin Hall for deferring the schemes of the Metropolitan Board of Works to eminent engineers. He was acting under the provisions of

of the Act of Parliament, and certainly I am not here to impugn the validity of his action.

3415. Mr. *Cowper.*] In the Act of 1854, which gave the veto to the First Commissioner, was there any power whatever for supplying Imperial funds in aid of those works?—None, whatever.

3416. Consequently, may we not suppose that those who passed the Act contemplated that the veto would be exercised in such a way as not to oblige the expenditure of public money, and therefore may we not come to the conclusion that if the veto was exercised by Sir Benjamin Hall in such a way as to give the Metropolitan Board of Works a claim upon the Imperial funds, it must have been exercised in a manner not contemplated by the Act of Parliament?—I should say that it rather shows that when Sir Benjamin Hall induced Parliament to erect the Metropolitan Board of Works, it was done in what may be called a tentative manner. It was a new experiment, and an experiment of a very delicate nature; and I do not at all wonder that Sir Benjamin Hall and Parliament put in what were thought to be safeguards. In operation they turned out to be hindrances and not safeguards; and the result was, that Parliament, on mature experience, decided on discarding them, and I think, most wisely. Among other vetos reserved to the First Commissioner, there was a veto on the re-naming of all the streets of the metropolis. The Metropolitan Board of Works could not re-name any street in the metropolis without the sanction of the First Commissioner of Works. I give that as one instance out of many.

3417. You do not quote that as an instance in which there is an expenditure of money, but rather as an instance where discretion is given without expenditure of money?—That is an instance in which discretion is given without the expenditure of money.

3418. I think it was proposed by some members of the Metropolitan Board to re-name those streets which had duplicate names after the members of the Board themselves; it was said that the principal street was to be named Thwaites-street, and that another street was to be called D'Iffanger-street; supposing that that report had been well founded, should you not have thought it a great advantage that there should have been a power in the Government to prevent St. James's-street, Piccadilly, from being called D'Iffanger-street?—I really do not see the advantage; to contemplate that the Metropolitan Board would ever change St. James's-street, Piccadilly, into anything else, is contemplating what I should humbly say was utterly absurd; but why a street in the metropolis should not be called D'Iffanger-street, or Thwaites-street, or any other name, I see no reason.

3419. Do you not think that the inhabitants of London, who might have been represented through the Executive Government, would have as much right to prevent anything which they thought a great absurdity as these ratepayers who are represented by the Metropolitan Board of Works?—I think not, unless you are prepared to carry that principle into every town in the kingdom; I do not see that the inhabitants of London are more represented by the Imperial Government than the inhabitants of Liverpool or Glasgow.

3420. Have the Metropolitan Board of Works any responsibility to Parliament?—They have a responsibility to Parliament whenever they come before Parliament to give them compulsory powers for any great work.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3421. Is there not this distinction between a metropolitan body elected by the ratepayers and the Government of the day; that in the one case there is a direct responsibility to Parliament, and through Parliament to public opinion; whereas the Metropolitan Board of Works have not any responsibility of that sort, their responsibility rather resting upon the chances of their re-election by the vestries upon a future vacancy; and is not that rather an important distinction?—If I understand the purport of the question, it would be that the Metropolitan Board of Works should be abolished, and the management of the metropolis handed over to the Government; unless that is the meaning of the question, I do not quite see its applicability.

3422. The idea which I wish to put before the noble lord is, that while the Metropolitan Board of Works are elected for certain definite purposes, there may be very safely a control exercised over them upon particular points by those who would represent the public opinion of the day, in short, any unnecessary infringement of their rights as parish authorities, might not that be done?—I really think not. I do not apprehend that the Government of the day is elected upon any idea of architectural taste or knowledge at all. I do not think that the people of this country in electing their representatives, and the representatives in bringing in or turning out ministers, have ever the slightest regard to architectural affairs.

3423. In the case of railways, they are obliged to submit their plans and sections to the Board of Trade, and before they can actually use their railway they must have a certificate from an officer of the Board of trade; is not that a case where a control is beneficially exercised by a public department without any unnecessary contribution from the public funds?—I apprehend that that arises from its being the primary duty of the Government to take care of the lives of its subjects.

3424. May not that principle by which the Executive Government interferes to control the discretion of the engineers of a railway, who are themselves supposed to have for their primary object to convey people safely, be extended to such other branches of the subject where the Government ought to interfere as in this case, where railways might erect buildings and stations in London unnecessarily disfiguring from the want of such proper control?—I have already said that, in my view, it would be very proper to give some preliminary authority of the kind to the municipal authority, and I have also given my reasons for thinking that it should be the municipal authority, and not any department of the State.

3425. But may not the instance which I have quoted of the Board of Trade justify those who framed the Act of 1854 in considering that a control which is deemed beneficial may be exercised by the Executive Government over railway works, or over metropolitan works, without thereby involving the necessity of contributions from the Imperial revenue?—I think not; my view is that that Act, as I have said, was an experimental Act; it was found to work badly in those

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

those particulars, and it was amended in those particulars.

3426. You have mentioned, I think, an objection on principle to the interference of the Executive Government with metropolitan works, do you see any practical disadvantage which is likely to arise from the First Commissioner of Works and a Council of Advice being empowered to exercise some control over all those architectural works for which an Act of Parliament is sought?—I do.

3427. Will you state what practical disadvantage you anticipate would arise?—In the first place, I think you would find great difficulty in drawing a distinction between London and the great towns. If it is right to give the First Commissioner of Works the power to step in and say that a bank shall not be built in Southwark or in the City without the sanction of its architectural features by the First Commissioner of Works, I do not see why a similar rule is not to apply to Dublin and Edinburgh. The present First Commissioner of Works has told us, very rightly, that the business of the Office of Works is greatly increasing, and I think that by such a system as that you would so completely overwhelm it that it really could not work.

3428. But supposing that a First Commissioner was sturdy and active enough to get through the work, there would be no disadvantage in any other respect, and would there not be the advantage that the ornamentation of those great towns would then be as well looked after in that respect as the ornamentation of the capital; and would not that be a gain instead of a loss?—Again you bring me to a consideration of the question: Are we so sure that your First Commissioner will exercise this power in a way which would embellish those great towns? And when you talk of his being advised by a council which is to have no power, no pay, and no position, I cannot conceive how such a council would be got together, even to do the work in the metropolis; but if you extended it to all the great towns in the three kingdoms, or even to those of England alone, I think you would break down in the very first work. Who are those gentlemen whom you propose to make into this council? They are, I apprehend, many of them gentlemen very actively engaged in professional pursuits, as leading architects, engineers, painters, and so on. Do you expect them to give a great portion of their time without any pay, and without any real power, to giving advice to the First Commissioner as to public buildings all over the kingdom?

3429. I am supposing that the subject of their discussion would be the buildings in prominent positions in London and great towns which were contained in the private Bills of that Session; do you suppose that there are in each Session of Parliament any such number of great buildings erected in prominent positions in London and great towns as to make any formidable demands upon the time of a committee who might have to consider them?—I should think so. It must be done within a given time. There is a certain time allowed for the submitting of plans and specifications, and so on. You cannot allow the scheme of a company to be held over till the month of June, July, or August; and until those gentlemen may have been able to form and express an opinion upon the character of the buildings. It must be done by a given date, I suppose by November or December at the latest. Until I have more information as to how this council is to be constituted, of course I speak with reserve and diffidence, but I have heard nothing hitherto which makes me think that a council of that sort would really be operative.

3430. Supposing that it appeared upon an investigation of the subject that an extension of their operations over the great towns of England would really give them more work than they would be prepared to fulfil, would it not be a very natural arrangement to give to the authorities of each town a similar control to that which would be exercised in the metropolis by the First Commissioner and his council?—As I have already said, I am decidedly in favour, on principle, of giving every control which it may be thought expedient to give with respect to these matters to the municipal authority, be it in London or be it in the country.

3431. We are speaking now of the difficulty in point of the time which would be taken up; do you not think that if, contrary to my expectation, it occurred that too large an amount of work would be thrown upon this council, that difficulty might be easily got over by having distinct bodies exercising the same authority in other parts of the country?—I really do not; I think that would lead to great local squabbles and animosities, without producing any good result. There is no evidence before us to show that in the great towns ugly public buildings have been erected. I am not aware what line you are to lay down as to what constitutes an ugly building and what constitutes a handsome building. Tastes differ very much upon this point.

3432. It seems to me that we have very much lost sight of the restricted class of works which are now under discussion, viz., the buildings which we wish to see altered in London in respect to the railways, which really amount, I think, to three or four stations, and a certain number of bridges; have you any doubt that a certain number of competent people called together to examine the elevation of the station at Charing-cross would have been able without any difficulty to prescribe to the railway company something which need not have been unanimously pleasing to everybody, but which would, at the same time, have avoided the obvious and necessary disfigurement which the appearance of the structure now produces on the banks of the river?—I really could not give an opinion upon that point.

3433. *Chairman.*] With reference to those provincial towns to which the Right Honourable the Member for South Hants has referred, at present the railway company gets its Bill passed to establish a station, or to carry its line through any one of those towns, and to make bridges across the streets; the municipal authority does not know what the form of that station will be, nor what the nature of those bridges will be, and it has no control whatever; if it is so in the metropolis, the probability is, that it is equally so in the provinces, is it not?—I conclude it is.

3434. I presume that you think it desirable that there should be some authority given to the municipal bodies to control such matters in provincial towns, if it is given in the metropolis?—Quite so.

3435. And the probability is, that the railway bridges which are made across streets in Preston, Bolton,

Bolton, Leeds, and other towns, are not æsthetically better than the normal iron railway bridges which we see disfiguring the streets in the metropolis?—Possibly not; if the municipal authority have not that power, that would be a very proper one to give them.

3436. Mr. *Beresford Hope.*] You spoke of the re-naming of streets as a branch of business which you thought the Office of Works might well be rid of, has it not occurred to you, that in the names of the streets in an ancient city, there are many historical and antiquarian associations, the real value of which a Board like the Metropolitan Board would not be likely to consider?—I think decidedly not.

3437. I will give you an instance. Eastcheap, which is curious from its showing the position of the old market of London, and from its literary connection with Shakespeare and Falstaff, either has lost its name or was threatened with the loss of its name; another locality in London, which is also very interesting from its historical associations, is Battle Bridge, the name of which has been refered to one of Cæsar's battles, or one of the old Roman battles, in the conquest of England; that is swept away, and is called now King's cross; would it not have been desirable to prevent those changes?—I think not. In the first case, if I understand the Honourable Member's question, it has not happened, but somebody threatens that it shall happen, therefore the grievance does not exist. In the next case, unless I know what the authorities were that destroyed the old name and substituted the new one I can give no opinion, but it is quite conceivable that Government authorities would overlook cases of that sort; it is quite impossible for the first Commissioner of Works to concern himself with the names of streets over the whole metropolis, and that class of work, I apprehend, is much more likely to be well looked after by the District or the Metropolitan Board of Works.

3438. You refuse to draw a distinction between a capital and a provincial city; do you not think that a city, by the very fact of its being a capital, acquires so many privileges and advantages that it may well surrender something in return to the State which has made it the capital?—No; you must remember that in all these affairs there is a great deal of give and take. No doubt for London it is an immense thing that it is the metropolis of this empire; but when you come to consider the pounds, shillings, and pence view of the question, you must remember that all the great Government buildings are exempt from local taxation, and it is merely by a sort of grace and courtesy that a special vote is now moved every year for contributions in aid of local assessments. But you will find that wherever you propose to pull down a poor class of houses, and substitute for those poor houses a great Government building, there is a very great outcry from the local authorities in consequence of the diminution of the local resources; I would also say, that in drawing no line of distinction between London and provincial towns, I again fall back upon Dublin and Edinburgh, and I say that upon your own showing, if you proceed upon this new principle of action with respect to London, you must inevitably proceed upon it with respect to Dublin and Edinburgh.

3439. That leads me to this question; do you not think that it is fair that Dublin and Edinburgh, in return for the honour and glory, (such as it is) of being reckoned as capital cities, and for the fact of their being, in the one case, the residence of a Viceroy, and in both cases, the seat of the Courts of Justice of the respective kingdoms or parts of the United Kingdom, should come under the general paternal supervision of the Minister of Works?—I do not think so; I believe you would get into serious difficulties if you once attempted to govern the affairs of Dublin and Edinburgh upon that principle. Dublin and Edinburgh would immediately call upon you to contribute handsomely to their resources out of the Imperial Exchequer. If you conceded that point, I should have nothing more to say.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3440. *Chairman.*] Are you aware that owing to there being at present no control over the construction of railways when the North British Railway was constructed, which was a line to run from Edinburgh to Berwick, at one terminus at Berwick it knocked down the old castle at Berwick and at the other terminus it knocked down an early gothic church, which was almost the most beautiful specimen of gothic architecture in Edinburgh?—I have heard so, though I do not know it.

3441. Do you not think it probable that if either the municipal authorities or the Government had had such control over the proceedings of railways, both these two vandalisms would have been prevented?—I think it is extremely likely, and I have already expressed my approval of a suggestion which should give to the municipal authorities the power of assenting to or dissenting from schemes of that sort.

3442. Mr. *Beresford Hope.*] Perhaps you are not aware, nor the noble Chairman either, that I happened to be on the Committee, about a quarter of a century ago, which dealt with that very Bill, and that I secured the insertion of a clause in the Bill, which, in the eyes of all honest and reasonable people, would have compelled the company to rebuild that church, and that it has shirked that responsibility up to this time, until the stones of that church have perished. Do you not think that confirms the question which the noble Chairman has put before you?—No, it really proves how very difficult it is to carry the control of Parliament into practical effect.

3443. But if Parliament had a mouthpiece in the shape of a minister, would not its control be more efficient?—It might or might not.

3444. At any rate there would be some one to raise the question, would there not?—Clearly, if you think it wise to give him those extended powers.

3445. Considering the wealth and importance of England, and the great interest that English people take in questions of art and architecture, do you not think it is desirable to develop the department of works into a ministry of art, science, and architecture?—That is a very large question, and I was not aware that I was to be examined upon it; it is a very large departmental, and more than a departmental question. How far you would propose to extend the power of such a Minister I do not know, but with respect to the immediate subject before this Committee, I adhere strongly to my opinion, that the power which we have been talking about should be granted, not to the First Commissioner of Works, but to the municipal authorities.

3446. You are not prepared, then, with a view upon that question?—Not quite.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3447. But you see no objection to it offhand?—That the Office of Works may be altered and improved in its constitution I think very likely, and, indeed, we understood from the Right Honourable Gentleman, the present first Commissioner, that he was making some changes with that object, but I am not prepared to give any opinion now upon that question.

3448. *Chairman.*] In reference to this proposed council, assuming that it was only a council of advice, and had no direct authority, do you not think that the advice of experienced men, properly selected, might be a protection to the First Commissioner, and also a reason why, to the general public, for things being done or left undone?—My view would be, that unless your council has a definite *status* assigned to it, and I would say further, a very considerable remuneration attached to it, I do not think you would get those gentlemen to fulfil duties which must expose them to considerable odium and annoyance, and which would want all the corresponding power which ought to attach to them. I remember hearing some reference made to the Indian Council, but the Indian Council, as I understand it, consists of gentlemen not now engaged in professional avocations, but who are generally retired Indians, I believe, of great eminence. They are not allowed to be in Parliament; they have distinct and clear functions assigned to them, and they are in the receipt of a very satisfactory honorarium. If you are going to establish a council—to advise the First Commissioner—of retired and most eminent engineers, architects, painters and so on, give them a real and definite *status*, and a handsome salary, and I can understand such a body being a very important body in the State. But I apprehend that the First Commissioner would really disappear, that the council would exercise all real power, and the First Commissioner, would be a mere man of straw. But I do not really understand that to be what we are discussing. I apprehend we are discussing the question of some gentlemen of eminence in three or four professions, who are to be called upon to give advice whenever the First Commissioner chooses to ask them, which advice he is at perfect liberty to reject, if it does not square with his own view. I think that is a position which gentlemen of great eminence in those professions would not like to fill, and therefore I do not imagine that you would gain anything practically by the appointment of such a council. The Right Honourable Gentleman the Member for South Hants, said, that he was in the habit of consulting two or three eminent architects whenever he found an architectural difficulty. No doubt eminent architects would consent to be consulted by the First Commissioner in that friendly and agreeable manner. I can remember when I was in office formerly, when great engineering works were under contemplation, nothing could exceed the kindness with which the late Mr. Robert Stephenson and the late Mr. Locke always gave me advice in a private way; but I think it would be a very different thing if they were meant to be a council, and were to be called upon in some sort of public way by a First Commissioner to give advice, the First Commissioner not being in the least bound to take the advice which they so offered in a public way.

3449. Mr. *Beresford Hope.*] Do you think they would be different men from those temporary councils called in to adjudicate upon competitions for the public offices, or the National Gallery, or the Law Courts? You and your predecessors have from time to time had the appointment of what were virtually councils, to sit upon particular questions, and I do not think that you have had any difficulty in finding gentlemen willing, from their love of art and public spirit, to serve gratuitously on those bodies?—If it is meant that each time when a difficulty arises the First Commissioner is to be at liberty to call in different men who may be supposed to be most competent in the particular case, that I think is a different question from a council such as we have been discussing; but although competent and distinguished men have never been found wanting, at the invitation of the Government of the day, to sit and adjudicate upon the specific designs submitted to them, the result of those adjudications has not been so satisfactory, either to the eminent personages in question, or to the Government, or to the profession, as would lead me to give a very positive answer to my Honourable Friend's question.

3450. *Chairman.*] Do you see any difference whatever in principle between the appointment of those temporary committees, such as you have referred to in the case of the National Gallery, for instance, and the constitution of a permanent council such as has been suggested by the Right Honourable Gentleman the Member for South Hants, and others?—I see a very decided difference, certainly.

3451. Where is the difference in principle?—The difference in principle is, that in the one case you appeal to a certain number of selected gentlemen whom you suppose are the most competent to advise upon this particular work; and the moment their decision is given their responsibility ceases, their work is at an end, and they incur no further responsibility of any kind.

3452. But they have incurred the full responsibility with regard to that work, have they not?—Undoubtedly.

3453. Your objection, as I gathered from your reply to a former question, was one so far in principle that you did not think you would get persons such as those of whom this council should be constituted to serve without pay and to undertake the responsibility?—That is so; I draw a very wide distinction, which I think is obvious, between gentlemen who may consent at the express invitation of the Executive Government to discharge that function upon a given subject, and gentlemen who would be constituted by name and form into a standing committee of counsel, to be consulted from time to time, at the whim, one might almost say, of the First Commissioner, and to have their advice followed or rejected as he may think proper.

3454. It is contemplated, is it not, that the subjects upon which they would be consulted, if they were a permanent body, would be cognate, if not identical, with those matters upon which those temporary committees have been consulted?—I really could hardly answer that question; those temporary committees are very, very rare; I should be disposed to think that if you constituted a permanent council, you must consult it on a variety of questions other than those which have been submitted to those committees which have been especially summoned.

3455. But they would be cognate questions, would they not?—I should think in some instances they

they would not; for instance, if you take those railway bridges, and so forth, I have no recollection of any such committee being appointed.

3456. Is there no analogy and nothing cognate between summoning a committee to determine upon the design of the National Gallery, whether it is an ornamental design or not, and summoning a committee to decide upon whether the Charing-cross Railway Station, or a railway across Ludgate-hill will or will not be a disfigurement to the metropolis?—There is this obvious difference between them, that in the one case the building, the designs for which are submitted to the arbitrament, so to speak, of the specially constituted committee, is a Government building, and the Government reserves in its own hands the power of acting upon the recommendation of the committee, and the responsibility extends no further. But in these cases you are to invite a council to decide upon the elevation of a great structure which is not under Government control; and I think, therefore, that they would incur a much greater responsibility in the one case than in the other. The Government voluntarily in the one case submits the decision upon the designs to this specially appointed committee; in the other case they would have to adjudicate upon the designs of the great building that is to be the property of a company.

3457. Do you suppose that if you had the power of summoning those special Committees to deal with railways as well as with Government buildings, and to give opinions upon them, that you would have any difficulty in getting gentlemen to come and give an opinion upon the Charing Cross Railway, or upon the position of a statue, or any other matter of that kind without pay and incurring such responsibility?—Yes; I should think you would have a great difficulty in getting a committee so appointed to adjudicate upon a great railway structure, for the reason that they would be not only dealing with a simple architectural question, but they would be necessarily more or less interfering with the whole structure, and perhaps with the possibility of carrying the works into effect at all.

3458. I am assuming that all that they are asked to give an opinion upon are the architectural points, but not the estimates. It is simply that the First Commissioner has a control over the elevation of this building, and that they are asked to give an opinion upon it. What is the distinction between that and a Government building?—The Government building is within the power of the Government, and a building that is to be erected by the subscribed capital of a company can hardly be viewed, I think, in the same way. I do not think that you can say that those gentlemen are to give an opinion upon the architecture apart from the estimates. We all know that architecture implies estimate, and it may be that those competent architects would recommend an architectural treatment which would add very greatly to the cost of the undertaking.

3459. But are you not aware that the First Commissioner has never found any difficulty in getting men of the class referred to to give opinions when summoned to do so without pay, and incurring such responsibilities as those opinions entail in individual cases?—That is so.

3460. Do you doubt as to the First Commissioners succeeding in forming a body of persons who would remain permanently in office for a year, or two years, or three years, as the case might be, as a body of reference on all such matters?—I doubt it very much.

3461. Mr. *Beresford Hope.*] Does not the history of all our great societies, scientific, literary, artistic, antiquarian, and religious, show that in England there is an enormous amount of work freely given by educated people to carry out the objects in which they are themselves interested, the work being not merely temporary work like the adjudication upon a particular design, but going on from day to day?—Clearly; and that work is rendered in the hope that the people who give their time and energy will be able to see the work completed and carried out according to their own views.

3462. Do you not think that the reasonable expectation, that the advice they gave would have its weight, would be enough to induce gentlemen not to sit every day in the week but to meet from time to time round a table in the Office of Works to consult with the Minister?—I really greatly doubt it. I will give you a case in point. There was a Fine Arts Commission which existed for many years under the presidency of the late Prince Consort; they were a consultative body dealing with many matters of technical art; I from time to time was a member of that commission, *ex-officio*, and I can safely say that no decision of that commission ever gave so much satisfaction to its various members as the decision we last of all came to, to break it up. It was not found that the position of gentlemen of eminence on that commission was so satisfactory as to induce them to sit there and deliver their opinions, and sometimes have those opinions carried into effect, and sometimes not. If I remember rightly, it was the late Sir James Graham who proposed that we should destroy ourselves, and I think there was no difference of opinion upon the subject, but we agreed to perform the ceremony of the "happy despatch."

3463. Was the cause which led to your "happy despatch" that you were a body responsible to no one in particular, and if there had been one Minister in particular to whom you were responsible, and who had the sole power of convoking you, might you not have brought your work to a better and more practical conclusion?—I think not; but that is mere conjecture.

3464. Mr. *W. Cowper.*] Was not one reason why the Fine Arts Commission ended their labours, that they had accomplished all that was entrusted to them?—No, most unquestionably not. If you look at the condition of the blank walls all around this palace; it was originally proposed that all those should be filled with frescoes, and so on. Then again, with reference to the great question of statues and statuary ornamentation, the Palace is very incomplete indeed.

3465. But had not the Commission done everything required of them in the way of recommendation and reporting, and was not the only thing remaining executive work, for which the Commission naturally thought themselves less fitted than the Minister of the day?—I think not; my recollection of it is that there was a great deal yet to be done, but that it was thought advisable to terminate our existence.

3466. Viscount *Sandon.*] Have you at all considered the advisability of the First Commissioner having an official seat on the Metropolitan Board, in virtue of his being the representative of the public

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

public interest in the palaces, national buildings, parks, &c., of London?—That question was, I think, very fully considered before Mr. Ayrton's Committee some two years ago, though I do not carry in my head all the recommendations that were made. If there were any re-constitution of the Metropolitan Board of Works I think it would be quite right that that question should be taken into consideration, but, for the reasons I have given here, I should myself be very shy of bringing about any interlacing of the functions of the Metropolitan Board and those of the First Commissioner of Works.

3467. It might lead, however, might it not, to a friendly relation between the Government Department and the Metropolitan Board of Works, which might be useful in the public interest?—It might. On the other hand, I am bound to say that I have found that the more completely the independence of those two bodies is recognised, the more harmonious is the action of their respective heads. I never found the least want of cordiality, or spirit of harmony, between the Metropolitan Board of Works and the Office of Works from the moment that the complete independence of the Metropolitan Board of Works was recognized.

3468. Mr. *Beresford Hope.*] Might not that harmony prove that the Commissioner and his consultative bond would also work together harmoniously?—I do not see the analogy at all. In the one case the two bodies are perfectly independent, in the other case of course the consultative body would be more or less (more, certainly, than less) under the control of the First Commissioner.

3469. Mr. Alderman *Lawrence.*] Previously to the formation of the Metropolitan Board of Works, were not the various street improvements outside the City of London, such as New Oxford-street, carried out under the Office of Works?—My experience of the Office of Works only commenced in the year 1852; but my impression is that all the works to which the worthy Alderman refers were undertaken not by the Office of Works, but by the joint Office of Woods and Works as being made upon Crown property.

3470. That would, of course, refer to the improvement of Regent-street and the Regent's-park?—Quite so.

3471. But with respect to New Oxford-street, that was not on Crown property, was it?—I am not sufficiently informed to answer the Honourable Member's questions, but I am aware generally of the fact that many of those streets previously to 1852 were formed in various parts of the metropolis by the then united Office of Woods and Works.

3472. With respect to the continuation of Bow-street into Gower-street, and Endell-street, and Commercial-street, Whitechapel, and the first commencement of New Faringdon-street, do those improvements compare favourably or unfavourably with the improvements that have been carried out by other bodies; is not the communication from Bow-street to Gower-street, for instance, a tortuous, winding street, which at the present time we should consider a very unsatisfactory new street?—I should say it was so; but I can only speak with great doubt as to anything that happened previously to 1852.

3473. Then with respect to New Oxford-street, the architecture of which has been so many times altered, even before the houses were occupied, does it compare more favourably with the streets that have been carried out, either by the City of London or under the Metropolitan Board of Works?—I should say Regent-street is a very poor architectural exhibition indeed.

3474. Did not the Office of Works find itself, under its present constitution, really incapable of carrying out works of that kind successfully?—It was not its present constitution, and I am unable to state how those great works were carried on while the Office of Works and Woods formed one department. But the present constitution of the Office of Works is altogether different from that which was the case previous to 1851, when the separation of the two offices took place, as the Committee are aware.

3475. Are you aware that for a long time Endell-street and Commercial-street remained unbuilt upon, the Office of Works having fixed much too high a price for the land?—I am unable to say that I know that.

3476. And with respect to Endell-street, did they not build two model houses at the corner which remained in carcase for many years, no one taking the land adjoining?—I will take it on the statement of the worthy Alderman that that was so; but I am not myself acquainted with the fact.

3477. Is not your Lordship acquainted with the fact of the houses standing there?—I do not know the fact.

3478. In its present constitution, I take it to be your Lordship's opinion that the Office of Works is not at all better calculated to carry out street improvements in this metropolis to a satisfactory conclusion, than either the Metropolitan Board of Works, or the Corporation of the City of London?—Unquestionably, that is my opinion.

3479. Mr. *Bentinck.*] With regard to the railway which crosses Ludgate-hill, do you remember that the question was before the House of Commons?—I apprehend that it was.

3480. Do you remember that a considerable agitation was made on the part of gentlemen interested in art to cause the Bill to be thrown out as regards that bridge, but that the opposition was unsuccessful?—I believe that was so.

3481. If a majority of the House of Commons had been of opinion that such a railway bridge was undesirable, they would have voted accordingly, and would have rejected it, would they not?—I apprehend so.

3482. And, therefore, it is clear, as I think you will admit, that the House of Commons did not do that which it might have done?—No doubt.

3483. It is not, perhaps, fair to ask you as to a point of law; but in reference to the question raised by the present First Commissioner, as to a railway being carried from Charing Cross Station, in front of the National Gallery, do you not think the Office of Works would, in such a case, have a *locus standi*, just upon the same principle as an ordinary occupier would have a *locus standi* in the case of residential damage?—I could scarcely answer that question. Assuming that the case was parallel, of course he would have a *locus standi*. If the First Commissioner of Works in that case stands in the same position as an ordinary occupier of a house, of course he would have a *locus standi*.

3484. Mr. Colnaghi, the printseller, would only have a *locus standi* to oppose such a Bill on the

the principle of residential damage; just in the same way, do you not think it probable that the Minister who has the charge of the National Gallery might very reasonably object before Parliament to such a railway upon the same ground?—Yes, I should think he might; but I would say with respect to that, that in all probability some property in Spring-gardens belonging to the Crown, though not to the Office of Works, would be touched; and, therefore, in that given instance I presume there would be no practical difficulty.

3485. *Chairman.*] We have had the instance already given before this Committee of a railway which cut in two a new street erected by the Metropolitan Board of Works in Southwark; there, clearly, if there was a *locus standi*, they must have had this *locus standi*; and, in spite of this *locus standi*, under the existing state of things, a bridge has been made across that street which, according to the Chairman of the Board of Works, has materially diminished the value of the property, and disfigured the street; are you aware that that is the case?—I understand that is the case.

3486. Mr. *Bentinck.*] There is at present a divided jurisdiction over Crown property between the Offices of Works, Woods, and Forests, is there not?—I should hardly say there was.

3487. Are there not portions of Crown property in the metropolis which are solely under the control of the Office of Woods and Forests, such, for instance, as the site of Lord Clyde's statue; is not the plot of ground on which Lord Clyde's statue now stands, at the southern end of Waterloo Place, under the control of the First Commissioner?—No; I believe that is Crown property, and therefore under the control of the Commissioners of Woods and Forests, and I believe that distinction is clearly carried out all through the metropolis. Crown property is under the management of the Commissioners of Woods and Forests; other property, Government property as it may be called, is under the control of the First Commissioner of Works; but the line of demarcation is clear and distinct. I never, for instance, interfered at all in the management of Crown property, and the Commissioner of Woods never interfered with the Commissioner of Works.

3488. Therefore I understand your Lordship to state, that if any individual wished to erect a statue upon that plot of ground or any other plot of ground which is under the sole control of the Commissioners of Woods and Forests, he would not ask to have the consent of the First Commissioner?—Certainly not.

3489. In your judgment, is it not desirable that the whole of the Crown property in London should be under the control of one body?—Not having had experience of the working of the system to which the Honourable Member refers previously to 1851, I can only give a very general opinion in answer to that question; but I must assume that there were good and substantial reasons for the change that then took place, and I am quite convinced that the present staff and system of the Office of Works would be totally incompetent to manage the very large Crown property which exists in different parts of the metropolis.

Right Hon. Lord *John Manners*, M.P.

21 June 1869.

3490. With reference to this very Clyde statue, was it proposed to erect that statue upon ground under the control of the First Commissioner of Works in the first instance?—I rather think that was the statue which was to be erected on the Parade.

3491. And then the First Commissioner objected, did he not?—The First Commissioner, I believe, objected. There was a considerable objection raised on the part of many people, to its position there. The First Lord of the Admiralty, if I remember rightly, and the Admiralty authorities generally, objected very much to the statue being placed where it was proposed to be put, and negotiations ensued and the result was that that site was selected where it now stands.

3492. And over that site, as I understand you, the First Commissioner had no control?—The First Commissioner had no control over that site, and the same with regard to the site on which Sir John Franklin's statue stands, which is Crown property.

3493. Is the statue of Lord Herbert under the control of the First Commissioner of Works?—That would be Crown property, I understand.

3494. As regards the placing of statues, there is a divided jurisdiction in the metropolis, is there not?—It is not only divided, but immensely divided, because, of course, when you come to the squares, which are important places for public statues, you have every conceivable sort of authority. I may mention that an Act was passed some few years ago which enables people to whom public statues belong, of their own volition, to hand them over to the permanent charge of the First Commissioner of Works, and various statues already in existence are, if I recollect rightly, specified in the schedule of that Act as being under the jurisdiction of the First Commissioner of Works.

3495. *Chairman.*] Who has charge of statues on the tops of arches and pillars?—If the arches and pillars are in the charge of the First Commissioner of Works, he has the charge of them.

3496. Is the arch in Hyde Park, at the top of Constitution-hill, under the charge of the First Commissioner of Works or of the Commissioners of Woods?—I should think of the First Commissioner of Works.

Mr. Henry Cole, C.B., called in; and Examined.

3497. *Chairman.*] You have turned your attention much to matters of art, few people more in the metropolis; and I presume that you have considered the question of the ornamentation of the metropolis and public works which you see going on, such as railways and public buildings, and others; I wish to know from you whether you consider that we are in a satisfactory state as regards those things now?—My opinion is that you are in a most unsatisfactory state. I know no other state except the state of Laputa, which is parallel with it, and I think you want a Dean Swift to tell you all about it, and make you sufficiently ashamed of it.

Mr. *H. Cole*, C.B.

3498. Do you wish to specify in any way instances of this unsatisfactory state of things, or will you rest satisfied with that general statement?—If it is necessary to be precise, I should instance the look of the Thames as shown by the station at Charing-cross, also as shown by the station

Mr. *H. Cole*, C.B.

21 June 1869.

station in Cannon-street; those two almost inconceivable bridges side by side at Blackfriars, the viaduct across Ludgate-hill, and the viaducts without number in the neighbourhood of London Bridge on the south side. In fact, go where you will you find evidences of that self-assertive British independence which amounts almost, I think, to a tragic-comedy.

3499. You have some drawings, I see, there; are they in illustration of what you have just stated?—I would put in a photograph of the railway-bridge across Ludgate-hill, which seems to me to illustrate the degraded taste of England. It shows wall advertisements without number, that venerable monument to Alderman Waithman and the bridge stopping the view of St. Paul's, and, altogether, it is a sort of thing for a pantomine. If the photographer had had an eye for the comic more than he has, he could have got worse points of view than those, which are rather favourable than otherwise. One of these photographs is a view of the Charing-cross station, another is a view of the Cannon-street station; but I think the climax of our chaos is found in those two bridges side by side at Blackfriars. Nobody in the world seems to have been sensible that one bridge of a handsome kind would have answered both purposes. Several independent authorities have bamboozled Parliament to give them power to put those bridges side by side. In fact, it is so monstrous, that if we cared a button about our credit for taste or common sense we should proceed at once to pull them down.

3500. I see here no specimen of the normal æsthetic railway bridges across streets or roads; could you get one made and lay it before the Committee?—Yes, I will find the ugliest thing I can.

3501. Will you take a normal æsthetic iron railway bridge?—I will do so; I would venture to suggest to the Committee that they should put these photographs in some way or other into their Report. You talk in a vague manner when you only mention things in words. I think that reducing the size of those photographs and printing them by a process called the Woodbury process, Parliament would not be ruined. Sufficient illustrations could be got on two pages, which I think would be extremely useful.

3502. Could the Department of Science and Art undertake that?—If you will pay for it; our Votes are low enough; we have nothing to spare, or any authority for any eccentricities of that kind.

3503. You have spoken generally of the unsatisfactory state of things in respect of art, and the character of our public buildings and works, and you have given us specific instances; to what do you attribute this unsatisfactory result?—Broadly to the want of taste in the nation, to atheism in principles of art, no faith in anything; and public ignorance all concentrated in allowing those things to go on. Those are the general points, I think.

3504. You gave as one reason, British independence; by that I assume you mean an absence of any harmonious action on the part of those who have the construction of those various works or of any controlling power over those who construct?—I mean that; also the natural impatience which we English people have to allowing anybody to have a concentrated action about anything. Every parish vestry thinks itself a little dominion in itself, and looks with horror upon the next parish as treading upon its toes; the city too, looks upon the surrounding disticts askance. Whatever authority we have representing the metropolis, it does its best of course, but still it is looked upon with jealousy by other authorities. In fact everybody's arm is against the others, and we have not yet found out the means of even getting at the minimum of discord; I will not say at harmony.

3505. Then attributing, as you do, those evils which are patent to us all to this divided authority and this jealousy of interference by one body with another, do you think it desirable if possible to produce some harmony of action, and to render what is now divided united in those works?—I think the experiment should be tried; my only hope is in Parliament. That is the one thing that has in my view a spark of real responsibility about it in this country.

3506. Have you considered at all how such harmony of action should be brought about?—That is the business of the Legislature; it is not quite my business. I see all the difficulties which the noble lord who has just given his evidence stated, but I think something could be done in the way of preventing those abortions by insuring a proper amount of publicity. I find great difficulty in getting to the point where the iron hand of despotism should come in and say that something is infallibly right, and must be. I think that public discussion in this country, which really means talking about the subject in Parliament, is the great security for preventing abominations; and if something could be done to prevent this independence running riot, I think it must be done in some way or other through Parliament. Whether you can make the chairman of the Metropolitan Board of Works in anywise responsible to Parliament I am not prepared to say. I rather agree with the noble Lord, that if you have two concurrent jurisdictions, that is to say, one based upon the ratepayers and the other based upon Parliamentary and Ministerial authority, you may get into delay and difficulty, like the two cats of Kilkenny. I doubt if by that means you are going to promote harmony of action, but I have no hesitation in saying that there should be the utmost publicity, and that nothing should be done in a hurry. You get the Press to talk about things; you get any number of Members of Parliament to talk about them in Parliament, and you may perhaps find out some means to prevent these things by having them talked about sufficiently.

3507. Publicity, as far as you have explained what you mean, means talk in Parliament; but, in order to have talk, you assume that you have facts to talk about. Now, we will take the case of those railways; how would you get publicity as to what the construction of the railway is to be, either as to its stations or its bridges, in such a form as to enable Parliament to discuss it before it is constructed?—I think you must first find some authority responsible to Parliament to tell Parliament of the mischiefs which are intended.

3508. That is to say, that the designs, as at present, of the line of railway and the gradients have to be submitted to the Board of Trade, so you would have the elevations for the stations and bridges submitted to some other authority?—I think so, and models too.

3509. What authority would you take?—I suppose the Office of Works is the best. It seems

seems to me not to be of much importance what it is, provided that you have a real responsibility existing which you can call to account, if it does not warn you of these errors.

3510. Those elevations should be submitted to the Office of Works according to your idea; but would you give the Office of Works any controlling power, or merely the knowledge, which knowledge it might or might not lay before Parliament?—That is a very delicate point; Parliament does not hesitate in the case of other things to create some department of Government to see that rights are not too much interfered with. You have the Endowed Schools Bill for instance. It is proposed by various stages that everybody shall be able to say his say, and that there shall be a sufficient warning even against any improvement coming about. It seems to me not at all impossible to devise the same thing on behalf of architectural art. Something can be done, certainly.

3511. Do you agree with what we have heard proposed, that the only persons who should have any power of control, for instance, over the railways, should be the Metropolitan Board of Works?—If you could make the Metropolitan Board of Works responsible, I should, I think, on the whole (they being the representatives of the tax-payers) prefer their being the responsible parties; but the difficulty which I see is, how to make them responsible to Parliament. The city of London is not responsible to Parliament. Parish vestries are the most irresponsible things in the world, except railway companies and limited liability companies; but the difficulty is to find out how you shall get this Parliamentary responsibility. I would say that if the Metropolitan Board of Works were not allowed to put up anything of their own without sufficiently showing to the public what they intended, there would be something in that. I do not know whether they could stop Mr. Fowler in his railway engineering, but I think they ought to know what he is going to do, and they ought to put up the red danger signal; but when they are to put their finger upon something and say, "You shall not do it," seems to me a little difficult. Then who is to do it? Who is to warn Parliament of those things? And then, after all, if the Parliamentary mind is warned, it is not quite clear to me that the Parliamentary mind is in such a frame that it will take advantage of the warning, and prevent the thing being done. The whole subject, in my opinion, is full of difficulty; but I am clear that the present state is a disgrace to our boasted civilization. Whether or not awakening us to the perception that we are in a most ignominious state of degradation in such matters will make us come out of it, I do not know; perhaps it will.

3512. Are you aware whether the Metropolitan Board of Works, in any works on which they are engaged, give any publicity to their plans, so that the ratepayers of the Metropolis, other than the representatives on the Board, have any means of knowing what this work is to be?—So far as I have heard, I believe little or none; I believe that they might have made the Thames Embankment, like the walls at Brighton pier, of concrete instead of granite.

3513. That is as far as any Parliamentary or Government control goes?—Yes.

3514. Might they have made it so without the ratepayers knowing before it was erected, what the nature of the works was to be?—I think so.

3515. So that at the present moment the public are in utter ignorance of what those works are going to be?—They are hoodwinked almost to blindness.

3516. Then do you think that the Metropolitan Board of Works, as at present constituted, gives any security that questions of Art entering into public works, though they may have been up to the present time considered, will be so considered in future?—I think not; and we cannot expect the Metropolitan Board of Works to be much wiser than the average common sense of the public.

3517. It is quite possible, is it not, that in any great work which might in future be constructed, and which might be necessitated from the requirements of the metropolis, owing to the ignorant impatience of taxation of the representatives, the ratepayers, aware of that ignorant impatience, might look much more to the scamping of the work, as regards artistic consideration, than to the making of a fine ornamental work, such as the Thames Embankment?—Until you have raised the tone of public sentiment for these things, you can have no hope of improvement.

3518. Do you think, therefore, that in such a case as that, with that danger a-head, it might be desirable to have some artistic element, either in the person of the First Commissioner of Works, or of a council assisting him, which would to a great extent, influence decisions as to the plans?—Looking to the state in which all municipal questions appear to me to be in London, it has occurred to me that for this purpose of architectural decoration, as well as for other purposes, that you might perhaps get a united authority by associating together the First Commissioner of Works, the chairman of the Metropolitan Board of Works, and perhaps the Lord Mayor; and I think that if those three persons were under the necessity of reporting to Parliament upon those cases—either collectively, or separately if they could not agree—and of giving publicity, whilst they had the power of calling in the best advice which they could, and certainly paying for it (I would not give a button for an opinion without paying for it; I do not believe that there is any responsibility without it, and I do not believe that the expense would be very great), then you will have nearly got the best tribunal you can get under present circumstances.

3519. Would you advise that they should be paid on each separate occasion, as it was required, or would you contemplate a permanent council of advice?—Certainly not a permanent one; but I would call in a body partly, if you please, elected by the various institutions, which band themselves together to promote those objects, such as the Royal Academy, the Society of Arts, the Civil Engineers, and so on, and partly nominated; I would do what is done at the Department of Science and Art, viz., pay them a fee for the day's attendance. We have no difficulty in getting the best artistic advice, and the best scientific advice to be had in this country, by giving a fee of five guineas to gentlemen to give us an opinion.

3520. You may have a permanent body, which yet consists of changing individuals; I meant a permanent body, with individuals from it selected to serve on that body, but elected for a certain time; is that your view of a permanent body?—I mean

Mr. *H. Cole*, C.B.

21 June 1869.

I mean a permanent council, with members changing according to circumstances.

3521. You say that, in your opinion, it is desirable that any council of advice, such as has been suggested, should be paid, and that the members should be paid so much for each attendance; and you say that you have had no difficulty in getting persons of eminence to serve upon those terms; can you give us an instance of the satisfactory working of such a system in your own department?—For years we have been accustomed to invite the President of the Royal Academy, and Academicians like Mr. Maclise, Mr. Westmacott, Mr. Horsley, Mr. Leighton, and others, who come and examine the works of art sent up from all the schools of the United Kingdom. They come for three or four days, for several hours during the day, and judge the works, and award the prizes; I am happy to say that it costs but little, five guineas a day to each person, for the examination of the culminating works, numbering 80,000. They examine the cream of those works. In addition to that, we have 23 subjects of scientific instruction, in which we have been accustomed to have for examiners, and have at the present time, men like Professors Tyndall, Frankland, Percy, Huxley, Cowie, and others. In fact, we have no difficulty in getting the very best men in England, by offering them a moderate fee of that kind.

3522. Do you pay them five guineas?—For a day's attendance, five guineas. If they examine a number of papers, the payment is so much per paper.

3523. Are those artists to whom you have referred paid in the same way, by the attendance or by the work done?—In the case of the artists of the Royal Academy, they are paid by the day's attendance.

3524. How many day's attendance does it require?—Probably four day's in the year. I think if you had a council, as a principle, you might get the services upon it for a short time on each occasion of the most eminent people in this country to warn you of any dangers ahead in the way of architectural taste. Then, again, we put up statues in the metropolis in an odd fashion. People think that a statue ought to look like a chimney sweeper; and if you were to put up a gilt statue, as the Greeks did with their best art, you would have a screech of horror all through the metropolis; you would have all the best public instructors denouncing it. That is the state of knowledge we are in as regards statues. We make them look like chimney sweeps, so that people cannot see the details of them, and then we think the images will glorify the people to whom we put them up.

3525. Have you found the system which you have described to answer well, and have you found no difficulty in obtaining the best advice?—It has answered perfectly. We never have the slightest difficulty in obtaining the best advice.

3526. In all those cases to which you have referred, were you bound to take the advice so offered you?—Absolutely. I should say no Lord President would dispute a question of physics with Tyndall.

3527. Does that answer apply equally to the decisions of the artists?—Equally. I do not believe that even our Inspector General, Mr. Redgrave, knowing the whole system, would dispute their decisions. I cannot conceive such a thing, and I know as a fact that it never has happened, and he never attempted to advise the Lord President to override the decision of this council.

3528. You have likewise, have you not, unpaid committees or commissions?—Yes, we have occasionally invited gentlemen to decide on a competition. I remember one in which the Honourable Member for the University of Cambridge assisted, and it never occurred to us to offer him five guineas. Some people are paid by honour, and others earn their livings in their professions.

3529. Can you name some others?—The Honourable Member for Bath has not acted for the department, but I know that upon other matters at Kensington he has served on a committee.

3530. Were those unpaid committees?—Those were unpaid committees.

3531. Had you any difficulty in getting persons of the position of my honourable friend the Member for the University of Cambridge, or the Honourable Member for Bath, to undertake those unpaid duties?—None, for the duties which we wanted.

3532. Was there much responsibility attached to the duties which they performed?—Not a very serious responsibility.

3533. What were the duties?—The Honourable Member for Bath served on a committee to determine the question of the architectural proprietors of the Albert Hall of Arts.

3534. That is a very important work, is it not, which I have heard called the "Cole-iseum"?—When you have five professional gentlemen advising upon a work of art, the utmost I think you have any right to expect from them is to say that they think it will do well or not; but exact responsibility is quite different from that which would have existed, for instance, if the Honourable Member for Bath had made the original design. They can warn you of errors, and they can say to you, "Make changes in this or that direction"; but I think there is a great difference between the responsibility of five gentlemen and the responsibility of one. Now, in the case of the science examinations, Dr. Tyndall is virtually responsible for the giving away of public money, and giving away exhibitions in respect of physics, so that there is an important difference between the kinds of responsibility in the two cases.

3535. Is there any record, or is it known that the Honourable Member for Bath was referred to upon the question of the architecture of the Albert Hall?—Yes, distinctly. Minutes are kept, and so far as there is a responsibility, he is responsible to the paymasters of the hall.

3536. Therefore he is as responsible, though unpaid, in that case as the President of the Royal Academy, who is paid, is responsible for the decisions which he comes to in the other case?—I am hardly inclined to say "Yes" in that case; though I should say distinctly "No" in the case of the science judgment.

3537. In the case of the President of the Royal Academy, and those artists, and Professors Tindal, Huxley, and others, who are called upon to give opinions, should you say that their opinions were practically binding upon the Lord President?—Yes.

3538. In the other case, when the Honourable Member for Bath was called in to give an opinion, was his opinion binding?—I should say that it was rather advice, whereas the other was absolute.

3539. When

3539. When the honourable Member for Bath agreed to that, was he aware of those two circumstances: one, that he was to receive no salary, and the other that he had incurred considerable responsibility, but that his advice would not necessarily be taken?—I apprehend so; he certainly knew that he was not to be paid.

3540. And yet you had no difficulty in getting him to undertake that position?—None at all.

3541. Do you think that you would have any difficulty, supposing that it was thought desirable not to pay persons so employed, in getting persons of the standing of my honourable friend, the Member for the University of Cambridge, or of the honourable Member for Bath, or in getting persons representing the Society of Arts, or the College of Civil Engineers, or the Institute of Architects, to serve on this permanent committee, and to undertake this responsibility, without pay?—I think not; but I think you must put the responsibility of seeking that advice very definitely somewhere. The responsibility to Parliament, and the warning of Parliament of a mistake, is one thing; but the giving advice to the responsible party is another.

3542. Would you make the recommendations of such a council binding upon the First Commissioner, or upon his trio which you have proposed, of the First Commissioner of Works, the Chairman of the Metropolitan Board of Works, and the Lord Mayor?—I think it would be morally so, and would be held to be binding, unless it could be shown that the advice was erroneous.

3543. Would not that take away the responsibility from the responsible heads of those different departments?—I think not; I do not think you have any right to assume that the Lord Mayor has much artistic judgment; I think that Sir John Thwaites is rather chosen from his being a man of business, than from his having artistic instincts; and I apprehend that the political appointments of Ministries are made rather from political considerations than from other considerations; so that I should be disposed to say that, at all events, unless those three gentlemen could show the public and Parliament that the advice given to them was altogether absurd, morally they would be bound to follow it. I do not think that you could lay down rigidly by Act of Parliament that under a penalty they must follow it.

3544. But supposing that there were not this union of the three co-ordinate powers which you suggest, of the City, the Metropolitan Board of Works, and the Commissioners of Works; and that it was really the First Commissioner of Works who had the benefit of this council, of which the chairman or some member of the Metropolitan Board of Works should be a member, and of which also somebody should be a member from the City of London; would you make the suggestions of this council binding on the First Commissioner, or would you leave it to him to exercise his own judgment as to whether he would follow the advice of that council or not, the decision of the council being of course known to the public, and any departure from that decision on the part of the Commissioner being done on his own responsibility?—I think it would have to come to that.

3545. Have you any suggestion to make otherwise than what you have already stated to the Committee, with a view to getting us out of this mire in which we are at present, as regards all these matters?—I do not see much daylight. I think that anything you do must be experimental. It will probably fail, and then you must find out where it failed, and how to do something better; but so long as you have the arts in the state in which they are; the engineer knowing nothing of architecture, the architect knowing next to nothing of engineering, neither of them being painters, nor any of the three knowing anything about sculpture; all working independently, and having their own customs; so long as you have all that divided, it is very hard to say how you shall get a judgment which will form a good taste anywhere. All is against the practice of the past, when those arts were united in great men like Michael Angelo, and Leonardo da Vinci, Raffaelle, and others. I have no hopes except in the gradual elevation of the public taste, and publicity, and undivided responsibility somewhere. As to how you are to get it, I think you must make a great many jumps, before you will jump right. For instance, let me say something which came under my eyes this morning. I see a little pigmy statue, representing Lord Palmerston, between two gothic lamp-posts, bigger than itself, opposite the Houses of Parliament.

3546. Mr. *Beresford Hope.*] Have you seen it crossing the way?—I saw it coming down to the House this morning; I feel quite satisfied that the public will cause it to be taken away. My instinct tells me that Lord Palmerston will not stand there between the two lamp-posts for all time quite out of scale with the lamp-posts and with the Canning statue seen at the west.

3547. *Chairman.*] You do not think yourself that he ought to stand there?—I do not know that my thought on the matter is worth a button.

3548–3552. But you predict that he will not stand there eventually?—I do.

3553. Looking to the future, in any council which is formed, or which may be formed, as a council of advice to the First Commissioner, or to anybody else, would you have it representative, or would you have it nominative?—I should make my legislation so that I could try both; but I am rather inclined to be in favour of the trial of a representative body.

3554. Would you have it partly representative and partly nominative?—I am rather inclined that way. Your responsible tribunal might be bound to select one representing the Royal Academy, another the Civil Engineers, another the Antiquaries, another the Society of Arts, and not leave the nomination to those societies.

3555. In the cases which you have cited from your own department, is it entirely a nominated council, or is it a representative council?—It is nominated. We enjoy, at Kensington, an undivided responsibility. The Lord President is the one person responsible for everything going wrong, and consequently he, according to the best of his judgment, does everything, taking all the advice he can. In this case he names as judges various professors and artistic celebrities. I do not think we should get at Kensington any advantage by putting the nomination out of the hands of the Lord President.

3556. When you say the Lord President nominates them, there are two ways of nominating; there is nomination purely by selection, and there is a way of nominating *ex officio*; does he take

Mr. *H. Cole*, C.B.

21 June 1869.

the President of the Royal Academy *ex officio*? — *Ex officio.*

3557. Are the other artists, who are named from the Royal Academy, artists who hold certain positions, such as the artist who has charge, for a year, of the School of Painting, another artist who lectures on painting, another who has to do with the anatomical school, or are the artists nominated by the Lord President, other than the President of the Royal Academy and the *ex officio* artists, and does he merely take them as a general body at his discretion?—He takes a sculptor at his discretion; he takes a Royal academician who has shown a feeling for ornament; he takes a painter who is known before the world to be strong in drawing the figure; in the case of science, he takes for the most part the professors attached to the department.

3558. In the question which is immediately before the Committee, which is the question of the council of advice, or whatever it may be called, to aid the First Commissioner, you are upon the whole in favour of its being representative, or perhaps partly representative and partly nominative; supposing it to be representative, what bodies should it represent?—I think it ought to represent the Royal Academy, the Institute of Architects, the Civil Engineers, and the Society of Arts; I think that is enough in the way of representation.

3559. Would you think that it might also represent the Society of Antiquaries?—I see no objection.

3560. And clearly the City of London and the Metropolitan Board of Works?—Certainly. You will not get on unless you make things pleasant with them.

3561. By having two representatives from the Metropolitan Board of Works, you might have one representing that part of the City of London which is represented on the Metropolitan Board of Works, might you not?—I am disposed to take the City into alliance.

3562. You are acquainted with many foreign cities, are you not?—Yes, partially with many.

3563. Are you at all aware what control is exercised there over public works?—I only know the case of Paris.

3564. Is there anything there analogous to this council or committee which has been suggested?—I think not; I think that the Prefect of the Seine does the work in hisown way. I know that he is surrounded by the people who are very competent to give him advice, and being always more or less in very friendly alliance with the powers that be, of course there is no friction between the Government and the Prefect; and there is no friction with the taxpayer, because he has not much of a voice in the matter.

3565. Do you agree in the argument, that no distinction can be drawn between the metropolis and Leeds in this matter of interference with the public works in the City?—I do not at all.

3566. Do you think that a distinction can be drawn?—I think a marked distinction.

3567. Upon what ground would you draw the distinction?—In the first place, in the metropolis you have 3,000,000 of people concentrated together at present, and there is only about a tenth part of the number, we will say, at Leeds; that is one reason. If all England was in the metropolis, you would not find that there was much analogy between all England, centered in the metropolis, and a little place perhaps far away. In the next place, it is clear that all England comes to the metropolis, very largely. The metropolis is greatly supported by people who come from the provinces habitually. Then there are other classes of people who live both in the provinces as well as in London. Then you have public buildings, and a great deal of public expenditure going on in London. The Legislature meets there, and as you look up to the Crown as the culminating point, the metaphysical part of our constitution, so you look up to the metropolis as the worthy representative of the state of intelligence of the nation. The best shops are in London, that is a free-handed operation of trade, and having all those and other points unlike a local town, to my mind there is a kind of central responsibility which ought to exist in London, different from what exists in a provincial town. You have public museums in London, and you have them because the greatest number of people are here, and you must have them somewhere. Then you have, or you ought to have, pride in the look of your chief metropolitan town, and if you have not, you can go to school and get it. Even the Republicans of the United States are proud of their Washington. Supposing a railway wanted to go through Westminster Abbey, I should hope there would be a rebellion in London, and that you would get Mr. Beales to rise up and prevent it. At present we are taking a *laissez faire* action, and therefore everybody does what he likes.

3568. Assuming the principle of municipal government to be sound, and that the municipal authorities should have the control of the taxation for public works raised within their jurisdiction, do you think that that sound general rule absolutely applies to this metropolis?—It cannot apply to London, because you have no municipality. You have an old corporation in the City; you have a new Board of Works; you have a number of wretched independent parish vestries, as jobbing as anything, and as rotten as possible. You cannot say that you have a municipality in London. If you had, there might be some little difference.

3569. Then I gather from your evidence that, in your opinion, neither as a matter of principle nor as a matter of policy, having in view what we all wish, which is the embellishment of the metropolis, in which every individual in this nation has a joint and collective interest, would it be advisable to leave the Metropolitan Board of Works wholly uncontrolled to manage those things?—Certainly, I should say not. I cannot take Sir John Thwaites as the representative of all the architectural possibities in London; you cannot dream of it; I had much sooner take the Lord Mayor, if I had to choose between the two.

3570. Do you think that Sir John Thwaites, as representing that Board, would have any just right to complain of his Board in his person being put in an undignified position, or in an unjust position, if some such controlling powers were given by Parliament as you have suggested, and if he, representing that Board, had his fair voice on the council which was to be established under the new system?—I think not. I think he ought heartily to rejoice in it.

3571. In the same way you would put on the Board a representative for that portion of London embraced within the precincts of the City?—I think so.

3572. And so far from there being a loss of dignity, should you not think that it was rather

an

an accession of dignity to be associated with all those persons, chosen especially for their artistic knowledge?—I think so.

3573. Mr. *W. Cowper.*] You stated that you thought that the hope of efficient control over buildings in prominent places in the metropolis would lie in undivided responsibility and publicity; supposing that your first suggestion were adopted, and that the body to whom those duties were assigned were to consist of the First Commissioner of Works, the Lord Mayor, and the Chairman of the Board of Works, would you divide the responsibility between all three?—Assuming the idea to be worth consideration, my notion would be that they must act corporately, and have the responsibility of reporting publicly to Parliament on those various architectural changes which are about to take place.

3574. But would the responsibility which rested upon those three men be what you would call an undivided responsibility?—I think it would, *quâ* that corporation; I should certainly prefer an individual sole responsibility, but I see many difficulties in arriving at that; such difficulties that I should almost conceive it hopeless at present.

3575. Is it your idea then that each of those three personages should have an equal voice in the decision?—I think so.

3576. Supposing that the other suggestions were adopted, of associating a council of advice with the First Commissioner of Works, do you contemplate that the First Commissioner should have an undivided responsibility of his own, independently of his council, or that he should simply rank as one of the council in regard to the ultimate decision?—I should make him responsible in that case, with such safeguards of publicity as would keep it right.

3577. Would you require that any advice given by that council should be made known to the public, so that upon him might rest the responsibility of having disregarded that advice, if he did so?—Certainly.

3578. Do you think then that there would be an advantage in associating with them persons elected by independent art committees, and not leaving it entirely to his selection?—I think there would be some advantage in a mixed system; I think that he should nominate some, and that the others should be chosen from societies.

3579. *Chairman.*] Would you have them elected or nominated for a year, or two years, or three years?—That is a matter to debate.

3580. Mr. *W. Cowper.*] You would not think it desirable, would you, to make them a rapidly shifting body, but you would require that there should be some permanence in the body?—I think the nominees would be the permanent members more or less, whilst you would get new views and new interests by the representatives changing.

3581. *Chairman.*] They might be elected for one year, or two years, or three years, as the case might be, and be re-eligible?—Yes.

3582. Mr. *W. Cowper.*] So that if you followed the precedent of the Metropolitan Board of Works you would elect him for three years, with the possibility of his being re-elected?—Yes.

3583. Do you contemplate that if to this council were allotted the task of considering those buildings of importance which arise out of Acts of Parliament, they would have much to do, or many subjects of consideration?—I should think there would be a good month's work, on and off, in the year; but I think that you might ease their labours very much by compelling persons who want to build, and railway companies who want to carry a railway, and other authorities, to have proper elevations and drawings and especially models, upon which any council of advice might, without any great deal of laborious work, say, "This is very damaging; this could be improved;" and, if the thing is worked with common sense, I think that all parties would get on pretty fairly.

3584. Supposing that they had only to consider drawings and elevations, and possibly models, which would be submitted to them for buildings to be built under Acts of Parliament, would not their work be really slight, because they would have only to express a judgment upon those drawings, and would not be called upon to suggest any substitutions, or to make any designs of their own?—Certainly; the work would be comparatively slight.

3585. Do you think that that is work which might not be easily allotted to persons who would not require payment for such work, but who would be satisfied with the important public service which they were rendering by giving that advice?—I have a great objection to take a professional man, whose judgment ought to be the best, and who is living by his brains, and expecting him to give it to the public for nothing. I can quite understand persons who have retired from their profession, such as Mr. Robert Stephenson, or the honorable Member for Bath, and others, feeling gratified at being asked to do a public service, but if you wish to select the best artistic judgment you can, and the possessor of it is in the heyday of his work, I think it is monstrous to ask him for his labour for nothing. You might as well ask a leading counsel to advocate your cause, or a physician to come for the sake of the public service and feel your pulse.

3586. But while it would be very wrong to ask an architect to do architectural work, that is to say, make drawings or plans without payment, is it not quite a different matter when you ask a man of taste and experience to give an opinion upon works which would not involve any labour or any length of time to perform?—To ask a gentleman and give him public credit for coming to you and seeing a model, upon which it will take him half an hour to give you a judgment, of course might not be necessary, but even then I should prefer that he should have a payment; I think he would feel his responsibility much more than he would by stepping in and giving a perfunctory sort of opinion which you can take or not.

3587. When judges have been appointed for competitive designs either of the Courts of Justice or of the National Galleries, or of other buildings, and professional men have been employed, it has not been usual to offer them any salary; would not the work which would be required under this supposed council of advice be rather more analogous to that than such work as you have mentioned as being done, where men have to give a whole day to the minute examination of the student's work?—I feel strongly that whatever is worth having is worth paying for, and I also feel strongly that in proportion as you pay for it so do you get work well done. There is no favour on either side, and if he does not do the work well you can call him to account and get others.

3588. *Chairman.*]

Mr. *H. Cole*, C.B. 21 June 1869.

3588. *Chairman.*] Do you think that any distinction could be drawn in forming such a council, in a discretionary power being given by any authority or Act of Parliament to pay those who are in the active pursuit of their profession?—I think it is not worth a moment's consideration; who would grudge having to pay 1,000 *l.* in fees, to be relieved from the Charing-cross station? You could raise the money by a public subscription of farthings.

3589. Mr. *W. Cowper.*] Would not the class of persons whom we should desire to see on this council of advice, rather be a class whom we should call critics in art and architecture than professors in that art?—I entertain a strong objection to unprofessional critics. When a gentleman wishes to build his house, he is wholly responsible for the taste which he may choose to exercise in it; but if you call him in as a semi-public servant, to give an opinion, I object; I dislike anything but a professional opinion.

3590. Would you question the fact that many people may be excellent judges of architecture, without having themselves any professional knowledge or power of building?—The proof of it is in the practice; I rather doubt about it.

3591. *Chairman.*] It has been pointed out that, as the Office of Works is at present constituted, if the First Commissioner of Works wishes to have the advice of any architect or engineer, or other person, he can privately consult such a person, and have the benefit of his advice; but that advice is now given without any publicity, and without any responsibility, as far as publicity is concerned, is it not; that is to say, no public reponsibilty can possibly attach to advice given by a private individual in his private capacity?—No.

3592. And any advice given by an engineer or an architect, privately consulted by the First Commissioner, comes under that category, does it not?—Yes.

3593. Whereas, even if they were unsalaried, if any number of architects and engineers, and others, were appointed on a council, and were known to the public to be so appointed, and to give advice, they would act under responsibility, would they not?—Certainly.

3594. And, therefore, there is the broadest possible distinction, is there not, between a council paid or unpaid, as has been suggested, and the individual chance haphazard opinions given by private individuals who may happen to be consulted by the First Commissioner?—A wide difference.

3595. Mr. Alderman *Lawrence.*] I suppose, in reference to a council deciding as to architectural beauties and as to architectural necessities, you would consider the question of site as of equal importance with the architecture of a public building?—Yes.

3596. You have alluded to the Albert Hall of Arts; the site which that occupies, I suppose, must be considered an admirable site, having the Park in front and the ground falling from it at the back?—I think it will prove so.

3597. And the very reasons which made the site of that building admirable would have made the site of the Exhibition building of 1862, if it had remained permanent, an unadvisable site, would they not?—I think that experience has shown that it was wise to pull it down.

3598. If that building had been permanent it would have been upon a site which would not have been most advantageous for a building of that kind, would it not?—The main defect was that it was too near the road.

3599. And the ground, I apprehend, sloped down to it rather than sloping from it?—That depends upon the way in which it might be treated; I should not like my answer to lead to the conclusion that it is impossible advantageously to put a public building upon that or on a sloping site.

3600. But I apprehend as a general principle, that a public building on a higher portion of ground, the ground belonging to it sloping down from it, is more advantageous than a building put upon the bottom of the ground sloping up from it?—There is a great deal to be said, and you must look at the precise case I think before you can pass a judgment; I do not think that you could very safely lay down a general principle.

3601. Might I not lay down this principle, that if it had been possible at the time when that building was erected, as it was intended for a permanency, it would have been far better to have placed it in the position which is now occupied by the Albert Hall of Arts, than in the position in which it was placed?—Yes, if it remained for all time; but as circumstances have turned out I think it is better to have the Hall of Arts where it is; and I think that it was wise to have pulled down the 1862 Exhibition building, but I think that it would be dangerous to say that buildings in hollows do not look very well. The monks, who knew what was good in architecture as well as in other things, frequently selected the most picturesque sites which are quite in hollows. Some of the most beautiful buildings in this country are not on the tops of hills, but in hollows.

3602. *Chairman.*] Were not those situations necessarily near a good trout stream or a tench pond?—No doubt.

3603. Mr. Alderman *Lawrence.*] But supposing that you had to erect a building for the purposes of an Exhibition, similar to the one in 1862, and that you intended it to remain permanent, and that you had the same space of ground now free and clear, and that you could have the choice of placing it where the Albert Hall of Arts is placed, or at the bottom, which place would you choose for it?—In the abstract, I should say the place where the Albert Hall of Arts is.

3604. Then, may I come to the conclusion that it was rather a mistake to place it where it was placed for a permanent building in 1862?—It was Hobson's choice as respects taking that particular piece of ground. It was easy to get that piece of ground, difficult any other. That a great many mistakes were made in that building, I readily admit, but that it would be possible to put a good public building there I am prepared to say.

3605. I think there can be no doubt of the possibility of a good public building being placed there; the only question which I have asked is, supposing you had the choice of the two sites, the one where the building was originally placed, and the site which is now occupied by the Albert Hall of Arts, which of those two sites would you choose upon; which to put an Exhibition building, afterwards to remain permanent?—That must depend entirely upon circumstances.

3606. *Chairman.*] Are they each 16 acres?—No.

3607. Was not the site below much more suitable,

able, as regards space, than the site above?—The site above is only about eight acres.

3608. Mr. Alderman *Lawrence.*] I understand that you prefer that a public building should be on the upper spot, rather than the lower spot, for an Exhibition building for a permanency, if you should have the same quality of land in both positions?—With respect to the Exhibition site, I have attempted to give an answer which illustrates my reason; with respect to the general question I have also answered; with respect to another case which I have in my eye, if I am asked whether I prefer to have the Law Courts on the Thames Embankment, which is lower than the Carey-street site, I infinitely prefer the Thames Embankment.

3609. Mr. *W. H. Smith.*] The inquiry before the Committee divides itself into two branches: first, whether it is expedient that there should be an authority which should exercise control over works carried out by the Metropolitan Board of Works, and next, whether there should be an authority which should exercise control over works which are carried out by private owners or corporate bodies; are you of opinion that it would be possible to constitute an authority which should have a veto over the works executed by the Metropolitan Board of Works at the cost of the taxpayers, which would act satisfactorily and harmoniously with such a body as the executive of the Board of Works?—I have tried to express my views by the answers which I have given. I have attempted to show that we are in a state which requires some drastic remedies; I think it might be possible, admitting the permanence of the Corporation of London, admitting the existence of the Metropolitan Board of Works, and also the State itself as representing large interests in the metropolis, in some way for them to concur at all events to prevent mischief (I will not say to create things; each one will create things for itself), and to see that they do not tread upon one another's toes, and offend public taste; whether what I have suggested be practical or not I cannot say.

3610. You are aware that such a veto existed in the First Commissioner of Works some time ago, and that it was given up?—I dare say it did not work well, but that is not what I contemplate.

3611. Your knowledge, of course, of public bodies is great, and you know the jealousy which exists between bodies having co-ordinate authority, or between the body possessing the taxing power and the body which exercises control over that power?—There is always as much animosity between a cat and a rat as there is between one public department and another.

3612. With reference to this council, that would advise the First Commissioner of Works, would you merely give it a power of advice?—I should first look to see what the corporation, or unit, or individual is who is to be advised, and that would somewhat regulate my judgment as to the nature of the council. The first question I do not conceive yet to be settled. The Right Honourable Member for South Hants has put some questions to me which show that it is quite a distinct thing where a Minister has the sole responsibility, and where, perhaps, he is acting in union with other people. If you could get a Minister who could put all things right in London, then, of course, he ought to have undivided responsibility, and seek the best advice he can where he can; but that I look upon as a dream at present.

3613. *Chairman.*] Supposing that you gave co-ordinate authority to the Lord Mayor, Sir John Thwaites, and the First Commissioner of Works, would there not be this difficulty, that you would have done away with the Parliamentary responsibility of the First Commissioner in a great measure, because he would be in a position to say, "It is true that this has been done, but I was in a minority; the other two were against me"?—Supposing that it touched some Parliamentary piece of work paid for by Parliamentary funds, then the whole of their reports would go before Parliament and the public, and in some way it would be solved by some common sense at the time. But that is a very extreme contingency. I think that to produce harmony you had better trust to the opinion of such a Board duly published.

3614. Lord *John Manners.*] Would you give to the Lord Mayor and the Chairman of the Metropolitan Board of Works and the First Commissioner of Works the power of interfering with all the buildings in your own department?—I would give them a power of interfering in the way of advice. The Lord President would be responsible to Parliament for the carrying out of the work and spending the money properly, but if so be that the Lord Mayor and Sir John Thwaites could give a useful opinion, or any opinion, I think it might be well to have it.

3615. *Chairman.*] If the First Commissioner was responsible, and the Lord Mayor and Sir John Thwaites differed from him as to the plans, what he is to do?—Alter them if they could be bettered. I do not think that that body has any function of submitting plans of their own.

3616. Mr. *W. H. Smith.*] I think I understood you, in the early part of your examination, to say that you hoped it would be possible ultimately to create such a body as that which we have been discussing, but that you looked rather to publicity, to the education of the public mind, and to discussion in Parliament to prevent immediately the evils which all of us regret?—Yes.

3617. Do we rightly understand you that in the first place, and as a step to the creation of this ultimate power, it is your opinion that we should increase the publicity with which every step in the production of those works should be accompanied, and put it upon some public authority to consider and publish, and if necessary oppose before the Committees of the House of Commons, or elsewhere, so as to prepare the public mind for the creation of a central authority?—I think so, and I should say that you would not have had the abominations which you would now be glad to get rid of, had you been sufficiently warned of what they were likely to be before they were created, and that if some remonstrances could have been made to the engineers upon the subject, and if there had been some kind of competent authority to look at the subject before it was done, you would have been saved the trouble, and probably, too, without even any supervising despotism.

3618. But I understood you, that in your judgment it must be the first step in the education of the public mind to support the creation of some authority, such as that which we have been discussing during the last half-hour?—I think so.

Mr. *H. Cole*, C.B.

21 June 1869.

3619. You think that it would be impracticable to create an authority possessing a veto which would work satisfactory with the popular bodies, until first of all this tentative step had been taken, making it compulsory upon all persons seeking powers to erect large public buildings to make new streets, or construct railways, to deposit plans to show distinctly what their works are intended to be, and to put it upon some public authority either to oppose here or to discuss publicly the effect of those plans?—That is my view; I think that you would spare London a great many inflictions if you compelled the parties wishing to put up architectural structures to exhibit proper models of them in some public place, and supposing you could do nothing more than that, I believe that would be a great good.

3620. You referred to the fact that it was the custom of the Department of Science and Art to obtain advice from the most competent persons from time to time as they might require it; is that advice given upon questions of construction, or is it advice as to questions affecting the giving away of prizes, which are purely personal matters as between the recipient and the Department?—In any question upon which the Lord President may not be supposed to have fully competent authority under his own direct control, or upon which there is controversy, such, for instance, as the lighting and ventilation affecting the preservation of pictures, he has constituted a specific committee to report upon that subject. This committee is composed of responsible professional advisers with his own officers, and reports have been made; in the case of the construction of the building of course he ought to have an officer who is responsible for it, and he has had no reason ever to doubt that he had one. He would think it very superfluous to call in a second engineer to know whether the thickness of the walls was what it should be; as respects the other professional advice for giving away prizes and so on, I have already described that; we have had no difficulty for over 12 or 14 years in getting at any time *ad hoc* the best professional advice which this country could afford.

3621. And I suppose, as a rule, you have followed that advice when you have obtained it?—I think invariably.

3622. But it might happen that the First Commissioner of Works, or this new authority, constituted as you have suggested, might take advice, and might not be able, from a variety of circumstances, in a great many instances to follow that advice; do you conceive that it would be probable that gentlemen would consent to act upon a committee of advice, their advice being frequently ignored and departed from on public grounds, the difficulties in the matter being exceedingly great?—That will very much depend upon the common sense which is exercised in the whole business.

3623. Lord *John Manners.*] I think I understood from you that to this new tribunal, consisting of the Lord Mayor, the Chairman of the Metropolitan Board of Works, and the First Commissioner of Works, you would confide the deliberation upon such public buildings as were undertaken by departments of the Government, by municipal bodies, or by public companies?—That is the inclination of my mind.

3624. You have said that you would not exempt even your own department from that operation?—No; I would try the working of the general principle.

3625. The Lord President and the First Commissioner of Works being members of the same Government, do you think that in the event of a difference of opinion between this consultative body and the Department of Science and Art, the work of the Government would go on smoothly?—I should hope it would; I can foresee difficulty, but the whole case is full of difficulty. I do not know why the Government should affect to be a great deal wiser than either the Metropolitan Board of Works or the Lord Mayor in his corporate capacity. I do not think that the Government would have built a better Embankment. Then if you put to me a closer question as to whether I should see any difficulty in that committee criticising the South Kensington building, I do not see any. I think we could explain it satisfactorily enough.

3626. But supposing that two departments of the Government differed, and you had the First Commissioner, and the Lord Mayor, and the Chairman of the Metropolitan Board of Works dissenting from the style of building proposed to be erected by the Lord President of the Council, how do you think the harmonious relation between the heads of the various departments of the Government could be maintained?—I think that if the Lord President could not convince them that he was quite right, of course you might conceive that there would be a dead-lock; but supposing that our buildings had not commenced, and that it had been a question upon a view of the models and plans, whether they should adopt the style selected or some other, then of course some one or other of the parties would have agreed about it. You may contemplate that there would have been such a difference of opinion that you would come to a dead-lock. That happens in some cases, and you would somehow get over it; but if they were to come now and say, "I think you had better adopt the style of the thirteenth century," I think common sense would be against them, and they would give in. But I see rocks ahead everywhere.

3627. At the present moment, can you tell the Committee what are the relations which exist between the Office of Works and the Science and Art Department?—None at all.

3628. Is there clear and distinct independence?—Completely so.

3629. With regard to the works undertaken by the Science and Art Department, are you satisfied that you do not require the assistance of the First Commissioner of Works?—Quite.

3630. Am I putting it too far in asking whether you suppose that the First Commissioner of Works requires the assistance of the Science and Art Department?—I am not prepared to say that.

3631. Be that as it may, at the present moment there is complete mutual independence, is there not?—There is complete independence officially.

3632. And the consequence is that there are no official rubs and jars, which lead to hindrance?—None at all.

3633. With respect to another great spending department of the public service, viz., the War Department, are you able to tell the Committee what relations, if any, exist between the First Commissioner of Works, the President of the Council,

Council, and the War Department, *quâ* barracks and other buildings of that character in the metropolis?—I have no official knowledge of that.

3634. Should you be surprised to hear that the First Commissioner of Works has nothing whatever to say to barracks to be erected in the metropolis?—I have seen it so stated.

3635. Would you propose that this council of the Lord Mayor, the Chairman of the Metropolitan Board of Works, and the First Commissioner of Works, should have a veto on the barracks which the War Department propose to erect?—If the barracks were going to be in any very ostensible public situation, and if they proposed to repeat anything as ugly as the Knightsbridge Barracks, I think that the opinion of that body would be very useful.

3636. Do you imagine that the friendly relations between the Office of Works and the War Department, would be promoted by that system?—I think that if the War Department want to put up something hideous, as they do not affect to have any architectural taste, it would be rather wholesome for them to be kept a little in order.

3637. Do you think that at the present moment the system is defective in that respect, that the War Department has unlimited control over the buildings which it erected?—The War Department does not affect to be an architectural department. It is a constructional department, building by means of its Royal Engineers. They do sometimes, they put up bad things, no doubt; and if they were going to put up a railway station as ugly as the Charing-cross station is, I should say it would be a very good check upon them if they were called to account before they put it up. As to their quarrelling over it, that I dare say they would do so, but still it would be very good for the public. The public would not pay for a hideous building, and their eyesight would not be insulted.

3638. Mr. *Beresford Hope.*] I gathered from what you have said that the Science and Art Department is an artistic department?—So it is supposed, and that is its assumption.

3639. Is that the assumption on which you give your evidence?—Yes.

3640. It is under the responsibility of the Lord President, and you consider it an advantage to be under the responsibility of a strong Cabinet Minister, do you not?—Certainly, of the highest advantage.

3641. The Department of General Education, the three R.'s, and so on, is also under the Lord President, is it not?—Yes.

3642. Have you any very close relations with that department, except the fact of having a President and Vice President in common?—We teach drawing, or cause it to be taught, or instigate its teaching, at the national schools.

3643. Still you have your own very distinct line of operation, have you not?—Yes, excepting that we are, in a broad sense, altogether educational.

3644. That is one view of the matter; but yours is the Department of Artistic and Scientific Education, is it not?—Yes.

3645. You consider that the Office of Works is, or ought to be, to a great extent artistic also?—Certainly.

3646. Have you ever considered whether your own position might not be strengthened if the responsible Minister always in the Cabinet, whom, as you so justly say, you feel to be a tower of strength to you, should be a Minister of Arts and Architecture, who would take you away from the mere Downing-street branch of the Lord President, and also administer the department now not so strongly worked by the First Commissioner?—If you wish the Science and Art Department to be for the good of the education of the whole country, then I think if you do not recognise that educational function to be its highest function you would damage it. But it has also an artistic function, inasmuch as it is erecting its own buildings at least, and trying its own experiments in them. That is, in my mind, rather subordinate to the educational function of the department. If you ask me whether I think that the Museum would be benefited by being put under a Minister whose mind was turned to public works, I have some doubts, and I think it ought to be kept as an educational institution.

Mr. *H. Cole*, C.B. 21 June 1869.

3647. Do you see any difficulty in our hypothetical Minister being an educational Minister, there being a new department of the State, a ministry of arts, architecture and science, which should take up arts, both in their practical and their educational aspect, leaving the Downing-street department, so to speak, to look after practical education?—I see great difficulty in that; it would take, perhaps, too long to go into all the details, but if you are in the faith that a parish school should do nothing but reading, writing, and cyphering, and that it should not have a little geography, a little history, and a little drawing, and a little something else quite on the borders of science and art, I venture not to agree with you. If you thought the school should be highly taught, it would be very hard to say that you should give reading, writing, and cyphering to one Cabinet Minister, and geography, and so on, to some one else who is called an Art and Science Minister.

3648. Is it not the fact that you build very magnificent public buildings, such as the Albert Hall and the South Kensington Museum; that the First Commissioner of Works builds others; that the War Office builds barracks, which are big if they are nothing else; and that the First Commissioner of Woods builds other things, which are also big if they are nothing else, and looks after statues which stand upon Crown land?—Undoubtedly there are lots of anomalies in the whole thing, and it might be possible to get to a more logical state of things; I only hold strongly to the faith, that if the Science and Art Department be not educational, we had better not exist.

3649. Do you not conceive it possible that persons who hold that belief as strongly as you, want to extend the domain of education and want national architecture to be artistic, and not merely that which is comprised in the word "works"?—That is another point; let me say that I have no responsibility as regards the Albert Hall, except by paying for a share.

3650. *Chairman.*] Who is responsible?—The corporation.

3651. What corporation?—The body that has raised the capital of 200,000 *l.*

3652. Mr. *Beresford Hope.*] Seeing difficulties then on all sides, are you opposed to a reconsideration of the national administration, which would give a more logical and complete position to all art and all science as such, including architecture

Mr. *H. Cole*, C.B. 21 June 1869.

tecture as one branch of it?—On the contrary, I should gladly see any improvement.

3653. Are you satisfied that the present position of affairs which leaves works under a Minister who may or may not be in the Cabinet, and who divides your work between the Lord President and the Vice President, is not perhaps the best concentration of power and force?—*Quâ* architecture no; *quâ* education, and helping the people to be better instructed, yes.

3654. Then do you think such a concentration as I contemplate would necessarily damage the art education of the people?—I think that if you look upon museums as mere *dilettanti* places, antiquarian shops, without reference to their teaching or to their being turned practically to account, they are dull and useless affairs.

3655. Granting that is not the best chance of their being turned to a good use, there being one department which shall look after both their outside and their inside, and which shall try to make their outside as little disfiguring as possible, and their inside as generally useful as possible?—I think if you keep a Minister of Works having charge of public buildings and architecture, and in some way ally him with the educational branch, without damage to the educational branch, you may do good service. But if you say you will have one man who will look after the Public Works, who shall take up the æsthetical branch, and the museums, and what not, and another man who shall look after the three R's only, and another man, I do not see daylight.

3656. Of course, in any such re-casting, the new office would require an organised system for communication with other departments?—On that point I have no doubt at all that there ought to be an inter-communication amongst them. I can suppose that art education is left at Kensington, and that the Minister of Public Works and Buildings may become responsible for the art of the metropolis, and then, I think, there ought to be close relations between him and Kensington certainly.

3657. Do you think in the same way that the Commissioners of Woods and Forests ought to owe some subordination to the Office of Works in reference to statues or other public masses of matter put upon Crown ground?—I think so.

3658. And the same with regard to the War Department?—That is a fighting instrument, and it does not affect to be an architectural one, but if it did affect to do anything in architecture, I would have it looked after.

3659. But when the happy day comes to build the Kensington Barracks elsewhere, you would be glad that somebody who knew something of architecture should survey the elevations, would you not?—I hope the day will come when the Royal Engineers will take them down and never rebuild them on that site, and if they are put in some unseen situation that would not trouble London very much, then I do not think this supposed tribunal need trouble themselves very much upon the subject, but if they are to be put in Hyde-park, or some such ostensible place, I think a little gentle advice to the War Department may be good.

3660. *Chairman.*] Do not you think that even in this unseen situation there might be some person interested in the character of the buildings, such as Mr. Cole for instance?—Yes.

3661. Mr. *Beresford Hope.*] Might there not be enterprising tourists and water-colour painters looking out for picturesque nooks?—I think if you are going to build the barracks on the Carey-street site, you need not trouble yourselves much upon the subject.

3662. Do you consider that if the barracks were built on the Carey-street site, their outline would be visible from the windows of the palace we are now in, and for a circuit of six miles round?—They ought not to be ugly, certainly.

3663. Do we gather from the evidence which you have just given us, that you consider unpaid advice to be worth very little?—Yes.

3664. On all occasions?—I would not say that; I think the honourable Member's advice was very valuable, although it was not paid for.

3665. Lord *John Manners.*] Would you say unpaid professional advice?—Exactly; that marks the distinction.

3666. Mr. *Beresford Hope.*] Does not that distinction lead to the chance of a certain amount of invidiousness as to what is professional advice; there is a stage in the life of professional men when they retire from the active pursuit of their profession, and occupy a semi-amateur position. Do not great lawyers, great physicians, great artists, great men in every branch, after they have obtained a certain degree of eminence, and the solid results of eminence, take up a semi-amateur position?—I have not much objection when they get into that semi-amateur position to not paying them, but I should prefer to pay them.

3667. *Chairman.*] The line might be drawn at their practising, perhaps?—Perhaps it might.

3668. Mr. *Beresford Hope.*] You see many great societies, do you not, which are worked by men whose time is still their money, and who yet give up some of that time to objects which they think useful?—There is a great difference between that kind of work and public responsible work.

3669. But, assuming that the council is not responsible, but is acting behind the ægis of the Minister of Public Works, would there be any objection to their being unpaid?—I really do not think the taxpayers would have to pay such great sums for the advice, that it is worth any consideration.

3670. If there was a remuneration either obligatory or optional to its members, your objection to the council would, to a certain extent, be removed, would it not?—Yes; I think any council will be all the better for being a paid council, but I see no objection to any modification of the principle, if it is for any reasons thought desirable.

3671. Council or no council, the keystone of the structure must be Ministerial responsibility and a strong department, must it not?—Certainly.

3672. *Chairman.*] The instance of the barracks that has been cited, is an additional reason, is it not, for some control?—I think so.

Monday, 28th June 1869.

MEMBERS PRESENT:

Mr. Bentinck.
Mr. Buxton.
Mr. William Cowper.
Lord Elcho.
Mr. Gregory.
Mr. Beresford Hope.
Mr. Alderman Lawrence.
Mr. Layard.
Mr. M'Clean.
Lord John Manners.
Mr. William Henry Smith.

LORD ELCHO IN THE CHAIR.

Mr. WILLIAM CORRIE, called in; and Examined.

Mr. *W. Corrie.* 28 June 1869.

3673. *Chairman.*] I BELIEVE you are the City Remembrancer?— That is my office.

3674. And you come here to tell us the way in which matters affecting public works and buildings are managed in the City?—Yes. I understood the Committee desired my attendance.

3675. Will you kindly state to the Committee generally how they manage these things? —There are two standing committees, among other standing committees of the Corporation; one called the Improvement Committee, and the other the Bridge House Estates Committee; and according as these improvements are general improvements, or relate to the erection of bridges, they are referred to the consideration of these respective committees.

3676. How are these committees appointed? —They are appointed by the Court of Common Council. They are appointed each year; that is to say, a number go out every year.

3677. Are they appointed by vote?—By vote.

3678. Do the persons present themselves as candidates for appointment, or are they merely selected?—There is a sort of understanding who are the better men, I suppose, and they are proposed. You may object to one name and propose another, just as in the House of Commons.

3679. Are there no *ex officio* members? — There are no *ex officio* members except chairmen of other committees. They always have a number of aldermen and common councilmen on each committee, and on the Improvement Committee, and the Markets Improvement Committee, four chairmen of other committees, and the chairman of the Commissioners of Sewers. The chairmen of these two committees may be considered as standing chairmen, having each served many years.

3680. Is there any special selection; do you put any engineers on the committee, or architects?—Sometimes a member will be selected especially to be put on a committee from his peculiar knowledge; and perhaps an architect might be chosen in that way. Then this committee having any given work, whether it is a new street or whatever it may be, frequently issue notices for plans to be submitted to them. I may mention, that in the case of the Holborn Viaduct they gave prizes; 250*l.* for the best plan selected, and 150*l.* for the second plan. In the cases of bridges a different course was taken. I am not able to say what was done in the case of London Bridge.

3681. In regard to the Holborn Viaduct, had the Bridge Committee anything to do with it?— Nothing with that; the General Improvement Committee have that under their management.

3682. So that their provinces are quite distinct?—Yes.

3683. And the Bridge Committee is confined to water bridges, I suppose?—Yes.

3684. And has not reference to bridges across roads or viaducts?—No; that name of the Bridge House Committee probably arises from the fact, that there are considerable estates called the Bridge House Estates, which were originally intended for the erection and support of London Bridge; and as the property has increased in value, they have been applied to make other improvements. I may mention perhaps in passing, that they were used to purchase Southwark Bridge, the iron bridge, which was erected by a public company a good many years ago, and which proved rather a failure. The corporation purchased that out of the Bridge House Estate, and threw it open to the public, toll free.

3685. What do you mean by the Bridge House Estates?—There are estates which were originally intended for the purpose of keeping up London Bridge; but as I have mentioned, the estates have increased in value, and, after paying all the expenses of erecting that bridge, they have been applied to other like purposes, such as the new Blackfriars Bridge: all these applications of the Bridge House funds have been under Acts of Parliament.

3686. Are we to understand that this Bridge House Estate Commitee was a committee originally constituted, not for the erection of bridges, and looking after their mechanical construction or artistic form, but for the management of certain property connected with the bridges?—And keeping the bridges in repair.

3687. Originally was that so?—That may be going back for ages.

3688. I thought it arose from the time of London Bridge?—No.

3689. It is a very ancient committee?—A very ancient committee. I may point out that when it became necessary to build that new London Bridge, it was referred to the Bridge House Committee to consider the subject, and under their superintendance it was erected. In the

Mr. *W. Corrie.* 28 June 1869.

case of London Bridge, there seems to have been rather more superintendence than there has been latterly; I mean of the Government and Parliament. The bridge was erected under an Act of Parliament, the 4th Geo. 4, c. 50; and I find that the fourth section states, that "the bridge is to be erected and built of the best granite stone, and other durable materials; with five arches of such height, width, and dimensions, as are shown by the model, and the plans and specifications, as far as they relate to the construction of the bridge itself, designed by the late John Rennie, Esq., civil engineer, as exhibited to the Committee of the House of Commons, and deposited at the Office of Works at the Guildhall of the City of London." Then there is a provision, that if the Mayor, Aldermen, and Commons of the City of London think that any alteration should be made in the plan, or that a bridge should be constructed upon any other plan, an approval of the same shall be certified in writing by the Commissioners of the Treasury; and if they get their consent it may be altered. So that it seems that Parliament determined the form and the materials of which it should be built at that time, with power to make an alteration.

3690. You say that the consent of the Treasury was required to any alteration?—I can only guess the reason, for this consent being required was because the Treasury advanced considerable sums of money upon the security of the Bridge House Estates. Then, as connected with London Bridge, very great improvements were made in the City; they are specified in the various Acts of Parliament. There is the 10th Geo. 4, c. 136, 2nd Will. 4, c. 23, and the 4th Will. 4, c. 13, extending the approaches; and what are called the "approaches," were really laying out anew one part of the City; for they extend from London Bridge up King William-street and Princes-street, and Moorgate-street, going really through the City; they were called approaches, but they were really great improvements.

3691. Those were done by the general Improvement Committee in connection with the Bridge House Committee? — Yes; and your Lordship will remember the broad open streets that there are all the way from London Bridge till you get out of the City at Finsbury-square; it has quite altered the face of the City from what it was prior to the alterations. Perhaps I might mention here, with reference to the elevations of the various houses, the check which the city keep upon that. They grant leases, but they do not grant the leases except they have the plans submitted to them as to what is to be built there. Then, having approved the plans, they grant the leases; and having granted the leases, when the houses are erected they sell the ground-rent.

3692. That is on the property that they require for improvement purposes?—Yes. Then I may perhaps just run through the great improvements that they have made in the City of late years; I have mentioned those streets which made the City in that part of it almost new.

3693. You have a City architect, I suppose?—Yes.

3694. And are the plans for these new streets drawn by the City architect; that is to say, where you make a City improvement and open up a new line of roadway or street, the City acquires the land; does the City architect draw the plan of the buildings that are to be erected, or have you competition, or do those who take the ground submit plans?—I am not aware of any competition with regard to a street; with regard to the Holborn Viaduct there was a competition; in the case of houses I think that they would rely on their own architect for the time being.

3695. So that all builders would take the plan laid down by the City corporation, and build to that plan?—Yes.

3696. Have you a City clerk of the works?—That office is contained in the architect's office.

3697. What is the name of the architect?—Mr. Horace Jones.

3698. Is he salaried, or paid by the job?—He is salaried; so much a year.

3699. And what do his duties mainly consist in; are they the duties of a designer, or of a surveyor?—Partly of a designer; I have here the design made by him for the continuation of the streets leading to and from the Viaduct. I could show the Committee, if they desire it, what he requires to be built there.

3700. Mr. *Beresford Hope.*] Does he do all his works on salary?—Yes.

3701, Even such exceptional works as the restoration of the Guildhall?—Yes.

3702. Mr. *M'Clean.*] And Smithfield Market?—Yes.

3703. Mr. *Beresford Hope.*] And temporary decorations for great feasts?—Those he also superintends.

3704. *Chairman.*] And he is the surveyor, too?—Yes; he used to be called some years ago surveyor, I believe; but he is now called an architect, surveyor, and clerk of the City works.

3705. Mr. *Beresford Hope.*] I believe that he succeeded Mr. Bunning?—Yes.

3706. *Chairman.*] What salary does he get?—£. 1,500 a year. Then the next improvement that I have to mention is this: the new meat and poultry market on the site of old Smithfield. In the Act of Parliament under which that was erected there was no check whatever: the Corporation had full power to erect it in any way that they pleased. I mention it, that there was a sort of check in the case of London Bridge, because the material is mentioned in the Act, and a model; but in the case of this market it is not so.

3707. That new meat market was made under an Act of Parliament, you say?—Yes, the 23 & 24 Vict. c. 193, which was passed in the year 1860.

3708. No drawing for that was submitted, or plan or model?—No; I have the Act of Parliament before me, and it is quite general; it is to be erected as the corporation think fit.

3709. What were the powers acquired; were they to purchase property, or to clear ground?—To purchase property and to clear ground. A good deal was cleared previously; it was to acquire other ground that was not cleared.

3710. Have you always to come to Parliament for the new streets that you make?—We must come to Parliament necessarily.

3711. You have no general power?—We have an Act of Parliament, called the City Improvement Act, originally passed for widening and improving Cannon-street, making a new street from the West end of Cannon-street, and for effecting other improvements in the City, and which we embody in all private Acts that we pass, and under which we have very extensive powers, much

much more so than are generally obtained by persons who are making public improvements.

3712. What is the date of that Act?—The 11 & 12 Vict. c. 280, 1847. Under that Act we had power to take a very considerable extent of property, more than was actually required for the streets.

3713. To recoup yourselves?—I do not know whether it was to enable us to make more advantage of the frontage; I am afraid that we do not make much profit; I believe that might have been one of the objects of the Act; but the result is this, that we are able to have much better houses built and much more extensive premises behind in consequence of taking the whole property behind the principal streets. Your Lordship will know that street in Southwark made by the Board of Works; they have very small spaces of ground taken there, and I think they have had considerable difficulty in consequence of not having more power to take property.

3714. You know the relative powers of the Metropolitan Board of Works and the City?—Yes.

3715. Do you consider that you have more power under that Act than the Metropolitan Board of Works have under theirs?—Yes; they might extend theirs when they come for improvements, but we always take those powers; and looking at that street in Southwark in passing along I think it would have been better for them if they had had more power.

3716. You think that your powers under this Act are wider than theirs?—Yes; but Southwark-street is made under a special Act, not under any general Act of the Metropolitan Board of Works.

3717. Lord *John Manners.*] Are your general permanent powers larger than the general permanent powers of the Metropolitan Board of Works?—You will observe that this is with reference to improvements; and, supposing that we are making a new street, we certainly do take very large powers, larger than, so far as I am aware, the Metropolitan Board of Works ever have taken; but there was nothing to prevent the Metropolitan Board of Works applying for larger powers if they had thought fit to do so.

3718. Mr. *M'Clean.*] It depends upon the plans deposited, does it not?—No, not upon the plans; there are no plans deposited as to the class of houses.

3719. But as to the extent of the ground there are?—Yes.

3720. Lord *John Manners.*] I think you gave evidence on this point at some length before Mr. Ayrton's Committee?—Yes.

3721. You can knock houses down off the corners of the street ——, and so on?—That is a different power.

3722. *Chairman.*] Have you a copy of your General City Improvement Act which was passed in 1847?—No; but I think I have explained the nature of it; it may be considered a sort of Lands Clauses Act for the City.

3723. You require for every special improvement a special Act?—We must have a special Act.

3724. And that special Act in its provisions is in the main ruled by the general Act of 1847, the City Improvement Act, to which you have just referred?—Yes.

3725. Lord *John Manners.*] Have you no power of dealing with houses which interfere with the lines of streets except by special appeal to Parliament?—The power that we have is exercised by the Commissioners of Sewers; they may take down houses under their own Act of Parliament under the Sewers Act. Before the other Committee I stated the respective powers of the two bodies, the Sewers Commission and the Metropolitan Board of Works, showing that the Commissioners of Sewers have more extensive powers than the Metropolitan Board of Works.

3726. *Chairman.*] Then you have another body besides your corporation committees, which has the power of dealing with houses in the City, and that is the Sewers Commission?—Yes.

3727. Is that confined to the City, or is it in common action with the Metropolitan Commissioners of Sewers?—No, it is confined to the City. Their duties are first of all to manage the sewers; then (most important perhaps of all), the management of the streets; and in that Act of Parliament there are the powers to which Lord John Manners alluded of taking down houses and improvements of that kind, but not to make a new street.

3728. Then how are your questions of sewerage arranged with the Metropolitan Commissioners of Sewers, because their sewers must necessarily communicate with yours, must they not?—They communicate with their main sewers; there is a main sewer running through the City, and our intercepting sewers run into it.

3729. Had your commission anything to do with the main sewer that runs through the City?—No, it was the Metropolitan Board of Works who planned it.

3730. They have power under their Act to run their main sewer through the City?—Yes.

3731. Irrespective of any action on the part of your own special commission of sewers?—Yes.

3732. Mr. *W. Cowper.*] In regard to sewers, the Sewer Commission of the City of London stand in the same relationship to the Metropolitan Board of Works that any district board or vestry in London stand to them?—No, because they have no power at all of interfering with us as they have with the district boards. We are absolute with regard to our own powers in the City.

3733. But you have no control over the main sewerage but only over the subsidiary sewerage?—Yes.

3734. And in that respect you resemble the other divisions of the metropolis?—So far as the main sewer is concerned; but with regard to the other divisions of the metropolis the Metropolitan Board of Works could take the management of any particular district entirely into their own hands if they thought fit so to do.

3735. *Chairman.*] What is the next point; anything further to say, have you, as to the market?—I think I have said all I have to say on the subject of the market.

3736. You say that that was entirely done by the City; that Parliament passed the Act empowering the City to make this market without seeing any plans of any kind?—Yes.

3737. They merely gave the powers which they required to acquire land for a certain purpose, leaving them to exercise those powers in any way they chose as to the amount of land they took or the form of building to be erected on the land?—Yes.

Mr. *W. Corrie.* 28 June 1869.

3738. What steps were taken by the City in reference to that market?—In that case they placed it entirely under the superintendence of their own architect, Mr. Jones. He sent plans, and they approved those plans, and he has carried out the work.

3739. In getting that Act, who undertook that; was it the City General Improvement Committee?—No, another committee; a committee called the Markets Improvement Committee.

3740. Then, had the General Improvement Committee nothing to do with that market?—No.

3741. Why did you think it necessary to appoint a special market committee if you already had an improvement committee?—There are numbers of markets. The great cattle market belongs to the City, and they have several other markets; Billingsgate Market, for instance; but, in addition to that, there is a Markets Improvement Committee, as distinguished from the General Improvement Committee, and it was the Markets Improvement Committee who carried out that work of the new market.

3742. Have you any other special committees for improvements?—No; I think that is all. There is the Improvement Committee and the Markets Improvement Committee.

3743. May I ask what is left for the Improvement Committee if all the markets and the bridges are taken out of their jurisdiction; are their improvements confined to streets?—Streets, and such matters as the Holborn Viaduct; they have conducted that.

3744. Any public building, such as the Exchange?—There is another speciality. Mr. Tite, a Member of this Committee, was the architect of the Royal Exchange, but that was erected partly by the Corporation, and partly by the Mercers' Company.

3745. That is another committee?—That is another corporation altogether; they and the City united in building the Royal Exchange.

3746. To return to this market. This market, you say, was erected by a Market Improvement Committee, who had erected, previously, other markets?—And they had superintendence of all the new markets.

3747. What was the date of the creation of that committee?—I cannot speak as to when it was created.

3748. Was it prior to your General Improvement Committee?—I should say not. I should think the Improvement Committee would be in existence before.

3749. Mr. Alderman *Lawrence.*] This Market Improvement Committee would be appointed at the time of the removal of Smithfield Market?—I cannot say that.

3750. *Chairman.*] Do you know the date of the appointment of this General Improvement Committee?—I should think 40 or 50 years ago at all events. In connexion with this market there had been considerable improvements carried on in the streets. I do not know whether the Committee remember the state of Farringdon-road many years ago. It belonged, at that time, to the Commissioners of Woods and Forests. Farringdon-road runs now to the Great Northern Railway. There was great difficulty in carrying it out, and ultimately the City undertook the management of that road; and then, in connexion with that improvement several streets have been made. There is a street by which you can go now from Holborn to the new market with very fair levels.

3751. That is to say this new market required approaches?—Yes.

3752. By whom were those approaches made?—Those were made by the Improvement Committee, and they assisted in making the streets.

3753. Did the approaches come under the Act?—No, they did not come under the same Act.

3754. You say that the Improvement Committee assisted in making the streets; I thought all streets were necessarily under the management, and were made by the General Improvement Committee?—There was a joining of the streets with the market, and, according to my recollection (I am not quite positive), I think that the two committees met and discussed the matter, and it was carried out by the Improvement Committee.

3755. There they required to meet together and consult, because each have separate powers, and it was necessary that these powers should combine to do what was wanted?—Yes, that was so.

3756. Now, as this Market Committee which erected this market, how is that constituted; is it constituted at all with reference to persons of knowledge of architecture, whether surveyors or architects, or are persons in the City known to have taste in these matters, specially selected?—No.

3757. Then, how are they selected, and what is the qualification to be a member of the Market Committee?—He must be a member of the Court of Common Council, and elected by that body into the committee; but I should have mentioned that there is always a superintending power in the Court of Common Council, because no works are carried out until the committee have made a report to the Court of Common Council, and then that Council approves. In the case of the Holborn Valley, and in the case of the bridges, they had drawings hung up for some weeks.

3758. Let us keep to the market at present, and trace how that has been erected. A market is wanted; powers are wanted to obtain land and to get rid of houses to make the market; an Act of Parliament is got for the purpose, which does not touch the question of design in any way. The Act of Parliament having been got through the agency, I suppose, of the City, and the Market Committee, plans are advertised for, are they?—It varies. In the case of the market they did not advertise for plans; the Corporation instructed their own architect to lay designs before them, and they adopted his designs.

3759. At the request of the Markets Committee?—The Markets Committee bring up the report as to what they think ought to be done; the designs are hung up in a room at the Guildhall, so that all the Corporation may see them; then the report is discussed, and it is adopted or referred back for further consideration, as the case may be, and then the committee are ordered to carry it out.

3760. Then by whom is the architectural part of the design and the general design decided?—By the body of the Corporation.

3761. Do they appoint any special committee for the purpose?—No; this special committee is the Markets Committee in that instance. They bring

bring up the report with the drawings prepared by the architect and the Court consider whether they are satisfactory.

3762. Did the Court refer them to the General Improvement Committee?—No.

3763. So that the General Improvement Committee, as such, had no voice except as they happened to be members of the Corporation as to the architectural elevation of that building?—No, it is the judgment of the whole body of the Court.

3764. Is it by vote, or how was it settled?—It is settled by vote; if there is any dispute a division takes place.

3765. Was there a division upon that?—I am not aware.

3766. And were there a variety of the plans submitted?—Only the architect's plan in that case.

3767. Now, will you take the Holborn Viaduct?—The Holborn Valley Act was obtained in the year 1864, and the provisions of that Act, the powers to the Corporation were quite general; there was no check upon them. The course which the Corporation adopted there was to issue advertisements calling for plans for this work, or rather the Improvement Committee under the orders of the Corporation did so.

3768. It was the Improvement Committee who took action in the Holborn Valley?—Yes; first of all they obtained the Act of Parliament which I have before me which is general, but it shows that at that time before they went to Parliament they had obtained the plans in the way that I mentioned. Advertisements were issued, and they offered rewards of 250 *l.* to the most deserving plan they selected, and 150 *l.* for the next, and there were a great many competitors.

3769. Were they bound to employ any of the successful competitors?—No; but it so happened that the successful competitor was an officer of the City, at least of the Commissioners of Sewers, Mr. Haywood. His plan was adopted which I have here.

3770. Lord *John Manners.*] He was the engineer to the City?—To the Commissioners of Sewers; I happened to be present at all these proceedings. The plans were produced to the Committee of the House of Commons that sat upon the subject, and they are carried out just as they were laid before the Committee.

3771. In that case the design was submitted to Parliament?—Yes, but they are not compelled to adopt it in any way. They did it to inform the Committee what they proposed doing. The Committee did make certain suggestions as to what was to be done, and those were, I believe, attended to by the engineer who carried out the works.

3772. Suggestions as to what?—One of the Members of this Committee rather objected to some steps that there were going up to the viaduct, but I rather think that they were suggested by Sir David Dundas, who was Chairman of the Committee, as a great improvement for the accommodation of the public. The Act of Parliament says that "the mayor, aldermen, and commons, may deviate from the line of any work delineated on the deposited plans within the limits of deviation defined on those plans"; and there is no specification there, as there was in the case of London Bridge, of the material of which it is to be built. It is built of granite, a good deal of it.

3773. Have you the plans that were submitted to the House of Commons?—Mr. Haywood has been here this morning, and he says that this was carried out just as he proposed it to the Committee (*producing a plan and explaining it to the Committee*).

3774. *Chairman.*] Have you anything more to say about the Holborn Valley Improvement?—No.

3775. What steps were taken with reference to the Ludgate-hill Bridge; how was that made?—That, you are aware, is a point of very considerable difficulty. The Blackfriars Bridge and the Ludgate-hill Bridge are very much mixed up together. You know that exception has been taken to those two bridges being so close together.

3776. You mean the bridges over the Thames?—The Blackfriars Bridge and the railway bridge. I should wish to call the Committee's attention to the Act under which the London, Chatham, and Dover Bridge, which goes by the side of Blackfriars Bridge, was made; and I should call the attention of the Committee to the fact that the two railways, the railway on the north and the railway on the south, had been made before they thought of going across the Thames. The Act of Parliament recites there that it "would be of national importance and a great public and local advantage" to make this communication. Therefore the first and great object seems to have been "to insure speedy and uninterrupted communication between London and other parts of England traversed by the railways of the company, and the railways communicating or which will communicate therewith, and the continent of Europe." Now, with regard to these two bridges being erected close to each other, they were not so erected without full consideration.

3777. Which was first in the field?—They seem to have been in the field about the same time. The Act of Parliament for making of the London, Chatham, and Dover Bridge passed in the year 1860; the other bridge in 1863, as I have pointed out; but I ought to point out to the Committee that there was already a bridge there; the Blackfriars Bridge did exist, and the railway company came to make their bridge by the side of it. Supposing there had been no new Blackfriars Bridge the same objection would have existed, which exists now, to the two new bridges together.

3778. Although the Act was only got in 1863 for the new Blackfriars Bridge, when was it determined that a new one would be required?—The year before, I think, namely, 1862.

3779. Was it only known in the year before that the state of the bridge was such that it would require to be renewed?—The Corporation were discussing whether it was necessary to make a new bridge, or to repair the old one; they ultimately determined, in 1862, to have a new bridge; and in 1863 the Act of Parliament was passed, and in 1864 the foundations were laid.

3780. It was in an unsafe condition, was it not?—Yes.

3781. And had it been long in that state?—That I am not able to say.

3782. At any rate it was known some time before that something must be done; that it must be either repaired or renewed?—Yes.

3783. At the time that it was determined to renew

Mr. *W. Corrie.*

28 June 1869.

renew it the railway had then got its Act?—Yes; the railway company got their Act in 1860.

3784. Then it was too late to combine, or do you believe that the two might have been in any way combined then?—It seems to have been discussed, because Mr. Fowler, who was one of the engineers who sent in plans for the new Blackfriars Bridge, makes this observation in his report, showing that it was done after due consideration: "I have considered with great care the question of the London, Chatham, and Dover Railway Bridge in connection with the proposed new Blackfriars Bridge. It is to be regretted that the position of the two bridges with reference to each other is not more satisfactory, but the objects of each party seem to have left no alternative, and certainly cannot now be altered; and I do not think that any mode can be adopted for any connection between the two works beyond a provision, which of course will be made, for insuring the piers of the two bridges being constructed exactly in the same line."

3785. What is the date of that?—1861.

3786. After the Railway Act was got?—Yes.

3787. What is that report?—I should state that when the Corporation determined to erect the new bridge they consulted all the most eminent engineers, and asked them to send in plans. Mr. Fowler, Mr. Page, Mr. Hawkshaw, Mr. Barlow, Mr. Bidder, Mr. Mylne, Mr. Brunlees, Mr. Rennie, Mr. Brereton, Mr. Greenhill, Sir John Rennie, and Mr. Joseph Cubitt were all consulted upon the subject, and they all made reports to the Corporation; and I find that passage which I have just read in the report of Mr. Fowler.

3788. And was it pointed out to these engineers that part of the design should be a combination of the two bridges?—I infer that.

3789. Have you there the letter that referred this question to the engineers that you have named?—I do not find the letter; but the question of a combination seems to have been considered.

3790. That reference was made to the Bridge Committee, I suppose?—Yes. These designs were all submitted to the Corporation before being finally approved. I find in Mr. Mylne's report (a like report to that which I have read from Mr. Fowler) this: "I have not thought it desirable to submit any designs for the combination of the above-named descriptions of traffic; because, in the first place, the communication I received from your honourable Committee does not allude to its desirability; and, in the second, because I myself have great doubts whether such a combination, under the circumstances, would be advisable. It would hardly be possible to execute a stone bridge of sufficient strength to carry the two descriptions of traffic without increasing the number of the piers beyond those indicated. A cast-iron railway bridge might be more easily erected by the side of an ordinary road bridge than a stone one would be; but the details of the construction would forcedly differ so much in the respective traffic portions as nearly to annihilate the assumed advantage gained in the construction of the piers. It is true that at Liege, Dresden, Cologne, &c., bridges have been erected to carry both railway and ordinary traffic; but in those towns the movement of the trains is insignificant compared with the movement which would take place in London; yet, even in them, there is found to be great practical inconvenience in the combination." So that you see the subject was considered at the time by these various gentlemen.

3791. Did the Corporation appear in 1860 before the Committee which granted this line of rail to the Chatham and Dover Company?—Yes.

3792. What were the grounds of their appearance; were they opposing the line?—They appeared and they obtained a clause with reference to that Ludgate-hill Bridge.

3793. Did they appear at all with reference to the bridge across the river?—I am not able to say. They do not seem to have succeeded in obtaining anything if they did. In the London, Chatham, and Dover Act, which I think I have mentioned, the 23 & 24 Vict. c. 177, in the 73rd section, there is this provision which must have been inserted at the request of the Corporation: "In crossing all streets or public ways, courts or alleys within the City of London and liberties thereof, the railway shall be so formed as to leave a clear and open space for such streets or ways, courts or alleys, and all the arches underneath the railway shall span across the whole width of the respective streets or public ways, courts or alleys which the railway may cross, so that no part of the abutment, piers, or any other obstruction shall stand or encroach upon any part of the carriage or footways, and the forms and elevations of the said arches shall be approved of by the Commissioners of Sewers of the City of London and the liberties thereof."

3794. Why by them?—They have the management of the streets, and they had to take care that there was no obstruction in the streets.

3795. Then their approval would be simply as regards questions of obstruction, not as regards form?—Yes, as regards form and elevations at least; they did approve of the one that is there, and I believe that it is considered the best railway bridge that has been erected.

3796. But, as regards the bridge across the river, there was no power of control of any kind?—As far as regards the bridge across the river, that seems to have been placed in the hands of the Admiralty.

3797. There was nothing in the Act giving the Corporation the same control over the railway bridge across the river that they have in the passage which you have read with regard to the bridge across Ludgate-hill?—No; in the 59th section of the same Act the marginal note is "working drawings of bridge to be submitted to the Admiralty;" and the section is this: "Previously to commencing the bridge across the River Thames or the works connected therewith, the company shall deposit at the Admiralty Office plans, sections, and working drawings of the said bridge and works connected therewith, for the approval of the Admiralty, such approval to be signified in writing under the hand of the secretary of the Admiralty, and such bridge and works shall be constructed only in accordance with such approval." So that they seem to be the only parties who had a veto upon the mode in which that was to be constructed.

3798. Had the Admiralty the same power over the construction of London Bridge?—No, they do not seem to have had that; that seems to have been entirely with the Corporation.

3799. How does it happen that the great powers which they have in this case have been given them, and not in the case of London Bridge?

Bridge?—That I am unable to say; one was dealing with a railway company, and the other with the Corporation. They might have more confidence in the Corporation than in a railway company.

3800. Blackfriars is higher up the river than London Bridge, so that one would imagine that the Admiralty would endeavour to have almost more power over London Bridge than over Blackfriars Bridge?—There does not seem to have been any veto at all except by the Treasury, as far as London Bridge was concerned.

3801. Lord *John Manners.*] Is there no power reserved to the Thames Conservancy in that Chatham and Dover Act?—There must be some approval of the Thames Conservancy. I find in the 60th section that the Admiralty had full power also over the position of the bridge; that it should be constructed by the company in such a position and in such form as the Admiralty might determine.

3802. Mr. *Gregory.*] How far does the Admiralty jurisdiction extend?—I should not have thought that they had any jurisdiction there at all. Then there is another section, section 63, which says that "The bridge for the purpose of carrying the railway across the River Thames shall be executed according to a plan and elevation and upon a site to be approved by the conservators of the River Thames, and deposited at their office: and the works in the River Thames and adjoining thereto shall be executed and performed to the satisfaction of the engineer for the time being of the conservators" of the Thames.

3803. *Chairman.*] Is there any connection that you know of between the Thames Conservancy and the Admiralty?—Yes. The Admiralty appoint two of the conservators, and the Board of Trade one.

3804. Then the Board of the Thames Conservancy is partly composed of persons nominated by the Admiralty?—Yes. Therefore I am afraid that if there is any blame in these two bridges being erected so close together, it must rest with the Admiralty. However, probably it was found impossible to erect them in any other way. Mr. Fowler says that he does not think it possible.

3805. But when that letter of Mr. Fowler's was before the authorities and the letter of Mr. Mylne, then the powers were already granted to the railway company?—Yes, they had been granted.

3806. And it was an appeal *ad misericordiam* on the part of the City; you had no power of controlling the company?—No.

3807. But the City merely asked them whether so-and-so could not be done, and they might or might not refuse it; the City could exact nothing?—They could not exact anything.

3808. With regard to the Ludgate-hill bridge made under the powers given in that Act, was the design of it approved by the Improvement Committee?—No, by the Commissioners of Sewers.

3809. Had the Improvement Committee nothing to do with it?—No, not that I am aware of. "You may build it in such a way and no other way," the Commissioners said.

3810. It was not subsequently submitted to the Improvement Committee before it went to the Corporation as a whole?—No. I cannot myself see any great objection to that bridge; it does not prevent any view of St. Paul's.

3811. Is there any other public improvement to which you have to refer?—No, I think not. But if your Lordship will just allow me, I will just run through these bridges and point out what different authorities they have been erected under. We start with London Bridge. That was erected by the Corporation.

3812. With a money veto on the part of the Treasury?—That they could not alter it except with the consent of the Treasury. Then you come to Southwark Bridge. That was erected by a company for their own profit.

3813. But did they submit the design of Southwark Bridge to anybody?—I am not aware. They must have submitted the design to a Committee of the House of Commons.

3814. But had this Bridge Committee, which has existed as you have said for so long, nothing to do with Southwark Bridge?—I believe not. You will remember that it was erected by a company. I am not aware that the Bridge Committee had anything to do with it. Then you come a little lower down and find Blackfriars Bridge again erected by the Corporation. Then you come to Waterloo Bridge, one of the most beautiful bridges. That was erected by a company. Then you come to Westminster Bridge, which was erected by the Government; so that you have all sorts of authorities in erecting the bridges; and perhaps the bridges are all good ones.

3815. Have you anything more than these improvements to mention?—No.

3816. Then, practically, we find this state of things in the City; that you appoint a General Improvement Committee, but that besides that General Improvement Committee, you have a Bridge Committee, you have a Markets Committee, and a Sewers Commission, and that each of these authorities is independent of the other?—They are all dependent upon the Corporation.

3817. But independent of each other *qua* Committees and Commission?—Yes.

3818. That is to say, the design of this railway bridge across the river at Blackfriars, was not submitted to the Improvement Committee; it went before the Bridge Committee?—Yes.

3819. The continuation of that line of rail across Ludgate-hill, which was on an iron viaduct, did not go before the General Improvement Committee, but for some reason or other before the Sewers Commission?—Yes, because they have superintendence over the streets.

3820. The new market that was made went before the Markets Improvement Committee?—Yes.

3821. And did not go before the General Improvement Committee?—No.

3822. But there were streets and approaches to it which required the assistance of the General Improvement Committee, and so far the General Improvement Committee had a word to say in the general arrangements?—Yes.

3823. Designs of houses apparently are, to a certain extent, regulated by two bodies, by this General Improvement Committee, and by the Sewers Commission also?—Not the designs of the houses. When they are going to make a new street, it is entirely the Improvement Committee

Mr. *W. Corrie.*

28 June 1869.

mittee. The Sewers Commission interfere with old existing streets.

3824. Do you not think that it would be better if there were one body regulating these matters instead of several in the City?—I consider that there is only one body, because all these committees only work up to the Common Council who ultimately decide these matters.

3825. But if you have a general improvement committee, of which the members are selected specially with a view to their aptitude and knowledge of these matters, which does not decide on this question of a bridge across Ludgate-hill, but leaves it to be decided by the Commission of Sewers, who have only to do, you say, with old streets; does not that seem inconsistent?—Probably it did not occur to the Corporation, or they might have put it under the superintendence of the Improvement Committee. I am not aware how it was. It was in the year 1860 before I had anything to do with the City. It would seem rather to lie under the care of the Improvement Committee.

3826. We will assume, if you like, that the thing does work well; but theoretically it seems somewhat indefensible, does it not, to have this variety of committees for matters of improvement; one committee to decide upon the bridge across the river, and another body to decide upon the bridge across the street, and that body not the Improvement Committee but the Sewers Commission?—With that exception I do not see any great difficulty in the matter. That might be an oversight; but in all the other cases these committees were only to prepare the plans, as it were, for the consideration of the body of the Corporation, who then considered the whole matter.

3827. I suppose that they are very much guided by their architect?—I think that it is their own general taste rather than the architect. They would overrule his judgment, perhaps, in some questions.

3828. Do you think that it would be desirable, if possible, to establish some control over all these public works in the metropolis, bridges, or railways?—I have rather indicated my opinion that they seem to have been all very well done, and that I do not see any great necessity for any other superintendence.

3829. Do you think that all the bridges and viaducts that one sees in the metropolis (I am not talking merely of the City, which is only a portion of the metropolis) are satisfactory?—If you mean those numerous bridges over the streets, on the south side of the Thames, I think that they are anything but satisfactory.

3830. And how far these two bridges across the river will be satisfactory when the scaffolding is taken away remains yet to be proved?—I have been led to arrive at a favourable conclusion by looking at some of the other bridges; the levels are not the same in the other bridges, and yet they do not look very bad.

3831. You do not think that any change is required, whether within the precincts of the Corporation or without?—I think that the great change needed is to improve the taste of the public, because it is the public taste after all that settles these matters.

3832. How would the public taste, even if it were as perfect as possible, affect the question of these railway bridges, where the engineers look to construction and economy, if that public taste has no public means of expressing its opinions, and controlling the acts of the railway companies and the engineers?—You will observe that each of these works must be brought before a Committee of this House; and, as far as I have seen, Committees pay great attention on these matters; and they have persons of taste to advise them.

3833. But as they are appointed simply with reference to finance and the necessity for the work, and the general construction of the line, how would an improvement of taste on the part of the public affect the question?—I was, perhaps, rather thinking of ourselves; that we have a large managing body, and as the taste of the public generally improved, the taste of that body would be improved.

3834. Supposing it were thought that upon the whole it was necessary and desirable that there should be some consulting body in the metropolis on such matters, would you consider, in the event of such a body being formed to advise the Minister who had charge of Government works, that it would be at all derogatory to the City if the City had to send a representative to such a body?—No, certainly not. I think that would be rather a compliment to them than otherwise.

3835. Mr. *Beresford Hope.*] May I ask what body in the City has charge of your existing public buildings, the Mansion House and Guildhall, for example?—There is another committee, called the City Lands Committee. That is the committee that has care of all the estates of the Corporation, except the Bridge House Estates.

3836. Would the City Lands Committee, then, carry out the internal decorations that have been made from time to time in the Mansion House?—I should think that it must have been the City Lands Committee, but I am not quite sure.

3837. Is the City Lands Committee, like the other committees, composed of a certain number of aldermen and common council men?—Yes.

3838. Which of the committees had charge of the great works that have been done at the Guildhall?—There was a special committee appointed for that purpose, called the Guildhall Improvement Committee.

3839. And if the last scheme that we have heard of, of re-building the exterior of Guildhall, were it to be carried out, it would be carried out by this special committee?—That would be for the Corporation to determine.

3840. Your City architect has, for his salary, to regulate and take the orders of all these respective committees?—In such a work as the Guildhall improvement he has.

3841. And the Sewers Commission?—He has nothing to do with the Sewers Commissioners; they have an officer of their own, called the engineer.

3842. Do you mean that where the Sewers Commission begin building houses, they put the designs of them in the hands of their surveyor?—The Sewers Commission never build; they knock down houses.

3843. They build bridges, do they not?—No.

3844. They sanction bridges, as you have told us, in the case of Ludgate-hill?—In that single instance of the bridge over Ludgate-hill they did, but that, I think, was more with reference to the fact that they were to take care that the streets were kept clear.

3845. *Chairman.*] But is not that bridge across

across Ludgate Hill the most important of all the railway bridges that have been made in the metropolis?—Yes.

3846. Therefore would not one imagine that that that specially would have been referred to whatever Committee you had that regulated these matters of taste, your Improvement Committee or some other committee?—The Sewers Commission is a very numerous commission, I should mention, consisting of about half the Corporation.

3847. Mr. *Beresford Hope.*] The Holborn Viaduct was designed by Mr. Haywood, the engineer?—Yes, it was.

3848. Was his design submitted to any architectural authority, or only to the committee?—Only to the committee and the Corporation.

3849. But at the same time it is a building which has a good deal of architectural character about it, with its piers and decorated pillars?—Yes.

3850. The Corporation, then, has no architectural adviser to report upon the work of the engineer that they may employ?—Unless they choose to take the advice of their architect; but I think that the engineers who built these bridges would not have submitted to have their work considered by the architect. I may add that Mr. Haywood was a student in architecture at the Royal Academy, and he has exhibited drawings there. He built the chapels and lodge at the City Cemetery. His Viaduct must speak for itself.

3851. Who designed the new Blackfriars Bridge?—Mr. Cubitt.

3852. Unassisted, as far as you are aware, by the advice of any architect?—Yes; there were a great number of designs sent in by all the eminent engineers of the day, and his was the one that was ultimately selected.

3853. But no architectural advice was given to guide the Corporation in the selection of that design?—I do not know whether they might have asked their architect, but I should think not.

3854. Who is the City engineer?—There is no City engineer except as engineer to the Commission of Sewers; Mr. Haywood now fills that office.

3855. *Chairman.*] Is there any other committee?—Yes, there are other committees of the Corporation for different purposes.

3856. Connected with buildings and public improvements on land or water?—There is a committee called the General Purposes Committee; if you wanted to re-furnish the Mansion House I should think it very likely that that committee would do it.

3857. Mr. *Beresford Hope.*] Did the General Purposes Committee provide those statues which we now see in the Egyptian Hall?—Yes, I think so.

3858. Mr. *Gregory.*] And the painted glass?—That would almost come, I think, to the City Lands Committee (I am not sure), because in them is vested the building of the Mansion House.

3859. Lord *John Manners.*] Perplexing as this list of committees and commissions may be to us strangers, can you who are practically acquainted with the working of the system in the City tell us if you find any practical inconvenience in the arrangement which prevails or not?—I think not, because they are all under the general superintendence of the Corporation afterwards; their duty is rather to prepare the matter to submit to the general body.

3860. Mr. *Beresford Hope.*] Are they different men or the same men under different names?—Very frequently the members of the City Lands Committee will be also members of the Improvement Committee, and they assist each other in that way.

3861. Lord *John Manners.*] Are you aware, from your own knowledge, of any practical inconvenience that has resulted in the prosecution of any great works in the City from the multiplication of committees and commissions?—Not the least, that I am aware of.

3862. The system works harmoniously?—I think so. The Corporation have the power of altering it if it does not. They might, if they thought fit, do away with the whole of these committees, or appoint a committee of taste.

3863. Are you of opinion that any veto given to a Government official would be beneficial, with a view to the improvement of the structural works that are there from time to time carried on in the City?—I think not, because I think that they have been successful in carrying out their works without any such veto.

3864. Mr. *Bentinck.*] I understand you that there is no body in the City of London that has the entire control of all works which may be considered in the nature of artistic works in the City?—Except the whole body of the Corporation generally.

3865. You are aware, I dare say, that I have some practical experience of this matter, arising from the celebrated case last year of St. Mary Somerset's Tower. I remember going with you, and we saw various heads of departments, did we not?—It was so.

3866. We had to see the architect of the City, and we had to see the Lands Committee?—Yes.

3867. Now, then, as regards public improvements, I will take the case of the Monument at London Bridge. Is that under the control of the Improvement Committee?—No, the City Lands Committee.

3868. I do not know whether you are aware that some years ago, when Mr. Cowper was Minister of Works, I interested myself to get that very hideous cage removed, which disfigures the monument of London, and as I think is very unsightly, and I proposed a plan to Mr. Cowper, by which people could be prevented throwing themselves off the top of the monument, without at all disfiguring the character of the work. Now, supposing such a proposition was made again to the City, would it have to come before the City Lands Committee?—It must come before the corporation, and they would probably take the advice of the City Lands Committee and their architect on the subject; and I am sure, if you suggested anything of the sort, they would fairly consider it and carry it out.

3869. Do you think that they would?—Yes, I am sure they would. In the case of St. Mary, Somerset, they immediately acceded to your suggestion.

3870. And the Monument is actually under the control of the Corporation?—Yes.

3871. A drinking fountain has lately been made in King-street, close under the beautiful front of St. Lawrence Jury, a drinking fountain of a very extraordinary character, much objected to by many persons who take an interest in artistic questions; is that under the control of the

Mr. *W. Corrie.*

28 June 1869.

the City?—No, that is under the control of the parish.

3872. Then the City has no control over the works erected by the parishes?—That is in what was the churchyard, though they have taken all the bodies away.

3873. An ordinary intellect would suppose it to be in the public ways, would it not?—It is now in the public ways; anybody may walk there now.

3874. As regards statues in the city, you are better off than we are at the West End; I mean that there are fewer statues?—There is the Duke of Wellington and Peel.

3875. Mr. *Beresford Hope.*] And King William the Fourth?—Yes.

3876. Mr. *Bentinck.*] But is the statue of Sir Robert Peel (seen to such advantage or disadvantage, as the case may be), at the entrance of Cheapside, under your control?—It was erected by the city.

3877. Is William the Fourth under your control in King William-street?—Yes.

3878. And are the obelisks under your control?—Yes.

3879. Under the City Lands?—Yes.

3880. Just as St. Mary Somerset's tower is now under the City Lands?—Yes; it is vested in the Corporation.

3881. And under the management of the City Lands Committee?—Yes.

3882. And you think that there would be no objection on the part of the City, as I understand from your answer to Lord John Manners, to a general committee sitting in Whitehall Place, and directing your works of art?—I did not say so, quite the contrary.

3883. Do you consider that it would be an advantage?—No. I think that they have worked well as they are.

3884. And you are not prepared to give us an opinion on that point, as to whether a general committee sitting in Whitehall Place should direct your works of art?—No.

3885. *Chairman.*] What you said was, that supposing such a committee were appointed, you would consider it rather an honour than not that the City should have a representative on such a committee?—Yes, certainly.

3886. Mr. *Layard.*] I believe that the Metropolitan Board of Works have nothing to do with the City?—Only in one or two instances. They made a great sewer through the City, or they are to make it, for it is not yet made. And there is the new street, the continuation of the Embankment up to the Mansion House; they are making that.

3887. Have they ordinary power to levy rates in the City for metropolitan improvements?—No. The way in which the Metropolitan Board of Works get money for improvements is in rather an indirect way. There is a clause in their Act which says that certain things are to be considered as the expenses of the Board. Now, it was never supposed, as I contend, that under "the expenses of the Board" they would be making streets and imposing rates. They have tried once or twice to get an improvement rate, which has always been refused and rejected by the House of Commons.

3888. Would you then kindly state to the Committee exactly what the relations are between the Metropolitan Board of Works and the City?—The origin of their interference at all in the City was the Act of Parliament passed in the year 1855, the Metropolitan Local Management Act, which seems to have been passed principally to make the great sewers intercepting the sewage flowing into the Thames. Then it was necessary there that they should come through the City; and the City have three representatives on that Board, as the other parts of the Metropolis have representatives; and there are two or three things which have crept in by degrees. One is, that the Metropolitan Board of Works have the power of naming the streets, and altering the numbers of the streets in the City.

3889. Have they ever altered the names of streets?—They did on one occasion alter the numbering of the streets, but they found that it did not answer at all, and they have not interfered since, I believe.

3890. They have not altered any name?—I do not think that they have. A question arose in making a new street near Smithfield-market, and there they conferred with the Metropolitan Board of Works, and they each agreed upon the name of the street; it was to be called Charter House-street.

3891. Could the Metropolitan Board of Works, if they thought fit, under their present powers, alter the name of an historical street in the City?—I am disposed to think that they could.

3892. Mr. Alderman *Lawrence.*] They cannot alter the name of the street unless there are two of the same name?—That was so under 18 & 19 Vict. c. 120, but by the 25 & 26 Vict. c. 102, s. 87, they may change the name of any street, though there is only one street with a name.

3893. Mr. *Layard.*] I understand you to say that the Metropolitan Board of Works is only empowered to act in the City in specific cases?—Only in specific cases.

3894. The three members who represent the City on the Board, do they act only in questions relating to the City, or in all matters?—Generally.

3895. As regards improvements in the City, who raises the rates?—Most of the improvements in the City have been carried out with the coal and wine duties, also assisted by the estates of the City. They always give their own estates as security in case of any failure of funds. We have never raised rates for improvements.

3896. Mr. Alderman *Lawrence.*] But the Commissioners of Sewers have made a large number of minor improvements, which have been paid out of the rates of the City, have they not?—Yes.

3897. Mr. *Layard.*] Is not the position of the Metropolitan Board of Works in the City rather anomalous?—I think it is, and they ought not to exist there at all, I think.

3898. Then, in your opinion, the City representatives ought not to be on the Board, I presume?—No; I think that they should be treated as two separate bodies, separate counties, when they were going to make some sewers through the City, it was necessary that there should be a united government for that purpose.

3899. I understand from you that the Metropolitan Board of Works have only power to carry out works in the City in certain cases?—Yes.

3900. Whereas the three representatives of the City sitting on the Board have a voice in all matters relating to other parts of London?—Yes,

Yes, the representatives of the Corporation, not of the sewers.

3901. Mr. *Alderman Lawrence.*] But the City of London is rated equally with every other portion of the metropolis towards the works carried out by the Metropolitan Board of Works?—Yes; in the indirect way that I mentioned.

3902. The City is not exempted from any taxation collected by the Board from any other district of the metropolis?—No. Supposing that the Metropolitan Board of Works wanted to carry out any work, and got power from Parliament to do it, and to throw it on the general expenses, then we should pay a portion of it. I might mention on that subject of rates that several times lately we have said: "We do not object to contribute to the expenses, only we do not want you to come and make any rate. We do not object to the money if you do not interfere with our working." In the Contagious Diseases Act we pay double. We contribute to the general expenses of the metropolis, and we pay our own expenses out of our own pocket to that.

3903. Do you think it would be better to have one authority dealing with the whole metropolis?—I have thought a great deal on it, and I cannot make up my mind on the subject. I think it would be found that for certain things there must be one body; for instance, for the management of the water supply, and the management of one or two great works of that sort; but I think that the rest might be managed by the localities. However, that opinion is not worth much.

3904. *Chairman.*] Supposing one body to be established, would the City be prepared to allow the chairman and the Metropolitan Board to manage these great works and metropolitan improvement for them, *qua* architectural and æsthetic works?—No; we have always resisted that. We should certainly not have consented to their carrying out the Holborn Valley works. But we do not interfere with their works.

3905. There may be questions of improvement with regard to the continuation of a street or a line of viaduct, or a bridge, where it would be desirable that the two should act in concert and harmony, may there not?—Yes, but practically they have agreed I believe in some instances. I have mentioned that they agreed in the case of the naming of Charter House-street.

3906. But supposing that the Metropolitan Board of Works took an economical view, and that the City being perhaps better in funds than the Metropolitan Board of Works, took an artistic view of a street or any other public improvement, the two might clash?—You see we should have arbitrators who would decide between us, the House of Commons and the House of Lords. Any work we have to carry out must come before Committees of Parliament.

3907. That is as regards the work, not as regards the design or the sum to be expended on it necessarily?—The Committee of the two Houses would have power over the designs.

3908. So that the case which I put might very easily arise at any moment?—Yes; you must have some ultimate court of appeal.

3909. In such a case as that an ultimate court of appeal would be desirable?—Yes. I have a great opinion of the judgment of committees of Parliament, and I think that they should be the court of appeal, as they were in the case of London Bridge. They had the whole thing before them, the model and the material, and they determine everything about it; and I do not see why they should not.

3910. You are in favour of leaving to them not only the settlement of the question, whether public works are to be executed and whether the funds are sufficient for the purpose and are properly raised, but also what the design of those works should be?—Yes, I think so; I think it is a great mistake that when those railway stations were made some provision was not made as to their frontage to the river. The fronts to the streets are very good, but to the river they are hideous; and if the Committee had studied the question at that time they might have insisted on having proper screens, or whatever you might call them. Great improvements might be made in that way. The Government offices in Whitehall, for instance, were poor buildings, and now it is rather an elegant building I think; there is a screen put at the outside. The same in the case of Buckingham House; that is very much improved by the screen put there.

3911. Then you think that Parliament ought to exercise some control over these matters?—Yes, certainly; I think it the best tribunal you could have.

3912. If Parliament does not exercise control over these matters, or if control is not vested somewhere, then the City are liable to have such an erection as either the Charing Cross or the Cannon-street Station, where they face the river, at any moment?—Yes. Now that we have been put upon our guard we should take care.

3913. You would oppose the railway in Parliament you mean, unless their design satisfied you before you went to Parliament?—Yes.

3914. But as regards the rules of Parliament at the present moment, there is nothing requiring the deposit of their designs and elevations?—No.

3915. So that whatever you do would have to be done by private arrangement between the Corporation and the company?—The House of Commons might alter the Standing Orders, and require not merely, as they do now, the line of the work, but also the actual drawing.

3916. At present they do not?—No.

3917. As things now stand you would have no security *qua* the rules of Parliament, against the erection in the City of such things as the Charing Cross Station and Cannon-street Station, where they face the river?—No; but I think after what has taken place we should go before a Committee of the House, and ask to have a veto on the form of the buildings.

3918. There is no precedent for your doing so, is there?—There seems to have been a sort of precedent in the case of Ludgate Hill Bridge; they gave us a veto there.

3919. Mr. Alderman *Lawrence.*] From the experience which you have acquired since you have held the office you now hold in the Corporation, have you seen any difficulty arise from the management of the Corporation affairs by means of the different committees?—No; I think they are very convenient modes of working the Corporation.

3920. Has not the result of the City affairs being managed by different committees, such as the Market Improvement Committee, for building new markets, the Bridge House Committee, for building new bridges and attending to the repairs of the bridges that have been executed, and also the Improvement Committee, attending

Mr. *W. Corrie.*

28 June 1869.

to the new streets and improvements in the City, been that those works have been carried out more speedily and more efficiently than works of a similar kind in other parts of the metropolis?—I should say that it has, because it is an undivided authority.

3921. These various committees appointed for these special objects apply themselves to the carrying out of those objects as efficiently and as speedily as possible?—Yes, I think so; such is my experience.

3922. Are you aware that the Metropolitan Board of Works, when originally constituted, had no power of carrying out their works by means of committees?—I think that practically they did.

3923. They afterwards obtained power for the committees to be able to carry out matters that the Board itself were compelled to do, copying the idea of the Corporation of the City of London?—I believe that was so; by their first Act the proceedings of their committees were submitted to the whole Board. This was altered by 25 & 26 Vict. c. 102, s. 31, under this the committees may act, reporting their acts to the Board.

3924. But not small committees?—The Act I have mentioned, 25 & 26 Vict. c. 102, s. 31, contains no limit of the number a committee is to consist of; it may be small or large.

3925. Has not the management by the Commission of Sewers resulted in the City of London being placed, with respect to its sanitary arrangements, in a better position than any other portion of the metropolis?—I think it is so, and almost better than any other town; the rate of mortality is less, I believe, in the City of London than in any large town.

3926. *Chairman.*] But I think, generally speaking, whatever your opinion may be as to the results of the system working satisfactorily, theoretically you can hardly defend a system where you have a General Improvement Committee, which has really in the main nothing to improve, for the improvements appear to me at present to be carried on in a great measure irrespective of that committee?—I do not think that the name of the committee much signifies; whatever committee it is referred to, they prepare the plan, and bring it up to the Corporation, and they decide it. And I cannot admit the Improvement Committee have nothing to improve; they have completely changed the appearance of the City, and they are still engaged on most important works, and those are under consideration.

3927. Mr. *Alderman Lawrence.*] Did not the Improvement Committee carry out New Canon-street?—Yes.

3928. They are now carrying out the Holborn Viaduct?—Yes.

3929. And the new streets from the upper level to the lower level of Farringdon-street?—Yes; when the Corporation has determined upon it, then they are the executive, as it were.

3930. *Chairman.*] But the Improvement Committee had nothing to do with Blackfriars Bridge?—No.

3931. They had nothing to do with London Bridge?—No.

3932. They had nothing to do with the Ludgate Hill Railway Bridge, or with the Metropolitan Market, or with the Exchange?—That is so.

Mr. Beresford Hope, a Member of the Committee, Examined.

Mr. *Beresford Hope*, M.P.

3933. *Chairman.*] I believe you wish to put in in evidence a portion of the address which you delivered as President of the Institution of British Architects, in the year 1865?—Yes, I do. That portion of my address is as follows: "This sketch of the relations of the Institute to external powers would not be complete, if I did not comment upon that ministry of public works which has gradually grown up out of the old office of Woods and Forests. It has from time to time been urged, that, in order to avoid the vacillations and inconsistencies seemingly inherent in a fluctuating change of chiefs, there ought to be a permanent head of the Department of Works. I am decidedly opposed to any such arrangement. Not only is a permanent head to a great department antagonistic to our political instincts and traditions, but I believe that in this case the innovations would defeat its own object. The man who is originally appointed must have some art notions or other of his own, or else he is palpably unfit to get the place at all. These notions may be good, or they may be bad. Anyhow, if he is irremovable they will be ineradicable, to the discomfiture of all opposing schools of thought. At best we should perpetuate sameness and tameness; at worst ever-recurring clique and manœuvring. Besides, those who argue for the permanent chief, forget that in all public offices there is an element, often an overpowering one, of permanence in the irremovable second man. My own remedy would be based on the opposite principle, of exalting the attributes of the Minister of Works, treating his post as a necessary component, not merely of the administration, but of the Cabinet, increasing his responsibilities, multiplying his inducements to do well, and withal hedging him round with such constitutional safeguards as a perpetual oversight by the Institute and the Academy, not to mention the still more severe and formal one of Parliament itself. The Commissioner of Works is sometimes in the Cabinet and sometimes not; and whether in or out of the Cabinet, he is in theory only a subordinate of the Treasury. This is plainly wrong, for it pulls down the importance of the office, and consequently checks young men who are going into public life from really studying art questions as a channel of political advancement, not much inferior, in its openings, to heavy statistics or colonial grievances. Then modern educational developments have accumulated a large amount of mutual responsibilities, more or less referable to architectural art and its cognate pursuits, between the State and the people, which, if imposed upon the Minister of Works, would fill the hands of the office and of himself, and justify the suggested increase of his dignity; but, by some freak the wise men, who busied themselves a few years ago in re-arranging the public service, passed over the First Commissioner, and instead created an anomalous semi-minister, under the ambiguous name of Vice President of the Committee of Council, to divide his time between high art at South Kensington and parochial school squabbles in general over the remaining kingdom.

kingdom. I give nothing but praise to the noble collection at South Kensington, while, at the same time, I say that its wants have no relation to the department of State under which it is placed, and I claim that this museum, with the appendent art schools, would more congruously be made a function of the Minister of Works than of the Vice President of Education. Let the departments be thus redistributed, and the need for the latter never very well understood nor popular office falls to the ground. For the purpose of moving the really educational votes in the House of Commons, the Lord President himself, rid of his art responsibilities, would want, and ought to have, a Parliamentary Under Secretary, but that official need not be of weightier calibre than the Secretary of the Poor Law Board. If the Minister of Works were expanded, as I propose he should be, into an undoubted and constant member of the Cabinet, he should also have assigned to him a Parliamentary Under Secretary to move estimates and make explanations, and then the Department of Works might be filled by a peer, if the fitting man turned up in the House of Lords. We should know how we stood towards such a Minister, as we do not with respect to the actual First Commissioner. It would then be our duty, in conjunction with the Royal Academy, to see that, in the remodelling of the office, a definite standing should be given to those great societies, as the perpetual Attorney General and referees of architecture at the bar of the administration. Thus the liability of the office holder to be changed would check clique, and the fixity of his standing council would obviate fickleness and inexperience."

Mr. *Beresford Hope*, M.P.

28 June 1869.

3934. I believe you prefer reserving to another day any remarks you may have to make to that or generally upon the subject which we now have before us?—Yes; I should simply state now that the views which I have brought out in my address are views which I have long entertained. In various ways I have brought them before the public since the year 1855. I may remark that I made the suggestion in my examination before the Commission on the Royal Academy in 1863.

Mr. Richard Redgrave, R.A., called in; and Examined.

3935. *Chairman.*] You are at present head of the School of Design in connection with the South Kensington Museum?—Not head of the School of Design, but Inspector General of Art there, having all questions of art referred to me before their consideration by the Board.

3936. You have turned your mind to the matters which engage the attention of this Committee, have you not?—Generally I may say as an artist that I regard London as one of the most picturesque cities that I have seen in the world, but that it is so disfigured now by the late utilitarian erections, that as an artist it gives me great pain, and I regret that there is no authority that can prevent such obstructions and erections, but that they are permitted to take place without proper control.

3937. When you say that it is one of the most picturesque cities in the world, you mean, I presume, from the natural advantages that it possesses?—Yes.

3938. Those advantages being a broad river with parks which come down nearly to that river, separated only by a few rubbishy buildings at present from the river, and those parks in the form of garden and path extending continually for something like three miles?—Yes; the rise from the river is very peculiar to London, and it seems to me to differ from other towns in that it has been built greatly upon the old lines of communication, the roads and lanes which bordered the metropolis and its picturesqueness has arisen out of that which is now being wholly destroyed. It is different from Continental cities in this, that they are fond of vistas, but our picturesqueness arises from intricacy and variety. It is a very sad thing to see these great blots on the metropolis. I will not instance Ludgate Hill, which has been so often alluded to already, but I will take the other side of London, that from which foreigners used to approach the city. There is not a street on the south that has not been blocked up by the basest utility. Take London Bridge, a very fine approach to the City; there is an iron girder crossing the road at no possible angle with the street; one part is a semicircle joined on to a straight girder in the ugliest way possible. That utility must have its influence I can understand, but why should it not be combined with a certain amount of beauty.

Mr. *R. Redgrave*, R.A.

3939. You are alluding to what existed on the Surrey side of London Bridge?—Yes. There was a pretty little crossing refuge taken down to make way for this great obstruction. There is a fine old church, St. Saviour's, which is blocked out by this vile girder crossing the street, and the entire approach. If you turn and enter Southwark-street, the New street, where individuals have laid out very large sums upon buildings, there is another nasty girder, crossing at a very bad angle. And so it is with every approach to the metropolis on that side. Much of this might have been avoided if there had been some one who had a veto in such matters.

3940. From what you see, you are of opinion that a veto is necessary upon such public works as railways in this metropolis; that none such exists, and that unless such a veto exists, we may see these evils which you point out multiplied unlimitedly?—They have multiplied very largely in my time, and I presume that they will go on doing so. I am not prepared to say what the nature of that veto should be. There are immense difficulties in the way, as I have heard while obliged to sit here, but certainly when I find that there is no one authority that rules in these matters in the City of London, and I know that there is none in the outskirts, I may well think that there ought to be some constituted authority who should alarm public opinion as to whether a thing will be wrong or right when done. We do not want to Haussmannise London; but things are carried on very differently in Paris. When I have been there, I have seen the great advantage that arose from models. I have heard authorities here speak of models. A small model of that sort (*pointing to a street model in the Committee-room*) gives very little notion of what the thing will be. A large model would save many hundred pounds. A Frenchman, before he allowed that bridge to be built at Ludgate-hill, would have had a canvas erection and had it painted

Mr. *R. Redgrave*, R.A. — 28 June 1869.

out, so that the public could have properly judged of the ugliness of the work and then it never would have been finally set up. Once when I was at Paris, driving round the Boulevards, I saw an immense erection at the Barrière du Trône. I understood that it cost nearly 3,000 *l.* to put it up. It was merely a model, but it was altogether so perfect an illusion, that I thought it was the new barrière. The next time that I passed, it was removed.

3941. Do you know what the total cost of that erection was when finished?—I do not myself know that the model cost 3,000 *l.*; it is only an *on dit.* It must have cost many thousand pounds to build the barrière it represented.

3942. Even if it did, and 3,000 *l.* were spent in a model, do you consider that sum well spent?—Certainly. Look only at our public buildings erected in my time. I suppose if the public had thoroughly appreciated beforehand what they were about to erect, that column, with Nelson on the top of it, in Trafalgar-square, would never have been raised. What can be more disgraceful than the Duke of Wellington pressing down that enormous arch at Hyde Park?

3943. I suppose you hope that the nation may some day awake to a sense of propriety, and insist on removing that, as other statues have been removed?—I think that there is a great want of removal in many places.

3944. Are you aware whether in London, at present, models of the actual scale are erected in architecture?—I have never known it, except in regard to the buildings at South Kensington. I have seen parts of the buildings there in full-sized model.

3945. Is that the system that you proceed upon at Kensington?—Very largely; by painting out parts as large as the thing itself. I do not mean so much at South Kensington Museum as in other buildings there; the large hall is not connected with South Kensington Museum; that has had a section painted to the height of 80 feet, altered from time to time, when changes had to be considered.

3946. Mr. *Gregory.*] And the pediment was done in the same way?—Yes.

3947. Mr. *Beresford Hope.*] Are you aware that a model on a large scale representing the colour decorations has been made of the proposed Baldachino in St. Paul's Cathedral?—That was exhibited at the Academy.

3948. *Chairman.*] Was the New Museum at Kensington itself treated in that way?—Parts were done very large. The whole of the arcades, which were under the direction of Mr. Smirke, in the Horticultural Gardens, were drawn out the real size, and very much altered from time to time, till what was to be the final result was arrived at.

3949. You suggest that there should be control, and that that control should be exercised subject to the testing of buildings by models?—I think that it would be very useful in the metropolis.

3950. And from your experience abroad you feel confident that it would have as good results in this country as you have seen it have abroad?—Yes; it would awaken public opinion. I heard the last witness say something about public opinion, in regard to these erections over the Thames and elsewhere; but I do not know how public opinion could know anything about them till they were erected. If the public saw a model, they would begin to cry out before the work is executed; after it is executed it is too late.

3951. Public taste being at present in the state in which it is, it might be many years before, even if public opinion could express itself in an effectual way, it would express itself so as to prevent the disfigurement of the metropolis?—Yes, it is not perfect yet, but it is beyond utilitarianism already.

3952. You, having knowledge of these matters from your position, are of opinion that it would not do at present to trust to public taste alone in its influence on these things as, even if it had the power, it is not sufficiently advanced to step in to prevent these things?—No, I think it wants an educated public opinion, a selected public opinion to step in.

3953. But even if it were educated and selected, there is no power at the present moment of preventing these things?—No.

3954. That can only be obtained by the recognition of the want and the creation of the power?—Yes.

3955. Have you thought in what form that power should clothe itself?—I am very much in favour of a unit of power, that an individual, if possible, should be responsible for everything done. I think it would be very valuable to assist him by a council or some mode of reference to authorities, but I would have him act quite independently in the end.

3956. That is to say, your view would be that you should there, as in all other things else, endeavour to *focus* responsibility?—Yes.

3957. So that if anything goes wrong there is somebody whose head you can cut off?—Yes.

3958. You would assist this officer with a council, and he should be responsible to the public, and should be independent of the council, though, of course, he would be morally bound, more or less, by the advice of such a council?—I think so; I think that the council, or whoever gives him advice should give it in writing, and should be responsible for as much advice as they gave him.

3959. You would make the council be responsible for their views and opinions, and you would have a record of those views and opinions?—Yes.

3960. You would make the Minister, or the one individual so advised, responsible to the public whether he acted or not on that advice, but would leave him free to act or not according to his judgment?—Yes.

3961. Do you think that the public would be satisfied if this authority were exercised by the head of the Metropolitan Board of Works (I do not mean the Office of Works)?—I do not know that he is in any special way qualified for it.

3962. I do not look to the individual; but I mean if it were exercised by the person for the time being holding the office of Chairman of the Metropolitan Board of Works?—I do not know much of the constitution of the Metropolitan Board of Works; but I should say no, for I should say that whoever is responsible should be responsible to the House of Commons, which represents the people, and that he should be able to carry his responsibility into the House of Commons.

3963. Do you imagine that when that Board was constituted, and when the chairman to that Board was appointed by Act of Parliament, it

ever

ever entered into the minds of persons constituting this Board, that the head of it should have sole control over all these things in the metropolis?—No, I think not, considering how the Board are chosen.

3964. With an elective body like that, and with a constituency such as that is, it does not at all follow that the persons, either the electing or the elected, have any taste or feeling whatever for the matters under the consideration of this Committee?—I should think not any more than the Commissioners of Sewers.

3965. They representing the general rate-paying public, if the body which they have to look to on matters of taste is the public, that implies that they themselves have not that taste?—They merely represent such as themselves in taste; they are quite the reverse of being judges in the matter of art.

3966. And there might be a time when, through the impatience of taxation, and the heaviness of rates bearing on them, they might look solely to economy and not to æsthetics?—I think that that time has already come.

3967. So that you do not think that one can look for better things, and for a saving to the metropolis in the future, if the Metropolitan Board of Works, as at present constituted, has the sole power?—I should say no; and I am not aware that they have done anything in that direction already.

3968. You will admit that they have executed the Embankment well, I suppose?—Yes, as far as that is under their hands.

3969. The argument has been used that this controlling power (which is admitted to be necessary by all the evidence that we have had) should rest solely with the Metropolitan Board, because they raise the money; and where there is taxation there ought to be representation; and those only should spend the money who raise it; do you think that there is anything in that argument as applied to this metropolis?—Well, generally it is right that those who raise the funds should have some voice in spending them; but I cannot conceive that we are to allow the metropolis to be disfigured merely because the rates have been raised from individuals in the metropolis; it is a national question.

3970. It is not a question as to having a voice, but the sole voice?—Yes; I should say that the metropolis is national, and not connected merely with the ratepayers of London.

3971. Even assuming that that argument held as regards a provincial city, such as Leeds, you hold that London must be viewed exceptionally?—I should say so. You may put, if you like, the other metropolitan cities under the same category; but London is *per se* the head of the whole kingdom, and should be treated in a different way from provincial towns.

3972. Your view is that London, being the metropolis of the whole kingdom, every man is equally interested in it, and therefore there ought to be some one on the part of the whole nation, and not only on the part of the individual ratepayers of the metropolis to look after these great public works?—I think so.

3973. If in your view this authority is not to be found in the Metropolitan Board of Works solely, do you think that it is to be found in the person of the Lord Mayor for the time being of the City of London?—Certainly not.

3974. Without speaking in any way disrespectfully of the aldermen, you would not think it right to intrust to any one individual in the City, when Lord Mayor, the sole controlling power over the whole metropolis in these matters?—The Lord Mayor might have a control over the City if it was necessary, but I should think he ought to be aided by good advice, the advice of men selected to give such advice in matters of art. I have heard the evidence, and I do not see that there is any proof that the different commissions and committees in the City are selected with a view to settling an art question. The Lord Mayor, I presume, is chosen from a different point of view, not to decorate the City, but to rule it commercially, and as a magistrate.

3975. You have heard the evidence given by Mr. Corrie with reference to the way in which these things are managed now. Do you think the way in which they are managed in theory and principle, a sound one?—I cannot conceive that it is at all as regards the æsthetic point, because Mr. Corrie himself does not look at it in that view; he looks at it from an utilitarian view; they may work very well in that view, but no question of art comes before them, as far as I can see.

3976. But with this variety of committees which they have, whose duties appear to be somewhat undefined, the system there may be described as what is commonly known as the happy-go-lucky system in these days, may it not?—It does not seem to me to have any coherence at all. I attended very carefully to Mr. Corrie's evidence, and I cannot see that any one person as an authority interferes in matters of art and taste, the committee's decisions are utilitarian. When he speaks of the market, for instance, being erected by one body and the approaches by another, there is no means of considering their bearing upon one another. The approaches to the market might lead up to the worst part of it, and the best façade be led up to by the worst approach. The Bridge Committee again seem to have settled the erection of London Bridge, the approaches were made by a different committee; there was no concert between them by which the approaches shall be made to tell upon other objects situated near the bridge. I may mention an instance which has often struck me. That new street (King William-street) might, with the slightest alteration, have brought in the Monument at the end as a vista; it almost does; a slight deviation would have done it, and it certainly would have been a fine point. Many little things of that sort are overlooked, because there was no concert between the two bodies: no authority referred to in matters of taste; it is merely utilitarianism, as I understood the evidence.

3977. I have described the system as applying to the City as a system well known as the happy-go-lucky system; now, when you turn your view from the City and come to the Metropolitan Board of Works, you then find that this Embankment, which has been a very successful work, might, instead of being made with granite, and most beautifully worked granite, have been made with concrete, with rubble, with brick, or any other description of work, and that there is no control exercised over the proceedings of the Metropolitan Board of Works in these respects by Parliament, or any government officer; and one may perhaps apply the description of the happy-go-lucky system to the Metropolitan Board of

Mr. *R. Redgrave*, R.A.

28 June 1869.

Works' management as well?—It seems so; at the same time I think that we are highly indebted to Sir John Thwaites that he should have had the good sense to control what must have been the wishes of the ratepayers, and to make it a solid and handsome structure.

3978. So that in the case of Sir John Thwaites and the present Board the system has been lucky?—Certainly, happy and lucky.

3979. When you look to these hideous viaducts which are erected by railways across the streets and the roads in the metropolis, when you look to the bridges which they erect, and when you know that these are the result of such matters not being considered at all either by a Committee of the House of Commons, or by any other authority, or checked in any way, do you not think that the happy-go-lucky system may be said to apply generally to all these matters in the metropolis, and that upon the whole it is more happy-go-unlucky than happy-go-lucky?—I think so; it seems to me that there could not be very great difficulty, whenever Parliament grants compulsory powers to do certain things, in demanding that there should be some inspection as to such works being satisfactory to the public taste and eye; individuals will do as they like in this country, but if you give authority to railways you may certainly reserve any rights you please as to the railway works not interfering with the beauty of the metropolis.

3980. Would you see anything wrong in extending that principle to all bodies, whether corporate bodies such as St. Thomas's Hospital, or such as the City Corporation, or such as the Metropolitan Board of Works, when they come before Parliament for any purpose for the erection of any building, or for the making of any street or public improvement?—I think whenever Parliament steps in to give them public aid, it should have a right to demand that public rights should be taken care of.

3981. And that Parliament should meet that power in the person or in that person, with some combination of persons to assist him, that they think most likely to bring about the desired end?—That would seem the most reasonable view.

3982. Mr. *Gregory*.] Do you mean by public aid, public money?—No; any infringement on the rights of the public is public aid.

3983. *Chairman*.] You mean by public aid, Parliamentary powers to deal with property and to execute works?—Yes.

3984. From your position as an artist of eminence, and from your official position, you have necessarily, in the course of your life, been brought very much into contact with other artists and with persons who take an interest in æsthetics, whether in architecture or anything else. Now, have you found great unanimity of opinion upon these matters, and do the views of such persons coincide with those which you have at present expressed?—I think broadly that they do; but I am afraid that my brother artists do not enter much into such matters; they will exclaim against the ugliness of certain things, but they are not forward to assist in putting them right.

3985. You have found other representatives of that intelligent public opinion which we are told is to be in the future our security against these monstrosities sharing the view which you have expressed?—Yes.

3986. As far as that public opinion exists at present, you find it unanimous in that direction?—Yes; but I think that the public expression of that opinion is called for too late, when there is no means of acting upon the subjects; they are already constructed and cannot be undone. I think that if the public had been awake to the ugliness of these bridges before they were constructed we should never have had them.

3987. This is perhaps a turning point in these matters; the Embankment is erected, and there is still a hope of saving London by dealing properly with these matters; whereas if this opportunity is allowed to slip there will be no opportunity of recovering that opportunity?—I think that it is a good point of time to do something; but I think that the town has been much disfigured already by railway bridges and stations; still we may save something and prevent St. Paul's being further blocked than it is at present.

3988. You have said that you want individual responsibility to control these matters somewhere. You have said that you do not think that you can find that individual responsibility properly in the Chairman of the Metropolitan Board of Works; you have said that you do not think that this control ought to rest solely with the Lord Mayor and the City; I presume you point to such control being vested in some government officer?—I do.

3989. And you would probably look to the First Commissioner of Works as the person who should be responsible for these matters to the public?—Not as at present constituted; but I think that the First Commissioner of Works is the individual that I should look to.

3990. Whether his office should not be made a more important one is a matter for consideration, but at any rate you would look naturally to that office as the initiator of a better state of things?—I should.

3991. Then, with regard to this council that you suggest, or a council to advise the Minister, different suggestions have been made as to the constitution of it; do you think that such a council should be representative of societies or a nominated council, or both, partly the one and partly the other?—I do not quite clearly see in my mind the distinction; do you mean that societies are to nominate certain persons?

3992. I mean that there would be several ways of constituting such a council. It might either be a council nominated wholly by the Minister from persons conversant with these matters, as commissioners are now nominated. That would be one way, would it not?—Yes.

3993. Another way would be that it might be a council partly nominated by the Minister and partly composed of persons chosen by certain bodies. That would be another way. A third way would be that it should be a council composed of persons wholly nominated by certain bodies. Of those three principles which do you think to be the soundest?—I think, rather, that it should be nominated by the Minister to represent certain bodies; not nominated by the bodies themselves, but nominated by the Minister, perhaps, in correspondence with the bodies. I will take my own academy, which I think should be represented. I feel a doubt whether the academy would send the best members to represent itself on such a council. I would rather that it was in the hands of the Minister in conference with the body; in the same way, I presume, with the Institute of British Architects.

3994. You

3994. You would prefer that certain bodies who are to be represented by this council, instead of either sending their presidents or chairmen as *ex officio* members of it, or nominating them themselves, should communicate with the First Commissioner as to the member of their body to be selected to sit on that board; that is your view?—I think that would be the best way on the whole.

3995. What is your objection to such bodies either being represented *ex officio* or choosing their own representatives?—I think that if they are represented *ex officio* the men holding office are not the best for that purpose.

3996. They might be?—They might be.

3997. But that is the happy-go-lucky system?—Yes; I think that if it were necessary to send a person *ex officio*, the president would of course be chosen, and might be less suitable to take part in such a committee than others who might be selected from the body.

3998. That is a sound objection to an *ex officio* position on such council of the president or chairman of the different bodies: as you have suggested, the person for the time being filling that office, though an admirable painter, might not understand architecture, and might have no turn or taste for these matters, and therefore might be unfit to represent the general æsthetic element as allied to other things than painting; but what would be your objection to the Royal Academy, or any other body, sending a representative to the Board, on the understanding that such a representative was not necessarily to be their chairman?—I rather object to a council formed in that way; indeed, I am not quite in favour of a council to advise the minister. I think that it would be much better if these bodies were to nominate, if you please, three or four gentlemen whom they would consider capable of advising the minister upon many subjects that came before him; and that then when any particular case came up, he should select, we will say, five whom he should ask to report upon that particular case, and whom he should pay for that particular duty only; I think that would work well in many respects. For instance, if it was an architectural question, for that purpose perhaps it might be as well to take some painters or sculptors as well as architects, and to have them mixed with, perhaps, one or two laymen of taste, to give a report on the individual question.

3999. That would be practically the present system with the difference of pay, would it not, as regards the Government offices?—No, I would have these men nominated to assist the minister, but he would form from them council on each particular case when he desired.

4000. That is another point, whether it should be a permanent council or merely committees; but, supposing that it were a permanent council, and that there were permanent representatives from these different bodies, I want to know how to get the best men from the bodies; you object to the *ex officio* membership of the president and to the nomination of the body itself; do you think that the body would not choose the best men?—I am doubtful, since, for a council of five, any one man selected could not be entirely qualified; but if you wish me to come to a decision as to how these parties shall be chosen in the first place, I am afraid it must be given to the different bodies to nominate. I would rather the bodies nominated persons from whom the minister should select his council.

4001. Now, we come to the different bodies; you have mentioned your own one body; that body contains architects, so that on such questions the names of architects would form an element and be sent up, I presume?—I think that I should not send architects from the Royal Academy; the Institute of British Architects would do that.

4002. Now, we come to see what other bodies would be represented; you mentioned the Institute of British Architects; that you would naturally assume as one of the bodies?—Yes.

4003. And the Institute of Civil Engineers?—Yes.

4004. Then the Society of Antiquaries has been suggested?—I do not see their value on these questions, except in any associations with the old parts of the City.

4005. Of course I assume in all this that the Metropolitan Board of Works would necessarily have a representative on such a body and that the City of London would necessarily have a representative?—Yes.

4006. The Society of Arts has been suggested; it has been suggested to me that they being composed of persons interested in such matters, but not necessarily professional, would find in their body persons very well fitted for such an office?—They are a very stirring body, but I have no great faith in their taste.

4007. Is there any other body that you would suggest?—No. I am afraid of making the members of this council, if there is one representative from each body, too large; for I feel that in the multitude of counsel there may be safety, but if you want to get responsibility have as few as you can, and make them go thoroughly into their work.

4008. Taking those bodies that you have agreed to, the Royal Academy, the Institute of Architects, Civil Engineers, Metropolitan Board, and the City, that would make five; you would not consider a council of five too large?—No; I think that five would be a very good council for many proceedings, but those five men may not be fitted for all questions. Now, for instance, in civil engineering, a civil engineer would lead. If it was matter of architecture, the architect would lead the other members. I am not wishing to speak disrespectfully of the City or of the Metropolitan Board of Works, but its members are not necessarily men of æsthetic and cultivated tastes, and would be likely to concur with the professional member in whose province the work lies.

4009. But for such a council as that, the probability is that each body would select persons (from whom the minister would select according to your plan) who had special aptitude for the duties they would have to perform, taking a broad general view of their duties?—Yes. I think that five make a very good committee.

4010. I suppose that you would appoint them for a certain number of years, say two or three years at the outside, and make them re-eligible, but that you would not make it a long appointment?—I consider that there should be several nominated, from whom the minister should from time to time select his council; but if you please to take it the other way, I think that there is an obvious advantage in their being a little more permanent than annual.

4011. I think that the director of the National

Mr. *R. Redgrave*, R.A.

28 June 1869.

Gallery is appointed for five years, is he not?—Yes, nominally.

4012. Would you pay these representatives of the different bodies?—Certainly; I think that no good results unless a man is paid, because you want to nail him to the responsibility, which you cannot if you do not pay him.

4013. You said that you considered that if a body were so constituted it would be an honour to belong to such a representative body in this metropolis?—No doubt.

4014. Would you consider it at all derogatory to the position of the Metropolitan Board of Works, or of the City of London, that instead of each in their respective jurisdictions having, in these matters of æsthetic construction or public improvement, the sole and undivided control, they should have their part in such powers as were given to this body of five over the whole metropolis?—I should think that it would be much to their honour; and moreover, I should think that it would be a very onerous post for anyone to be appointed to, if he did his duty.

4015. As regards the ratepayers in the metropolis, whether residing in the City or within the metropolitan districts, speaking as a ratepayer, would you prefer the knowledge that these matters for which you are taxed were so controlled, to the present state of things?—Only speaking as a ratepayer, I should feel a great deal more content in knowing that things were administered by men of understanding than by men of none.

4016. Whether the plan failed or not, you would feel that you had this security, that whatever money you paid in rates for public improvement and general æsthetics, would be spent in the way which, as far as our limited means allow, the nation believes would be best for the metropolis?—That at any rate there had been an attempt to do it.

4017. And, speaking as a ratepayer, you would greatly prefer that system to the present?—I should greatly prefer it, because it would be a system opposed to no system.

4018. Mr. Alderman *Lawrence.*] If I understand your evidence correctly, it is that the First Commissioner of Works, aided by a council, in whatever way that council should be formed, whether chosen by him or elected by the different bodies that have been named, should have a power of control over all public works in this metropolis which are now carried out by the Metropolitan Board of Works or by the Corporation of London?—That is not my evidence; it was that whenever compulsory powers were asked from Parliament, Parliament should have a right to see how the money was spent, and to see that it was so spent that no injury was done to public taste.

4019. But do I rightly understand that you would give the First Commissioner of Works the power of increasing the sum expended upon these works, if necessary, in order to promote, according to his views and the views of the council assisting him, a higher degree of Art, or the making of a more beautiful structure?—I think that very often there would be less money expended in a beautiful than in an ugly structure. I do not contemplate giving him the power of increasing the charges, but that at any rate he shall have a veto: the power of saying, "This is so ugly that it shall not be done."

4020. I think I understood you to say that the Thames Embankment, which is now nearly completed, is a successful work, and has been carried out in a manner which is both creditable to those who carried it out, and creditable to the metropolis generally?—As far as possible consistent with the difficulties which they have had to encounter, I believe that it is an excellent work.

4021. Are you acquainted with the manner in which the main drainage has been carried out by the Board of Works?—Not more than generally; it is a utilitarian work in which I take no interest because it does not offend my eye.

4022. I do not understand that you would exalt Art so that it should be separated entirely from utility?—No; but I am giving evidence upon Art questions, not upon utility, and I am not required to go into sewage matters.

4023. Then do I rightly understand that, in all your evidence to-day, it has been a mere question as to the best methods of obtaining artistic designs, and that it has nothing whatever to do with utility?—It is the best method of conducting utilitarian buildings, that they shall not be offensive to the eye.

4024. Therefore it is not necessary that utility should be separated completely from Art, or Art from utility?—On the contrary, I believe that very often the best utility produces the best beauty.

4025. Until the evidence which has been given to-day as to how these matters have been conducted in the City of London, were you aware as to the mode in which these various bridges and buildings were carried out in the City?—I was not in the least aware of it, but I am extremely astonished at the method; it seems ten times worse than I had any idea of.

4026. Then your knowledge of the mode and method of carrying out these works has merely been gathered from the evidence to-day, and is not any personal knowledge of your own, as to the mode and manner of carrying them out, or as to their success or failure?—My knowledge has not been knowledge as to the modes in which they were carried out; but success or failure is a thing which is patent to everybody that looks at our city, and it is on that success or failure that I have been making remarks.

4027. You have heard how the bridges are managed, and how London Bridge was built; is London Bridge a bridge which may not be considered a bridge which is ornamental to this metropolis?—London Bridge is very ornamental, perhaps it is a wonder that it came out of such a method of procedure. I have not a word to say against London Bridge; neither have I a word to say against Waterloo Bridge, which was the work of a private company; but I am surprised that the City has not more control over the beauty of its own buildings, and that it should let such a construction as that in Southwark take place (if it is within the jurisdiction of the City) without some attempt to alter it.

4028. Are you aware how Southwark Bridge was built?—I am not speaking of Southwark Bridge, but of the girders of the South Eastern Railway Company crossing the street at the end of London Bridge.

4029. Are you aware that that is situated without the limits of the City of London?—I did not know whether it was so or not; that is why I qualified my answer just now; I am very glad to hear that it is out of the jurisdiction of the City;

City; but they have control at Ludgate Hill, though I have left that out in my remarks.

4030. With respect to Blackfriars Bridge, which is now building, much has been said about the two bridges; are you conversant with the design and the structure of the present Blackfriars Bridge?—Only as I pass up and down the river; how can we know anything of the bridge till it is built; that is what I complain of. I should be glad if there were some place in the City of London, or elsewhere, where designs and models of all such great works should be placed before the world, to inspect prior to their final sanction.

4031. I apprehend that you will not erect the model of a bridge over the Thames in the same way which you alluded to just now?—I do not see any great objection to that even. It is not such an impracticable work; we might have it very fairly represented to us.

4032. Do you think it would be advisable in erecting a new bridge over the Thames, that there should be in some degree a model thrown across the Thames?—I think it would often save great offence to the public taste if it were done.

4033. *Chairman.*] The scene painting in this country is the best in the world, is it not?—I believe so.

4034. And these scene painters would strike off a bridge in no time?—Yes; they would erect a few poles in the river, and get it up without much difficulty; and supposing it cost 1,000 *l.* that would not be thrown away.

4035. Mr. Alderman *Lawrence.*] I think you stated that with respect to the various buildings erected in the City there appeared to be no concert between the committees managing the various bridges, buildings, and markets?—No other concert than a reference to the Corporation, and the Corporation, in matters of taste, are not directed at all.

4036. But are you aware that the whole of these committees act in concert, that they are, in fact, only divisions of the Corporation for carrying out effectively the works which the Corporation as a body could not possibly carry out itself, it being so large a body?—The Corporation having been divided into committees, as you will, there is no one that has any authority to direct in matters of taste. I do not suppose that the Lands Committee have any knowledge of painted glass. I do not suppose that the Sewers Commissioners had any knowledge of whether that building across Ludgate Hill would be beautiful or otherwise.

4037. Your argument would apply to the body as a whole, would it not, that they do not possess the means of deciding upon any matters of taste; that they are without the power of doing so, in fact?—Generally, because they do not look at it from that point of view at all; I do not wish to say anything derogatory to the City or to the committees, but as a Corporation and as committees, they are not considering the question of taste at all; and I presume that the Commissioners of Sewers had no knowledge of that bridge across Ludgate Hill being so ugly till their attention was called to it, and then they made it ten times uglier by attempting to ornament it badly.

4038. Have you seen the market which has been alluded to?—I have passed it once or twice; it is very fairly built.

4039. Are you aware that that market is built with a railway communicating underneath it?—No.

4040. And that the market was built with every convenience, not merely for the sale of meat, but for meat being kept in a pure state?—Excellent things. I have not entered into that question at all; it does not come to me; I have no objection to make to the architecture of the building; I have not examined it much; it seems very respectable, I should say.

4041. With regard to the present constitution of the Office of Works as at present constituted, do you think that the office, having often a changing First Commissioner, is a body better able to control these various buildings throughout this metropolis than either of the permanent bodies to which allusion has been made?—I think, generally speaking, looking back at the First Commissioners of Works that we have had, it has been rather the intention of the Government to choose the First Commissioner with the view of aptitude for that office; whereas the City committees have no aptitude for such office; neither has Sir John Thwaites any particular qualification as to taste, though he may be a capital man to conduct constructive works.

4042. Are you aware that the new street from Bow-street to Gower-street was carried out under a First Commissioner of Works?—I was not; I cannot say much in his favour.

4043. Do you think that it will compare favourably with anything carried out either by the Corporation or by the Board of Works?—Well, it is in a part of London where, I suppose, there is a great difficulty in getting persons to spend their money as freely as they do in the City. I think I must bear evidence to being astonished, when going through parts of the City, at what individuals are doing to decorate and beautify the City by structures in lanes and alleys, where one would never expect they would lay out money so lavishly, and I do wish that there was some arrangement by which such public works should be brought to better the general aspect of the City.

4044. Are you aware that New Oxford-street, and the improvements at the bottom of St. Martin's-lane, and the opening up of Leicester-square, were done by a First Commissioner of Works?—If they were done badly, I should only say that the First Commissioner should have advice on the subject. I am presuming that he would not act without advice.

4045. If the First Commissioner were to have full power, and to use it badly in these matters, what control would there be over him?—Public opinion then would be so strongly in favour of those who had given their reports in writing to him, that he could not virtually go away from their advice.

4046. Have you observed Cannon-street?—It is, on the whole, a very beautiful street. I think there might have been a great improvement there. The City had a great deal of difficulty in securing that little bit of ground near St. Paul's. I have often wished, when coming along Cannon-street, that they had given a few more houses towards the school; a very little more would have opened a noble view of St. Paul's; but I really am not wishing to blame the City. You must be quite aware that it is the great companies that want controlling; these railway companies, and so on, over which neither the City nor anyone has any control at present.

4047. *Chairman.*]

Mr. *R. Redgrave*, R.A.

28 June 1869.

4047. *Chairman.*] You have been asked whether, looking to the changing nature and the Parliamentary position of the First Commissioner of Works, you would have any security that these powers which are proposed to be given him would be properly exercised; do not you think that if more importance were given to that office (which has really been more or less almost a builder's office than anything else, for the First Commissioner has been the builder of the Government), and if such controlling powers were entrusted to the First Commissioner, the Government in appointing their First Commissioner would look perhaps more carefully at his qualifications, assuming (I do not say it is the case) that they have not sufficiently looked at his qualifications hitherto?— I think so; I may be allowed perhaps, in concluding my evidence, to say that I think that the constitution of our own office is much better, and might be in some degree a model to the First Commissioner of Works. Our Lord President has an officer, myself, bound to give him the best advice about Art, and to recommend him whom to call in to advise with; the same in regard to science, there is a chief officer in the science department who advises the President whom to call in in questions of science; and I think if the First Commissioner of Works were advised by an officer eminent enough to say "These are the men that you should call in," it would be better than a standing council; you would in that way get a variety of opinions rather than the stereotyped views which you would be apt to get from those who would be likely to fall into the quiet routine of office; I am quite sure that anyone who was called in to give an opinion would feel more the deep responsibility; you would find it difficult to get a permanent council to whom it would be safe to leave these matters, but if the men best qualified for the special work, and taken from an appointed list, could be called in, you would find that a safe course.

4048. But supposing that, if such powers were delegated to the First Commissioner of Works, good care would be exercised in his selection, it might be advisable, might it not, also as an additional security for the proper exercise of such powers, and for their continuous proper exercise, that you should have some permanent official, such as the officials they have at the Home Office and at the Foreign Office, who give a sort of continuity to the policy of the Home Office and the Foreign Office, and who have a knowledge of all the details which at present they have not in the Office of Works, there being no such permanent officer there?— It is a difficult thing to find such an officer; but I think that it would be very valuable to the First Commissioner of Works to have such assistance.

4049. If there were in addition a council such as has been suggested, although the First Commissioner of Works would be so far independent of his council that he would decide on his own responsibility, either in accordance with or against the views of that council; still the knowledge of the fact that his decision would be known to be either in accordance with or against the views of his council, and that the opinions of that council would, as you have suggested, be recorded, would exercise a strong moral influence over the decision of the First Commissioner for the time being, would it not?—Yes, and a strong moral influence outside. It would lead people to feel that whether he agreed with the council or differed from it, the matter had been well considered, and the public would be in a position either to support him or them.

4050. And if in such a case he did differ from his council and came to Parliament, taking a different view from those that advised him, he would have to show a very strong case in his own favour, because the *primâ facie* case would be against him?—Yes.

Friday, 2nd July 1869.

MEMBERS PRESENT:

Mr. Buxton.	Mr. Beresford Hope.
Lord Elcho.	Mr. Layard.
Mr. Gregory.	Mr. M'Clean.

LORD ELCHO, IN THE CHAIR.

Mr. BERESFORD HOPE, a Member of the Committee, further Examined.

Mr. *Beresford Hope*, M.P.
2 July 1869

4051. *Chairman.*] I BELIEVE you were, in the year 1865, President of the Royal Institute of British Architects?—I was, from 1865 to 1867.

4052. You have necessarily turned your attention much to the matters which have engaged the attention of the Committee; do you consider that the state of things in this metropolis, as regards public works, whether executed by companies or by public bodies, is satisfactory?—I consider it to be thoroughly unsatisfactory and chaotic.

4053. Does your objection to the present state of things mainly rest upon the results or upon the system?—Upon both.

4054. Do you believe the results to be at all dependent upon the system?—To a considerable extent; but I would not like to commit myself by saying that it was so altogether.

4055. Those reasons, I presume, are such as have been pointed out to this Committee; such as the disfigurements by railway bridges, which are bad in form, and which perhaps interfere with other bridges, by railway bridges across roads, and other works of that kind?—Those are among the disadvantages, and of course there is the further disadvantage of streets and other improvements being laid out at haphazard, and according to no general plan, which is too wide a question for us to go into now.

4056. Will you be good enough to point out more particularly wherein you think that the results show a want of system, or wherein you think that the results at present are very objectionable?—I think I can do very little more than say "ditto" to what we have heard from previous witnesses. There are the cases of Ludgate Hill, of the west and east ends of Southwark-street, of the two bridges over the Thames at Blackfriars, of the iron bridge opposite Lambeth Palace, of the Charing Cross and the Cannon-street stations and bridges, and there are many other instances to be found in London.

4057. You have stated that you consider those results to be partly the results of the system; to what other cause do you attribute such results?—To that sort of commercial spirit which underlies the British character, and which makes us unwilling to look upon the architectural decoration of the metropolis as a matter of imperial interest.

4058. That is to say, as regards those who construct those buildings?—Those who construct, and those who ought to supervise the construction.

4059. That is to say, that those who design and supervise the construction of those works look to mere utility, and do not consider sufficiently the ornamentation of the metropolis?—Precisely.

4060. But that utility and economy can be combined with better forms?—Of course, because the essence of architecture is proportion; decoration comes next.

4061. Does it necessarily follow that, being a railway bridge across any of the roadways, at Ludgate Hill or elsewhere, by improving its form you add to its cost, or diminish its deficiency for the purpose for which it is designed?—Certainly you do not diminish its efficiency, and I should think that it could be so managed that the addition, if any, to its cost, would be fully repaid by the increased beauty.

4062. So that, in addition to the system, you consider that there is a want of taste and feeling for those matters at present?—Yes; at the same time, there are symptoms of improvements.

4063. Do you think that it would be sufficient to look to the improvement of public taste to guard us in future against such results as we have seen from the present state of things?—Certainly not; I take up the matter at the other end, and say that the improvement in public taste has brought us to a time when the improvement of the branch of the public service connected with taste questions ought to be faced.

4064. That is to say, that the cure by the whole nation being impregnated with better taste would be a very remote probability, and that the evils which would, in the meantime, result, would render it hopeless ever to embellish London; but that, in the meantime, you think there is such an improvement in public taste as would sanction and approve the establishment in this country of an improved state of things as regards administration?—I think decidedly so, from the very obvious consideration that the improvement in public taste must begin last in those professions and those public bodies which have the power, in the interest investment and return, of inflicting the largest constructions on the town and the country.

4065. The appointment of this Committee by the House of Commons is a symptom of that improved state of public feeling, is it not?—Certainly.

4066. And the report which we have already issued, which has been the means of saving, we hope, to a certain extent, the new Embankment from being wasted on a comparatively unnecessary public road, has been approved, as far as one can judge, has it not, by the public generally?—Decidedly so; there are many fragmentary

Mr. *Beresford Hope*, M.P.

2 July 1869.

symptoms, I may say, of an improved taste. We see, for example, at Charing Cross, in Piccadilly, and at other places, architectural forms introduced into shop fronts; and carving, marbles, terra-cotta reliefs, and other ornamental resources brought in, which 20 years ago would never have been dreamt of.

4067. And from those signs which you now see springing up around, are you of opinion that the public (and by the public I mean not only persons like yourself who take a special interest in these subjects, but the public generally) would be prepared and would wish to see some improvement introduced by the Government in the management of all those matters?—Decidedly, if judiciously introduced.

4068. Have you yourself considered how much a change of system could be judiciously introduced, and to what you should ultimately look for such an improvement?—I have. I put in at our last meeting an extract from my address as President of the Institute of Architects. I may state that I brought out the same views rather more broadly, in answer to a question from yourself, before the Royal Academy Commission in the year 1863; and I have in various ways, previously and subsequently, tried to impress the same ideas, speaking generally, upon the public.

4069. Perhaps, before you suggested what you think ought to be, you would state where you consider the chief defect in the present system of administration of those matters in this country to lie?—By the system of administration, I suppose you mean the bureaucracy of the country.

4070. I do?—I conceive that our present system is wholly inefficient, from neither giving sufficient power nor sufficient dignity to that department of State which has the general control of those matters, by making the First Commissioner of Works sometimes a member of the Cabinet and sometimes not; and by the rule or custom (whether it is a rule or a custom, I know not) which confines the selection of that official to one of the two houses of Parliament.

4071. You say, in your answer to my question, that you consider the defect is in not giving sufficient control; is not the primary cause of the evils which we see, the fact of there being no Government officer at present who has any control whatever over the majority of those matters?—I meant to include that in my general answer.

4072. That is the foundation of the defect in the system, is it not?—Yes.

4073. You would give greater authority to the First Commissioner, and you would make him a Cabinet Minister?—I should, always. I would state that the history of the creation of the office seems to explain the reason of the defect to which I have alluded. Those who have arranged the administrative system of England seem never to have faced fairly and squarely the idea of having a Minister of Architecture and Arts, but in consequence of the large amount of landed property which, by the arrangement in the time of Geo. 3, passed under the control of the nation, a mere national land steward was appointed to look after that land. That land steward gradually absorbed in himself the artistic control of portions of the national domain, whether parks, gardens, or buildings, which had something of an artistic character about them; and rather more than 20 years ago, I think, during the first administration of Lord Russell, the office was cut in two, the land-stewardship being made a permanent office, and the æsthetic portion of it remaining an office changing with the Government of the day, but at the same time not being, as I said, put upon a complete and satisfactory basis.

4074. The First Commissioner of Works is now, as regards public buildings, little more than the builder of the Government and of the nation, is he?—Very little more.

4075. And from not being necessarily in the Cabinet (as for instance the present Minister is not in the Cabinet), the plans of the First Commissioner are submitted to that Cabinet, without his having any voice either in the explanation or defence of his projects and plans, is not that so?—Precisely so; I believe that Lord John Manners has been the only First Commissioner who ever has been in the Cabinet since Sir William Molesworth was in the Aberdeen Cabinet, and that carries us back 15 years.

4076. So that the First Commissioner and his plans, under the present system, are liable to be sat on by every Cabinet Minister who holds an office for which expenditure is necessary, and who would probably look to getting funds for his own office in preference to getting them for another department not represented on the Council, would not that be so?—Yes; I think we had an example not long ago, in the case when the Chancellor of the Exchequer proposed *ex tempore* to adopt a forgotten design of Inigo Jones's for the Law Courts, without consultation with the First Commissioner.

4077. Is it not probable that if the First Commissioner of Works had had a seat in the Cabinet, they would have agreed upon some plan which would have come before the public in a different form, and which would have been proposed on the responsibility of a minister responsible for those works, and not of the Chancellor of the Exchequer, who is supposed only to have found the money for them?—It is to be hoped that such would have been the case.

4078. At least there would have been a better chance of it than there is now, would there not?—Yes.

4079. Then you would have the First Commissioner in the Cabinet?—Undoubtedly.

4080. Would you think it necessary to change his title from that of First Commissioner to that of Minister of Works?—I use the word "Minister" because it is the shortest vernacular; but it is the genius of the English people never to call a minister a minister; you might call him a President, or you might call him a Secretary of State, but that might frighten some people; I really think the name is very indifferent if you get the thing.

4081. You use the word "minister," then, merely as indicating increased authority; and whether he be called First Commissioner, President, or Minister, it matters not, provided he has authority and position in the Cabinet?—Quite so. I may incidentally remark that, as I elicited in the examination through which I put Mr. Cole, there are certain artistic attributes belonging to the Educational Department, which is at present worked by the Lord President and the Vice-President, which I think are more cognate to the Office of Works than they are to the office of primary education. I mean everything which depends upon South Kensington. I should myself be disposed, in a redistribution of public works, either to give the First Commissioner of Works some concurrent power

power at Kensington, or to remove that to his department; but that is a matter of detail.

4082. Mr. *Gregory.*] What is the reason that the minister is called "First" Commissioner of Works?—The reason is this: the old department of Woods and Forests was composed of three Commissioners, the First Commissioner being removeable, and the other two permanent. When the Woods and Forests was broken up under Lord Russell's Government into two departments, the permanent Commissioners remained behind as Commissioners of Woods and Forests, while the removeable man was transferred to the Public Works; but the name of "First Commissioner" was kept; and, as a justification of the name, certain high officers, three Secretaries of State (so I learn) and the President of the Board of Trade, are put in the commission with him, though they take no part in the administration of his office. It is like the Board of Control; before the President became Secretary of State, he was really the sole Minister at the head of a nominal board. The same may be now said of the President of the Board of Trade, since the recent abolition of the Vice-Presidentship, and the substitution of a secretary.

4083. *Chairman.*] I presume that you would not be disposed to make the office of First Commissioner, or whatever title this minister takes, other than a Parliamentary office?—I should be decidedly opposed to that.

4084. You are aware that recently, since the Right honourable Member for Southwark came into office, there has been a change made in the constitution of that office; that is to say, that before that time there were two secretaries, one with a salary of 1,200 *l.* a year, and the other with a salary of 800 *l.*, with an architect who was attached to the office; and that the present First Commissioner has done away with the architect, as attached to the office, and has made an architect, Mr. Fergusson, one of the permanent secretaries; Mr. Fergusson being the first person appointed to that office; do you approve of that change?—Decidedly; I think it does all the good which those reformers contemplated who wished to have made the office of First Commissioner permanent.

4085. Would you think it desirable that the First Commissioner of Works should be, as a rule, in the House of Commons or in the House of Lords?—I think that it is desirable that Architecture and Arts should have a representative in both Houses. That can only, of course, be effected by there being a minister, an under-minister, and a permanent secretary, as there are at present in the other great departments. It is very clear that whatever functions the House of Lords may or may not exercise with the good-will of the country, and to its advantage, all questions relating to matters of taste and art are, from the circumstances of the position and education of many of the Peers, topics such as may with very great profit be ventilated in the Upper House. At present the House of Lords is cut off from what would be a most useful branch of its business, for the simple reason that there is no mouthpiece of the Government in that House prepared officially to answer questions on these matters; and that defect operates, not only against the efficiency of the House of Lords itself, but against the whole art system of the country. A commoner, Mr. Layard for example, or yourself, or other persons whom I need not name, have a temptation to study those questions, because they may take their place in the public administration of the country as First Commissioner of Works; but a Peer has no such temptation; he is disfranchised in all such matters, and therefore, if he has any political ambition, there is a direct discouragement against his studying those questions in which he might be useful to the country. On that account, therefore, I think that it is very desirable indeed that the Minister of Works might sit in either House. At the same time, it is obvious that if he is in the House of Lords, the Office of Works must have a mouthpiece in the House of Commons; and I therefore come back to the conclusion that there ought to be a minister and a moveable secretary (to be in the position of the Secretary of the Poor Law Board, or the Secretary of the Board of Trade), either office to be tenable by a Member of either House, so that there should be an official mouthpiece in both Houses of Parliament.

Mr. *Beresford Hope,* M.P.

2 July 1863

4086. Mr. *Gregory.*] Would you consider the department to be sufficiently represented in the House of Lords if one of the noblemen who have Court appointments were attached to the Office of Works, and would it not be an excellent training for any young man?—Excellent, if he would sit so many hours a day in Whitehall-place, looking over plans and estimates. At the same time, I rather like calling people what they are, and if you are to have a secretary for the House of Lords, I do not see why he should be called a lord-in-waiting, or an equerry, or a Lord of the Treasury.

4087. *Chairman.*] You would think it desirable, I presume, in addition to this permanent architect who has been appointed by the present First Commissioner, that there should be a permanent secretary, not changing with the Government, as there is in the Foreign Office and in the Home Office?—Undoubtedly.

4088. By that means the traditions of the office would be maintained; and the First Commissioner, being necessarily changing from his Parliamentary position, would have the benefit of the continuous knowledge of this permanent secretary, as to the traditions and the general work of the office, would he not?—Undoubtedly. In fact, the office, to sum up, should have a Minister, a Parliamentary Secretary, a permanent secretary, and an architect.

4089. You have heard it suggested, in the evidence before this Committee, that there should be attached to this office, under any re-constitution, a council of advice; do you agree in that?—I do. At the same time I may state that I attach more importance to the reconstruction of the office than to that addition; but I fully admit that the council of advice would be in the reconstruction of the office a considerable advantage.

4090. One proposal, as to the formation of such a council, has been that it should be thus constituted: a representative from the City Corporation; a representative from the Metropolitan Board of Works; another from the Institute of Architects; a fourth from the Institute of Civil Engineers, and a fifth from the Royal Academy; and further, that the mode of selection of those persons should be this: that each of those bodies should nominate three, or some other number, and that from the persons so nominated the First Commissioner of Works, or the Government, should select one to represent each body on this council; would you think that

Mr. *Beresford Hope*, M.P.

2 July 1869.

that was a desirable mode of forming such a council, both as regards the bodies to be represented and the means of representing them?—I think that seems a feasible scheme. There is a further question (which I desire to leave open), whether there ought not to be other members of that council who do not belong to either of those bodies directly nominated by the Government.

4091. Keeping those bodies so chosen as the council, might it not be possible, having in view what you have just said, and looking at the present system, which is that when any special building is to be erected by the Government, such as the National Gallery, the Law Courts, or the Foreign Office, they have persons specially appointed to act as commissioners, or as a committee of advice to consider the plans; might it not be desirable, in addition to this permanent council, when any special buildings have to be erected, to have persons called in, not with the power of voting, but as *amici curiæ* for the nonce?—I should give the fullest elbow-room, both to the regular council and to the supposed occasional assessors. I think that at one time it might be desirable to call assessors in without power of voting, and perhaps at another time to give them the power of voting, and at other times to pass over the stated council, and to have recourse, as now, to special commissioners.

4092. Would you be in favour of paying such a council of representative men?—I think that, after all, that is a matter of detail. You want to get good men; and you want to get the men cheerfully to give their time. If you cannot get good men, and if you cannot get their time cheerfully, I should pay them. At the same time, I should be jealous of letting the council become too exclusively a council of professionals, which might be the effect of paying them. I think that there might be a certain number of paid members, and a certain number of unpaid members. I should take the Institute of British Architects, for instance, which contains both professional "fellows" and amateur "honorary fellows," either of which classes ought to be eligible. It would be rather awkward if the question of selection between professionals and amateurs were to turn upon the question of payment.

4093. But might not the rule be that any member should be paid for his attendances, whether he were an amateur or professional, so as to do away with invidiousness?—Certainly, I should make the acceptance of payment obligatory upon all the members representing those societies, if you introduce it at all. At the same time, as I said, I am not averse to there being three or four unpaid amateur members also added to the council.

4094. Would you make the decision of such a council on any point binding on the First Commissioner; or would you constitute it (as many people think would be best) simply as a council of advice, leaving the minister to follow the advice, or not, on his own responsibility?—I should certainly not make it binding, because that would be making him only a Tycoon; and the new state of things would be worse than the old.

4095. I presume that you think it probable that although the First Commissioner of Works would have, and ought to have, the free exercise of his own discretion and responsibilities in those matters, he would necessarily be more or less guided and influenced by the advice of persons who were specially selected and chosen for their knowledge of the subjects referred to them?—Of course that is the only reason for a council. The First Commissioner would feel himself more or less bound, according to his knowledge and strength of character. A council of this sort would be a help in one way to a commissioner who had not made these things a special study; and in another, but equally useful way, to one who had particularly studied them.

4096. And to a certain extent it would meet possible evils from the constantly changing Parliamentary nature of the office of First Commissioner, would it not?—Precisely. The term of office of the council ought, I think, to be totally independent of any change of Ministry.

4097. What would you say would be a proper term of office for such a council; would you say three years, and let the members be re-eligible?—Yes; or two years and let them be re-eligible as a matter of course.

4098. Is there any further point to which you would wish to call the attention of the Committee with reference to this council, or the constitution of the office?—I may point out that, in this passage in my address as President of the Institute of Architects in 1865, I chalk out, rudimentarily, the idea of such a council. I should also wish to put in, as part of my evidence, the following answer which I gave before the National Gallery Commission in the year 1863: "My idea has always been that there ought to be a department of the State which should combine the artistic half of the vice-president of the Committee of Council on Education, and the artistic half of the Board of Public Works. There should be, in short, a Minister of Arts and Works; as it is, the Chief Commissioner of Works is powerless, because he is simply subordinate to the Treasury. The vice-president is also subordinate to the Lord President. In the meanwhile the efficient superintendence of Art is incomprehensibly divided between those two semi-ministers. I would have a substantial department of Art with a first-class Minister at the head of it, perhaps not so high as a Secretary of State, but a first-class Cabinet Minister who should stand on his own legs and represent the artistic side of the Board of Public Works, and the artistic side of the vice-president of the Committee of Council on Education. A Parliamentary under secretary of the calibre of the Secretary of the Poor Law Board would have to be constituted to take charge of the purely scholastic duties of the actual vice-president in subordination to the Lord President, who would be re-instated as the real Minister of Education. When this Department of Arts and Works has been created, we shall then want to keep the new Minister in check by a central regulating body for the various Art movements of the country which should be independent of the Government of the day. This central body I should look for in the Royal Academy, enlarged and strengthened. In the third place, we should have to constitute the British Museum of Mediæval and Renaissance Art, which is now under the thumb of the Committee of Council, under some responsible Board (answering to the trustees of the British Museum) who should correspond with, though not be subservient to the new department." It will be observed that, in that answer, I forecast the idea of a council of advice. On that occasion I suggested that that council of advice should be constituted

stituted from the Royal Academy; but I do not wish to stand to that recommendation, while I do to the spirit of the Minister of Works being supported by certain recognised and expert advisers.

4099. Mr. *M'Clean.*] Is this council of advice to interfere with private buildings, or only with those erected by the Government?—I think that the Minister might have some control given over them in regard to all buildings of a public or *quasi*-public character which come before Parliament, and whose promoters have to apply for Parliamentary power to erect them; and that in every case where the Minister himself is brought in, he should bring in his council with him.

4100. But with regard to railway bridges, are you aware that engineers have great difficulty at the present time about railway bridges; that certain clauses are put in the Act regulating the width and the number of piers, or stating that there should be no piers at all; and that the headway should be the same across the whole extent of roadway? — I apprehend that we are now discussing exclusively London, or at the outside, London and the two other great capital cities. In the case either of London, or of London and our other two capital cities, I think it is reasonable that it should be obligatory that the designs of those bridges should be deposited at the Office of Works, and that the Minister, taking the advice of his council if he pleases, should have a power of intervening in regard to their architectural design; but the extent of that intervention I would rather not attempt to define, still less do I adventure any opinion as to the desirability of the First Commissioner intervening as to Act of Parliament constructions in the largest cities and boroughs of the Empire.

4101. Mr. *Gregory.*] I suppose that you would give power to the Commissioner of Works to order that a model should be presented to him upon all occasions where he might consider it desirable?—Everything which he thinks desirable to make up his mind, whether plans, elevations, sections, or models, as the case may be, I think he should have.

4102. Do you know what is the system in Paris with regard to private buildings, and whether there is any control at all exercised over private buildings?—I fancy very considerable. There was an edict of Louis XIV., which I believe has never yet been repealed, which limits the height of private buildings to 65 feet from the ground line up to the cornice. We must recollect that public buildings in Paris are not under the administration of the Minister of Public Works, but that they are under the administration of the Préfet of the Seine, who is well known now as Baron Haussmann. In all that we have done in this Committee, we have rather been constituting the First Commissioner of Works Prefect of the Thames, than putting him in the position of the Minister of Public Works in France.

4103. There is a Minister of Public Works, is there not, in France?—There is, and that is one of the Great Departments of State. Under the old Parliamentary system, he was always in the French Cabinet, and he is so now.

4104. Is he able to exercise his functions within the limits of Paris in any way?—I am not aware. I should imagine that in Paris he must be considerably over-shadowed by the Préfet.

4105. *Chairman.*] Would you limit the action of the Government and this council in their interference in any way with public works to the works of public bodies, corporations, or companies, which came before Parliament for Parliamentary powers?—I think that our whole system would make it impossible, as things are, to go further; I do not say in the interests of art, whether a greater interference might not be desirable, but I think that it would be exceedingly unpopular, and impossible to work under our constitutional system; I should be satisfied with so much gain.

4106. You consider that in this free country (as we boast ourselves to be), it would be perfectly legitimate that any public body, whether it is a railway, or whether it is a public body, or corporation in the metropolis, which comes before Parliament for special powers, should have some person controlling the exercise of those powers in the matter of the buildings they erect?—I think so, decidedly; though there would be probably some difficulty in organising it. The Committee are, no doubt, aware that the law of lights is one of the most troublesome and difficult things in the world, and that many buildings are totally spoilt by the interference of a vexatious neighbour, who thinks that his rights are interfered with. In any legislation of this sort, you would have, I think, more or less to overlook this whole question of lights. I do not know how you would do it, but I simply throw it out as a possible difficulty in the way in simplifying the system.

4107. At the present moment there is a Building Act which regulates all questions of light, so that the question of æsthetics would have to be subservient to the conditions laid down in the Building Act as regards light, would it not?—No doubt.

4108. Would you consider it at all derogatory to any public body to have a representative on some such general council as that of which we have spoken?—I should say that it was an honour and a compliment.

4109. Mr. *Buxton.*] Are you aware that the Building Acts in the metropolis, as well as in many other towns in England, forbid any projecting window, or any other projection from the walls over the footway, and thereby most seriously interfere with the architectural beauty of the streets?—I am aware of that; and I am aware, too, that the whole legal question as to the Building Act, and to the rights of neighbours, is in a most chaotic state. I had occasion to consider that question when I was president of the Institute of Architects, when there were grave debates on this subject, in which it comes out that the architects themselves, who were the most interested in knowing where their rights lay, were in a state of great confusion upon the matter. There are antagonistic parties always brought face to face in such matters, lawyers and architects, and they have not at all squared it. I believe that in Paris the law which is analogous to our Building Act is even more despotic than it is in England.

4110. Mr. *Gregory.*] Would you alter the law in any respect, so as to give greater latitude to private persons for the embellishment of their houses?—That is too wide a question to go into now; I was merely pointing out that if we once set the stone rolling there are many questions beyond.

Mr. GEORGE RUSSELL, called in; and Examined.

Mr. *G. Russell.*
2 July 1869.

4111. *Chairman.*] You have been, have you not, for a great many years, one of the Secretaries in the Office of Works?—For 13 years.

4112. Was your first appointment in the office before, or since the reconstitution of the office?—Since the reconstitution; since the separation of the Office of Works from the Office of Woods, which took place in 1851.

4113. The question has arisen here to-day as to why the First Commissioner of Works is now called First Commissioner; are there any other Commissioners?—There are other *ex officio* Commissioners. The title of First Commissioner of Works simply means that he is the first-named on the warrant.

4114. Who are the others?—The Secretaries of State; the President and the Vice President of the Board of Trade are *ex officio* Commissioners.

4115. Which Secretaries of State?—The Home, Foreign, and Colonial Secretaries.

4116. What is the connection between the Foreign Secretary and the Office of Works?—There is no connection between them; he merely is included as one of Her Majesty's Principal Secretaries of State.

4117. Until the present First Commissioner came into office the other day, there were two secretaries, were there not, a first secretary, and an assistant secretary?—Yes.

4118. At the present moment are there two secretaries?—There is a secretary, who has charge of the correspondence, accounts, and general business of the office; and there is a Secretary of Works and Buildings, to whom are entrusted special architectural questions, the supervision of architects' plans and estimates, &c.; there is also an assistant secretary.

4119. Do you consider that the office is properly constituted at the present moment; that is to say, that the First Commissioner has sufficient power as a Minister, in relation to the position of other Ministers in this country, and to the importance of the functions which he has to discharge?—That must depend very much upon the nature of the functions intrusted to him. According to my view of the duties which the First Commissioner ought to be called upon to discharge, his powers are not sufficient.

4120. Do you think that his powers are not sufficient, looking only to the functions which he at present exercises?—Looking at the functions which under the present constitution of his department he has the power of exercising.

4121. And clearly, if those functions were extended *à fortiori*, it would be the more necessary, would it not, that his powers should be increased?—Yes.

4122. I suppose you point by what you have stated to the fact that he is not necessarily a Member of the Cabinet?—He is not necessarily a Member of the Cabinet.

4123. From your experience in this office, do you think it desirable that the First Commissioner of Works should be *ex officio* a Member of the Cabinet?—I think there would be a considerable advantage in his being so.

4124. At the present moment, I imagine, he submits to the Cabinet plans and estimates, without having the means of explaining those plans, and defending them if they are objected to in the Cabinet?—I have no doubt that he has the opportunity of defending plans if they are objected to.

4125. Does the First Commissioner ever attend Cabinet Councils to defend and explain his plans?—There have been such cases; but they are rare.

4126. At the present moment, what power has the First Commissioner of controlling in any way any public works in this metropolis, or in Dublin, or in Edinburgh, or in any other large towns in this country?—His control over public works in the metropolis and in Edinburgh (he has none as regards Dublin) is entirely confined to works, the expense of which is defrayed out of a Vote of Parliament.

4127. You say that he has no authority in Dublin; by whom are those matters regulated in Dublin?—There is an Irish Board of Works.

4128. Is it wholly independent of your Board?—Wholly independent of our Board.

4129. Who is the head of that Board?—I am not aware who is the head at present.

4130. Is that a permanent Board?—It is a permanent Board, and not a representative Board.

4131. Then, in the case of any public building which is erected there with money voted by Parliament, has no Minister of the Crown any authority over the expenditure?—I imagine that the Secretary for Ireland would have control over it, acting under the advice of the Irish Board of Works.

4132. Mr. *Beresford Hope.*] Has your office any control over Irish matters?—We had control until recently over the Phœnix Park; but not architecturally over the buildings in Dublin.

4133. When did you give up the control over the Phœnix Park?—Speaking from memory, I think it was about nine years ago, and the Irish Board of Works has now taken it up.

4134. *Chairman.*] Is that a Royal park?—It is a Royal park; it was placed under our management when the offices were separated.

4135. Why did you give up the control of it?—It was considered desirable by the Treasury, I believe, that as we had no control over buildings in Ireland, or any other Irish property, we should give up possession of the Phœnix Park.

4136. Then, so far as you know, although as regards London and Edinburgh there is control exercised by your office through the First Commissioner in Parliament over money voted by Parliament and expended on public buildings, Parliament has no control whatever over money voted for such purposes in Ireland, unless there be some control exercised by the Irish Secretary?—That is my belief.

4137. But you cannot speak positively as to that?—No.

4138. Mr. *Gregory.*] Have you control over works in Scotland?—Over certain works in Scotland, the expense of which is defrayed out of Parliamentary grants.

4139. Do you know the cause why this change took place eight or nine years ago?—That change only referred to the management of the Phœnix Park, and not to the public buildings.

4140. Mr. *Beresford Hope.*] Can you from private information tell us who is the head of the Irish

Irish Board of Works?—Sir Richard Griffith was the head of the Irish Board of Works.

4141. Was Sir Richard Griffith an official or an architect?—He was an engineer, certainly; but he had some architectural knowledge.

4142. Is the position of the head of the Irish Board of Works a permanent one under the Lord Lieutenant and the Irish Secretary?—That is his position, I believe.

4143. *Chairman.*] In Edinburgh there are public works which are superintended by your office; for instance, the new Post Office was erected under designs which were prepared by some of your officers, was it not?—Those designs were prepared by our officer in Edinburgh, and approved of by the First Commissioner.

4144. Have you an officer in Edinburgh who communicates directly with your office, and who is appointed by the First Commissioner?—Yes.

4145. Mr. *Beresford Hope.*] What is his title?—He is assistant surveyor of works in Scotland.

4146. Is he an architect?—He is an architect. Mr. Matheson is the present officer.

4147. *Chairman.*] His office is not confined, then, to works in the metropolis of Scotland?—His office extends to all works in Scotland.

4148. What works in Scotland are there, besides public buildings in the metropolis, of which he has charge?—Glasgow Cathedral is under the Office of Works, and there are certain works there which are carried out by him.

4149. The works at Glasgow Cathedral you say are being carried out under Mr. Matheson's superintendence; how does Glasgow Cathedral happen to be under your office; was it always so, or has it been taken lately by your office?—It has been always so.

4150. Mr. *Beresford Hope.*] Is it not the fact that prelacy having been abolished in Scotland, the State entered into the property in more or less of the cathedrals?—That is so.

4151. I think you have under you Elgin Cathedral, and one or two others?—We have.

4152. And you have also under you some palaces, have you not, such as Linlithgow and Holyrood?—Yes, and one or two ruins, the expenses of the restoration of which have been defrayed out of the votes by Parliament.

4153. Mr. *Gregory.*] Do you think that there is any reason why the same power should not be given to the Board of Works in Ireland as it has with regard to Scotland?—Not at all, if its powers are to be extended; but the powers of the Board of Works are of course limited in this country, and there are a vast number of public buildings in this country which are not under the Office of Works; such as Inland Revenue, Customs, and Admiralty buildings, prisons, barracks, &c.

4154. Looking at Dublin as the capital of Ireland, do you not think that it might fairly be brought under the management, as regards those public buildings, of the Office of Works, just as is the case in Edinburgh, the capital of Scotland, or do you think there would be any objection to it?—There would be no difficulty on the ground of management.

4155. *Chairman.*] In Scotland parks are under the Office of Works, are they not?—Yes, the Queen's parks.

4156. How is the Phœnix Park maintained now?—That is maintained by a vote of Parliament under the Irish Board of Works.

4157. Mr. *Beresford Hope.*] I suppose that the Irish Board of Works communicates directly with the Treasury, does it not?—It does.

4158. Do you not consider that, viewing the different circumstances of the Church of England, it would be totally impossible and undesirable to hand over the English cathedrals to the Board of Works?—If the honourable Member's question has reference to the care of monuments and repairs, I imagine that there would be very great difficulties attending such an arrangement.

4159. Mr. *Gregory.*] Are you aware of the confusion which at present exists in what I may call the general control department of public works in Ireland?—Yes, I have heard of such confusion.

4160. Has it ever come to your knowledge that there have actually been three different authorities at once employed in executing works in the same department, all of which works may be considered more or less connected with one another?—No; that has not come within my knowledge.

4161. Have you never heard that the Science and Art Department, the Board of Works, and the Royal Dublin Society, were all engaged simultaneously in works in that department?—I have not.

4162. Mr. *Beresford Hope.*] We have heard of a good many competing departments which have the care of different public buildings in London and elsewhere; has not the Lord Great Chamberlain a certain control over this and other buildings?—Yes.

4163. May I ask what is the nature and extent of that control?—That control does not at all apply to architectural matters; it is more as to internal arrangements and the economy of the buildings.

4164. May I ask you to explain those terms further; can the Lord Great Chamberlain alter the distribution of furniture and the use of the rooms? — He has the power to control the assignment of the rooms and the occupation of them.

4165. Has he that power in this Palace of Westminster?—In the Queen's Palace of Westminster.

4166. Who puts him in motion; does the Speaker, or does the First Commissioner of Works, apply to him for what he wants?—I think that he is moved according to the circumstances which arise. I think there is no particular motive power.

4167. Are we, for example, sitting in this Committee-room now by his pleasure?—I imagine if you go to the very root of the thing you are doing so.

4168. Mr. *Gregory.*] Has he ever exercised that power of interference in this Palace?—I am not aware that he has.

4169. Mr. *Beresford Hope.*] Has he not the patronage of the refreshment hall in the lobby?—Yes.

4170. In point of fact, then, that is a dormant authority, except in special cases?—To the best of my belief that is a dormant authority.

4171. In this building, practically speaking, does the Speaker control the arrangements, and is the First Commissioner his builder?—That is, practically, his position.

4172. Under whose control is Buckingham Palace and the very large and handsome garden belonging to it?—The Palace is under the charge of

Mr. *G. Russell.*

2 July 1869.

of the Lord Chamberlain, and the garden is under the management of the Lord Steward.

4173. They are both treated as the Sovereign's private residence and domain, are they not?—They are both treated as the Sovereign's private residence and domain, being a palace in the personal occupation of the Queen.

4174. Then has your department nothing to say to it?—We have nothing to say to that.

4175. And I suppose the same condition applies to the Castle and private grounds of Windsor?—The condition applies to Windsor Castle and the grounds.

4176. Who has the control of St. George's Chapel; is that looked upon as a Royal Chapel?—That, I believe, is under the control of the Dean and Chapter of Windsor, as if it were a cathedral.

4177. With these exceptions of the private residences of the Sovereign, the buildings under the control of the War Department, the Admiralty, and the Customs and Inland Revenue Departments, and the dormant authority of the Lord Great Chamberlain, all public buildings are under your control, are they not?—All public buildings which appear in the Parliamentary estimates are under the control of the Office of Works.

4178. We know that there is no official relation, but is there any degree of unofficial communication between your office and the Metropolitan Board of Works and the Corporation of London, in reference to buildings of a public character in London?—None.

4179. *Chairman.*] You have stated that this control, which is exercised by your office through the First Commissioner of Works, does not even extend to such public buildings as barracks, Customs, and Inland Revenue buildings; are there any other public buildings to which that control does not extend?—Yes; it does not extend to public prisons and public hospitals.

4180. Is Greenwich Hospital under your care?—No.

4181. What other hospitals are under your care?—Chelsea Hospital, so far as regards certain repairs, &c.

4182. By "public hospitals" do you mean such a hospital as St. George's?—No, I mean such a hospital as the Netley Military and Naval Hospital, which may be called a government hospital.

4183. Would you think it desirable that some control should be exercised by your office over the outsides, at any rate, of those buildings?—It has always appeared to me to be desirable that there should be some control in one department with regard to the buildings in the metropolis.

4184. The barracks at Knightsbridge, for instance, are in a very prominent position in the metropolis. Supposing that it was determined that new barracks should be erected at Knightsbridge, who would have the erection of those barracks?—The War Office, I presume.

4185. Money would be voted to the War Office, and plans would be got from the War Office, probably from the Royal Engineers, and neither the Office of Works, nor the Board of Works, nor any other authority in the metropolis, would have any control over anything which the War Office might erect; would that be so?—Probably in the case of the barracks you have mentioned, the Office of Works would be consulted, inasmuch as the site is in Hyde Park; but in the case of any other barracks, where property under the charge of the Office of Works was not affected, they would not be consulted.

4186. There is nothing to necessitate their being consulted, is there?—There is nothing to necessitate their being consulted.

4187. It would be an act of grace, then, would it not, in the case of the Knightsbridge barracks, on the part of the War Office, in consideration of their property abutting on the public parks?—Yes.

4188. Was your office consulted in the case of Chelsea Barracks?—No.

4189. Was your office consulted in the case of the Wellington Barracks?—No.

4190. Those barracks are in almost the most prominent public places in the metropolis, are they not?—Yes.

4191. I do not say whether they are or are not disfigurements; at any rate, as far as regards any controlling power exercised by your department, they might have been hideous constructions, might they not?—We have no power of interference.

4192. Does the same condition of things apply to prisons?—The same thing applies to prisons.

4193. Our prisons are in open spaces, and in prominent positions, such as the Penitentiary on the river bank; that occupies a very prominent position, does it not?—Yes.

4194. Had the Office of Works any control over the architecture of that building?—None.

4195. The prison at Pentonville is in exactly the same position, is it not?—Yes.

4196. We will take another description of public buildings; there is Her Majesty's Stores, Pimlico, on the Thames Embankment; is that under the control of your office?—No.

4197. Then I presume, from your remarks, that you would consider it very desirable, with a view to the embellishment of the metropolis, that there should be protection, at any rate, against the erection by other public boards, such as the War Office or the Home Office (by whom I presume the prisons are erected), of buildings which would be a disfigurement to the metropolis?—It appears to me desirable that that control should be given to one department.

4198. The parks, I presume, are wholly under your office?—The Royal parks are entirely under our office.

4199. Does that include Kensington Gardens?—That includes Kensington Gardens.

4199.* Certain other parks under the Metropolitan Board, I believe?—Yes.

4200. Mr. *Beresford Hope.*] Are there not certain ancient parks which are technically called Royal parks, and other modern parks, such as Victoria Park and Battersea Park, which are also under your office?—Battersea Park is placed by a special Act of Parliament under our charge, as the Battersea Park Commissioners; Victoria Park is a Royal park.

4201. May I ask you how you stand now as regards Epping Forest, which seems to be trembling in the balance, as to whether it should become a town or whether it should remain a place of recreation?—That question is not in such a position as to enable me to answer it. It is in abeyance. There are certain legal questions pending at present which are unsettled.

4202. *Chairman.*] All Royal palaces are under you, wherever they are situated, are they not?—Yes; with the exception of a certain outlay upon them, the expense of which is defrayed out of the Civil

Civil List, and is in charge of the Lord Chamberlain.

4203. Is the Castle of Dublin under you?—No.

4204. Is that under the Irish Board of Works?—That is under the Irish Board of Works.

4205. Do you consider that it would be desirable to give your office control over works in this metropolis which are conducted by public bodies, such as the Metropolitan Board of Works, or railway companies, or water companies, or gas companies, or the Corporation of the City of London. I mean by that bodies which have to come to Parliament for Parliamentary powers before they can execute those works?—I think it would be a matter of great difficulty to give us control over works, the expense of which is borne out of local taxation.

4206. Complete control?—Complete control.

4207. Would you think it possible that that control might be exercised by constituting a representative board, which might act as a council of advice to the First Commissioner in such matters?—By strengthening the position of the First Commissioner you might obtain that control.

4208. That is to say, by making the First Commissioner's office an important one, and by giving him æsthetic (if I may use the word so applied) control over all such buildings as these to which I have referred, you think it might be possible to establish such a council, and to give them such control, assuming that the different public bodies are represented on that council?—If the First Commissioner is to be responsible for buildings in the metropolis, and to be responsible for buildings erected in the name of his office, I think it would be very desirable to give him certain powers of resisting what I may call external interference.

4209. I presume that you think it is absolutely necessary, in order to guard in the future against the evils which we have seen in the past, and which are going on at the present time in the erection of buildings by public companies and corporations, that there should be some control somewhere?—That, I think, very desirable.

4210. Do you think that that control should rest anywhere but in the First Commissioner?—No, I think that is the proper place for it.

4211. Therefore, what one has to do is, in vesting a control in the First Commissioner, to endeavour to do justice to all other interests, and to see them fairly represented in that control?—Yes, if that could be arrived at.

4212. It has been suggested that a council of advice might be formed, consisting of representatives from five public bodies; those public bodies being the Corporation of the City of London, the Metropolitan Board of Works, the Institute of Architects, the Institute of Civil Engineers, and the Royal Academy; would you not think that that would be a fair representative council, and that it would give you the best chance of getting the best advice in such matters?—I think that such a council might be of service to the First Commissioner.

4213. I presume that you would not wish, supposing it were thought that such a council were desirable, that it should in any way fetter the discretion and responsibility of the First Commissioner, but you would leave it with him to act, or not to act, upon the advice of that council, as seemed to him best. He would necessarily exercise moral control, more or less; but would you make the advice of such a council absolutely binding upon the First Commissioner?—I think one of the objects of that council would be to relieve the First Commissioner of a certain amount of responsibility, and therefore I think that it would be desirable that he should be guided by their opinions in the main, but certainly that he should not be fettered by them.

4214. If such a council was appointed, persons being selected for it who were supposed to be the fittest persons that could be found, if the First Commissioner were a reasonable being (and I presume that if he were not a reasonable being he ought not to be First Commissioner), he would be necessarily guided by their advice, would he not?—I presume that it would be part of the constitution of the office that he would have to consider it.

4215. Would you think it desirable that the First Commissioner should be a permanent official in this country?—I do not think that desirable.

4216. The permanent element you would find in a person who holds the office which you now hold?—What is wanted in the office appears to me to be continuity, and that you might arrive at without having a permanent First Commissioner.

4217. I presume you refer to arrangements similar to those which exist in other offices, there being gentlemen there of great experience and ability, who are permanent secretaries or assistant secretaries, and who carry on the traditions of the office, and give continuity to its policy, whatever that may be, whether foreign policy or home policy?—Yes.

4218. Mr. *Beresford Hope.*] May I ask what are the relations between your department and the office of Woods and Forests; do they ever call you in to design their buildings?—Never.

4219. Have they their own architects?—They have.

4220. And you are at present totally independent of each other?—We are totally independent of each other.

4221. Will you kindly state what is the extent of your control over the statues in the metropolis or elsewhere?—We have control over all statues erected subsequently to the 17 & 18 Vict. c. 33.

4222. Wherever they may be erected?—Wherever they may be erected, if transferred by the owners to the Office of Works, being situate within the Metropolitan Police District.

4223. But supposing they were erected in a private garden, but facing right up to the street, would they be still under your management?—No, they would not, unless specially transferred to us.

4224. For example, is the statue of Lord Herbert in front of the War Office under you?—That is under us.

4225. Older statues, like the very handsome one in Leicester-square, are completely private property, are they not?—Those are private property. At the time of the passing of the Act I have mentioned, certain statues were enumerated in the schedule, and that statue was not included.

4226. Mr. *Gregory.*] The statue of Lord Clyde is under you, is it not?—The statue of Lord Clyde is under us.

4227. Would you have the power of altering that statue in any way without the consent of the subscribers?—

Mr. *G. Russell.*

2 July 1869.

subscribers?—No; that statue was erected by private subscription.

4228. Mr. *Beresford Hope.*] Would you have equally the control of statues if they were hoisted on a pillar or an arch, and not standing on a pedestal?—Yes, I imagine so, it being always understood that that control does not extend to the approval of the design of the statue, unless our property is affected in any way.

4229. Mr. *Gregory.*] I suppose the First Commissioner could *proprio motu* remove the statue of the Duke of Wellington from the arch if he chose, could he not?—I imagine that he might legally do so.

4230. Mr. *Beresford Hope.*] Has not the Office of Woods and Forests anything to say about statues?—Not that I am aware of.

4231. I may state the fact, that a few years ago my consent, as the guardian of a minor whose property in Carlton Gardens was affected, was requested by Mr. Gore, it being then proposed to erect in that situation a statue of Sir John Franklin?—That is because that property is in the charge of the Commissioners of Land Revenue.

4232. Your rights, then, would cease in that case?—Our rights, as to the control over the statue would not cease; the statue of Sir John Franklin is in our charge.

4233. Then in that case there were actually two departments concerned, the Woods and Forests were concerned in putting the statue there, and now you are concerned in keeping it there, is that so?—That was the result of the accident of the ground being the property of the Commissioners of Woods and Forests. That might have happened to any private landowner, only it happened to be the property of the land revenue.

4234. Are the London squares considered to be public places?—According to the definition of a public place in the Act, a London square would not be considered one; I refer to such squares as Grosvenor and Russell-square.

4235. Mr. *Gregory.*] Would the Commissioner of Works have power to prevent a statue being erected in a public square, or to interfere in any way with the statue?—None.

4236. When it is once erected, does it come in any way under his control or supervision?—I believe not, in the case of a square, over which there is no public right of thoroughfare.

4237. Do you think it would be advisable that additional power should be awarded to the First Commissioner of Works to object to the erection of any statue in one of our public squares, such a statue becoming, as it were, a public monument?—I think that it would be advisable that he should have the power of expressing his approval or disapproval of any statues to be erected in a public place. Under the Act he has not that power.

4238. *Chairman.*] If he has control, what is his power over the statues in a square?—His control would be limited to such statues as might be placed in Parliament or Trafalgar squares, being public places within the meaning of the Act.

4239. Mr. *Layard.*] I presume there are public squares and private squares, some of the squares being public property?—Yes; some of the squares are public property, and some of them are private property.

4240. Mr. *Gregory.*] But still you would give power to the First Commissioner to object to the erection of any statue in a private square, would you not?—I think it would be desirable.

4241. *Chairman.*] To revert to the Council of Advice; do you consider that it could be better constituted as regards its representative character, than by being selected from those five bodies which I have mentioned, or is there any other body that, in your opinion, ought to be represented?—That would appear to me to cover all branches that would be necessary.

4242 It has been suggested that instead of those bodies being represented by *ex officio* members, such as their chairman or president, or whatever his title may be, or instead of their nominating one individual, they should each nominate two or three for the First Commissioner to select one from those two or three; would you agree in such a suggestion?—I have not considered the details.

4243. Do you consider that they should be paid?—That is a point upon which I do not feel that I could give an opinion.

4244. Is there any other point to which you would wish particularly to call attention?—I think not.

SECOND

REPORT

FROM THE

SELECT COMMITTEE

ON

HUNGERFORD BRIDGE

AND

WELLINGTON-STREET VIADUCT

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed,*

ANALYSIS OF INDEX.

ALPHABETICAL and CLASSIFIED LIST of the PRINCIPAL HEADINGS in the following INDEX, with the Pages at which they may be found.

PAGE

BUILDING FRONTAGE - - - - - - 3

CHARING CROSS TO EMBANKMENT:

1. *Great Importance of a Road from Charing Cross to the Embankment; its Advantage as compared with the proposed Viaduct* - 4
2. *Obstacle to the Acquisition of Northumberland House with a view to a direct Road from Charing Cross* - - - - - 4
3. *Question of a curved Road by the side of Northumberland House, or of a direct Road through the ducal Property* - - 4
4. *Question of widening the narrow part of Charing Cross* - - - - - - 5
5. *Plans of the proposed Road to the Embankment* - - - - - - - - 5

City of London (Public Works) - - - - - - 5
Blackfriars Bridge - - - - - - - 2
Holborn Viaduct - - - - - - - 15

COUNCIL OF ADVICE:

1. *Suggestions for the Constitution and Working of a Council of Advice in connection with the Office of First Commissioner of Works* - - - - - - - 8
2. *Evidence opposed to the foregoing Proposition* - - - - - - - - 8
3. *Adverse Conclusion arrived at by the Committee* - - - - - - - 10

First Commissioner of Works - - - - 12
Science and Art Department - - - - 31

Crown Land - - - - - - - - - 11

Essex-street - - - - - - - - - 12

First Commissioner of Works - - - - - 12
Compulsory Powers - - - - - - - 7
Council of Advice - - - - - - - 8
Metropolitan Board - - - - - - - 19
Office of Works - - - - - - - - 25
Plans of Models - - - - - - - 26
Railway Structures - - - - - - - 28

Gradient of Viaduct - - - - - - - 14

Lateral Communications - - - - - - 16
Charing Cross to Embankment - - - - 4
Derby-street - - - - - - - - 11
Essex-street - - - - - - - - 12
Gradients of Streets - - - - - - 14
Norfolk-street - - - - - - - - 24

METROPOLITAN BOARD OF WORKS:

1. *As to the present Constitution, Powers, and Working of the Metropolitan Board* - 19
2. *As to the Removal of the former Veto of Parliament, and of the First Commissioner of Works, upon Expenditure by the Board* 20

PAGE

METROPOLITAN BOARD OF WORKS—continued.

3. *As to the Question of a Limitation or an Extension of the Powers and Action of the Board in respect of Public Works in the Metropolis* - - - - - - - 20
4. *Objection by the Board to the proposed Viaduct; Obligation upon the Board in the matter* - - - - - - - 21

Act 25 & 26 Vict. c. 93 - - - - - - 1
City of London - - - - - - - - 5
Compulsory Powers - - - - - - - 7
Crown Land - - - - - - - - 11
First Commissioner of Works - - - - 12
Public Building (Embankment Site) - - - 29
Railway Structures - - - - - - - 28
Responsibility - - - - - - - - 30
Thames Embankment - - - - - - - 33

Metropolitan District Railway - - - - - 21
Ventilation Shafts - - - - - - - 38
Vibration - - - - - - - - - 39

MUSEUM OF NATURAL HISTORY:

1. *Concurrence of Testimony in favour of the Embankment Site, between Waterloo and Hungerford Bridges, for the proposed Museum* - - - - - - 22
2. *Exception taken to the foregoing Proposition* - - - - - - - - 22
3. *Explanations and Suggestions relative to the Plan of Buildings, and the Mode of Construction* - - - - - - 23
4. *Area required for the Buildings* - - 23
5. *Suggestions as to the Arrangement of the Natural History Specimens* - - - 23
6. *South Kensington Site* - - - - 24
7. *Adelphi Terrace Site* - - - - 24
8. *Cost* - - - - - - - - - 24

New Law Courts - - - - - - - - 24
Foundations - - - - - - - - 13
Vibration - - - - - - - - - 39

INDEX.

[*N. B.*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.* (*First Rep.*) to the Pages in the Appendix to the First Report; and the Numerals following *First Rep.* and *Second Rep.* to the Pages in the First and Second Reports respectively.]

A.

ACT 25 & 26 VICT. c. 93. Necessity of an Act of Parliament in order to enable the Metropolitan Board of Works to carry out the proposed road or viaduct, *Sir J. Thwaites* 156–158——Obligation upon the Metropolitan Board by the Act of Parliament to construct the road in question, *Sir J. Thwaites* 64–66; *Bidgood* 1771——Sundry sections of the Act 25 & 26 Vict. c. 93, cited as showing the restrictions upon the Metropolitan Board of Works in respect of the reclaimed land, and the privileges conferred upon the different river-side proprietors, *Sir J. Thwaites* 519.

Recommendation by the Committee that the Metropolitan Board of Works be relieved from the formation of the road, and that portion of the Act, 25 & 26 Vict. c. 93, be accordingly repealed, *First Rep.* v.

Adam-street. Proposed access from Adam-street to the Embankment by means of steps; character of the gradients, *Sir J. Thwaites* 273–276——Special provision in the Act of 1868 as to a communication by Adam-street, *Creasy* 2754.

Adams, William Bridges. (Analysis of his Evidence.)—Is a civil engineer; considers that if the new law courts be built on the Thames Embankment certain precautions are very desirable, in order to guard against the vibration and noise from the trains on the Metropolitan District Railway, 817 *et seq.*——Importance of taking the foundations of the law courts down to the blue clay, 820–824——Weight and speed of the trains on the proposed railway, there being less vibration according as the speed is slackened, 828–833. 838–845——Objection to the use of peat as a means of preventing vibration, 834–837.

Adelphi Terrace. Proposal by the Metropolitan Board to purchase Adelphi-terrace, and to resell it eventually, *Sir J. Thwaites* 521–534——Great expense if a public building were erected on the high ground at Adelphi-terrace, &c., instead of on the land reclaimed by the Embankment wall, *Layard* 1510. 1512–1514. 1521——Conclusion as to the bad foundation of the houses on Adelphi-terrace, *Waterhouse* 2896–2899.

See also *Museum of Natural History*, 7.

Albert Hall of Arts. Question considered as to the sites used respectively for the Albert Hall of Arts, and for the International Exhibition, *Cole* 3595–3608. 3649–3651.

Approaches to Embankment. See *Lateral Communications.*

Arches. About one-third of the road or viaduct would be on arches, *Sir J. Thwaites* 130–132——Statement to the effect that the arches of the proposed viaduct will be concealed by buildings, *ib.* 1230–1240——Equal objection of witness to the scheme whether the road be wholly or partly on arches, *Bidgood* 1713–1718.

B.

Banksian Library. Suggestions on the subject of dividing the natural history library, now at the British Museum, and of placing the Banksian Library, with the proposed museum, on the Embankment site, *Owen* 2350–2360.

Reports, 1869—*continued.*

Barracks. Advantage in certain cases of some check upon barracks erected by the War Department, *Cole* 3633–3637. 3658–3662. 3672——Expediency of the office of Works, or some other department, exercising supervision over barracks in London, *Russell* 4183–4191.

Bazalgette, Joseph William. (Analysis of his Evidence.)—As engineer to the Metropolitan Board of Works, is responsible for the design of the Thames Embankment, and of the Works upon it, 855–858——Considers that a public building may be erected on the Embankment, in proximity to the underground railway, without injury from vibration, and without much inconvenience from noise, 859 *et seq.*——Necessity in any case of taking the foundations of a large public building very low down, this being a protection against any possible vibration of the railway, 864–871——Advantage of an open area round the building as a precaution against vibration, 872–875——Further precaution if the railway be ballasted with sand, 876–883.

Explanation of the line of the railway relatively to the Embankment roadway, showing that it leaves the roadway at certain points for purposes of ventilation, 899–902——Necessity of the sanction of the Metropolitan Board as regards the designs of the railway stations, and the number of ventilation openings, 903–907. 973–977——Consideration of the sites proposed and agreed to for ventilating shafts between Charing-cross and Waterloo Bridges, with reference to the depreciation caused thereby as the value of the reclaimed land as the site for a public building, 908 *et seq.*

Curtailment by the Metropolitan Board of the size of the ventilation openings, 911–915——Obstacle to reducing the number, or altering the sites of the openings, without interfering with the necessary requirements of the railway, 916–923. 939–943. 956. 967–971. 978–980——Belief as to the designs of the railway stations and shafts being in character with the Embankment works, 937, 938. 944–950——Way in which it was proposed to deal with the ventilation openings in the event of the crescent buildings formerly proposed having been carried out, 958–966.

Bidgood, Henry. (Analysis of his Evidence.)—Represents the parish of St. James at the Metropolitan Board of Works, 1705, 1706——Submits the petition adopted by St. James's vestry against the construction of the projected viaduct from Wellington-street to Hungerford Bridge, 1708–1712——Equal objection of witness to the scheme whether the road be wholly or partly on arches, 1713–1718——Very limited usefulness of the road with reference to traffic, a communication from Charing Cross to the Embankment being infinitely more important, 1719 *et seq.*

Decided advantage of a direct road from Charing Cross through Northumberland House and gardens as compared with a curved road; much less cost of the former, 1730–1740. 1773–1809——Approval of a natural history museum on the reclaimed land between Hungerford and Waterloo Bridges, with ornamental grounds attached, 1742–1744. 1762–1764. 1810–1827——Conclusion as to the necessity of an approach to the Embankment by way of Essex-street, whether the law courts be built on the Carey-street site or on the Embankment site, 1746–1753. 1772.

Character of the opposition to the plan which required the taking of Northumberland House, 1765–1767. 1798–1800——Obligation upon the Metropolitan Board by Act of Parliament to adopt the plan of road from Wellington-street to Hungerford Bridge, 1768–1771——Question considered as to the means of concealing the railway dome or shed at Charing Cross, in the event of a direct road being made through Northumberland House, 1776–1782. 1788–1797——Wide road proposed from Charing Cross, so that inconvenience would not arise at its junction with the Embankment road, 1783–1787.

Greater convenience to the public by placing the natural history museum on the Embankment than at Kensington, 1810–1812. 1821–1828——Statement in favour of a public building on the reclaimed land instead of the land being preserved entirely as an open space for purposes of recreation, 1814–1820——Evidence as to the great usefulness of a direct approach to the Embankment from Charing Cross as regards inhabitants in the west end, 1829–1849——Less necessity for an embankment on the south side than on the north side, 1850, 1851.

Doubt as to the Strand being much less crowded when the Embankment road is opened, 1852——Impracticability of a road from the Strand to the Embankment by way of Carter's-lane, 1853–1858——Alternative modes of approach at Essex-street, one proposal being to make a new road commencing at Twining's and cutting across Essex-street, 1859–1865.

Blackfriars Bridges. Statement as to the want of control in the case of the Blackfriars Bridge of the London, Chatham, and Dover Railway, *Sir J. Thwaites* 3037–3045——Importance of the proposed Government check in the case of the two bridges at Blackfriars, *Right Hon. W. Cowper* 3275–3279——Comment upon the effect of the two adjacent bridges over the Thames at Blackfriars, *Cole* 3499.

Explanation relative to the erection of new Blackfriars Bridge, and of the London, Chatham, and Dover Railway Bridge in such close proximity to each other, and yet separately; full consideration given to the matter on the part of the Corporation, *Corrie* 3775–

Reports, 1869—*continued.*

Blackfriars Bridges—continued.

3775-3807——Statement as to the Admiralty having been entrusted with some control over the Blackfriars railway bridge, the Corporation having had no check in the matter, *Corrie* 3793. 3796–3807.

Board of Trade. Absence of analogy between the control by the Board of Trade in railway matters and a control by Government in architectural matters, *Lord John Manners* 3422–3425.——*See* also *Railway Structures.*

Bowring, Edgar A., C.B. (*Member of the House*). (Analysis of his Evidence.)—Has been secretary since 1850 to the Exhibition Commissioners, 2713, 2714——Explains the circumstances connected with the purchase by Government of certain land at South Kensington occupied by the Exhibition building of 1862; low value put on this land at the time of its purchase, 2715–2719——Condition of the purchase that Government should use the land for purposes connected with science or art, 2719–2722. 2731, 2732——Duty of the Commissioners to negotiate with Government as to the disposal of the land, if not applied to the purpose of science or art, 2723. 2731.

Statement as to the Commissioners not having yet decided upon the mode of appropriation of the land at South Kensington which has remained in their possession, 2724-2726——Great rise in the value of the land since 1862; 2727–2730. 2735, 2736——Fairness of the Government land being resold to the Commissioners at its former price, if Government does not use it with reference to science or art, 2733, 2734——Obligation upon the Commissioners to employ for the purposes of science and art any money derived from the sale of the land, 2737–2739.

Bridge House Estates Committee. Ancient origin of the Bridge House Estates Committee; very important improvements carried out by this committee in connection with London Bridge, &c., *Corrie* 3684–3691.

Bridges. Different authorities by which the different bridges over the Thames have been erected, *Corrie* 3811–3824.——*See* also *Blackfriars Bridges.* *Railway Structures.*

Buckingham-street. Explanation as to its not being now proposed to have any direct access from Buckingham-street to the Embankment, *Sir J. Thwaites* 270-288——Objection to Buckingham-street as an approach to the Embankment, *Creasy* 2753.

Building Act. Regulation by the Building Act of all buildings except Government buildings and railway buildings, the control being exercised by the Metropolitan Board through its district surveyors, *Sir J. Thwaites* 3061–3068.

Building Frontage (*Thames Embankment, &c.*). Economy in the Metropolitan Board buying properties affected by new works, and in laying out the land for building, instead of in their giving compensation for damage, *Sir J. Thwaites* 394–398. 529–534——Exceptional character of the prohibition in the Act of 1862 upon the Metropolitan Board taking land fronting the roadway and reselling it when built upon, *ib.* 458–469. 471–484——Privilege given by the Act 25 & 26 Vict. c. 93, to the Duke of Northumberland, the Marquis of Salisbury, the Duke of Norfolk, and other proprietors, as regards the right to building frontage along the Embankment roadway, *ib.* 456–484. 519.

Importance of buildings in order to hide the ugly frontage of the wharves, &c. *Sir J. Thwaites* 1223. 1292. 1317. 1319–1321. 1337——Exceptional instances of the riverside proprietors being authorised to build on the reclaimed land allotted to them, *ib.* 1304–1307. 1370–1374——Anticipated improvement in course of time in the architecture of the houses fronting the Embankment, *ib.* 1437.

Power of private individuals to erect buildings of an inferior character on land adjoining the reclaimed land, *First Rep.* iii, iv——Advantage of a public building on the reclaimed land as a screen against any possible disfigurement of the locality by the chance erections of private speculations, *ib.* iv.

C.

Carter's-lane. Impracticability of a road from the Strand to the Embankment by way of Carter's-lane, *Bidgood* 1853–1858.

Cathedrals. Statement as to certain cathedrals in Scotland being under the Office of Works, *Russell* 4148–4151——Difficulty as to the Office of Works having care of cathedrals in England, *ib.* 4158.

Cecil-street. Unfitness of Cecil-street for a carriage access to the Embankment, as the gradient from the bottom of the street would be one in fourteen, *Sir J. Thwaites* 280. 289–295——Prohibition upon an extension of Cecil-street to the Embankment, unless with the consent of the Marquis of Salisbury, *Creasy* 2756.

Reports, 1869—*continued.*

CHARING CROSS TO EMBANKMENT:

1. *Great Importance of a Road from Charing Cross to the Embankment: its Advantage as compared with the proposed Viaduct.*
2. *Obstacle to the Acquisition of Northumberland House, with a view to a direct Road from Charing Cross.*
3. *Question of a curved Road by the side of Northumberland House, or of a direct Road through the Ducal Property.*
4. *Question of Widening the Narrow Part of Charing Cross.*
5. *Plans of the proposed Road to the Embankment.*

1. *Great Importance of a Road from Charing Cross to the Embankment: its Advantage as compared with the proposed Viaduct:*

Greater importance attached to a communication from Charing Cross to the Embankment, than to the proposed roadway from Wellington-street; the former is in fact a necessity, *Sir J. Thwaites* 368–370. 406, 407——Considerable convenience if the traffic from the west had a direct access to the Embankment at Northumberland House, instead of going by Whitehall-place or down Craven-street, *ib.* 1247–1249. 1453, 1454.

Evidence as to the great usefulness of a direct approach to the Embankment from Charing Cross as regards inhabitants in the west end, *Bidgood* 1829–1849——Opinion that unless there be a good approach from Charing Cross, the greater part of the outlay on the Embankment will be thrown away, *Pennethorne* 2021, 2033——Contemplated saving of the expense of the Wellington-street road and of the extension of Whitehall-place if the curved approach from Charing Cross be carried out, *ib.* 2115–2119——Concurrence as to the necessity of an approach to the Embankment from Charing Cross, *Creasy* 2773–2775; *Walker* 2920, 2921.

Conclusion of the Committee as to the importance of a direct approach to the Embankment from Charing Cross through Northumberland House, or by a curved road from Charing Cross skirting Northumberland House and gardens, *First Rep.* iv——Opinion that instead of making the proposed road or viaduct, the money would be better expended on approaches to the Embankment from Charing Cross, and from the Strand in the direction of Essex-street, *ib.*

2. *Obstacle to the Acquisition of Northumberland House with a view to a direct Road from Charing Cross:*

Failure of the Bill brought in by the Metropolitan Board for taking Northumberland House, and opening a road from Charing Cross to the Embankment, *Sir J. Thwaites* 365-367—— Character of the opposition to the plan which required the taking of Northumberland House, *Bidgood* 1765-1767. 1798–1800.

3. *Question of a curved Road by the side of Northumberland House, or of a direct Road through the Ducal Property:*

Advantage if Northumberland House cannot be obtained, of a curved line from Charing Cross to the Embankment; calculation that the cost would be double that of the plan which involves the acquisition of Northumberland House, *Sir J. Thwaites* 371–407—— Necessity of acquiring some Crown property in forming a road round Northumberland House to the Embankment, *ib.* 399-401.

Amended estimates of the cost of an approach by a curved road round Northumberland House, and of a road going through Northumberland House; net cost of 400,000 *l.* in the former case, as against 200,000 *l.* in the latter, *Sir J. Thwaites* 1143–1155——Statement as to the Metropolitan Board being unprovided with funds for carrying out an approach from Charing Cross to the Embankment, whereas such approach is essential, *ib.* 1388–1397.

Decided advantage of a direct road from Charing Cross through Northumberland House and gardens, as compared with a curved road; much less cost of the former, *Bidgood* 1730–1740. 1773–1809——Wide road proposed from Charing Cross so that inconvenience would not arise at its junction with the Embankment road, *ib.* 1783–1787.

Explanation as regards the amended plan prepared by witness this year for dealing with the Crown land and the approach to the Embankment from Charing Cross, that such plan is brought forward in his private capacity, and has no official sanction, *Pennethorne* 2004-2008—— Sundry details in explanation and support of witness's plan for a curved approach from Charing Cross to the Embankment, by the side of Northumberland House; important advantages of such approach as compared with a direct road through the ducal property, *ib.* 2009 *et seq.*

Several objections to a direct approach through Northumberland House and grounds, *Pennethorne* 2023, 2024——Evidence relative to the cost of the curved road proposed by witness; expediency of the expenditure, even though in excess of the cost of a direct road, *ib.* 2070-2083. 2086–2092——Approval of a curved approach, whether private or public buildings be erected on the Whitehall site, *ib.* 2093–2101. 2109–2111.

Estimate by Mr. Pennethorne of 200,000 *l.* as the net cost of a curved road from Charing Cross to the Embankment, *App.* (*1st Rep.*) 139.

4. *Question*

Reports, 1869—*continued.*

CHARING CROSS TO EMBANKMENT—continued.

4. *Question of Widening the Narrow Part of Charing Cross:*

Advantage if the narrow part of Charing Cross were widened, suggestion that the expense be defrayed out of Imperial funds, *Sir J. Thwaites* 1156–1161——Great importance of the widening of the narrow part of Charing Cross, as provided for in the formation of the proposed curved road to the Embankment; necessity in any case of such widening in a few years, *Pennethorne* 2024–2033. 2084.

Estimate by Mr. Pennethorne of 150,000 *l.* as the net cost of the widening of Charing Cross, *App.* (*1st Rep.*) 139.

5. *Plans of the proposed Road to the Embankment:*

General plan showing approach from Charing Cross, skirting the west side of Northumberland House and the authorised approach to Wellington-street, *App.* (*1st Rep.*) 138.

Copy of plan ordered by the House of Commons to be printed 7th July 1868, with an addition thereto of a curved road from Charing Cross to the Embankment Railway; also of Charing Cross widened from Northumberland House to Whitehall-place, *App.* (*1st Rep.*) 140.

Plan in illustration of Mr. Pennethorne's evidence with reference to a curved road from Charing Cross to the Embankment Railway, *App.* (*1st Rep.*) 140.

Charing Cross Railway Station. Question considered as to the means of concealing the railway dome or shed at Charing Cross in the event of a direct road being made through Northumberland House from Charing Cross, *Bidgood* 1776–1782. 1788–1797——Advantage of the proposed curved line or approach from Charing Cross, as facilitating the masking of the Charing Cross Railway shed, *Pennethorne* 2052–2057——Comment on the want of control in the case of the Charing Cross Railway Station, the result being a great disfigurement to the Metropolis, *Sir J. Thwaites* 2989–2994.

Advantage in the case of the Charing Cross Railway Station, if there were increased powers in the first Commissioner, aided by a council, *Right Hon. W. Cowper* 3274——Advantage if the plans and elevations of Charing Cross Railway Station had been submitted to a council of advice, as proposed by witness, *Right Hon. A. H. Layard* 3351, 3352. 3356–3361——Comment upon the effect of the Charing Cross and Cannon-street stations, *Cole* 3498, 3499.

City of London (*Public Works*). Objection to any power of interference in the First Commissioner, when matters are in dispute between the Metropolitan Board and the City Corporation, *Sir J. Thwaites* 3238, 3239——Opinion as to the expediency of some Government control in the case of works in the City, *Right Hon. A. H. Layard* 3341, 3342.

Appointment of two standing committees by the Court of Common Council, for dealing with general improvements in the City, and with bridges respectively, *Corrie* 3674–3676——Statement of the constitution and separate functions of these committees which are called the Improvement Committee, and the Bridge House Estates Committee, *ib.* 3675–3684——Check applied by the Corporation as to the elevation and character of the houses built upon property taken for improvements, *ib.* 3691–3695——Duties and remunerations of Mr. Horace Jones as architect, and as surveyor and clerk of the City works, *ib.* 3696–3706.

Explanation relative to the extensive powers of the Corporation, under the City Improvements Acts of 1847, for acquiring property for improvements, *Corrie* 3710–3724——Enlarged powers of the City Commission of sewers, with reference not only to sewers but streets, *ib.* 3725–3734——Several committees of the Corporation for dealing with streets, markets, bridges, &c., the Common Council itself, being, however the final authority in each matter, *ib.* 3816–3827. 3835–3839. 3855–3858. 3864. 3926.

Opinion adverse to any veto over the City authorities in respect of bridges, streets &c.; the several committees work without inconvenience, and have been successful in carrying out their works without Government control, *Corrie* 3828–3830. 3859–3863. 3882–3884. 3919–3926.

Special works to which the interference of the Metropolitan Board in the City has been limited; evidence in defence of this limitation, *Corrie* 3886–3905——Practice as to the City contributing out of its rates towards the works of the Metropolitan Board, *ib.* 3887. 3901, 3902——Doubt as to the advantage of only one authority for the management of the City and of the rest of the Metropolis, *ib.* 3903–3905——Circumstance of the Metropolitan Board having obtained powers for its committees to act and to carry out works, *ib.* 3922–3924——Excellent sanitary results of the action of the City Commission of Sewers, *ib.* 3925.

Decided objection to the system and practice of the Corporation of London in regard to public works within their jurisdiction; examination hereon as to the merits of certain works carried out by the Corporation, *Redgrave* 3973–3976. 3979. 4025–4030. 4035–4040. 4043. 4046.

See also *Blackfriars Bridges.* *Holborn Viaduct.*

Reports, 1869—*continued.*

City of London Gas Company. Conditions as to the erection of buildings by the City of London Gas Company on reclaimed land allotted to them; refusal vested in the Metropolitan Board, *Sir J. Thwaites* 1307, 1308. 1372–1374.

Clyde Statue. Absence of jurisdiction in the First Commissioner over the ground on which the Clyde statue is placed, *Lord John Manners* 3487. 3490–3492.

Coal and Wine Duties (City of London). Total of between 300,000 *l.* and 400,000 *l* a year derived from the coal and wine duties, the latter being not more than about 10,000 *l.* a year, *Sir J. Thwaites* 106–110.

Cole, Henry, C.B. (Analysis of his Evidence.)—Refers to a certain plan as showing the site at South Kensington on which it has been proposed to erect the proposed Museum of Natural History, 2196–2199——Submits grounds for the conclusion that it is far preferable to place the Natural History Collection on the Thames Embankment site, than at South Kensington, 2200–2205. 2262, 2263——Recommends the plan of Captain Fowke for the Natural History Museum at South Kensington, as one most desirable for adoption in its main features if the museum be erected on the Embankment; puts in a paper by Captain Fowke explanatory of the plan, 2206–2211.

Great importance attached to the construction of models of all public buildings about to be erected; reliable means thus afforded for arriving at the cost, and for ensuring that the estimates and expenditure agree, 2212–2224——Paper submitted to the Committee containing suggestions for preventing excess over the original estimates of the cost of public buildings, 2225–2227; *App.* (*1st Rep.*) 141, 142,

Explanatory statement in connection with the land at South Kensington, purchased by Government from the Commissioners of the Exhibition of 1851; suggestion that about six acres be reserved for the growing wants of the Science and Art Department, and that the remaining ten acres be re-sold to the Commissioners, 2228–2254. 2284–2291. 2295–2313——Increase, fourfold, in the value of the land at South Kensington since its original purchase, 2237–2240.

Modifications contemplated in the plan of Captain Fowke, if used for a museum on the Embankment site; facility of adapting the plan to the requirements of the site, 2254, 2255. 2259–2261. 2281–2283. 2292–2294 —— Evidence in support of the use of red brick and terra cotta as the materials to be used in the construction of the museum; great durability of these materials, 2255–2258. 2273–2280. 2314–2318——Unsightly character of the proposed diagonal road across the Embankment ground, 2264——Practice of the Science and Art Department in regard to contracts for terra cotta, iron, &c., 2265–2272.

[Second Examination.]—Excessively unsatisfactory state of things in the Metropolis in regard to the erection of public buildings, railway bridges, &c.; numerous instances of this, and of the hideous effect of railway and other structures, 3497–3504——Very injurious effect of the several conflicting authorities in operation, and of the jealousy which each authority has of the other, 3503, 3504——Primary want of harmony and concentration of action, and of distinct responsibility to Parliament, 3505–3511——Great importance of publicity, and of the exhibition of designs and models, before any public or semi-public building is erected, 3506–3517. 3616, 3617. 3619.

Difficulty in making the Metropolitan Board of Works directly responsible to Parliament for the character of its works and buildings, 3506. 3511——Contemplated submission of designs to the Office of Works, who might report to Parliament, 3507–3510 —— Want of publicity, in the case of works undertaken by the Metropolitan Board, whilst there is no security that questions of art will be properly considered; necessity of control over the Board in such matters, 3511–3516. 3568, 3569.

Suggestion that the First Commissioner of Works, the Chairman of the Metropolitan Board, and the Lord Mayor, might be associated, as a body, to report to Parliament upon proposed works, 3518——Proposition for the constitution of a Council of Advice, the members of which should be changed according to circumstances, and should be paid, whenever called upon for their opinion, 3518–3524. 3553–3561. 3577–3594. 3622. 3663–3670.

Information relative to the course pursued by the Science and Art Department in obtaining the best professional opinions, as to works of art, &c., a fee of five guineas being given for each opinion; excellent results of this system, 3519. 3521–3527. 3555–3557. 3620, 3621——Practice of the department as to obtaining unpaid advice on certain occasions; degree of responsibility in the persons giving such advice, 3528–3541.

Considerations as to the responsibility of the proposed tribunal comprising the First Commissioner of Works, the Chairman of the Metropolitan Board, and the Lord Mayor; primary importance of undivided responsibility somewhere, 3541–3545. 3555. 3573–3576. 3609–3615—— Advantage of the publicity and responsibility under which a council of paid professional members should give advice, 3541–3545. 3577–3594. 3663–3670—— Extensive powers exercised in Paris, by the Prefect of the Seine, in regard to Public Works, 3563, 3564.

Reports, 1869—*continued.*

Cole, Henry, C.B. (Analysis of his Evidence)—*continued.*

Grounds for the conclusion that London should not be placed in the same position as Leeds, or similar towns, as regards control over the municipal authority with reference to works and buildings, 3565–3568——Question considered as to the sites used respectively for the Albert Hall of Arts, and for the International Exhibition, 3595–3608. 3749–3651.

Examination upon the question whether much jealousy and conflict of authority would not arise by empowering the proposed tribunal to interfere with the works of the Metropolitan Board, or of the Science and Art Department, or War Department, &c., 3609–3611. 3614, 3615. 3623–3632——Advantage in certain cases of some check upon barracks erected by the War Department, 3633–3637. 3658–3662. 3672——Further reference to the value of publicity, and of the deposit of plans, before any railway works, &c., are proceeded with, 3616–3619.

Evidence opposed to the Science and Art Department being placed under a minister of arts and architecture unless its educational functions be fully realised; approval, however, of some concentration in this direction, 3638–3656——Advantage of the Commissioners of Woods and Forests being under some check by the Office of Works in reference to statues, 3657——Expediency of ministerial responsibility and a strong department in order to check the evils now arising in the Metropolis in matters of art and architecture, 3671, 3672.

Compensation. Advantage generally of the principle of purchasing properties and of reselling them, rather than of compensating the different interests, *Sir J. Thwaites* 394–398. 529–534.

Compulsory Powers (*Acquisition of Property*). Power of Parliament to exercise control as regards all great works of the Metropolitan Board which involve application for compulsory powers, *Lord John Manners* 3368, 3369. 3420, 3421.

Compulsory Powers (*Acquisition of Property*). Suggestion that when compulsory powers are granted by Parliament for public works it should have a right to see that the money was so spent that public taste as well as utility was considered, *Redgrave* 3979–3983. 4018–4024——Contemplated control of the First Commissioner in the matter of railway bridges or other structures in the Metropolis involving the acquisition of compulsory powers from Parliament, *Hope* 4099, 4100. 4106.

Conflict of Authority. Very injurious effect of the several conflicting authorities in operation, and of the jealousy which each authority has of the other, *Cole* 3503, 3504——Examination upon the question whether much jealously and conflict of authority would not arise by empowering the proposed tribunal to interfere with the works of the Metropolitan Board, or of the Science and Art Department, or War Department, &c., *ib.* 3609–3611. 3614, 3615. 3623–3632.

Corporation of London. See *City of London.*

Corrie, William. (Analysis of his Evidence.)—Is City Remembrancer, 3673——Appointment of two standing committees by the Court of Common Council for dealing with general improvements in the City, and with bridges respectively, 3674–3676——Statement of the constitution and separate functions of these committees, which are called the Improvement Committee, and the Bridge House Estates Committee, 3675–3684——Ancient origin of the Bridge House Estates Committee; very important improvements carried out by this committee in connection with London Bridge, &c., 3684–3691.

Check applied by the Corporation as to the elevation and character of the houses built upon property taken for improvements, 3691–3695——Duties and remuneration of Mr. Horace Jones as architect, and as surveyor and clerk of the City works, 3696–3706——Full powers of the Corporation under the Act for the new meat and poultry market in Smithfield; particulars hereon as to the constitution of the Market Improvement Committee, and its action in respect of this market, 3706–3709. 3735–3742. 3746–3766.

Explanation relative to the extensive powers of the Corporation, under the City Improvement Act of 1847, for acquiring property for improvements; necessity, however, of a special Act for each special improvement, 3710–3724——Limited powers taken by the Metropolitan Board for the acquisition of property as compared with the powers of the Corporation, 3713–3724——Enlarged powers of the City Commission of Sewers with reference not only to sewers but streets, 3725–3734.

Management by the Improvement Committee of the Holborn Viaduct, and of street improvements generally, 3743. 3750–3755. 3926–3932——Erection of the Royal Exchange by the Mercers' Company, and the Corporation jointly, 3744, 3745——Statement of the course pursued by the Improvement Committee in carrying out the Holborn Viaduct, and the improvements in connection therewith; premiums were offered for the best plans, the plan of Mr. Hayward having been accepted, 3767–3774.

Explanation relative to the erection of new Blackfriars Bridge, and of the London, Chatham, and Dover Railway Bridge in such close proximity to each other, and yet

Reports, 1869—*continued.*

Corrie, William. (Analysis of his Evidence)—*continued.*

separately; full consideration given to the matter on the part of the Corporation, 3775–3807——Clause obtained by the Corporation with reference to Ludgate-hill Bridge, requiring that the sanction of the Commissioners of Sewers be obtained; reason for requiring the approval of this body instead of that of the Improvement Committee, 3791–3795. 3808–3810. 3825, 3826. 3844–3846. 3918——Dissent from the opinion that this bridge is of a very objectionable character; it does not interfere with the view of St. Paul's, 3795. 3810.

Statement as to the Admiralty having been entrusted with some control over the Blackfriars railway bridge, the Corporation having had no check in the matter, 3793. 3796–3807——Different authorities by which the different bridges over the Thames have been erected, 3811–3814——Several committees of the Corporation for dealing with streets, markets, bridges, &c., the Common Council itself being, however, the final authority in each matter 3816–3827. 3835–3839. 3855–3858. 3864. 3926.

Opinion adverse to any veto over the City authorities in respect of bridges, streets, &c.; the several committees work without inconvenience, and have been successful in carrying out their works without Government control, 3828–3830. 3859–3863. 3882–3884. 3919–3926——Expediency of an improvement in public taste as a means of improvement in railway works, &c., 3831–3833——Approval of a City representative at a central council of advice, if such council be established, 3834. 3885.

Circumstance of the designs for the Holborn Viaduct, and Blackfriars Bridge having been adopted by the Corporation without consulting any architect, except possibly Mr. Horace Jones, 3847–3853——Probability of the City Lands Committee and the Corporation fully considering any suggestion for removing the cage from the top of the Monument, 3867–3870——Explanation that the drinking fountain near the church of St. Lawrence Jewry is in charge of the parish, 3871–3873——Control of the Corporation, or of the City Lands Committee, over the statues and obelisks in the City, 3874–3881.

Special works to which the interference of the Metropolitan Board in the City has been limited; evidence in defence of this limitation, 3886–3995——Practice as to the City contributing out of its rates towards the works of the Metropolitan Board, 3887. 3901, 3902——Power and practice of the Board as to altering the names and numbers of streets in the City, 3888 3892——Doubt as to the advantage of only one authority for the management of the City and the rest of the Metropolis, 3903–3905.

Expediency of Parliament, through its Committees, acting as a court of appeal in matters of architectural taste, 3906–3911——Suggestion that the Standing Orders might be altered, so as to provide the deposit of plans and elevations before any important works are sanctioned, 3912–3918——Circumstance of the Metropolitan Board having obtained powers for its committees to act and to carry out works, 3922–3924——Excellent sanitary results of the action of the City Commission of Sewers, 3925.

Cost (*Public Buildings*). Paper submitted to the committee containing suggestions for preventing excess over the original estimate of the cost of public buildings, *Cole* 2225–2227; *App.* (*1st Rep.*) 141, 142.

Cost of Viaduct. Absence of any pecuniary liability in respect of the construction of the road itself, though steps have been taken for the deposit of material by the Metropolitan District Railway Company, *Sir J. Thwaites* 179–183——Estimate of about 200,000 *l.* as the cost of the viaduct and road, *ib.* 355–358. 426——Claim of the Metropolitan Board to indemnification at the hands of Parliament, as regards the liabilities already incurred if it be now determined to suspend the construction of the viaduct, *ib.* 537–544.

Further representation as to the liability of the Metropolitan Board for compensation claims in respect of the proposed viaduct, and as to the expediency of their being at once relieved from all responsibility by Parliament; that is, if the scheme is to be given up, *Sir J. Thwaites* 1386–1388.

Council of Advice:

1. *Suggestions for the Constitution and Working of a Council of Advice, in connection with the Office of First Commissioner of Works.*
2. *Evidence opposed to the foregoing Proposition.*
3. *Adverse Conclusion arrived at by the Committee.*

1. *Suggestions for the Constitution and Working of a Council of Advice, in connection with the Office of First Commissioner of Works:*

Contemplated report by the proposed council upon the plans and elevations before Bills for railway works, &c. are sanctioned by the House, *Right Hon. W. Cowper* 3269——Proposed check by means of the council, after the passing of the Bills, in regard to the carrying out of the plans, *ib.*——Suggestion that the council to be associated with the First Commissioner should comprise a representative from each of the following bodies, viz., the Royal Academy, the Institute of Architects, and the Metropolitan Board of Works, *ib.*——Question to be considered whether the Institute of Civil Engineers should

Reports, 1869—*continued.*

Council of Advice—continued.

1. *Suggestions for the Constitution and Working of a Council of Advice, &c.*—cont^d.

should not also be represented at the council, *Right Hon. W. Cowper* 3270–3273——Objection to the First Commissioner being controlled by a council as regards public works in his own department, but only as regards railways, &c., *ib.* 3280–3285.

Importance of the First Commissioner being able to refer to a council of advice, though it is desirable that he should act on his own responsibility, and not be bound by their opinions, *Right Hon. A. H. Layard* 3311–3317. 3347–3352——Steps already taken by witness with a view to obtaining advice from the Society of Antiquaries and the Institute of Architects, *ib.* 3311. 3363, 3364——Suggestions as to the constitution and mode of action of the proposed council, *ib.* 3311–3317. 3343–3352. 3362–3366——The Society of Antiquaries should be represented at the council, *ib.* 3311. 3347——The members of the council should not be paid, *ib.* 3317. 3343, 3344——Expediency of the Metropolitan Board being represented on the council, *ib.* 3346.

Proposition for the constitution of a council of advice, the members of which should be changed according to circumstances, and should be paid whenever called upon for their opinion, *Cole* 3518–3524. 3553–3561. 3577–3591. 3622. 3663–3670——The responsible tribunal might select representatives from the Royal Academy, the Society of Arts, the Institute of Architects, and the Institute of Civil Engineers, *ib.* 3519. 3553–3559——Advantage of the publicity and responsibility under which a council of paid professional members should give advice, *ib.* 3541–3545. 3577–3594. 3663–3670——The council might be partly representative and partly nominative, *ib.* 3553–3561. 3578–3582——The City of London and the Metropolitan Board of Works should also be represented on the proposed council, *ib.* 3560, 3561. 3570–3572——Approval of a City representative at a central council of advice, if such council be established, *Corrie* 3834. 3885.

Enhanced responsibility of the First Commissioner if assisted by professional advisers in architectural art from time to time, who should place on record their opinions as to any proposed structure, *Redgrave* 3958–3960. 4045. 4047. 4049, 4050——Proposition that the First Commissioner should select a council of advice from a list of persons nominated by the Royal Academy, the Institute of Architects, the Institute of Civil Engineers, and the Metropolitan Board, and the Corporation of London, *ib.* 3991–4017. 4047——Objection to a permanent council, *ib.* 3998. 4047——Importance of paying the members of the council, *ib.* 3998. 4012——Disapproval of the council comprising more than five members, *ib.* 4007–4009——Honour to the Metropolitan Board and the Corporation of London in being represented on the proposed council, *Redgrave* 4014; *Hope* 4108.

Considerable advantage in attaching a council of advice to the Office of Works; a reconstruction of the office being, however, more important, *Hope* 4089——Suggestions as to the constitution and mode of action of the proposed council; approval of its comprising both paid and unpaid members, *ib.* 4090–4099. 4108——Objection to the opinion of the council being binding upon the First Commissioner, *Hope* 4094, 4095; *Russell* 4213, 4214——The term of office of the council should be independent of any change of ministry, *Hope* 4096——The members might be elected for two years, and be re-eligible, *ib.* 4097.

2. *Evidence opposed to the foregoing Proposition:*

Consideration of suggestions for the formation of a board of advice or committee of taste, in connection with the Office of Works, and including the chairman of the Metropolitan Board, for exercising an extended control over works and buildings in the metropolis; sundry objections thereto, *Sir J. Thwaites* 3131 *et seq.*——Expected want of harmony and conflict of opinion at the proposed board of advice, *ib.* 3131–3133. 3159–3181.

Improbability of Committees of the House attaching any great weight to the recommendations of a board of advice connected with the Office of Works. *Sir J. Thwaites* 3188–3198——Uselessness of a council or board of advice as a means of preventing the deadlock in the case of the Metropolitan District Railway and the Embankment, *ib.* 3240, 3241——Concurrence to some extent in the Report of the Royal Commission on the Royal Academy, in 1863, in which a permanent council of advice is suggested as an aid to the First Commissioner on questions relating to public buildings and monuments in the metropolis, *ib.* 3260, 3261.

Grounds for the conclusion that it is very inexpedient to establish a council of advice, to be consulted by the First Commissioners, in regard to large works and buildings proposed in the metropolis, *Lord John Manners* 3401–3403. 3407–3412. 3426–3432——Great amount of work devolving upon a council of advice if it had to consider all railway stations or bridges, and similar works, in London and the chief towns, *ib.* 3427–3429——Difficulties anticipated in obtaining an efficient and permanent council if unpaid, as proposed, *ib.* 3429, 3430. 3448 *et seq.*——Important difference between the proposed council of advice for consultation by the First Commissioner and the temporary committees or commissions appointed in reference to the National Gallery, New Law Courts, &c., *ib.* 3449–3456.

 3. *Adverse*

Reports, 1869—*continued.*

Council of Advice—continued.

3. *Adverse Conclusion arrived at by the Committee:*

Proposition by the Chairman of the Committee for the constitution of a board or council of advice; non-adoption thereof by the Committee, *Second Rep.* vii.

See also *First Commissioner of Works.* *Science and Art Department.*

Cowper, The Right Hon. William (*Member of the Committee*). (Analysis of his Evidence.)—Explanation that the First Commissioner of Works has now no control over the acts or the expenditure of the Metropolitan Board of Works, though previously to 1858 there was a veto in the First Commissioner upon works costing more than 50,000 *l.*; 3262–3265. 3291——Limit of the control of the First Commissioner to those works which he is empowered to erect, 3267——Evidence in support of the conclusion that the designs and elevations of railway structures, &c. in the metropolis should be submitted to the First Commissioner of Works, associated with a council of advice, 3267 *et seq.*

Contemplated report by the proposed council upon the plans and elevations before the Bills are sanctioned by the House, 3269——Proposed check by means of the council, after the passing of the Bills, in regard to the carrying out of the plans, *ib.*——Suggestion that the council to be associated with the First Commissioner should comprise a representative from each of the following bodies, viz.: the Royal Academy, the Institute of Architects, and the Metropolitan Board of Works, *ib.*——Question to be considered whether the Institute of Civil Engineers should not also be represented at the council, 3270–3273.

Advantage in the case of the Charing Cross Railway Station, if there were increased powers in the First Commissioner aided by a council, 3274——Importance of the proposed check in the case also of the two bridges at Blackfriars, 3275-3279—— Objection to the First Commissioner being controlled by a council as regards public works in his own department, but only as regards railways, &c., 3280–3285.

Dissent from the views of Sir John Thwaites in favour of entrusting the Metropolitan Board with exclusive control in the matter of railways, gas-works, &c. in the metropolis, 3286, 3287——Statement in support of the conclusion that there should be a control by Parliament and by the First Commissioner over all important works carried out by the Metropolitan Board, 3288–3298——Objection to the repeal of the former power of Parliament and of the Board of Works over the expenditure of the Metropolitan Board, 3289-3291——Distinction between the metropolis and important provincial towns as regards the amount of control to be vested in the representatives of the ratepayers in the carrying out of works, 3293–3295.

Craven-street. Information relative to the gradients of Craven-street, and the width, this being one of the streets to be brought on to the Embankment, *Sir J. Thwaites* 246–262. 296——Facility of communication from Craven-street to the proposed curved road from Charing Cross to the Embankment, *Pennethorne* 2049–2051——Provision for an extension of Craven-street; intention to carry out this approach irrespectively of the formation of the diagonal road from Wellington-street, *Creasy* 2750–2752.

Creasy, Edward. (Analysis of his Evidence.)—Reference to the Act 31 & 32 Vict. c. 3, as giving certain powers to the Metropolitan Board as regards communications with the Thames Embankment, 2741——Explanation as to the proposed communication from Parliament-street by the side of Whitehall Club, 2741-2746——Obstacle to a communication at Richmond-terrace on account of the Crown property intervening, 2746——Restriction upon the Board taking property of the Duke of Northumberland, so that they cannot make an approach through Scotland-yard, 2746. 2748, 2749.

Steps being taken to extend Whitehall-place on to the Embankment, 2747——Provision for an extension of Craven-street, 2750–2752——Intention also of the Board to make an approach from Villiers-street, even though the diagonal road be made, 2752, 2753——Obection to Buckingham-street as an approach, 2753——Means of access by some steps at the end of Adam-street, 2754.

Prohibition upon an extension of Cecil-street and Salisbury-street, unless with the consent of the Marquis of Salisbury, 2756——Provision for a foot access along Savoy-street, 2756-2762——Arrangement in view for an approach road giving access to Norfolk, Arundel, and Surrey-streets, 2763-2767——Importance of an access at Essex-street, there being no intervening property to interfere, 2767-2772——Absolute necessity of an approach from Charing Cross, 2773-2775.

Entire dissent from the views of Mr. Hooper, witness being favourable to the proposal for erecting a museum on the Embankment site, with ornamental grounds attached, 2776-2779.

Crescent. Statement as to some crescent buildings having been proposed in connexion with the roadway, *viâ* Savoy Chapel, to act as a screen; objections raised against this and other portions of the scheme, so that the Bill ultimately fell through, *Sir J. Thwaites* 133-135

Reports, 1869—*continued.*

Crescent—continued.

133–155——Further reference to the opposition which caused the abandonment of the crescent buildings; explanation that it was proposed to put those houses as the back of the roadway, *Sir J. Thwaites* 520–546——Removal of the chief reason for the proposed crescent if the road from Wellington-street be abandoned, *ib.* 1385, 1386——Inability at present of the Board to build the crescent on the reclaimed land, *ib.* 1398–1400.

Crown Land:

Unexpected payment by the Metropolitan Board in respect of the Crown's interest in the foreshore reclaimed by the Thames Embankment, *Sir J. Thwaites* 89–92——Unduly large compensation paid by the Metropolitan Board when they take Crown property, *ib.* 402, 403——Comment upon the cession of the reclaimed land to the Crown, such land, which was valueless as foreshore, having been rendered worth several hundred thousand pounds by the works constructed at the cost of the metropolitan ratepayers, *ib.* 479. 485–509——Heavy claims upon the Metropolitan Board for compensation to Crown tenants, notwithstanding the great value conferred upon the foreshore, *ib.* 500–504. 511–514.

Further statement relative to the payment of 27,000 *l.* to the Crown in respect of the right of making the Embankment, *Sir J. Thwaites* 505–510. 516–518——Detailed provisions in the Act of 1862 relative to the Crown land, or reclaimed land, showing the restrictions imposed upon the Board in respect thereof, *ib.* 519.

Distinction between the Crown and the Government, the Woods and Forests, as representing the former, having nothing to do with the proposed site on the Embankment, if acquired for a museum or other public building, *Layard* 1526. 1533–1536.

Explanation in connection with some plans prepared by witness last year for laying out the Crown estate at Whitehall, including the Crown land or foreshore reclaimed by the Embankment, *Pennethorne* 1866 *et seq.*——Payment by the Metropolitan Board of 26,000 *l.* in respect of twenty-six acres of reclaimed foreshore, two-thirds of which sum went to the Conservators of the Thames, *ib.* 1879, 1880. 2133–2141——Very valuable character of the land reclaimed in front of the Crown property at Whitehall; power of the Crown to build upon it, *ib.* 1883–1891. 2132——Statement as to the Metropolitan District Railway running under the roadway, and not interfering with the building powers of the Crown, *ib.* 1889–1897——Alternative plans prepared by witness, the one providing for public buildings on the Crown land, and the other for private buildings, *ib.* 1906. 1994–2003.

Details relative to the Crown property at Whitehall, showing the periods of the leases under which the different houses are held by the Crown tenants, and the extent of land now available for public buildings, *Pennethorne* 1912 *et seq.*—— Consideration of the question of the erection of public buildings on the Crown estate at Whitehall, *ib.* 2058–2069. 2113, 2114. 2143–2145——Greatly enhanced value of the Crown estate at Whitehall if the plan of a curved approach to the Embankment be carried out, *ib.* 2093–2101.

Consideration of the relative rights of the Crown and of the Thames Conservancy to the land reclaimed by the Embankment; amount of compensation received in each case from the Metropolitan Board, *Pennethorne* 2150–2166. 2182–2185——Examination upon the question as to the ratepayers of the Metropolis being unfairly burdened, to the undue advantage of the Crown, in respect of the reclaimed foreshore, *ib.* 2167–2181. 2186–2191——Statement as to the Crown requiring special clauses for its protection in the case of all Crown land wanted for public improvements, *ib.* 2192–2195.

Complete control over the character of buildings proposed to be erected upon any land of the Crown, *Lord John Manners* 3389–3393——Doubt as to the expediency of placing the Crown property in London in charge of the Office of Works, *ib.* 3489.

D.

Deposit of Plans. See *Plans and Models.*

Derby Street. Contemplated access to the Embankment from Parliament-street by way of Derby-street, *Sir J. Thwaites* 1426, 1427. 1441–1443——Explanation as to the proposed communication from Parliament-street, by the side of Whitehall Club, *Creasy* 2741–2746——Statement in strong approval of an approach to the Embankment from Parliament-street by way of Derby-street; important relief thereby to the traffic at Bridge-street, *Walker* 2916–2919. 2924–2930. 2935–2997.

Recommendations by Superintendent Walker adverted to by the Committee, *First Rep.* v.

Dublin. Statement as to the Irish Board of Works, and not the Office of Works, having control over works in Dublin, such control applying also to the Phœnix Park, *Russell* 4126–4142. 4156, 4157. 4203, 4204.

E.

Embankment Site. See *Museum of Natural History. New Law Courts. Reclaimed Land. South Kensington. Vibration.*

Essex Street. Evidence as to the expediency of facilities of access to the Embankment by way of Essex-street, if the Law Courts are to be placed on the Carey-street site, *Sir J. Thwaites* 322–354. 1269–1284——Steep gradient of Essex-street; improvement feasible by taking the houses on each side of the way and reconstructing the street, *ib.* 1162–1165——Consideration of the means of access to the railway and to the Embankment roadway *viâ* Essex-street or Norfolk-street; relative importance of such access, and of the access by the Wellington-street viaduct, *ib.* 1168–1175. 1245, 1246. 1269–1284. 1375. 1412. 1416–1424——With regard to the widening of Essex-street, the Metropolitan Board considers that this expense should not fall upon them, *ib.* 1439, 1440.

Witness contends that, whether the Law Courts be built upon the Carey-street site or upon the Embankment, there will be an enlarged access to the Embankment roadway, *viâ* Essex-street, thus rendering the proposed viaduct still less necessary, *Layard* 1457. 1463–1466. 1501–1509. 1522–1525. 1537–1540——Conclusion as to the necessity of an approach at Essex-street or Norfolk-street, *White* 1645, 1646 —— Necessity of an approach to the Embankment by way of Essex-street, whether the Law Courts be built on the Carey-street site or on the Embankment site, *Bidgood* 1746–1753. 1772——Alternative modes of approach at Essex-street, one proposal being to make a new road, commencing at Twining's, and cutting across Essex-street, *ib.* 1859–1865.

Importance of an approach to the Embankment near Essex-street, *Pennethorne* 2119, 2120——Facilities of an access at Essex-street, there being no intervening property to interfere, *Creasy* 2767–2772——Expediency of a communication at or near Essex-street, *Walker* 2922, 2923.

Estimates (*Cost of Public Buildings*). Memorandum submitted by Mr. Cole, with reference to the prevention of excess of original estimates of the cost of public buildings, *App.* (*First Rep.*) 141, 142.

F.

Fergusson, James. (Analysis of his Evidence.)—Statement showing that no vibration is felt in the clock tower of Westminster Abbey from the trains on the adjacent railway, some ninety feet off, 803–810——Belief that though inconvenience might arise, there would be no structural danger from building the New Law Courts on the Embankment, near the railway, 811–816.

Fergusson, Mr. (*Office of Works*). Explanation relative to the appointment, through witness, of Mr. Fergusson as secretary for works and buildings; great advantage derived by the office and by the public from Mr. Fergusson's architectural knowledge, *Right Hon. A. H. Layard* 3324–3328——Approval of the appointment of Mr. Fergusson as permanent architect or secretary to the Office of Works, *Hope* 4084.

Fine Arts Commission. Illustration, in the case of the Fine Arts Commission, of the unsatisfactory result of the system of a consultative body, *Lord John Manners* 3462–3465.

Finsbury Park. Want of control over the Metropolitan Board, in the case of Finsbury Park, *Right Hon. A. H. Layard* 3318, 3319.

First Commissioner of Works:

Statement with reference to the dead-lock which occurred in the matter of the main drainage plans, by reason of the veto exercised over the Metropolitan Board by the First Commissioner of Works; consequent removal of this veto, *Sir J. Thwaites* 34–52. 1261–1268. 3118–3121——Evidence confirmatory of the foregoing statement, *Lord John Manners* 3367. 3404. 3413–3415.

Unsatisfactory result, generally, of the control formerly exercised by the Office of Works over the Metropolitan Board, *Sir J. Thwaites* 3152–3154——Very satisfactory relations between the First Commissioner and witness, *ib.* 3185——Approval of the First Commissioner being an *ex officio* member of the Metropolitan Board, *ib.* 3186.

Objection to the repeal of the former control of the First Commissioner over important works of the Metropolitan Board, *Right Hon. W. Cowper* 3289–3291; *Right Hon. A. H. Layard* 3318–3321——Argument that a power of control should be vested in the First Commissioner of Works, aided by a council, in respect of all important works in the Metropolis, such as railways, gasworks, &c., *Right Hon. W. Cowper* 3267 *et seq.*; *Right Hon. A. H. Layard* 3299 *et seq.*——Explanation that the First Commissioner of Works has now no control over the acts or the expenditure of the Metropolitan Board of Works, though previously to 1858 there was a veto in the First Commissioner upon works costing more than 50,000 *l.*, *Right Hon. W. Cowper* 3262–3265. 3291——Limit of the control of the First Commissioner to those works which he is empowered to erect, *ib.* 3267.

Reports, 1869—*continued.*

First Commissioner of Works—continued.

Strong objection to the exercise of any control or veto by the First Commissioner over the Metropolitan Board, *Lord John Manners*, 3368——Expected complication and collision if the First Commissioner were, as well as the Metropolitan Board, intrusted with direct power of interference with railway stations, &c.; expediency rather of a very distinct demarcation between the functions of the two authorities, *ib.* 3378-3396——Means of the First Commissioner and of Government for obtaining information about any building proposed to be erected, and for opposing its sanction by Parliament, *ib.* 3394-3399.

Objection to State interference in municipal matters, the State not contributing to municipal buildings, *Lord John Manners* 3400. 3402. 3408——Connection between the exercise of a veto by the First Commissioner and the contribution of Imperial funds, *ib.* 3413. 3425——Doubt as to the expediency of the First Commissioner having a seat at the Metropolitan Board; existing harmony between the two departments as at present constituted, *ib.* 3466-3468.

Probability of increased attention being paid to the qualifications of the First Commissioner if intrusted with the proposed control, *Redgrave* 4047.

Views of witness on former occasions in favour of the establishment of a Ministry of Works, the head of the department being in the Cabinet, *Hope* 3933, 3934. 4038——Evidence as to the want of dignity and power in the Department of Works, witness submitting grounds for the conclusion that the First Commissioner should be a Cabinet Minister, *ib.* 4069-4082. 4089——Origin of the term "First Commissioner," *ib.* 4082.

Several *ex officio* Commissioners of Works, the First Commissioner being the first named on the warrant, *Russell* 4113-4116——Opinion as to the insufficiency of the powers of the First Commissioner with reference to his present duties; advantage if he were a member of the Cabinet, *ib.* 4119-4125——Limitation of the control of the First Commissioner over public works in London and Edinburgh to those works the expense of which is defrayed by Parliament grant, *ib.* 4126.

Approval of the proposition for vesting the First Commissioner with control over public buildings, railway structures, &c., in the Metropolis, it being desirable at the same time to assist him by means of a council of advice, *Russell* 4205-4214. 4241-4243.

Resolution that the First Commissioner of Works should report to Parliament on the deposited plans, &c., and that such reports should be referred to the Committees on Private Bills in the same manner as the reports from the Board of Trade and Admiralty are now referred, *Second Rep.* iii.

Non-adoption by the Committee of motion made by the chairman that a general control over all public works and buildings in the Metropolis should be vested in the First Commissioner, *Second Rep.* vi, vii.

Foreshore. See *Crown Land. Reclaimed Land.*

Foundations (*Embankment Site*). Safety against vibration by placing the foundations of the Law Courts very deep, this, however, involving increased expense, *Hawkshaw* 636-638. 648, 649. 675. 693. 696-703——Increased expense of the foundations of the Law Courts or any other public building the nearer they approach the river, *ib.* 699-701——Importance, irrespectively of the proximity of the railway, of very deep foundations for a public building on the Embankment, *Gregory* 762, 763. 787-793——Expediency of taking the New Law Courts down to the blue clay, *Adams* 820-824——Necessity in any case of taking the foundations of a large public building very low down, this being a protection against any possible vibration from the railway, *Bazalgette*, 864-871——Conclusion as to the necessity of very deep foundations for a large building on the reclaimed land, the expense on this score not being affected by the question of vibration from the railway, *Fowler* 1013-1016. 1025-1029.

Fowler, John. (Analysis of his Evidence.)—Is Engineer for the Metropolitan District Railway, 987——Has had extensive experience in reference to the vibration caused by railway trains, and cites sundry data for the conclusion that there need not be the slightest fear of structural risk by placing the new Law Courts in close proximity to the railway along the embankment, 988 *et seq.*——Explanation relative to the use of peat in carrying the railway near Westminster Abbey, in order to deaden the vibration, 994-1008——Approval of an open space or area round a public building on the Embankment, as a precaution against vibration, 1008, 1009. 1087.

Statement as to the absence of vibration on the first floor of the Westminster Palace Hotel, although the trains run close by, 1011. 1030-1033——Conclusion as to the necessity of very deep foundations for a large building on the reclaimed land, the expense on this score not being affected by the question of vibration from the railway, 1013-1016.

Reports, 1869—*continued.*

Fowler, John. (Analysis of his Evidence)—*continued.*

1016. 1025-1029——Approval of gravel ballast for the railway, as a precaution against vibration, 1018, 1019.

Belief that the railway along the Embankment, together with a station at the Law Courts, will be productive of immense public convenience, without causing risk to adjacent or superincumbent buildings, 1020-1023. 1133–1137——Readiness of the railway company to consult the views and requirements of Government in the erection of a station at the Law Courts, 1024. 1130–1133——Experience derived from the construction and working of the present underground railways in London adverted to, as proving that houses may be built in immediate proximity, and even over the railway, without injury from vibration, 1035–1067.

Control exercised by the Metropolitan Board or by the Office of Works over the architecture of the railway stations, 1068–1078——Particulars relative to the extent and character of the ventilation proposed at Bridge-street and Charing Cross stations, and at other points, 1079–1101. 1123——Willingness of the company to adopt any modifications which may be feasible, in order that the ventilating shafts may not interfere with the value of the land, if used for a public building, 1102–1106. 1124–1126. 1130, 1131.

Final settlement already of the sites of the stations along the Embankment; progress made with their construction, 1105–1110. 1115–1117. 1127–1129——Obstacle to a station at the end of Essex-street, 1112–1114——Arrangements proposed as regards access from the railway to Norfolk-street, 1118–1122——Convenience in incorporating a station with the new Law Courts, and in providing a lift from the station to the different floors of the building, 1132–1137.

G.

Gasworks. Limited extent to which the architecture of gas and water works in the metropolis is under regulation by Parliament, *Sir J. Thwaites* 3046–3049——Advantage of the Metropolitan Board being assisted by the office of Works in controlling the erection of gasworks, so long as there is no undue control in the First Commissioner, *ib.* 3233–3237.

Gradient of Viaduct. Varying incline of the proposed roadway, about one-third of which would be on arches, *Sir J. Thwaites* 64. 129-132. 159-164——The rise of the roadway would be thirty-three feet, *ib.* 64. 132——Incline of one in fifty-seven at Hungerford Bridge, and thence, at the same inclination, for about two-thirds of the way, the incline being then one in forty up to Wellington-street, *ib.* 129. 159–164——Exceptions taken to the roadway and viaduct on account of the gradient at which it rises; that is, as being a disfigurement, *ib.* 1226–1229. 1252–1258. 1340——Unsightly character of the proposed diagonal road across the Embankment ground, *Cole* 2264.

Gradients of Streets. Details relative to the gradients of the several streets in lateral communication with the Embankment, *Sir J. Thwaites* 245–266. 296–308——Statement of the gradients of certain streets in the metropolis, as bearing upon the question of the gradients of the Embankment approaches, *ib.* 1138-1143.

Sections of streets on the river side of the Strand, showing their levels in reference to the Embankment roadway, *App.* (*First Rep.*) 138——Plans and sections showing widths and gradients of Water-street and Strand-lane, *ib.*——Sections showing gradients of some of the main thoroughfares in the metropolis, *ib.*

Gregory, Charles Hutton. (Analysis of his Evidence.)—Considers that Mr. Hawshaw has an exaggerated view of the effect of vibration as produced by railways, and submits in detail reasons for the conclusion that the Law Courts if built on the Embankment, near the Metropolitan District Railway, will not suffer any injury thereby, 734 *et seq.*—— Advantage of ballasting with sand or gravel as a means of checking the vibration from railways; objection to peat for the purpose, 752–760. 767–771——Importance, irrespectively of the proximity of the railway, of very deep foundations for a public building on the Embankment, 762, 763. 787–793.

H.

Hawkshaw, John. (Analysis of his Evidence.)—Consideration of the effect generally of the vibration of railways upon adjacent buildings, the conclusion being that certain precautions are very desirable if the Law Courts are to be built on the Embankment, near the Metropolitan District Railway, 597 *et seq.*——Information relative to the use of peat and other soft substances as a means of deadening the vibration produced by railways; limited value attached to this contrivance, 599–612. 639–650. 660–665—— Statement explanatory of the amount and character of the vibration produced in the Westminster Palace Hotel by the trains on the adjacent railway underground, 613–627. 653–659. 671–673. 677–679. 684–688. 690–692.

Conclusion

Reports, 1869—*continued.*

Hawkshaw, John. (Analysis of his Evidence)—*continued.*

Conclusion that the Law Courts should not be nearer the railway than 100 feet, though by taking the foundations very low down it may be safe to place them within fifty feet, 620. 629 *et seq.*——Absence of vibration in the Clock Tower of Westminster Abbey, 620. 631. 651——Safety against vibration by placing the foundations of the Law Courts very deep, this, however, involving increased expense, 636–638. 648, 649. 675. 693. 696–703——Increased expense of the foundations of the Law Courts or any other public building, the nearer they approach the river, 699–701.

Holborn Viaduct. Management by the City Improvement Committee of the Holborn Viaduct and of street improvements generally, *Corrie* 3743. 3750–3755. 3926–3932——Statement of the course pursued by the Improvement Committee in carrying out the Holborn Viaduct and the improvements in connection therewith; premiums were offered for the best plans, the plan of Mr. Hayward having been accepted, *ib.* 3767–3774——Circumstance of the designs for the Viaduct having been adopted without consulting any architect, except possibly Mr. Horace Jones, *ib.* 3847–3853.

Hooper, William. (Analysis of his Evidence.)—Is churchwarden of St. Paul's, Covent Garden, 2647—Statement in explanation and support of a petition from the vestry of St. Paul's, Covent Garden, against the abandonment of the proposed viaduct and road from Wellington-street, 2648 *et seq.*——Understanding on the part of the public that the land reclaimed by the Thames Embankment is to be preserved as an open space, without any buildings being erected upon it, 2650–2653——Conclusion that the diagonal road from Wellington-street would not interfere with the ground for purposes of recreation, but would facilitate access from the Strand, &c., and would enhance the public enjoyment of the open space, 2656–2671. 2696–2700.

Obstacles to satisfactory approaches to the Embankment by the lateral streets along the Strand, 2668–2671. 2681–2692——Grounds for objecting, in the interests of the public, to the erection of a museum of natural history or of any buildings on the site reclaimed by the Embankment between Waterloo and Hungerford Bridges, 2672–2680. 2693–2695——Dissent from the view that there would be a great gain or saving by the metropolitan ratepayers if the expense of the diagonal road were not incurred, and if at the same time a site on the Embankment were sold for a public building, 2701–2712.

Hope, Beresford (*Member of the Committee*). (Analysis of his Evidence.)—Submits a portion of his address as President of the Institution of British Architects in 1865, containing suggestions for the constitution of a Ministry of Works entirely separate from the Education Department, such Minister to be a member of the Cabinet, 3933——Has for many years held the views embodied in this proposition, 3934.

[Second Examination.]—Extremely unsatisfactory system in the metropolis as regards public works, railway bridges, &c., the result being that numerous structures have been erected without any reference to architectural beauty or public taste, 4052–4062——Facility of combining ornamentation with utility without any diminution of efficiency, 4059–4061——Symptoms of improvement in the public taste; inexpediency of relying upon such improvement as an adequate check upon future disfigurements, 4062–4066.

Evidence as to the want of dignity and power in the Department of Works, witness submitting grounds for the conclusion that the First Commissioner should be a Cabinet Minister, 4069–4082——Suggestion that the artistic department at South Kensington should more properly be in charge of the First Commissioner than of the Lord President, 4081——Origin of the term "First Commissioner," 4082——Advantage if the First Commissioner might be a member of the House of Lords, and if there were a Parliamentary secretary, who might also belong to either House, so that the department might be represented in both Houses, 4083. 4085, 4086. 4088.

Approval of the appointment of Mr. Fergusson as permanent architect or secretary of the Office of Works, 4084——Advantage of a permanent secretary as well as of an architect, 4087, 4088——Considerable advantage in attaching a council of advice to the office, a re-construction of the office being however more important, 4089——Suggestions as to the constitution and mode of action of the proposed council; approval of its comprising both paid and unpaid members, 4090–4099. 4108.

Quotation by witness of certain evidence given by him before the National Gallery Commission in 1863, as showing the views then entertained by him in favour of the creation of a Ministry of Arts and Works, aided by professional advisers, 4098.

Contemplated control of the First Commissioner in the matter of railway bridges or other structures in the metropolis, involving the acquisition of compulsory powers from Parliament, 4099, 4100. 4106——Expediency of power in the First Commissioner to require the production of models, plans, &c., 4101——Belief as to their being considerable control exercised over private buildings in Paris by the Prefect of the Seine, 4102–4104——Doubt as to the expediency of direct Government control over the character of private buildings as well as of public works; difficulty as to the law of lights and the rights of neighbours, 4105–4107. 4109, 4110.

Reports, 1869—*continued.*

Hospitals. Exemption of public hospitals, such as Greenwich Hospital, from any control by the Office of Works, *Russell* 4179-4182.

Howard-street Site. Different level of the streets at the Howard-street site on the Embankment and at the site near Adelphi-terrace, *Waterhouse* 2903-2906.

Hunt, H. A. (Office of Works). Position of Mr. Hunt adverted to; reduction effected in his salary as consulting surveyor, *Right Hon. A. H. Layard* 3339, 3340.

Huxley, Professor. (Analysis of his Evidence.)—Is decidedly favourable to a site on the Thames Embankment rather than at South Kensington for a Natural History Museum, on the ground chiefly of the greater accessibility of the former to the working classes, 2394-2402——Not only witness but his brother naturalists approve of the Embankment site, a re-organisation and re-arrangement of the collection being at the same time most essential, 2403-2405——In objecting some years ago to a removal of the natural history collection to South Kensington, witness and others had chiefly in view a new arrangement of the specimens, which would have rendered removal, on the score of space, unnecessary, 2403, 2404.

Explanation of the plan of typical arrangement and exhibition of the natural history specimens, as advocated by witness and other naturalists in opposition to Professor Owen's plan of exhibiting all the specimens; great advantages of witness's plan on the score of space, and as a means of instruction, 2406 *et seq.*——Suggestions as to the area of the galleries, and as to the total space required for a museum on witness's plan; sufficiency of a building site of three acres for present and future wants, 2407, 2408. 2414-2423.

Plan proposed by which the specimens may be accessible to students by means of a gallery in the rear of the cases, whilst the public need not be excluded from the museum any day in the week, 2409. 2432-2435. 2440-2442. 2449-2453——Importance of all the gallaries being lighted from the top, a building of only one storey being the best, 2410, 2411. 2414-2419——Suggestions as to the library to be attached to the museum, the expense not being a serious matter, 2412, 2413.

Great interest taken by working men in museums; expediency of an improved arrangement of the specimens for their better instruction, 2436-2439——Enlarged facilities for instruction under the typical arrangement proposed by witness, 2443, 2444——Non-adoption hitherto of this system in any foreign museums, 2445-2448. 2554.

L.

Lancaster, Duchy of. With regard to certain holes or depressions in some land belonging to the Duchy of Lancaster, these will probably be filled up and built upon, *Sir J. Thwaites* 1212-1217. 1259, 1260.

Lateral Communications (Thames Embankment). Advantage of some communication from the Strand to the Embankment other than afforded by the lateral streets, on account of the gradients of these being unsatisfactory, *Sir J. Thwaites* 244. 309——Statement of the gradients and width of the several lateral streets, *ib.* 245-266. 296-308——Advantage of several lateral communications with the Embankment rather than of a large approach from any narrow part of the Strand, *White* 1646-1648——Obstacles to satisfactory approaches to the Embankment by the lateral streets along the Strand, *Hooper* 2668-2671. 2681-2692——Reference to the Act 31 & 32 Vict. c. 3, as giving certain powers to the Metropolitan Board as regards communication with the Embankment, *Creasy* 2741.

Plan of works proposed by the Thames Embankment (North) Approaches Bill of 1866, *App. (First Rep.)* 138.

See also *Charing Cross to Embankment. Derby-street. Essex-street. Gradients of Streets. Norfolk-street.*

Layard, Right Hon. Austen Henry. (Analysis of his Evidence.)—Submits grounds for the conclusion that the proposed viaduct and roadway from Wellington-street to Hungerford-bridge may well be dispensed with, as regards the traffic to be accommodated, 1455-1466. 1508, 1509. 1541-1544——Contends further that whether the Law Courts be built upon the Carey-street site or upon the Embankment, there will be an enlarged access to the Embankment roadway, *viâ* Essex-street, thus rendering the proposed viaduct still less necessary, 1457. 1463-1466. 1501-1509. 1522-1525. 1537-1540.

Evidence as to the exceedingly eligible character of a site on the reclaimed land between Waterloo and Hungerford-bridges for the proposed Museum of Natural History, 1467-1482. 1510-1512. 1520, 1521. 1530, 1531——Concurrence of valuable testimony in favour of placing the Museum on the Embankment site, 1467. 1469. 1479, 1480. 1520——Suggestions as to the arrangement of the proposed museum building, and as to the formation of ornamental grounds in connection therewith: conclusion that the museum as well as the grounds

Reports, 1869—*continued.*

Layard, Right Hon. Austen Henry. (Analysis of his Evidence)—continued.

grounds, would be eminently calculated for public recreation, 1467, 1468. 1476–1478. 1510–1512. 1531. 1545–1547. 1551–1554.

Effect of a diagonal road between Wellington-street and Hungerford Bridge, in preventing the utilisation of the reclaimed land as the site for a museum, or other public building, 1467. 1473–1475. 1483, 1484.——Views of Mr. Waterhouse, the architect, in approval of the proposed site for the museum, 1469. 1527. 1541.——Explanation that the Wellington-street roadway may be constructed at the rear of the museum, 1471, 1472.

Responsibility upon Parliament if there be any omission or delay in preventing the construction of the diagonal road, as precluding the erection of a public building on so excellent a site, 1473–1475. 1483–1490. 1499——Communication between witness and Sir John Thwaites, the result being that steps have been taken by the latter to keep in abeyance the construction of the road, 1490——Consideration of the question of payment to the Metropolitan Board for a public site on the reclaimed land; due allowance to be made for the expenditure saved by the Board, if the diagonal road be abandoned, 1491–1499. 1513–1519. 1526.

Valuable land belonging to Government at South Kensington, which might be sold, and the proceeds devoted to the acquisition of a site on the Embankment, 1494–1496. 1529——Great expense if a public building were erected on the high ground at Adelphi-terrace, &c., instead of on the land reclaimed by the Embankment wall, 1510. 1512–1514. 1521——Conclusion as to the satisfactory character of any arrangements between the Office of Works and the Metropolitan Board, in respect of the utilisation of the Embankment site, if the diagonal road be abandoned, 1515. 1557, 1558.

Distinction between the Crown and the Government, the Woods and Forests, as representing the former, having nothing to do with the proposed site if acquired for a museum or other public building, 1526. 1533–1536——Slight difficulty apprehended as regards levels in constructing a public building on the reclaimed land, 1527——Expediency of the principle being clearly laid down, that the Thames Embankment should be utilised, 1532.

Importance of due facilities of approach to the Law Courts, if built on the Embankment land, 1537–1540——Excellent facilities of approach for the masses to the proposed museum, 1538. 1541–1543. 1555——Great relief of the Strand when the main Embankment road is open for traffic, 1544——Circumstance of the diagonal road having formed no part of the original Embankment scheme, 1548–1550——Very good approach to the Embankment by way of Norfolk-street, if the Law Courts are not built on the Embankment site, 1555–1557.

[Second Examination.] Contends that a power of control should be vested in the First Commissioner of Works, aided by a council, in respect of all important works in the Metropolis, such as railways, gas works, &c., 3299 *et seq.*——Decided distinction between London and provincial towns, as regards a power of control in Government, 3299–3301——Illustration of the powerlessness of the Office of Works, under certain circumstances, to prevent the disfigurement of public sites and buildings, 3303. 3353–3355——Intention of witness to propose an amendment of the Standing Orders, so that all plans and elevations of railways, &c., may be deposited with the Office of Works as well as with the Metropolitan Board, 3304–3307.

Conclusion that all plans of works to be carried out by the Metropolitan Board should be deposited with the First Commissioner, 3307–3310——Importance of the First Commissioner being able to refer to a Council of Advice, though it is desirable that he should act on his responsibility, and not be bound by their opinions, 3311–3317. 3347–3352——Steps already taken by witness with a view to obtaining advice from the Society of Antiquaries and the Institute of Architects, 3311. 3463, 3364——Suggestions as to the constitution and mode of action of the proposed council, 3311–3317. 3343–3352. 3362–3366.

Objection to the repeal of the former control of Parliament over important works of the Metropolitan Board, 3318–3321——Want of control over the Metropolitan Board in the case of Finsbury Park, 3318, 3319——Probability that the Thames Embankment would have presented a much better architectural appearance if there had been a control in the First Commissioner, 3321——Inadequate control in the matter of the Metropolitan District Railway, 3322, 3323.

Explanation relative to the appointment, through witness, of Mr. Fergusson as secretary for works and buildings; great advantage derived by the office and by the public from Mr. Fergusson's architectural knowledge, 3324–3328——Statement explanatory of the present position of Mr. Pennethorne, he being no longer a salaried officer, 3329–3338——Position of Mr. Hunt adverted to; reduction effected in his salary as consulting surveyor, 3339, 3340.

Opinion as to the expediency of some Government control in the case of works in the City, 3341, 3342——Grounds for the conclusion, that if there had been an efficient

Reports, 1869—*continued.*

Layard, Right Hon. Austen Henry. (Analysis of his Evidence)—*continued.*

Government control, railway stations and other semi-public structures in the metropolis might have been made very ornamental, instead of being disfigurements as they now are, 3345. 3351. 3356-3361——Comment upon the injury to Southwark-street by the railway bridges thrown across it, 3345——Advantage if the plans and elevations of Charing Cross Railway Station had been submitted to a council, as proposed, 3351, 3352. 3356-3361.

Line of Roadway. Particulars relative to the line of roadway from Wellington-street to the Embankment, as first proposed by the Royal Commission, *Sir J. Thwaites*, 112-124——Amended proposed by the Metropolitan Board, opening out at the corner of the Strand, instead of in Wellington-street, and passing through the burial ground of Savoy Chapel, *ib.* 123-126——Commencement of the Embankment end of the roadway opposite Villiers-street, *ib.* 161.

Lord Chamberlain. Nature of the control vested in the Lord Chamberlain, as to the internal arrangements of the Palace of Westminster, Buckingham Palace, &c., *Russell*, 4162-4176.

Ludgate-hill Railway Bridge. Discussion in Parliament upon the question of the Ludgate-hill railway bridge, it having been decided to permit its erection, *Lord John Manners*, 3399. 3479-3482——Comment upon the arctitectural effect of the bridge, *Cole* 3498, 3499; *Redgrave*, 3938; *Hope*, 4056.

Clause obtained by the Corporation with reference to Ludgate-hill Bridge, requiring that the sanction of the Commissioners of Sewers be obtained; reason for requiring the approval of this body instead of that of the Improvement Committee, *Corrie* 3791-3795. 3808-3810. 3825, 3826. 3844-3846. 3918——Dissent from the opinion that this bridge is of a very objectionable character; it does not interfere with the view of St. Paul's, *ib.* 3795. 3810.

M.

Main Drainage. See *Metropolitan Board of Works*, 2.

Mall (*St. James's Park*). Necessity of taking a good many houses on Crown property if the Mall be opened up into Charing Cross, *Pennethorne* 2102-2108.

Manners, The Right Hon. Lord John (*Member of the Committee*). Analysis of his Evidence.)—Outline of the circumstances under which the Metropolitan Board of Works were entrusted, during the Government of Lord Derby, in 1858, with full powers to carry out the main drainage scheme, 3367——Concurrence of Sir Benjamin Hall in the removal by Government, in 1858, of the veto of the First Commissioner over the works of the Metropolitan Board, exceeding 50,000 *l.*; 3367. 3404——Probability of further difficulties and delay in regard to the main drainage, if the veto of the First Commissioner had not been removed, 3367.

Power of Parliament to exercise control as regards all great works of the Metropolitan Board which involve application for compulsory powers, 3368, 3369——Strong objection to the exercise of any control or veto by the First Commissioner over the Metropolitan Board, 3368——Similar category in which London, Dublin, and Edinburgh should stand, with respect to municipal power and action, uncontrolled by the State, 3370-3373. 3438, 3439.

Evidence in support of the conclusion that the Metropolitan Board rather than the First Commissioner should have control in the matter of railway stations, bridges, &c., 3373, *et seq*——Contemplated necessity of the sanction of the Metropolitan Board to designs for railway and other erections before any Bill for the works is approved by the Select Committee, 3375-3377. 3386-3424——Expected complication and collision if the First Commissioner were, as well as the Metropolitan Board, entrusted with direct power of interference with railway stations, &c.; expediency rather of a very distinct demarcation between the functions of the two authorities, 3378-3396.

Complete control over the character of the buildings proposed to be erected upon any land of the Crown, 3389-3393——Means of the First Commissioner and of Government for the obtaining information about any building proposed to be erected, and for opposing its sanction by Parliament, 3394-3399——Discussion in Parliament upon the question of the Ludgate-hill railway bridge, 3399. 3479-3482——Objection to State interference in municipal matters, the State not contributing to municipal buildings, 3400. 3402-3408.

Grounds for the conclusion that it is very inexpedient to establish a Council of Advice, to be consulted by the First Commissioner in regard to large works and buildings proposed in the metropolis, 3401-3403. 3407-3412. 3426-3432——Exceedingly successful result through the Thames Embankment having been entrusted entirely to the Metropolitan Board, 3403——Very satisfactory constitution of the Board; great

advantage

Reports, 1869—*continued.*

Manners, The Right Hon. Lord John. (Analysis of his Evidence)—*continued.*

advantage of the permanence and experience of the Chairman, 3404–3406——Connection between the exercise of a veto by the First Commissioner and the contribution of Imperial funds, 3413. 3425.

Importance of the removal in 1858 of the First Commissioner's veto further adverted to, 3413–3415——Conclusion as to the expediency also of the removal of the veto of the First Commissioner on the re-naming of the streets, 3416–3419. 3436, 3437——Responsibility of the Metropolitan Board to Parliament when compulsory powers are obtained, in addition to their responsibility to the ratepayers, 3420, 3421——Absence of analogy between the control by the Board of Trade in railway matters and a control by by Government in architectural matters, 3422–3425.

Great amount of work devolving upon a Council of Advice if it had to consider all railway stations or bridges, and similar works, in London and the chief towns. 3427–3429——Difficulties anticipated in obtaining an efficient and permanent council if unpaid, as proposed, 3429, 3430. 3448 *et seq.*——Approval of control in the municipal authorities of provincial towns as well as of London in the matter of railway bridges, &c.; inexpediency, however, of any local councils of advice, 3430–3435. 3440–3445——Statement that witness is not prepared to give an opinion upon the question of enlarging the Department of Works into a Ministry of Art, Science, and Architecture, 3445–3447.

Important difference between the proposed council of advice for consultation by the First Commissioner and the temporary committees or commissions appointed in reference to the National Gallery, New Law Courts, &c., 3449–3456——Illustration, in the case of the Fine Arts Commission, of the unsatisfactory result of the system of a consultative body, 3462–3465——Doubt as to the expediency of the First Commissioner having a seat at the Metropolitan Board; existing harmony between the two departments as at present constituted, 3466–3468.

Concurrence in the proposition that the Office of Works is not better calculated to carry out street improvements than the Metropolitan Board or the Corporation of London; former operations of the Office of Works in the matter of new streets adverted to hereon, 3469–3478——Impression as to the executive Government having a *locus standi* before The House in the event of a Bill for a railway viaduct in front of the National Gallery, 3583–3485.

Explanation of the jurisdiction in regard to the erection of statues on Crown property in London and on Government property respectively, 3486–3496——Absence of jurisdiction in the First Commissioner over the ground on which the Clyde statue is placed, 3487. 3490–3492——Doubt as to the expediency of placing the Crown property in London in charge of the Office of Works, 3489.

METROPOLITAN BOARD OF WORKS:

1. *As to the present Constitution, Powers, and Working of the Metropolitan Board.*
2. *As to the Removal of the former Veto of Parliament and of the First Commissioner of Works upon Expenditure by the Board.*
3. *As to the Question of a Limitation or an Extension of the Powers and Action of the Board in respect of Public Works in the Metropolis.*
4. *Objection by the Board to the proposed Viaduct; Obligation upon the Board in the matter.*

1. *As to the present Constitution, Powers, and Working of the Metropolitan Board.*

Establishment of the Metropolitan Board of Works by the Act 18 & 19 Vict. c. 120, *Sir J. Thwaites* 4——Alteration of the constitution and powers of the Board by subsequent Acts, more especially by the Act 25 & 26 Vict. in 1862, *ib.* 7–9——Numerous functions and considerable powers of the Board under the Metropolis Management Act of 1855, *ib.* 10–17——Unlimited powers of the Board as to assessment, there being no appeal to any other authority, *ib.* 12–17——Explanation of the constitution of the Board and of the practice as to the appointment and payment of the chairman and secretary, *ib.* 18–33—— Conclusion as to the expediency of the Board being responsible only to the ratepayers, *ib.* 49.

Absence of control over the Board as to the mode of construction of its works, the taxpayers' impatience of taxation being an ample check upon the expenditure, *Sir J. Thwaites* 2955–2963——Dissent from the view that there is any fear of the majority of the members of the Metropolitan Board being elected with reference solely to an economy of rates and of expenditure, and without due regard to matters of taste and ornament, *ib.* 3090–3096. 3114, 3115——Very general satisfaction hitherto with the works carried out by the Metropolitan Board, *ib.* 3182——Very satisfactory relations now existing between witness and the First Commissioner of Works, *ib.* 3185.

Very satisfactory constitution of the Board; great advantage of the permanence and experience of the Chairman, *Lord John Manners* 3404–3406——Responsibility of the

Reports, 1869—*continued.*

METROPOLITAN BOARD OF WORKS—continued.

1. *As to the present Constitution, Powers, &c.*—continued.

Board to Parliament when compulsory powers are obtained, in addition to their responsibility to the ratepayers, *Lord John Manners* 3368, 3369. 3420, 3421——Limited powers taken by the Metropolitan Board for the acquisition of property as compared with the powers of the Corporation, *Corrie* 3713-3724.

2. *As to the Removal of the former Veto of Parliament and of the First Commissioner of Works upon Expenditure by the Board.*

Existence of certain vetoes in the Act of 1855 upon expenditure by the Board, it having been found necessary to remove these vetoes in 1858, chiefly through the deadlock caused by them in the matter of the main drainage, *Sir J. Thwaites* 34-52. 1261-1268——Limited sense in which there was formerly any control or veto in Parliament over the expenditure of the Board, there having been, however, a certain veto in the First Commissioner of Works, *ib.* 3115-3124——Abolition by Act in 1858 of the right of veto upon the expenditure of the Board, it having been found mischievous, *ib.* 3118-3121. 3152-3154.

Objection to the repeal of the former power of Parliament and of the Board of Works over the expenditure of the Metropolitan Board, *Right Hon. W. Cowper* 3289-3291; *Right Hon. A. H. Layard* 3318-3321.

Outline of the circumstances under which the Metropolitan Board of Works were entrusted during the Government of Lord Derby, in 1858, with full powers to carry out the main drainage scheme, *Lord John Manners* 3367——Concurrence of Sir Benjamin Hall in the removal by Government in 1858 of the veto of the First Commissioner over the works of the Metropolitan Board, exceeding 50,000*l.*, *ib.* 3367. 3404——Probability of further difficulties and delay in regard to the main drainage if the veto of the First Commissioner had not been removed, *ib.* 3367. 3413-3415.

3. *As to the Question of a Limitation or an Extension of the Powers and Action of the Board in respect of Public Works in the Metropolis.*

Conclusion that there should be a general and extended control over buildings, &c. and that such control should be vested in the municipal body, *Sir J. Thwaites* 3069 *et seq.*——Special reasons for vesting the proposed control in the Metropolitan Board instead of in a Government department, *ib.* 3070——Objection to any Government control unless there were a contribution by Government towards the municipal burdens, *ib.* 3070. 3129——Grievance if the municipal body in the metropolis were not allowed the same control in local matters as is freely allowed to the municipalities in Liverpool, Glasgow, &c., *ib.* 3070. 3125-3130. 3134-3142.

Details in further support of the conclusion that the Metropolitan Board, as the representatives of the ratepayers, are the proper body to exercise control in the case of railways, semi-public buildings, &c., *Sir J. Thwaites* 3125 *et seq.*——Very able professional officers attached to the Board, besides which the Board is constantly seeking advice of first class men in every profession; it may well be entrusted therefore with a general control in architectural and engineering matters, *ib.* 3210-3219——Decided objection to the formation of any body irrespectively of the Metropolitan Board for exercising architectural control in the case of semi-public works, gas works, &c., *ib.* 3223-3237. 3242.

Dissent from the views of Sir John Thwaites in favour of entrusting the Metropolitan Board with exclusive control in the matter of railways, gas works, &c., in the metropolis, *Right Hon. W. Cowper* 3286, 3287——Statement in support of the conclusion that there should be a control by Parliament and by the First Commissioner over all important works carried out by the Metropolitan Board, *ib.* 3288-3298——Distinction between the metropolis and important provincial towns as regards the amount of control to be vested in the representatives of the ratepayers in the carrying out of works, *ib.* 3293-3295——Decided distinction between London and provincial towns as regards a power of control in Government, *Right Hon. A. H. Layard* 3299-3201.

Evidence opposed to the suggested check upon the action of the Board, *Lord John Manners*, 3367. *et seq.*——Similar category in which London, Dublin, and Edinburgh should stand, with respect to municipal power and action, uncontrolled by the State, *ib.* 3370-3373. 3438, 3439.

Want of publicity in the case of works undertaken by the Metropolitan Board, whilst there is no security that questions of art will be properly considered; necessity of control over the Board in such matters, *Cole* 3511-3516. 3568, 3569——Grounds for the conclusion that London should not be placed in the same position as Leeds or similar towns as regards control over the municipal authority with reference to works and buildings, *ib.* 3565-3568.

Conclusion as to the unfitness of the Metropolitan Board of Works or its chairman to be entrusted with the supervision of buildings in reference to art, *Redgrave* 3961-3968. 3977-3979. 4020, 4021——Argument that as regards municipal control of public works the

Reports, 1869—*continued.*

METROPOLITAN BOARD OF WORKS—contiuued.

3. *As to the Question of a Limitation, &c.*—contiuued,

the metropolis should not be dealt with in the same way as large provincial towns, *Redgrave* 3969–3972.

4. *Objection by the Board to the proposed Viaduct; Obligation upon the Board in the Matter:*

Obligation upon the Metropolitan Board of Works by Act of Parliament to carry out a line of street from Wellington-street to the Embankment, *Sir J. Thwaites* 64–66; *Bidgood* 1771——Adverse feeling of the Board with respect to the viaduct, the opinion being that the money might be more profitably spent elsewhere, *Sir J. Thwaites* 546——Objection raised by witness at the Board to the proposed road, *Bidgood* 1768–1770.

See also *Act 25 & 26 Vict. c. 93. City of London. Compulsory Powers. Crown Land. First Commissioner of Works. Public Building (Embankment Site). Railway Structures. Responsibility. Thames Embankment.*

Metropolitan District Railway. Particulars as to the relations between the Railway Company and the Metropolitan Board, with reference to the construction of the railway along the Embankment; serious difficulties through the company's want of funds, the result being an immense delay in the opening of the Embankment roadway, *Sir J. Thwaites* 184 *et seq.*——Steps now being taken by the company to obtain a financial hill, whereby there is a prospect of funds being provided, and of the works being rapidly pushed on, *ib.* 186. 209–219——Obligation upon the company to open the railway by 1st January 1870, *ib.* 211–215——Sites of the company's stations on the Embankment; probability of the stations not being in harmony with the Embankment, *ib.* 232–235. 240–243.

Explanation of the line of the railway relatively to the Embankment roadway, showing that it leaves the roadway at certain points for purposes of ventilation, *Bazalgette* 899–902——Necessity of the sanction of the Metropolitan Board as regards the designs of the railway stations, and the number of ventilation openings, *ib.* 903–907. 973–977——Belief as to the designs of the railway stations and shafts being in character with the Embankment works, *ib.* 937, 938. 944–950.

Belief that the railway along the Embankment, together with a station at the Law Courts, will be productive of immense public convenience, without causing risk to adjacent or superincumbent buildings, *Fowler* 1020–1023. 1133–1137——Readiness of the railway company to consult the views and requirements of Government in the erection of a station at the Law Courts, *ib.* 1024. 1130–1133——Control exercised by the Metropolitan Board or by the Office of Works over the architecture of the railway stations, *ib.* 1068–1078——Final settlement already of the sites of the stations along the Embankment; progress made with their construction, *ib.* 1105–1110. 1115–1117. 1127–1129——Obstacle to a station at the end of Essex-street, *ib.* 1112–1114.

Statement as to the absence of control, save in the case of the Crown, as regards the character of the buildings and stations of the Metropolitan District Railway, *Sir J. Thwaites* 3000–3006——Inadequate architectural control in the matter of the Metropolititan District Railway, *Right Hon. A. H. Layard* 3322, 3323.

See also *Ventilation Shafts. Vibration.*

Ministry of Works. Witness submits a portion of his address as President of the Institution of British Architects in 1865, containing suggestions for the constitution of a Ministry of Works entirely separate from the Education Department, such Minister to be a Member of the Cabinet, *Hope* 3933——For many years witness has held the views embodied in this proposition, *ib.* 3934.

Quotation by witness of certain evidence given by him before the National Gallery Commission in 1863, as showing the views then entertained by him in favour of the creation of a Ministry of Arts and Works, aided by professional advisers, *Hope* 4098.

See also *First Commissioner of Works.*

Models. See *Plans and Models.*

Monument (London Bridge). Probability of the City Lands Committee and the Corporation fully considering any suggestion for removing the cage from the top of the Monument, *Corrie* 3867–3870.

Murchison, Sir Roderick Impey. (Analysis of his Evidence.)—Explanation of the grounds of objection by witness and numerous other men of science, some years ago, to the removal of the Natural History Collection from its present position, 2368, 2369. 2372——Approval for several reasons of a removal of the collection to a site on the Thames Embankment, instead of to South Kensington; similar approval on the part of several other trustees of the British Museum, 2370–2393.

Reports, 1869—*continued.*

MUSEUM OF NATURAL HISTORY:

1. *Concurrence of Testimony in favour of the Embankment Site between Waterloo and Hungerford Bridges for the proposed Museum.*
2. *Exception taken to the foregoing Proposition.*
3. *Explanations and Suggestions relative to the Plan of Buildings, and the Mode of Construction.*
4. *Area required for the Buildings.*
5. *Suggestions as to the Arrangement of the Natural History Specimens.*
6. *South Kensington Site.*
7. *Adelphi Terrace Site.*
8. *Cost.*

1. *Concurrence of Testimony in favour of the Embankment Site between Waterloo and Hungerford Bridges for the proposed Museum:*

Evidence as to the exceedingly eligible character of a site on the reclaimed land between Waterloo and Hungerford Bridges for the proposed Museum of Natural History, *Right Hon. A. H. Layard* 1467–1482. 1510–1512. 1520, 1521. 1530, 1531——Concurrence of valuable testimony in favour of placing the museum on the Embankment site, *ib.* 1467. 1469. 1480. 1520——Views of Mr. Waterhouse, the architect, in approval of the proposed site for the museum, *ib.* 1469. 1527. 1541——Excellent facilities of approach for the masses to the proposed museum, *ib.* 1538. 1541–1543. 1555.

Conclusion favourable to the erection of a Natural History Museum on the reclaimed land with terraces and ornamental grounds in front; examination hereon as to the advantage of this scheme, in the interests of the working classes, rather than of preserving the reclaimed land as an open space, *White* 1575–1577. 1585–1604. 1658 *et seq.*

Approval of a Natural History Museum on the reclaimed land between Hungerford and Waterloo Bridges with ornamental grounds attached, *Bidgood* 1742–1744. 1762–1764. 1810–1827——Greater convenience to the public by placing the Natural History Museum on the Embankment than at Kensington, 1810–1812. 1821–1828.

Decided approval of a Natural History Museum or other public building, on the site between Wellington-street and Hungerford Bridge, the road being abandoned, *Pennethorne* 2121–2125. 2147–2149.

Grounds for the conclusion that it is far preferable to place the Natural History Collection on the Thames Embankment site than at South Kensington, *Cole* 2200–2205. 2262, 2263.

Approval of the Embankment site for a new Museum of Natural History as far preferable to the South Kensington site, *Owen* 2319–2336——Importance of the Natural History Collection being in proximity to the library at the British Museum, *ib* 2327. 2338, 2339——Expediency, in any separation of the collections at the British Museum, of locating the Natural History Collection in a central position easy of access to the working classes, *ib.* 2328–2334.

Explanation of the grounds of objection by witness and numerous other men of science, some years ago, to the removal of the Natural History Collection from its present position, *Sir R. Murchison* 2368, 2369. 2372——Approval, for several reasons, of a removal of the collection to a site on the Thames Embankment instead of to South Kensington; similar approval on the part of several other trustees of the British Museum, *ib.* 2370–2393.

Witness is decidedly favourable to a site on the Thames Embankment rather than at South Kensington for a Natural History Museum, on the ground chiefly of the greater accessibility of the former to the working classes, *Huxley* 2394–2402——Not only witness but his brother naturalists approve of the Embankment site, a reorganisation and rearrangement of the collection being at the same time most essential, *ib.* 2403–2405.

Witness was selected by the First Commissioner of Works in 1866 as the architect to carry out Captain Fowke's plan of a Natural History Museum at South Kensington; has recently been in communication with the Office of Works upon the question of erecting the museum on the Embankment site, *Waterhouse* 2455-2463——Decided preference for a site on the Embankment as compared with South Kensington, *ib.* 2465, 2466.

Conclusions of the Committee favourable to the proposed erection of a Natural History Museum on the reclaimed land, *First Rep.* iv, v.

2. *Exception taken to the foregoing Proposition:*

Grounds for objecting, in the interests of the public, to the erection of a Museum of Natural History, or of any buildings, on the site reclaimed by the Embankment between Waterloo and Hungerford Bridges, *Hooper* 2672–2680. 2693–2695.

3. *Explanations*

MUSEUM OF NATURAL HISTORY—continued.

3. *Explanations and Suggestions relative to Plan of Buildings, and the Mode of Construction:*

Suggestions as to the arrangement of the proposed museum buildings, and as to the formation of ornamental grounds in connection therewith; conclusion that the museum as well as the grounds would be eminently calculated for public recreation, *Right Hon. H. A. Layard* 1467, 1468. 1476–1478. 1510–1512. 1531. 1545–1547. 1551–1554——Explanation that the Wellington-street roadway may be constructed at the rear of the museum, *ib.* 1471, 1472.

Witness recommends the plan of Captain Fowke for the Natural History Museum at South Kensington as one desirable for adoption in its main features if the museum be erected on the Thames Embankment; puts in a paper by Captain Fowke explanatory of the plan, *Cole* 2206–2211——Modifications contemplated in the plan of Captain Fowke if used for a museum on the Embankment site; facility of adopting the plan to the requirements of this site, *ib.* 2254, 2255. 2259–2261. 2281–2283. 2292–2294——Evidence in support of the use of red brick and terra cotta as the materials to be used in the construction of the museum; great durability of these materials, *ib.* 2255–2258. 2273–2280. 2314–2318——Greater durability of terra cotta than of granite or Portland stone, *ib.* 2255–2258.

Importance of all the galleries being lighted from the top, a building of only one story being the best, *Huxley* 2410, 2411. 2414–2419——Suggestions as to the library to be attached to the museum, the expense not being a serious matter, *ib.* 2412, 2413.

Approval by the British Museum trustees of the modified plans prepared by witness for the museum as proposed at Kensington, *Waterhouse* 2460, 2461——Facility of adopting witness's plan to the Embankment site between Waterloo and Hungerford Bridges; detailed explanations to this effect, *ib.* 2464 *et seq.*——Means of providing for a road at the back of the proposed building, *ib.* 2464. 2477–2481.

Suggestions and explanations as to the architecture and general arrangements of the proposed museum on the Embankment, as to the utilisation of the adjacent ground, and as to the approaches from the Strand, &c., *Waterhouse* 2467 *et seq.*——Modification by witness of the original design of Captain Fowke further adverted to and explained, *ib.* 2639–2641——Recent interview between witness and Mr. Fowler when it was shown that the railway need be no obstacle to the carrying out of witness's plan for a museum on the Embankment, *ib.* 2782, 2783.

Witness explains in detail a further plan for the proposed museum, and for the approaches, the building in the rear, &c., *Waterhouse* 2790 *et seq.*——Question as to the utilisation of the basement of the proposed building, the basement also being important as giving elevation and dignity to the museum, *ib.* 2822–2831——Necessity under No. 3 of witness's plans of taking a portion of Adelphi-terrace as well as other house property, *ib.* 2851–2861——Very little valuable property required to be taken under No. 1 plan, *ib.* 2862–2867——Important advantages of plan No. 1; facilities in connection therewith for the provision of recreation ground, *ib.* 2884–2895. 2900–2902.

Plans submitted by Mr. Waterhouse for a natural history museum on the site between the Charing Cross Railway and Waterloo Bridge, *App.* (*First Rep.*) 143.

4. *Area required for the Buildings:*

Requirement of an area of at least three acres for the proposed museum, including a library; the building to be of two storeys, and some of the galleries to be lighted from the side, *Owen* 2343–2349. 2355–2357. 2361–2367——Necessity of an additional two acres, looking forward to the wants of the next thirty years, *ib.* 2343, 2344.

Suggestions as to the area of the galleries, and as to the total space required for a museum on witness's plan; sufficiency of a building site of three acres for present and future wants, *Huxley* 2407, 2408. 2414–2423.

5. *Suggestions as to the Arrangement of the Natural History Specimens:*

Explanation of the plan of typical arrangement and exhibition of the natural history specimens, as advocated by witness and other naturalists, in opposition to Professor Owen's plan of exhibiting all the specimens; great advantages of witness's plan on the score of space, and as a means of instruction, *Huxley* 2406 *et seq.*——Plan proposed by which the specimens may be accessible to students by means of a gallery in the rear of the cases, whilst the public need not be excluded from the museum any day in the week, *ib.* 2409. 2432–2435. 2440–2442. 2449–2453.

Great interest taken by working men in museums; expediency of an improved arrangement of the specimens for their better instruction, *Huxley* 2436–2439——Enlarged facilities for instruction under the typical arrangement proposed by witness, *ib.* 2443, 2444——Non-adoption hitherto of this system in any foreign museums, *ib.* 2445–2448 2554.

MUSEUM OF NATURAL HISTORY—continued.

6. *South Kensington Site:*

Reference to a certain plan as showing the site at South Kensington on which it has been proposed to erect a Museum of Natural History, *Cole* 2196–2199——Objections to the South Kensington site as compared with the Embankment site, *Cole* 2200–2205. 2262, 2263; *Owen* 2319–2336; *Sir R. Murchison* 2370–2393; *Huxley* 2394–2402; *Waterhouse* 2465, 2466——In objecting some years ago to a removal of the Natural History Collection to South Kensington, witness and several others had chiefly in view a new arrangement of the specimens, which would have rendered removal, on the score of space, unnecessary, *Huxley* 2403, 2404.

7. *Adelphi Terrace Site:*

Consideration of a proposal for placing the museum on the high ground now covered with buildings between Villiers-street and Adam-street down to the front of Adelphi-terrace; sundry objections thereto on the whole, though the plan is not without some advantages, *Waterhouse* 2832–2850. 2868 *et seq.*

8. *Cost:*

Estimates of cost of a museum on the Embankment and at South Kensington, there being a saving of about 100,000 *l.* in the latter case, *Waterhouse* 2603–2622——Plan No. 1 would cost 582,000 *l.*; Plan No. 2, 697,000 *l.*; and Plan No. 3, 694,000 *l.*; that is, for the buildings alone, *ib.* 2603–2616——Increased expense of a site on the Embankment by reason of the greater depth necessary for the foundations, *ib.* 2622–2628——Increased cost also by reason of the greater elevation proposed for a building on the Embankment site, *ib.* 2628. 2642–2644——Estimate of 603,000 *l.* as the cost of witness's No. 4 Plan, *ib.* 2807.

Natural History Museum. See *Museum of Natural History.*

New Law Courts. Examination to the effect that if the New Law Courts are built at Carey street there will probably be an improved communication from Essex-street to the Embankment roadway, and that this would be a preferable route to that along the viaduct for persons going from the Law Courts to the Houses of Parliament, *Sir J. Thwaites* 322–354. 1269–1284——Necessity of an approach to the Embankment by way of Essex-street, whether the New Law Courts are placed on the Carey-street site or the Embankment site, *Right Hon. A. H. Layard* 1457. 1493–1496. 1501–1509. 1522–1525. 1537–1540; *Bidgood* 1746–1753. 1772.

Convenience in incorporating a station with the New Law Courts, and in providing a lift from the station to the different floors of the building, *Fowler* 1132–1137——Importance of due facilities of approach to the Law Courts if built on the Embankment land, *Layard* 1537–1540.

Conclusion of the Committee adverse to the proposed roadway, whether the New Law Courts be placed on the Carey-street site or on the Embankment site, *First Rep.* iv.

See also *Foundations. Vibration.*

Norfolk-street. Arrangements proposed as regards access from the railway to Norfolk-street, *Fowler* 1118–1122——Impracticable character of the gradient from the end of Norfolk-street to the Embankment, *Sir J. Thwaites* 1166, 1167——Very good approach to the Embankment by way of Norfolk-street, if the Law Courts were not built on the Embankment site, *Right Hon. A. H. Layard* 1555–1557——Arrangement in view for an approach road giving access to Norfolk, Arundel, and Surrey streets, *Creasy* 2763–2767.

Northumberland, Duke of. Information relative to the privileges conferred by section 53 of the Act of 1862, in the case of the Duke of Northumberland; that is, by giving him a right to certain building frontage created at the expense of the Metropolitan Board, *Sir J. Thwaites* 456–484. 519.

Northumberland House. See *Charing Cross to Embankment.*

Northumberland-street. Facility for communication from Northumberland-street to the proposed curved road from Charing Cross to the Embankment, *Pennethorne* 2049–2051.

Notices (Acquisition of Property). Statement as to the Metropolitan Board having served notices on all the parties whose property would be taken or affected by the roadway, except two, eleven notices having been issued, and four claims received, amounting to 32,874 *l.*, *Sir J. Thwaites* 164–178——Obligation upon the Metropopolitan Board to proceed with the acquisition or the properties, respecting which notices have been issued as being required for the proposed viaduct from Wellington-street, *ib.* 172–174. 535, 536. 545.

O.

Office of Works. Communication between witness and Sir John Thwaites, the result being that steps have been taken by the latter to keep in abeyance the construction of the road and viaduct, *Right Hon. A. H. Layard* 1490——Conclusion as to the satisfactory character of any arrangements between the Office of Works and the Metropolitan Board in respect of the utilisation of the Embankment site, if the diagonal road be abandoned, *ib.* 1515. 1557, 1558——Illustration of the powerlessness of the Office of Works, under certain circumstances, to prevent the disfigurement of public sites and buildings, *ib.* 3303. 3353–3355.

Question whether certain street improvements carried out by the Office of Works are not open to much objection, *Redgrave* 4041–4044——Approval of some permanent official in the Office of Works well capable of supplying information to the First Commissioner for the time being, as to the system of the office in dealing with architecture, *ib.* 4048.

Great importance attached to a re-construction of the Office of Works; suggestions on the subject, *Hope* 4069 *et seq.*——Advantage if the First Commissioner were a Cabinet Minister and might be a member of the House of Lords, and if there were a Parliamentary Secretary who might also belong to either House, so that the Department might be represented in both Houses, *ib.* 4069-4083. 4085, 4086. 4088, 4089——Advantage of a permanent secretary as well as of an architect, *ib.* 4087, 4088.

Duties of each secretary, there being also an assistant secretary, *Russell* 4117, 4118——Large number of public buildings in England not under the Office of Works, *ib.* 4153. 4177-4197——Complete independence between the Office of Works and the Office of Woods in reference to buildings, *ib.* 4178. 4218–4220——Advantage of a permanent secretary rather than of a permanent First Commissioner, *ib.* 4215–4217.

See also *Council of Advice. Fergusson, Mr. First Commissioner of Works. Metropolitan Board of Works. Plans and Models. Railway Structures. Statutes. Street Improvements.*

Owen, Professor. (Analysis of his Evidence.)—Approval of the Embankment site for a new museum of natural history, as far preferable to the South Kensington site, 2319–2336——Importance of the natural history collection being in proximity to the library at the British Museum, 2327. 2338, 2339——Expediency, in any separation of the collections at the British Museum, of locating the natural history collection in a central position, easy of access to the working classes, 2328–2334.

Requirement of an area of at least three acres for the proposed museum, including a library; the building to be of two storeys, and some of the galleries to be lighted from the side, 2343–2349——Necessity of an additional two acres, looking forward to the wants of the next thirty years, 2343, 2344. 2355–2357. 2361–2367——Suggestions on the subject of dividing the natural history library now at the British Museum, and of placing the Banksian Library with the proposed museum on the Embankment site, 2350-2360.

P.

Paris. Statement showing that in Paris, where the control over buildings, &c. rests with the State, there are large imperial contributions for municipal purposes, *Sir J. Thwaites* 3070-3084——Extensive powers exercised in Paris by the Prefect of the Seine, in regard to public Works, *Cole* 3563, 3564——Satisfactory system in Paris in regard to the construction of models or designs of public works proposed to be erected, *Redgrave* 3940–3942——Belief as to their being considerable control exercised over private buildings in Paris by the Prefect of the Seine, *Hope* 4102–4104.

Parks. Control of the Office of Works over the Royal Parks in London, whilst other parks are under the Metropolitan Board, *Russell* 4198–4200.

Parliamentary Control. Suggestion that the First Commissioner of Works, the Chairman of the Metropolitan Board, and the Lord Mayor might be associated as a body to report to Parliament upon proposed works, *Cole* 3518——Expediency of Parliament, through its Committees, acting as a Court of Appeal in matters of architectural taste, *Corrie* 3906-3911.

See also *Compulsory Powers. First Commissioner of Works.*

Pennethorne, James. (Analysis of his Evidence.)—Explanation in connection with some plans prepared by witness last year for laying out the Crown estate at Whitehall, including the Crown land or foreshore reclaimed by the Embankment, 1866 *et seq.*——Payment by the Metropolitan Board of 26,000 *l.* in respect of twenty-six acres of reclaimed foreshore, two-thirds of which sum went to the conservators of the Thames, 1879, 1880.

Reports, 1869—*continued.*

Pennethorne, James. (Analysis of his Evidence)—*continued.*

2133–2141——Very valuable character of the land reclaimed in front of the Crown property at Whitehall; power of the Crown to build upon it, 1883–1891. 2132——Statement as to the Metropolitan District Railway running under the roadway, and not interfering with the building powers of the Crown, 1889–1897.

Alternative plans prepared by witness, the one providing for public buildings on the Crown land, and the other for private buildings, 1898–1901. 1906. 1994–2003——Proposal by one plan for an approach to the Embankment opposite the Horse Guards, 1902–1905. 1998–2000——Details relative to the Crown property at Whitehall, showing the periods of the leases under which the different houses are held by the Crown tenants, and the extent of land now available for public buildings, 1912 *et seq.*

Explanation as regards the amended plan prepared by witness this year for dealing with the Crown land and the approach to the Embankment from Charing Cross, that such plan is brought forward in his private capacity and has no official sanction, 2004–2008——Sundry details in explanation and support of witness's plan for a curved approach from Charing Cross to the Embankment, by the side of Northumberland House; important advantages of such approach as compared with a direct road through the ducal property, 2009 *et seq.*

Opinion that unless there be a good approach from Charing Cross the greater part of the outlay on the Embankment will be thrown away, 2021, 2022——Several objections to a direct approach through Northumberland House and grounds, 2023, 2024——Great importance of the widening of the narrow part of Charing Cross, as provided for in the formation of the proposed curved road to the Embankment; necessity in any case of such widening in a few years, 2024–2033, 2084.

Facility of communication from Craven-street and Northumberland-street to the curved road, 2049–2051——Advantage of the curvelinear approach as facilitating the making of the Charing Cross Railway shed, 2052–2057——Consideration of the question of the erection of public buildings on the Crown estate at Whitehall, 2058–2069. 2113, 2114. 2143–2145——Evidence relative to the cost of the curved road proposed by witness; expediency of the expenditure, even though in excess of the cost of a direct road, 2070–2083. 2086–2092.

Greatly enhanced value of the Crown estate at Whitehall if the plan of a curved approach to the Embankment be carried out, 2093–2101——Necessity of taking a good many houses on Crown property if the Mall be opened up into Charing Cross, 2102–2108——Approval of a curved approach, whether private or public buildings be erected on the Whitehall site, 2109–2111——Contemplated saving of the expense of the Wellington-street road and of the extension of Whitehall Place if the curved approach from Charing Cross be carried out, 2115–2119——Importance of an approach to the Embankment near Essex-street, 2119, 2120.

Decided approval of a natural history museum, or other public building, on the site between Wellington-street and Hungerford Bridge, the road being abandoned, 2121–2125. 2147–2149——Explanation as to the proposed appropriation of certain reclaimed land to the houses in Whitehall Gardens, 2126–2130——Consideration of the relative rights of the Crown and of the Thames Conservancy to the land reclaimed by the Embankment; amount of compensation received in each case from the Metropolitan Board, 2150–2166. 2182–2185.

Examination upon the question as to the ratepayers of the metropolis being unfairly burdened, to the undue advantage of the Crown, in respect of the reclaimed foreshore, 2167–2181. 2186–2191——Statement as to the Crown requiring special clauses for its protection in the case of all Crown land wanted for public improvements, 2192–2195.

Pennethorne, Mr. (*Office of Works*). Statement explanatory of the present position of Mr. Pennethorne, he being no longer a salaried officer, *Right Hon. A. H. Layard* 3329–3338.

Percy, Dr. (Analysis of his Evidence.)—Statement to the effect that witness is not prepared to express any decided opinion upon the question of the vibration to be produced by the railway running along the Thames Embankment, but he considers an investigation of the subject very desirable, 708 *et seq.*——Inconvenience rather than injury likely to result from vibration, as regards adjacent buildings, 721–733.

Plans and Models. Great importance attached to the construction of models of all public buildings about to be erected; reliable means thus afforded for arriving at the cost and for ensuring that the estimates and expenditure agree, *Cole* 2212–2224.

Suggestions that all promoters of Bills be required to deposit plans in the Office of Works, *Sir J. Thwaites* 3151——Intention of witness to propose an amendment of the Standing Orders, so that all plans and elevations of railways, &c. may be deposited with the First Commissioner, as well as with the Metropolitan Board, *Right Hon. A. H. Layard* 3304–3307——Conclusion that all plans of works to be carried out by the Metropolitan Board should be deposited with the First Commissioner, *ib.* 3307–3310.

Great

Plans and Models—continued.

Great importance of publicity, and of the exhibition of designs and models, before any public or semi-public building is erected, *Cole* 3506-3517. 3616-3619——Contemplated submission of designs to the Office of Works, who might report to Parliament, *ib.* 3507-3510——Suggestion that the Standing Orders might be altered so as to provide the deposit of plans and elevations before any important works are sanctioned, *Corrie* 3912-3918.

Great importance attached to the construction and exhibition of models and designs on a large scale before any important works are carried out; practice hereon in Paris and at the South Kensington Museum, *Redgrave* 3940-3950. 4030-4034——Expediency of power in the First Commissioner to require the production of models, plans, &c., *Hope* 4101.

Sundry plans submitted to the Committee in illustration of the evidence of Sir J. Thwaites, *App.* (*First Rep.*) 138——Plans delivered in by Mr. Pennethorne, *ib.* 140——General plan showing the laying out of the South Kensington estate, *ib.* 142——Plans submitted by Mr. Waterhouse, *ib.* 143.

Conclusion of the Committee that the design and execution of unsightly works may be reasonably attributed to the fact that the deposit of designs, elevations, or models of projected works or buildings is not required when application is made for Parliamentary powers, *Second Rep.* iii——Resolution in favour of public companies or corporate bodies, when applying for Parliamentary powers for the erection of works in the metropolis, being required to deposit plans and elevations, and designs or models, at the Office of Works, *ib.*

Prisons. Want of control in some Government department over prison buildings in London, *Russell* 4192-4197,

Private Buildings. Check retained by the Metropolitan Board as to the architecture of houses built upon land disposed of by the Board, *Sir J. Thwaites* 1378-1384——Limited extent to which it is desirable that any architectural control should be exercised by the Board over private buildings, *ib.* 3243-3256.

Doubt as to the expediency of direct Government control over the character of private buildings as well as of public works; difficulty as to the law of lights and the rights of neighbours, *Hope* 4105-4107. 4109, 4110.

Provincial Towns. Approval of control in the municipal authorities of provincial towns as well as of London, in the matter of railway bridges, &c.; inexpediency, however, of any local councils of advice, *Lord John Manners* 3430-3435. 3440-3445.

See also *Metropolitan Board of Works.*

Public Building (*Embankment Site*). Belief that the land between Hungerford Bridge and Waterloo Bridge is in every sense a most eligible site for a public building, *Sir J. Thwaites* 1218-1223——Question considered as to the relative height of any public building on the reclaimed lands, and of the existing buildings facing the river, *ib.* 1401-1407——Expectation that the full value of the site will be paid over to the Metropolitan Board, if a public building be erected, *ib.* 1408-1411——Statement as to the open space still available east of Hungerford Bridge if a public building be erected on that site, *ib.* 1431-1436.

Effect of a diagonal road between Wellington-street and Hungerford Bridge in preventing the utilisation of the reclaimed land as the site for a museum or other public building, *Right Hon. A. H. Layard* 1467. 1473-1475. 1483, 1484——Responsibility upon Parliament if there be any omission or delay in preventing the construction of the diagonal road as precluding the erection of a public building on so excellent a site, *ib.* 1473-1475. 1483-1490. 1499——Consideration of the question of payment to the Metropolitan Board for a public site on the reclaimed land; due allowance to be made for the expenditure saved by the Board if the diagonal road be abandoned, *ib.* 1491-1499. 1513-1519. 1526——Slight difficulty apprehended as regards levels in constructing a public building on the reclaimed land, *ib.* 1527.

Further representation as to the claim of the Board to adequate payment from the Crown or from Parliament in respect of a site on the reclaimed land for public buildings, *Sir J. Thwaites* 1560-1564——Statement in favour of a public building on the reclaimed land, instead of the land being preserved entirely as an open space for purposes of recreation, *Bidgood* 1814-1820——Dissent from the view that there would be a great gain or saving by the metropolitan ratepayers if the expense of the diagonal road were not incurred, and if at the same time a site on the Embankment were sold for a public building, *Hooper* 2701-2712.

Conclusion of the Committee as to the reclaimed land being suitable as a site for public buildings, but not being available for the purpose on account of the provisions of the Act 25 & 26 Vict. c. 93, *First Rep.* iii——Effect of the formation of the roadway to render impossible the erection of any public building on the reclaimed land, *ib.* iv.

See also *Foundations.* *Museum of Natural History.* *New Law Courts.* *Reclaimed Land.* *Vibration.*

Reports, 1869—*continued.*

Public Opinion. Value of publicity before any railway works, &c. are proceeded with, *Cole* 3506–3517. 3616–3619——Expediency of an improvement in public taste as a means of improvement in railway works, &c., *Corrie* 3881–3883——Urgent want of some controlling authority and of public opinion being properly awakened, as a check upon the character of railway structures, &c., *Redgrave* 3940. 3950–3952. 3984–3987——Undue delay in the expression of public opinion with reference to railway bridges, &c., the whole of London being in the meantime in course of disfigurement, *ib.* 3984–3987——Symptoms of improvement in the public taste; inexpediency of relying upon such improvement as an adequate check upon future disfigurements, *Hope* 4062–4066.

Public Works and Buildings. Control of the Government in the case of all public works in the metropolis, the expense of which is voted by Parliament, *Sir J. Thwaites* 2964–2968.

See also *Barracks. Blackfriars Bridges. Charing Cross Railway Station. City of London. Compulsory Powers. Council of Advice. First Commissioner of Works. Gas Works. Metropolitan Board of Works. Office of Works. Paris. Parliamentary Control. Plans and Models. Prisons. Railway Structures. Responsibility. Thames Embankment.*

R.

RAILWAY STRUCTURES (METROPOLIS):

Evidence in detail as to the want of control in Government or in the Metropolitan Board as regards railway structures in the metropolis, the result being that stations, bridges, &c. are erected, which are a great disfigurement and a great public inconvenience, *Sir J. Thwaites* 2979-3045. 3135-3151. 3242——Insufficient weight attached to the representations of the Metropolitan Board in the matter of railways, bridges, &c., as in the case of Southwark-street and of Ludgate-hill, *ib.* 3183, 3184. 3193-3198.

Conclusion that the Metropolitan Board, as the representative body in the metropolis, should have control not only as to the works carried out by themselves but as to works carried out by railway companies, &c., *Sir J. Thwaites* 3201–3209——Examination to the effect that witness does not object to increased control in the Board of Trade on the subject of railways, as regards engineering questions, nor to an architectural control in the Board as to the elevations of railway bridges, *ib.* 3220–3227. 3233——Necessity of the judicious exercise of any control in the case of semi-public buildings, such as railway structures, hospitals, &c., *ib.* 3254. 3257–3259.

Evidence in support of the conclusion that the designs and elevations of railway structures, &c. in the metropolis should be submitted to the First Commissioner of Works, associated with a council of advice, *Right Hon. W. Cowper* 3267 *et seq.*; *Right Hon. A. H. Layard* 3299 *et seq.*——Grounds for the conclusion that if there had been an efficient Government control railway stations and other semi-public structures in the metropolis might have been made very ornamental, instead of being disfigurements as they now are, *Right Hon. A. H. Layard* 3345. 3351. 3356–3361.

Evidence in support of the conclusion that the Metropolitan Board, rather than the First Commissioner, should have control in the matter of railway stations, bridges, &c., *Lord John Manners* 3373 *et seq.*——Contemplated necessity of the sanction of the Metropolitan Board to designs for railway and other erections before any Bill for the works is approved by the Select Committee, *ib.* 3375–3377. 3386. 3424——Impression as to the Executive Government having a *locus standi* before the House in the event of a Bill for a railway viaduct in front of the National Gallery, *ib.* 3483-3485.

Excessively unsatisfactory state of things in the metropolis in regard to the erection of public buildings, railway bridges, &c.; numerous instances of this, and of the hideous effect of railway and other structures, *Cole* 3497–3504.

Great natural advantages of London, its picturesque character being, however, almost destroyed by the hideous structures allowed to be erected, *Redgrave* 3936–3938——Comment upon the deformity and ugliness involved in the railway bridges or girders on the Surrey side of London Bridge, *ib.* 3938, 3939.

Extremely unsatisfactory system in the metropolis as regards public works, railway bridges, &c., the result being that numerous structures have been erected without any reference to architectural beauty or public taste, *Hope* 4052–4062——Facility of combining ornamentation with utility, without any diminution of efficiency, *ib.* 4059–4061.

See also *Blackfriars Bridge. Charing Cross Railway Station. Compulsory Powers. First Commissioner of Works. Ludgate-hill Railway Bridge. Plans and Models. Public Opinion.*

Railway (Thames Embankment). See *Metropolitan District Railway.*

Ratepayers. Difficulty experienced by the Metropolitan Board in raising money for improvements; large and recent increase, however, in the rateable value of the metropolis, the ratepayers being quite capable of carrying out the required works, *Sir J. Thwaites* 3096-3103.——*See* also *Public Building (Reclaimed Land).*

Reclaimed

Reclaimed Land (*Recreation and Ornamentation*). Difference of opinion between the Metropolitan Board and the Office of Works as to the mode of disposal of the land reclaimed by the Embankment, the decision being that it should all be reserved for the public as an open space, and that none of it should be built upon, *Sir J. Thwaites* 55–58. 73, 74——Statement that there are about six acres of reclaimed land between Waterloo and Hungerford Bridges which the Metropolitan Board is required to lay out as ornamental ground, but which form an excellent site for a public building, and represent in such case a probable value of 900,000 *l.*, *ib.* 408–429.

Effect of the proposed viaduct and road greatly to diminish the value of the reclaimed land, if available for building purposes, *Sir J. Thwaites* 430–436——Injurious effect of the viaduct and road as regards the reclaimed land, if converted into ornamental grounds, and planted, *ib.* 437–450. 1349–1352——Statement on the question of the Metropolitan Board being empowered to build upon a certain portion of the reclaimed land, *ib.* 451–454.

Witness reads to the Committee the several sections of the Act 25 & 26 Vict. c. 93, showing in details the restrictions upon the Metropolitan Board in respect of the reclaimed land, and the privileges conferred upon the different proprietors, *Sir J. Thwaites* 519.

Particulars relative to the steps proposed to be taken in respect of certain land reclaimed, and of land to be purchased east of Temple Gardens: uncertainty at present as to the erection of buildings on some of this land, *Sir J. Thwaites* 1176–1201——Examination to the effect that in the interests of the ratepayers, the whole of the land reclaimed by the Embankment should not be converted into recreation ground, it being desirable that a portion be utilised for buildings, *ib.* 1285–1309. 1312–1321. 1323–1337. 1363–1374——Re-arrangement of the ground if the viaduct and road be abandoned, the system of mounds having been adopted as a screen, *ib.* 1338–1348——Provision made in regard to certain reclaimed land east of Somerset House being preserved as an open space, *ib.* 1363–1374.

Strong objection to the road as greatly deteriorating the value of the reclaimed land, as being unsightly, and as providing but little facility for traffic, *White* 1569–1574. 1583, 1584.

Understanding on the part of the public, that the land reclaimed by the Thames Embankment is to be preserved as an open space without any buildings being erected upon it, *Hooper* 2650–2653——Conclusion that the diagonal road from Wellington-street would not interfere with the ground for purposes of recreation, but would facilitate access from the Strand &c., and would enhance the public enjoyment of the open space, *ib.* 2656–2671. 2696–2700.

Entire dissent from the views of Mr. Hooper, witness being favourable to the proposal for erecting a museum on the Embankment site, with ornamental grounds attached, *Creasy* 2776–2779.

Plan showing the works authorised by the Thames Embankment Acts of 1862 and 1868, and the disposal of the reclaimed ground as provided for by the same Acts, and by the Metropolitan District Railway, *App.* (*First Rep.*) 138.

Reclamation of nine-and-a-quarter acres between the Charing Cross Railway and Waterloo Bridge, *First Rep.* iii.

Recreation Ground. See *Public Building.* *Reclaimed Land.*

Redgrave, Richard, R.A. (Analysis of his Evidence.)—Is Inspector General of Art at the South Kensington Museum, 3935——Great natural advantages of London, its picturesque character being, however, almost destroyed by the hideous structures allowed to be erected, 3936–3938——Urgent want of some controlling authority, and of public opinion being properly awakened, as a check upon the character of railway structures, &c., 3936. 3940. 3950–3952. 3984–3987——Comment upon the deformity and ugliness involved in the railway bridges or girders on the Surrey side of London Bridge, 3938, 3939.

Great importance attached to the construction and exhibition of models and designs on a large scale before any important works are carried out; practice hereon in Paris and at the South Kensington Museum, 3940–3950. 4030–4034——Expediency of individual responsibility in a Minister of Works, or a First Commissioner, 3953–3960. 3988–3990——Enhanced responsibility of the First Commissioner if assisted by professional advisers in architectural art, who should place on record their opinions as to any proposed structure, 3958–3960. 4045. 4047. 4049, 4050.

Conclusion as to the unfitness of the Metropolitan Board of Works, or its chairman, to be entrusted with the supervision of buildings in reference to art, 3961–3968. 3977–3979. 4020, 4021——Argument that as regards municipal control of public works, the metropolis should not be dealt with in the same way as large provincial towns, 3969–

Reports, 1869—*continued.*

Redgrave Richard, R. A. (Analysis of his Evidence)—*continued.*

3972——Decided objection to the system and practice of the Corporation of London in regard to public works within their jurisdiction; examination hereon as to the merits of certain works carried out by the Corporation, 3973-3976. 3979. 4025-4030. 4035-4040. 4043. 4046.

Suggestion that when compulsory powers are granted by Parliament for public works, it should have a right to see that the money was so spent that public taste as well as utility was considered, 3979-3983. 4018-4024——Undue delay in the expression of public opinion with reference to railway bridges, &c., the whole of London being in the meantime in course of disfigurement, 3984-3987.

Proposition that the First Commissioner should, from time to time, select a council of advisers from a list of persons nominated by the Royal Academy, the Institute of Architects, the Institute of Civil Engineers, the Metropolitan Board, and the Corporation of London, 3991-4017. 4047——Objection to a permanent council, 3998. 4047——Importance of paying the members of the council, 3998. 4012——Disapproval of the council comprising more than five members, 4007-4009.

Question whether certain street improvements carried out by the Office of Works are not open to much objection, 4041-4044——Probability of increased attention being paid to the qualifications of the First Commissioner if entrusted with the proposed control, 4047——Satisfactory system by which the Lord President of the Council obtains advice in matters of science and art, *ib.*——Approval of some permanent official in the Office of Works well capable of supplying information to the First Commissioner for the time being, as to the system of the office in dealing with architecture, 4048.

Responsibility. Importance of the direct responsibilty of the body elected directly by the ratepayers, *Sir J. Thwaites* 3199, 3200. 3220.

Primary want of harmony and concentration of action, and of distinct responsibility to Parliament, in respect of public buildings in the metropolis, *Cole* 3505-3511——Difficulty in making the Metropolitan Board of Works directly responsible to Parliament for the character of its work and buildings, *ib.* 3506. 3511.

Considerations as to the responsibility of the proposed tribunal comprising the First Commissioner of Works, the Chairman of the Metropolitan Board, and the Lord Mayor; primary importance of undivided responsibility somewhere, *Cole* 3541-3545. 3555. 3573-3576. 3609-3615——Expediency of Ministerial responsibility and a strong department in order to check the evils now arising in the metropolis in matters of art and architecture, *ib.* 3671, 3672——Importance of individual responsibility in a Minister of Works or a First Commissioner, *Redgrave* 3953-3960. 3988-3990.

Richmond Terrace. Obstacle to a communication with the Embankment at Richmond Terrace on account of the Crown property intervening, *Creasy* 2746.

Royal Commission. Explanation as to the Royal Commission, of which witness was a member, having recommended a line of roadway from Wellington-street to the Embankment below Hungerford Bridge, *Sir J. Thwaites* 58-63——Probability that the Commissioners would not have recommended the road in question had they been aware that the Metropolitan Board would be restricted as to the mode of dealing with the reclaimed land, *ib.* 59. 62.

Royal Exchange. Erection of the Royal Exchange by the Mercers' Company and the Corporation jointly, *Corrie* 3744, 3745.

Russell, George. (Analysis of his Evidence.)—Has been one of the secretaries of the Office of Works for thirteen years, 4111, 4112——Several *ex officio* Commissioners of Works, the First Commissioner being the one first named on the warrant, 4113-4116——Duties of each secretary, there being also an assistant secretary, 4117, 4118——Opinion as to the insufficiency of the powers of the First Commissioner with reference to his present duties; advantage if he were a member of the Cabinet, 4119-4125——Limitation of the control of the First Commissioner over public works in London and Edinburgh to those works the expense of which is defrayed by Parliament grant, 4126.

Statement as to the Irish Board of Works, and not the Office of Works, having control over works in Dublin, such control applying also to the Phœnix Park, 4126-4142. 4156, 4157. 4203, 4204——Supervision exercised by the Office of Works over various buildings in Scotland; question whether they might not exercise similar supervision over buildings in Ireland, 4138. 4143-4155——Large number of public buildings in England not under the Office of Works, 4153. 4177-4197——Difficulty as to the Office of Works having care of cathedrals in England, 4158.

Nature of the control vested in the Lord Chamberlain as to the internal arrangements of the Palace of Westminster, 4162-4172——Absence of control in the Office of Works in respect of Buckingham Palace, Windsor Castle, &c., 4173-4176——Complete independence between the Office of Works and the Office of Woods in reference to buildings, 4178. 4218-4220——Exemption also of public hospitals, such as Greenwich Hospital,

Russell, George. (Analysis of his Evidence)—*continued.*

Hospital, from any control by the Office of Works, 4179-4182——Expediency of the Office of Works, or some other department, exercising supervision over barracks and prisons in London, 4183-4197——Control of the Office of Works over the Royal parks in London, whilst other parks are under the Metropolitan Board, 4198-4200.

Approval of the proposition for vesting the First Commissioner with control over public buildings, railway structures, &c., in the metropolis, it being desirable at the same time to assist him by means of a council of advice, 4205-4214. 4241-4243——Advantage of a permanent secretary rather than of a permanent First Commissioner, 4215-4217——Explanation relative to the power of the Office of Works in respect of statues in the metropolis; increased control desirable, 4221-4240.

S.

St. James's Parish (*Westminster*). Witness submits the petition adopted by St. James's vestry against the construction of the projected viaduct from Wellington-street to Hungerford Bridge, *Bidgood* 1708-1712.

St. Lawrence Jewry Drinking Fountain. Explanation that the drinking fountain near the church of St. Lawrence Jewry is in charge of the parish, *Corrie* 3871-3873.

St. Paul's (*Covent Garden*). Statement in explanation and support of a petition from the vestry of St. Paul's, Covent Garden, against the abandonment of the proposed viaduct and road from Wellington-street, *Hooper* 2648 *et seq.*

St. Thomas's Hospital. Explanation and approval of the arrangement by which there is only a footway on the Embankment in front of St. Thomas's Hospital, the roadway being in the rear, *Sir John Thwaites* 1310, 1311——Favourable anticipations as to the ornamental character of St. Thomas's Hospital, though under no control by Government or the Metropolitan Board, *ib.* 3050-3060.

Salisbury Estate. Positive improvement of the chief portion of Lord Salisbury's property by the substitution of the roadway for the river, *Sir J. Thwaites* 475, 476.

Salisbury-street. Prohibition upon an extension of Salisbury-street to the Embankment unless with the consent of the Marquis of Salisbury, *Creasy* 2756.

Savoy. Strong objection made to the proposed interference with the Savoy Chapel graveyard, so that it was decided to adopt the line of roadway before the Committee, *Sir J. Thwaites* 124-129. 142. 154, 155.

Statement in support of the conclusion that the projected road would be a great injury to the Savoy, without conferring any compensating benefit, *White* 1605-1637——Explanation as to witness having at one period agreed to a roadway from Wellington-street, diverted so as not to interfere with the Savoy, whereas he now is opposed on public grounds to any such road, *ib.* 1619-1641. 1649-1657.

Provision for a foot access to the Embankment along Savoy-street, *Creasy* 2756-2762.

Science and Art Department. Practice of the Science and Art Department in regard to contracts for terra cotta, iron, &c., *Cole* 2265-2272——Information relative to the course pursued by the department in obtaining the best professional opinions; a fee of five guineas being given for each opinion; excellent results of this system, *ib.* 3519. 3521-3527. 3555-3557. 3620, 3621——Practice of the department as to obtaining unpaid advice in certain occasions; degree of responsibility in the persons giving such advice, *ib.* 3528-3541.

Evidence opposed to the Science and Art Department being placed under a minister of arts and architecture unless its educational functions be fully realised; approval, however, of some concentration in this direction, *Cole* 3638-3656.

Satisfactory system by which the Lord President of the Council obtains advice in matters of science, *Redgrave* 4047.

Suggestion that the artistic department at South Kensington should more properly be in charge of the First Commissioner than of the Lord President, *Hope* 4081.

Scotland. Supervision exercised by the Office of Works over various buildings in Scotland; question whether they might not exercise similar supervision over buildings in Ireland, *Russell* 4138. 4143-4155.

Scotland-yard. Restriction upon the Metropolitan Board taking property of the Duke of Northumberland so that they cannot make an approach to the Embankment through Scotland-yard, *Creasy* 2746. 2748, 2749.

Site for Public Building. See *Museum of Natural History. New Law Courts. Reclaimed Land. South Kensington. Vibration.*

Reports, 1869—*continued.*

Smithfield Market. Full powers of the Corporation under the Act for the new meat and poultry market in Smithfield; particulars hereon as to the constitution of the Markets Improvement Committee, and its action in respect of this market, *Corrie* 3706-3709. 3735-3742. 3746-3766.

Somerset House. Conclusion of the Royal Commissioners that Government was desirous to have a communication from Somerset House to the Embankment, and so to the Houses of Parliament, *Sir J. Thwaites* 58, 59——Convenience of the roadway chiefly as facilitating communication between Somerset House and the Houses of Parliament and Government offices in Downing-street and Whitehall, *ib.* 319-321——Grounds for the statement that Government showed themselves desirous of a communication by the Embankment from Somerset House to the Houses of Parliament, *ib.* 1202-1204——Facility of providing access from Somerset House to the Embankment by means of steps, *ib.* 1210, 1211.

South Kensington. Valuable land belonging to Government at South Kensington which might be sold, and the proceeds devoted to the acquisition of a site on the Embankment, *Right Hon. A. H. Layard* 1494-1496. 1529.

Explanatory statement in connection with the land at South Kensington purchased by Government from the Commissioners of the Exhibition of 1851; suggestion that about six acres be reserved for the growing wants of the Science and Art Department, and that the remaining ten acres be re-sold to the Commissioners, *Cole* 2228-2254. 2284-2219. 2295-2313——Increase fourfold in the value of the land at South Kensington since its original purchase, *ib.* 2237-2240.

Explanation of the circumstances connected with the purchase by Government of certain land at South Kensington occupied by the Exhibition Building of 1862; low value put on this land at the time of its purchase, *Bowring* 2715-2719——Condition of the purchase that Government should use the land for purposes connected with science or art, *ib.* 2719-2722. 2731, 2732——Duty of the Commissioners to negotiate with Government as to the disposal of the land if not applied to the purpose of science or art, *ib.* 2723. 2731.

Statement as to the Commissioners not having yet decided upon the mode of appropriation of the land at South Kensington which has remained in their possession, *Bowring* 2724-2726——Great rise in the value of the land, *ib.* 2727-2730. 2735, 2736——Fairness of the Government land being re-sold to the Commissioners at its former price, if Government does not use it with reference to science or art, *ib.* 2733, 2734——Obligation upon the Commissioners to employ for the purposes of science and art, any money derived from the sale of the land, *ib.* 2737-2739.

See also *Museum of Natural History.*

South Kensington Museum. Satisfactory system in regard to the construction of models before the erection of buildings at the Museum, *Redgrave* 3944-3948.

Statement of the general method of executing buildings at the South Kensington Museum, *App.* (*First Rep.*) 142.

Southwark-street. Comment upon the construction of the railway bridge across Southwark-street, and the great injury thereby to the street, *Sir J. Thwaites*, 3017-3031; *Right Hon. A. H. Layard* 3345.

Standing Orders. See *Plans and Models.*

Statues. Control of Government in the matter of ornamentation works, such as statues, railways, &c., the Metropolitan Board having no power to interfere, *Sir J. Thwaites* 2969-2978——Explanation of the jurisdiction in regard to the erection of statues on Crown property in London and on Government property respectively, *Lord J. Manners* 3486-3496——Advantage of the Commissioners of Woods and Forests being under some check by the Office of Works, in reference to statues, *Cole* 3657.

Control of the Corporation or of the City Lands Committee over the statues and obelisks in the City, *Corrie* 3874-3881——There is a great want of removal of statues, *Redgrave* 3943—— Explanation relative to the power of the Office of Works in respect of statues in the metropolis; increased control desirable, *Russell* 4221-4240.

Strand. Statement as to the extent to which the traffic along the Strand, &c., would be relieved by the Wellington-street viaduct, *Sir J. Thwaites* 1205-1209. 1416-1424——Very little difference in distance between the corner of Wellington-street and the Admiralty *viâ* the Strand and *viâ* the proposed roadway on the Embankment, *ib.* 1224, 1225——Great relief of the Strand when the main Embankment road is opened for traffic, *Right Hon. A. H. Layard* 1544——Doubt as to the Strand being much less crowded when the Embankment-road is opened, *Bidgood* 1852.

Street Improvements. Information on the subject of the gross and net cost incurred by the Metropolitan Board in the acquisition of property for the formation of new streets, *Sir J. Thwaites* 3104-3113—— Concurrence in the proposition that the Office of Works is not

Street Improvements—continued.

not better calculated to carry out street improvements than the Metropolitan Board or the Corporation of London; former operations of the Office of Works in the matter of new streets, *Lord John Manners* 3469-3478.

Street Nomenclature. Conclusion as to the expediency of the removal of the veto of the First Commissioner on the re-naming of the streets, *Lord John Manners* 3416-3419. 3436, 3437——Power and practice of the Metropolitan Board as to altering the names and numbers of streets in the City, *Corrie* 3888-3892.

Surrey Traffic. Very little, if any, use to be made of the proposed viaduct and road by traffic from the Surrey side of Westminster Bridge, *Sir J. Thwaites* 310-318——Uselessness of the new roadway for traffic from Belgravia or Tyburnia, or from Holborn, Smithfield, &c. for the south of the river, *ib.* 319. 359, 360.

T.

Taylor, John. (Analysis of his Evidence.)—Is surveyor to the Office of Works for the London district, 547——Statement as to a tie-bolt in Somerset House-terrace having recently fallen when some waggons were passing on a temporary railway along the Embankment, the question thus arising whether the main building may not suffer by vibration from the Metropolitan District Railway, 548-567——Increased settlement of the terrace since the formation of the Embankment, it being doubtful whether further settlement may not take place if there be vibration from the railway, 556-558. 569-571. 576-596.

Thames Embankment:

Origination in 1860 of the proposal for the construction of a Thames Embankment in connection with the low-level sewer, *Sir J. Thwaites* 53, 54——Appointment of a Select Committee of the House, and of a Royal Commission, upon the question of an embankment, the result being that a Bill was introduced in 1862 empowering the Metropolitan Board to carry out the Embankment, *ib.* 54, 55——Discretion and responsibility of the Board as to the mode of construction of the Embankment, though bound to follow a certain line, *ib.* 67-72.

Explanation that the Metropolitan Board is not responsible for the estimates of cost of the Embankment and Mansion House-street, and that for several reasons these estimates will be greatly exceeded, *Sir J. Thwaites* 75-95——Increase of expenditure by reason of the Board not having power to take the freehold of any of the properties affected, *ib.* 89——Responsibility of the Board as to the ornamental adjuncts to the Embankment, *ib.* 96-99——Charge of the expense of the Embankment upon the coal and wine dues, these taxes being borne by the inhabitants of the metropolis, *ib.* 101-111——Introduction of the original Bill or Act of 1862 for the Thames Embankment by the Office of Works, clauses having been inserted giving certain privileges to proprietors on the bank of the river, *ib.* 455.

Witness, as engineer to the Metropolitan Board of Works, is responsible for the design of the Thames Embankment and of the works upon it, *Bazalgette* 855-858.

Expediency of the principle being clearly laid down that the Thames Embankment should be utilised, *Right Honourable A. H. Layard* 1532——Circumstance of the diagonal road having formed no part of the original Embankment scheme, *ib.* 1548-1550——Less necessity for an embankment on the south side than on the north, *Bidgood* 1850, 1851.

Statement as to the Metropolitan Board having been permitted by Parliament to carry out the Thames Embankment according to their own views, save that the wall adjoining the Crown property was to be subject to the approval of the Office of Woods, *Sir J. Thwaites* 2938-2954——Credit due to the Board for the success of the Embankment, and for the construction of the wall in granite, *ib.* 2940-2942.

Probability that the Embankment would have presented a much better architectural appearance if there had been a control in the First Commissioner, *Right Honourable A. H. Layard* 3321——Exceedingly successful result through the Thames Embankment having been entrusted entirely to the Metropolitan Board, *Lord John Manners* 3403——Satisfaction expressed with the Thames Embankment, *Redgrave* 3968. 3977, 3978. 4020.

General plan of the metropolis, showing main thoroughfares in connection with the Thames Embankment and its approaches, *App.* (*First Rep.*) 138.

See also *Building Frontage. Charing Cross to Embankment. Lateral Communications. Museum of Natural History. New Law Courts. Public Building. Reclaimed Ground.*

Reports, 1869—*continued.*

Thwaites, Sir John. (Analysis of his Evidence.)—Has been Chairman of the Metropolitan Board of Works since 1855, the Board having been constituted in that year by the Act 18 & 19 Vict. c. 120; 1–6——Alteration of the constitution and powers of the Board by subsequent Acts, more especially by the Act 25 & 26 Vict. in 1862; 7–9——Numerous functions and considerable powers of the Board under the Metropolis Management Act of 1855; 10–17——Unlimited powers of the Board as to assessment, there being no appeal to any other authority, 12–17.

Explanation of the constitution of the Board, and of the practice as to the appointment and payment of the chairman and secretary, 18–33——Existence of certain vetoes in the Act of 1855 upon expenditure by the Board, it having been found necessary to remove these vetoes in 1858, chiefly through the dead lock caused by them in the matter of the main drainage, 34–52——Conclusion as to the expediency of the Board being responsible only to the ratepayers, 49.

Origination in 1860 of the proposal for the construction of a Thames Embankment in connection with the low-level sewer, 53, 54——Appointment of a Select Committee of the House, and of a Royal Commission, upon the question of an embankment, the result being that a Bill was introduced in 1862, empowering the Metropolitan Board to carry out the Embankment, 54, 55——Difference of opinion between the Metropolitan Board and the Office of Works as to the mode of disposal of the land reclaimed by the Embankment, the decision being that it should all be reserved for the public as an open space, and that none of it should be built upon, 55–58. 73, 74.

Explanation as to the Commission, of which witness was a member, having recommended a line of roadway from Wellington-street to the Embankment below Hungerford Bridge, 58–63——Conclusion of the Commissioners that Government was desirous to have a communication from Somerset House to the Embankment, 58, 59——Probability that the Commissioners would not have recommended the road in question, had they been aware that the Metropolitan Board would be instructed as to the mode of dealing with the reclaimed land, 59. 62.

Obligation upon the Board by Act of Parliament to carry out a line of street from Wellington-street to the Embankment, 64–66——Discretion and responsibility of the Board as to the mode of construction of the Embankment, though bound to follow a certain line, 67–72—— Explanation that the Board is not responsible for the estimates of cost of the Embankment and Mansion House-street, and that for several reasons these estimates will be greatly exceeded, 75–95.

Increase of expenditure by reason of the Board not having power to take the freehold of any of the properties affected, 89——Unexpected payment in respect of the Crown's interest in the foreshore, 89–92——Responsibility of the Board as to the ornamental adjuncts to the Embankment, 96–99——Charge of the expense upon the coal and wine dues, these taxes being borne by the inhabitants of the metropolis, 101–111.

Particulars relative to the line of roadway from Wellington-street to the Embankment, as first proposed by the Royal Commission, 112–124——Amended line proposed by the Metropolitan Board, opening out at the corner of the Strand, instead of in Wellington-street, and passing through the burial ground of Savoy Chapel, 123–126——Strong objections made to the proposed interference with Savoy Chapel graveyard, so that it was decided to adopt the line of roadway now before the Committee, 124–129. 142. 154, 155——Varying incline of the proposed roadway, about one-third of which would be on arches, 129–132. 159–164.

Statement as to some crescent buildings having been proposed in connection with the roadway *viâ* Savoy Chapel, to act as a screen: objections raised against this and other portions of the scheme, so that the Bill ultimately fell through, 133–155——Necessity of an Act of Parliament for the carrying out of the roadway now under consideration, 156–158——Commencement of the Embankment end of the roadway opposite Villiers-street, 161.

Statement as to the Metropolitan Board having served notices on all the parties whose property would be taken or affected by the roadway, except two, eleven notices having been issued, and four claims received, amounting to 32,874 *l.*, 164–178——Power of those served with notices to compel the Board to take the property, 172–174——Absence of any pecuniary liability in respect of the construction of the road itself, though steps have been taken for the deposit of material by the Metropolitan District Railway Company, 179–183.

Particulars as to the relations between the Railway Company and the Metropolitan Board, with reference to the construction of the railway along the Embankment; serious difficulties through the Company's want of funds, the result being an immense delay in the opening of the Embankment roadway, 184 *et seq.*——Steps now being taken by the company to obtain a financial Bill, whereby there is a prospect of funds being provided, and of the works being rapidly pushed on, 186. 209–219——Obligation upon the company to open the railway by 1st January 1870; 211–215——Sites of the company's stations on the Embankment; probabilty of the stations not being in harmony with the Embankment, 232–235. 240–243.

Reports, 1869—*continued.*

Thwaites, Sir John. (Analysis of his Evidence)—*continued.*

Advantage of some communication from the Strand to the Embankment, other than that afforded by the lateral streets, on account of the gradients of these being unsatisfactory, 244. 309——Details relative to the gradients of the several streets in lateral communication with the Embankment, 245–266——Explanation as to its not being now proposed to have any direct access from Buckingham-street to the Embankment, 270–288——Unfitness of Cecil-street for a carriage access to the Embankment, as the gradient from the bottom of the street would be one in fourteen, 280. 289–295——Statement of the width of the several lateral streets, 296–308.

Very little, if any, use to be made of the proposed viaduct and road by traffic from the Surrey side of Westminster Bridge, 310–318——Usefulness of the new roadway for traffic from Belgravia or Tyburnia, or from Holborn, Smithfield, &c. for the south of the river, 319. 359, 360——Convenience of the roadway chiefly as facilitating communication between Somerset House and the Houses of Parliament and Government Offices in Downing-street and Whitehall, 319-321.

Examination to the effect that if the new Law Courts are built at Carey-street, there will probably be an improved communication from Essex-street to the Embankment roadway, and that this would be a preferable route to that along the viaduct for persons going from the Law Courts to the Houses of Parliament, 322–354——Estimate of about 200,000 *l.* as the cost of the viaduct and road, 355–358. 426.

Failure of the Bill brought in by the Metropolitan Board for taking Northumberland House, and opening a road from Charing Cross to the Embankment, 365-367——Greater importance attached to a communication from Charing Cross to the Embankment than to the proposed roadway from Wellington-street; the former is in fact a necessity, 368–370. 406, 407——Advantage, if Northumberland House cannot be obtained, of a curved line from Charing Cross to the Embankment; calculation that the cost would be double that of the plan which involves the acquisition of Northumberland House, 371–407.

Economy in the Metropolitan Board buying properties affected by new works, and in laying out the land for building, instead of in their giving compensation for damage, 394–398——Necessity of acquiring some Crown property in forming a road round Northumberland House to the Embankment, 399–401——Unduly large compensation paid by the Board when they take Crown property, 402, 403.

Statement that there are about six acres of reclaimed land between Waterloo and Hungerford Bridges, which the Board is required to lay out as ornamental ground, but which form an excellent site for a public building, and represent in such case a probable value of 900,000 *l.*, 408–429——Effect of the proposed viaduct and road greatly to diminish the value of the reclaimed land, if available, for building purposes, 430–436——Injurious effect of the viaduct and road as regards the reclaimed land, if converted into ornamental grounds and planted, 437–450.

Statement on the question of the Metropolitan Board being empowered to build upon a certain portion of the reclaimed land, 451–454——Introduction of the original Bill, or Act of 1862, for the Thames Embankment by the Office of Works, clauses having been inserted giving certain privileges to proprietors on the bank of the river, 455——Information relative to the privileges conferred by section 53 of the Act of 1862 in the case of the Duke of Northumberland; that is, by giving him a right to certain building frontage created at the expense of the Metropolitan Board, 456–484. 519——Exceptional character of the prohibition in the Act of 1862 upon the Metropolitan Board taking land fronting the roadway and re-selling it when built upon, 458–469. 471–484.

Similar privilege given by the Act 25 & 26 Vict. c. 93 to the Marquis of Salisbury, the Duke of Norfolk, and other proprietors as to the Duke of Northumberland, as regards the right to building frontage along the Embankment roadway, 471–474. 519——Positive improvement of the chief portion of Lord Salisbury's property by the substitution of the roadway for the river, 475, 476.

Comment upon the cession of the reclaimed land to the Crown, such land, which was valueless as foreshore, having been rendered worth several hundred thousand pounds by the works constructed at the cost of the metropolitan ratepayers, 479. 485–509——Heavy claims upon the Metropolitan Board for compensation to Crown tenants, notwithstanding the great value conferred upon the foreshore, 500–504. 511–515——Further statement relative to the payment of 27,000 *l.* to the Crown in respect of the right of making the Embankment, 505–510. 516–518.

Witness reads to the Committee the several sections of the Act 25 & 26 Vict. c. 93, shewing in detail the restrictions upon the Metropolitan Board in respect of the reclaimed land, and the privileges conferred upon the different proprietors, 519——Detailed provisions in the Act of 1862 relative to the Crown land, or reclaimed land, showing the restrictions imposed upon the Board in respect thereof, *ib.*

Further reference to the opposition which caused the abandonment of the crescent buildings; explanation that it was proposed to put these houses at the back of the road-

Reports, 1869—*continued.*

Thwaites, Sir John. (Analysis of his Evidence)—*continued.*

way, 520. 546——Proposal by the Board to purchase Adelphi Terrace, and to resell it eventually, 521–534——Advantage generally of the principle of purchasing properties, and of reselling them, rather than of compensating the different interests, 529–534.

Obligation upon the Metropolitan Board to proceed with the acquisition of the properties, respecting which notices have been issued as being required for the proposed viaduct from Wellington-street, 535, 536. 545——Claim of the Board to indemnification at the hands of Parliament, as regards the liabilities already incurred, if it be now determined to suspend the construction of the viaduct, 537–544——Adverse feeling of the Board with respect to the viaduct, the opinion being that the money might be more profitably spent elsewhere, 546.

[Second Examination.]—Statement of the gradients of certain streets in the Metropolis, as bearing upon the question of the gradients of the Embankment approaches, 1138–1143——Amended estimates of the cost of an approach by a curved road round Northumberland House, and of a road going through Northumberland House; net cost of 400,000 *l.* in the former case as against 200,000 *l.* in the latter, 1143–1155——Advantage if the narrow part of Charing Cross were widened; suggestion that the expense be defrayed out of Imperial funds, 1156–1161.

Steep gradient of Essex-street; improvement feasible by taking the houses on each side of the way, and reconstructing the street, 1162–1165——Impracticable character of the gradient from the end of Norfolk-street to the Embankment, 1166, 1167——Consideration of the means of access to the railway and to the Embankment roadway, *viâ* Essex-street or Norfolk-street; relative importance of such access to the Embankment, and of access by the Wellington-street viaduct, 1168–1175. 1245, 1246. 1269–1284. 1375. 1412. 1416–1424——Hardship on the ratepayers in being called upon to provide expensive approaches to new railway stations in the Metropolis, 1171. 1173. 1322.

Particulars relative to the steps proposed to be taken in respect of certain land reclaimed and of land to be purchased east of the Temple Gardens; uncertainty at present as to the erection of buildings on some of this land, 1176–1201——Grounds for the statement that Government showed themselves desirous of a communication by the Embankment from Somerset House to the Houses of Parliament, 1202–1204——Further statement as to the extent to which the traffic along the Strand, &c., would be relieved by the Wellington-street viaduct, 1205–1209. 1416–1424——Facility of providing access from Somerset House to the Embankment by means of steps, 1210, 1211.

With regard to certain holes or depressions in some land belonging to the Duchy of Lancaster, these will probably be filled up and built upon, 1212–1217. 1259, 1260——Belief that the land between Hungerford Bridge and Waterloo Bridge is in every sense a most eligible site for a public building, 1218–1223——Very little difference in distance between the corner of Wellington-street and the Admiralty *viâ* the Strand and *viâ* the proposed roadway on the Embankment, 1224, 1225.

Exceptions taken to the roadway and viaduct on account of the gradient at which it rises; that is, as being a disfigurement, 1226–1229. 1252–1258. 1340——Statement to the effect that the arches will be concealed by buildings, 1230–1240——Conditional approval of the proposed road as being a relief to the traffic, the chief objections being that it depreciates the value of the land for building purposes, and for recreation purposes, 1241–1244. 1250, 1251. 1349–1351——Great convenience if the traffic from the west had a direct access to the Embankment at Northumberland House, instead of going by Whitehall-place or down Craven-street, 1247–1249. 1453, 1454.

Statement with further reference to the dead-lock which occurred in the matter of the main drainage plans by reason of the veto exercised over the Metropolitan Board by the First Commissioner of Works, 1261–1268——Expediency of facilities of access to the Embankment by way of Essex-street if the Law Courts are to be placed on the Carey-street site, 1269–1284——Examination to the effect that in the interests of the ratepayers the whole of the land reclaimed by the Embankment should not be converted into recreation grounds, it being desirable that a portion be utilised for buildings, 1285–1309. 1312–1321. 1323–1337. 1363–1374.

Explanation and approval of the arrangement by which there is only a footway on the Embankment in front of St. Thomas's Hospital, the roadway being in the rear, 1310, 1311——Re-arrangement of the ground if the viaduct and road be abandoned, the system of mounds having been adopted as a screen, 1338–1348——Serious interference of the road with the laying out of the ground for recreation purposes, 1349–1352——Steps taken for continuing Whitehall-place on to the Embankment, irrespective of access by way of Northumberland House, 1355–1360.

Provision made in regard to certain reclaimed land east of Somerset House being preserved as an open space, 1363–1374——Check retained by the Metropolitan Board as to the architecture of houses built upon land disposed of by the Board, 1378–1384——Removal of the chief reason for the proposed crescent if the road from Wellington street be abandoned, 1385, 1386.

Further

Reports, 1869—*continued.*

Thwaites, Sir John. (Analysis of his Evidence)—*continued.*

Further representation as to the liability of the Metropolitan Board for compensation claims in respect of the proposed viaduct, and as to the expediency of their being at once relieved from all responsibility by Parliament, that is, if the scheme is to be given up, 1386-1388——Statement as to the Board being unprovided with funds for carrying out an approach from Charing Cross to the Embankment, whereas such approach is essential, 1388-1397——Inability at present of the Board to build the crescent on the reclaimed land, 1398-1400.

Question considered as to the relative height of any public buildings on the reclaimed land and of the existing buildings facing the river, 1401-1407——Expectation that the full value of the site will be paid over to the Metropolitan Board, if a public building be erected, 1408-1411——Contemplated access to the Embankment from Parliament-street by way of Derby-street, 1426, 1427. 1441-1443.

Statement as to the open space still available east of Hungerford Bridge if a public building be erected on that site, 1431-1436——Anticipated improvement in course of time in the architecture of the houses fronting the Embankment, 1437——With regard to the widening of Essex-street, the Metropolitan Board consider that this expense should not fall upon them, 1439, 1440——Explanation in connection with the abandonment of the approach through Whitehall Yard, 1444-1452.

[Third Examination.]—Further representation as to the claim of the Board to adequate payment from the Crown or from Parliament in respect of a site on the reclaimed land for public buildings, 1560-1564.

[Fourth Examination.]—Statement as to the Metropolitan Board having been permitted by Parliament to carry out the Thames Embankment according to their own views, save that the wall adjoining the Crown property was to be subject to the approval of the Office of Woods, 2938-2954——Credit due to the Board for the success of the Embankment, and for the construction of the wall in granite, 2940-2942——Absence of control over the Board as to the mode of construction of its works generally, the taxpayers' impatience of taxation being an ample check upon the expenditure, 2955-2963.

Control of the Government in the case of all public works in the metropolis, the expense of which is voted by Parliament, 2964-2968——Control also of Government in the matter of ornamentation works, such as statues, railings, &c., the Metropolitan Board having no power to interfere, 2969-2978—— Evidence in detail as to the want of control in Government or in the Metropolitan Board as regards railway structures in the metropolis, the result being that stations, bridges, &c. are erected which are a great disfigurement and a great public inconvenience, 2979-3045.

Limited extent to which the architecture of gas and water works in the metropolis is under regulation by Parliament, 3046-3049——Favourable anticipations as to the ornamental character of St. Thomas's Hospital, though under no control by Government, or the Metropolitan Board, 3050-3060——Regulation by the Building Act of all buildings, except Government buildings and railway buildings, the control being exercised by the Metopolitan Board through its district surveyors, 3061-3068.

Conclusion that there should be a general and extended control over buildings, &c., and that such control should be vested in the municipal body, 3069 *et seq.*——Special reasons for vesting the proposed control in the Metropolitan Board instead of in a Government department, 3070——Objection to any Government control unless there were a contribution by Government towards the municipal burdens, 3070, 3129——Grievance if the municipal body in the metropolis were not allowed the same control in local matters as is freely allowed to the municipalities in Liverpool, Glasgow, &c., 3070. 3125-3130. 3134-3142.

Statement showing that in Paris, where the control over buildings, &c. rests with the State, there are large Imperial contributions for municipal purposes, 3070-3084——Dissent from the view that there is any fear of the majority of the members of the Metropolitan Board being elected with reference solely to an economy of rates and of expenditure, and without due regard to matters of taste and ornament, 3090-3096. 3114, 3115——Difficulty experienced by the Board in raising money for improvements; large and recent increase, however, in the rateable value of the metropolis, the ratepayers being quite capable of carrying out the required works, 3096-3103.

Information on the subject of the gross and net cost incurred by the Board in the acquisition of property for the formation of new streets, 3104-3113——Limited sense in which there was formerly any control or veto in Parliament over the expenditure of the Board, there having been, however, a certain veto in the First Commissioner of Works, 3115-3124——Abolition by Act in 1858 of the right of veto upon the expenditure of the Board, it having been found mischievous, 3118-3121.

Details in further support of the conclusion that the Metropolitan Board, as the representatives of the ratepayers, are the proper body to exercise control in the case of railways, semi-public buildings, &c., 3125 *et seq.*——Consideration of suggestions for the formation of a board of advice or committee of taste, in connection with the Office of

Reports, 1869—*continued.*

Thwaites, Sir John. (Analysis of his Evidence)—*continued.*

Works, and including the chairman of the Metropolitan Board, for exercising an extended control over works and buildings in the metropolis; sundry objections thereto, 3131 *et seq.*

Expected want of harmony and conflict of opinion at the proposed board of advice, 3131-3133. 3159-3181——Expediency as regards the public buildings in the metropolis, of due control on the part of Government in the matter of railways, &c., 3135-3151. 3242——Suggestion that all promoters of Bills be required to deposit plans in the Office of Works, 3151——Unsatisfactory result of the control formerly exercised by the Office of Works over the Metropolitan Board, 3152-3154——Very general satisfaction hitherto with the work carried out by the Metropolitan Board, 3182.

Insufficient weight attached to the representations of the Board in the matter of railway bridges, &c., as in the case of Southwark-street and of Ludgate-hill, 3183, 3184. 3193-3198——Very satisfactory relations now existing between witness and the First Commissioner of Works, 3185——Approval of the First Commissioner being an ex officio member of the Metropolitan Board, 3186——Improbability of Committees of the House attaching any great weight to the recommendations of a board of advice, 3188-3198.

Importance of the direct responsibility of the body elected directly by the ratepayers, 3199, 3200. 3220——Conclusion that the Metropolitan Board, as the representative body in the metropolis, should have control not only as to the works carried out by themselves, but as to works carried out by railway companies, &c., 3201-3209——Very able professional officers attached to the Board, besides which the Board is constantly seeking the advice of first class men in every profession; it may well be entrusted, therefore, with a general control in architectural and engineering matters, 3210-3219.

Examination to the effect that witness does not object to increased control in the Board of Trade on the subject of railways, as regards engineering questions, nor to an architectural control in the Board as to the elevations of railway bridges, 3220-3227. 3233——Decided objection, however, to the formation of any body, irrespectively of the Metropolitan Board, for exercising architectural control in the case of semi-public works, gas works, &c., 3223-3237. 3242——Advantage of the Metropolitan Board being assisted by the Office of Works in controlling the erection of gas works, so long as there is no undue control in the First Commissioner, 3233-3237.

Objection to any power of interference in the First Commissioner when matters are in dispute between the Metropolitan Board and the City Corporation, 3238, 3239——Uselessness of a council or board of advice as a means of preventing the dead lock in the case of the Metropolitan District Railway and the Embankment, 3240, 3241——Limited extent to which it is desirable that any architectural control should be exercised by the Metropolitan Board over private buildings, 3243-3256——Necessity of the judicious exercise of any control in the case of semi-public buildings, such as railway structures, hospitals, &c., 3254. 3257-3259.

Concurrence to some extent in the Report of the Royal Commission on the Royal Academy in 1863, in which a permanent council of advice is suggested as an aid to the First Commissioner on questions relating to public buildings and monuments in the metropolis, 3260, 3261.

Traffic. Conditional approval of the proposed road as being a relief to the traffic, the chief objections being that it will depreciate the value of the land for building purpose and for recreation purposes, *Sir J. Thwaites* 1241-1244. 1250, 1251. 1349-1351——Grounds for the conclusion that the proposed viaduct and roadway from Wellington-street to Hungerford Bridge may well be dispensed with as regards the traffic to be accommodated, *Right Hon. A. H. Layard* 1455-1466. 1508, 1509. 1541-1544——Great inconvenience to the crowded traffic at the corner of Wellington-street and the Strand if a new street to the Embankment were to be opened out at that point, *White* 1578-1582. ——Absence of any local demand for the proposed roadway, *ib.* 1642-1644——Very limited usefulness of the road with reference to traffic, a communication from Charing Cross to the Embankment being infinitely more important, *Bidgood* 1719 *et seq.*

Conclusion of the Committee that the proposed roadway would not give an approach to the Embankment from the districts lying west and north-west, *First Rep.*, iv.

See also *Charing Cross to Embankment. Strand. Westminster Bridge.*

V.

Ventilating Shafts (Metropolitan Railway). Consideration of the sites proposed and agreed to for ventilating shafts between Charing Cross and Waterloo Bridges, with reference to the depreciation caused thereby in the value of the reclaimed land as the site for a public building, *Bazalgette* 908 *et seq.*——Curtailment by the Metropolitan Board of the size of the ventilation openings, *ib.* 911-915——Obstacle to reducing the number, or altering the sites

Reports, 1869—*continued.*

Ventilating Shafts (*Metropolitan Railway*)—continued.

sites of the openings, without interference with the necessary requirements of the railway, *Bazalgette* 916. 923. 939-943. 956. 967-971. 978-980——Way in which it was proposed to deal with the ventilation openings in the event of the Crescent-buildings formerly proposed having been carried out, *ib.* 958-966.

Particulars relative to the extent and character of the ventilation proposed at Bridge-street and Charing Cross Stations and at other points, *Fowler* 1079-1101. 1123——Willingness of the company to adopt any modifications which may be feasible in order that the ventilating shafts may not interfere with the value of the land if used for a public building, *ib.* 1102-1106. 1124-1126. 1130, 1131.

Vibration (*Metropolitan District Railway*):

Statement as to a tie-bolt in Somerset House-terrace having recently fallen when some waggons were passing on a temporary railway along the Embankment, the question thus arising whether the main building may not suffer by vibration from the Metropolitan District Railway, *Taylor* 548-567——Increased settlement of the terrace since the formation of the Embankment, it being doubtful whether further settlement may not take place if there be vibration from the railway, *ib.* 556-558. 569-571, 576-596.

Consideration of the effect generally of the vibration of railways upon adjacent buildings, the conclusion being that certain precautions are very desirable if the Law Courts are to be built on the Embankment, near the Metropolitan District Railway, *Hawkshaw* 597 *et seq.*——Information relative to the use of peat and other soft substances as a means of deadening the vibration produced by railways; limited value attached to this contrivance, *ib.* 599-612. 639-650. 660-665.

Statement explanatory of the amount and character of the vibration produced in the Westminster Palace Hotel by the trains on the adjacent railway underground, *Hawkshaw* 613-627. 653-659. 671-673. 677-679. 684-688. 690-692——Conclusion that the Law Courts should not be nearer the railway than 100 feet, though by taking the foundations very low down it may be safe to place them within fifty feet, *ib.* 620. 629 *et seq.*——Absence of vibration in the Clock Tower of Westminster Abbey, *ib.* 620. 631. 651.

Statement to the effect that witness is not prepared to express any decided opinion upon the question of the vibration to be produced by the railway running along the Thames Embankment, but he considers an investigation of the subject very desirable, *Percy* 708 *et seq.*——Inconvenience rather than injury likely to result from vibration as regards adjacent buildings, *ib.* 721-733.

Witness considers that Mr. Hawkshaw has an exaggerated view of the effect of vibration as produced by railways, and submits in detail reasons for the conclusion that the Law Courts if built on the Embankment, near the Metropolitan District Railway, will not suffer any injury thereby, *Gregory* 734 *et seq.*——Advantage of ballasting with sand or gravel as a means of checking the vibration from railways; objection to peat for the purpose, *ib.* 752-760. 767-771——Statement showing that no vibration is felt in the Clock Tower of Westminster Abbey from the trains on the adjacent railway, some ninety feet off, *Fergusson* 803-810——Belief that though inconvenience might arise there would be no structural danger from building the New Law Courts on the Embankment near the Railway, *ib.* 811-816.

Witness considers that if the New Law Courts be built on the Thames Embankment certain precautions are very desirable in order to guard against the vibration and noise from the trains on the Metropolitan District Railway, *Adams* 817 *et seq.*——Weight and speed of the trains on the proposed railway, there being less vibration according as the speed is slackened, *ib.* 828-833. 838-845——Objection to the use of peat as a means of preventing vibration, *ib.* 834-837.

Conclusion that a public building may be erected on the Embankment, in proximity to the Underground Railway, without injury from vibration, and without much inconvenience from noise, *Bazalgette* 859 *et seq.*——Advantage of an open area round the building as a precaution against vibration, *ib.* 872-875——Further precaution if the railway be ballasted with sand, *ib.* 876-883.

Witness has had extensive experience in reference to the vibration caused by railway trains, and cites sundry data for the conclusion that there need not be the slightest fear of structural risks by placing the New Law Courts in close proximity to the railway along the Embankment, *Fowler* 988 *et seq.*——Explanation relative to the use of peat in carrying the railway near Westminster Abbey in order to deaden the vibration, *ib.* 994-1008——Approval of an open space or area round a public building on the Embankment as a precaution against vibration, *ib.* 1008, 1009. 1017.

Statement as to the absence of vibration on the first floor of the Westminster Palace Hotel, although the trains run close by, *Fowler* 1011. 1030-1033——Approval of gravel ballast for the railway as a precaution against vibration, *ib.* 1018, 1019——There is no necessity for a distance of 100 feet or of fifty feet between a public building and

Reports, 1869—*continued*

Vibration (*Metropolitan District Railway*)—continued.

the railway, *Fowler* 1022——Experience derived from the construction and working of the present underground railways in London adverted to, as proving that houses may be built in immediate proximity and even over the railway without injury from vibration, *ib.* 1035–1067.

Joint conclusion of Mr. Fowler and witness that no injury need be apprehended on the score of vibration, *Waterhouse* 2784–2789.

Villiers-street. Statement relative to the gradient of Villiers-street, *Sir J. Thwaites* 263–266. 297–301——Intention of the Metropolitan Board to make an approach from Villiers-street, even though the diagonal road be made, *Creasy* 2752, 2753.

W.

Walker, Superintendent. (Analysis of his Evidence.)—Conclusion as to the great increase of difficulty in regulating the traffic to and from Westminster Bridge, at the corner of Bridge-street, if the traffic along the Embankment from the north and east is to emerge at this point, 2907–2915. 2931–2934——Statistics showing the very large traffic over Westminster Bridge, distinguishing between vehicles and foot passengers, 2914, 2915——Statement in strong approval of an approach to the Embankment from Parliament-street by way of Derby-street; important relief thereby to the traffic at Bridge-street, 2916–2919. 2924–2930. 2935–2937——Necessity of an approach to the Embankment from Charing Cross, 2920, 2921——Expediency also of a communication at or near Essex-street, 2922, 2923.

Waterhouse, Alfred. (Analysis of his Evidence.)—Was selected by the First Commissioner of Works, in 1866, as the architect to carry out Captain Fowke's plan of a Natural History Museum at South Kensington; has recently been in communication with the Office of Works upon the question of erecting the Museum on the Embankment site, 2455–2463——Approval by the British Museum trustees of the modified plans prepared by witness for the Museum, as proposed at Kensington, 2460, 2461——Facility of adapting witness's plans to the Embankment site between Waterloo and Hungerford Bridges; detailed explanations to this effect, 2464 *et seq.*

Means of providing for a road at the back of the proposed building, 2464. 2477–2481——Decided preference for a site on the Embankment as compared with South Kensington, 2465, 2466——Suggestions and explanations as to the architecture and general arrangements of the proposed Museum on the Embankment, as to the utilisation of the adjacent ground, and as to the approaches from the Strand, &c., 2467 *et seq.*

Estimates of cost of a Museum on the Embankment and at South Kensington, there being a saving of about 100,000 *l.* in the latter case, 2603–2622——Increased expense of a site on the Embankment by reason of the greater depth necessary for the foundations, 2622–2628——Increased cost also by reason of the greater elevation proposed for a building on the Embankment site, 2628. 2642–2644——Modification by witness of the original design of Captain Fowke further adverted to and explained, 2639–2641.

[Second Examination.]—Recent interview between witness and Mr. Fowler, when it was shown that the railway need be no obstacle to the carrying out of witness's plan for a Museum on the Embankment site, 2782, 2783——Joint conclusion of Mr. Fowler and witness that no injury need be apprehended on the score of vibration, 2784–2789.

Witness explains in detail a further plan for the proposed Museum, and for the approaches, the buildings in the rear, &c., the estimated cost being 603,000 *l.*, 2790 *et seq.*——Question as to the utilisation of the basement of the proposed building, the basement also being important as giving elevation and dignity to the Museum, 2822–2831.

Consideration of a proposal for placing the Museum on the high ground now covered with buildings between Villiers and Adam-street, down to the front of Adelphi-terrace; sundry objections thereto on the whole, though the plan is not without some advantages, 2832–2850. 2868 *et seq.*——Necessity under No. 3 of witness's plans, of taking a portion of Adelphi-terrace, as well as other house property, 2851–2861.

Very little valuable property required to be taken under witness's No. 1 plan, 2862–2867——Important advantages of plan No. 1; facilities in connection therewith for the provision of recreation-ground, 2884–2895. 2900–2902——Conclusion as to the bad foundation of the houses on Adelphi-terrace, 2896–2899——Different level of the streets at the Howard-street site on the Embankment, and at the site near Adelphi-terrace, 2903–2906.

Westminster Bridge. Intended communication from Westminster Bridge to the Embankment by a carriage-road 100 feet wide, which is to run all along the Embankment, *Sir J. Thwaites* 1429, 1430.

Conclusion

Reports, 1869—*continued.*

Westminster Bridge—continued.

Conclusion as to the great increase of difficulty in regulating the traffic to and from Westminster Bridge at the corner of Bridge-street, if the traffic along the Embankment from the north and east is to emerge at this point, *Walker* 2907–2915. 2931–2934—— Statistics showing the very large traffic over Westminster Bridge, distinguishing between vehicles and foot passengers, *ib.* 2914, 2915.

See also *Derby-street.*

White, Rev. Henry, M.A. (Analysis of his Evidence.)—Is chaplain of Savoy Chapel, 1565 ——Has taken an active part, on public grounds, in opposing the formation of the projected road from Wellington-street to Hungerford Bridge, 1566–1569—— Strong objection to the road as greatly deteriorating the value of the reclaimed land, as being unsightly, and as providing but little facility for traffic, 1569–1574. 1583, 1584—— Conclusion favourable to the erection of a Natural History Museum on the reclaimed land, with terraces and ornamental grounds in front; examination hereon as to the advantages of this scheme in the interests of the working classes, rather than of preserving the reclaimed land as an open space, 1575–1577. 1585–1604. 1658 *et seq.*

Great inconvenience to the crowded traffic at the corner of Wellington-street and the Strand if a new street to the Embankment were to be opened out at that point, 1578–1582——Statement in support of the conclusion that the projected road would be a great injury to the Savoy, without conferring any compensating benefit, 1605–1637—— Explanation as to witness having at one period agreed to a roadway from Wellington-street, diverted so as not to interfere with the Savoy, whereas he now is opposed on public grounds to any such road, 1619–1641. 1649–1657——Absence of any local demand for the proposed roadway, 1642–1644——Advantage of several lateral communications with the Embankment rather than of a large approach from any narrow part of the Strand, 1646–1648.

Whitehall Gardens. Explanation as to the proposed appropriation of certain reclaimed land to the houses in Whitehall Gardens, *Pennethorne* 2126–2130.

Whitehall Place. Steps taken for continuing Whitehall Place on to the Embankment, irrespectively of access by way of Northumberland House, *Sir J. Thwaites* 1355–1360; *Creasy* 2747.

Whitehall Yard. Explanation in connection with the abandonment of the approach through Whitehall Yard, *Sir J. Thwaites* 1444–1452——Proposal by one plan for an approach to the Embankment opposite the Horse Guards, *Pennethorne* 1902–1905. 1995–2000.

REPORT

FROM THE

SELECT COMMITTEE

ON

INCLOSURE ACT;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
7 *July* 1869.

Tuesday, 20th April 1869.

Ordered, THAT a Select Committee be appointed to inquire whether the provisions of the Inclosure Act 8 & 9 Vict. c. 118, so far as they relate to the Labouring Poor, have been duly carried out in the Inclosure Bills annually brought before Parliament, and further to inquire whether, in order properly to protect the interests of the Public, the Act 8 & 9 Vict. c. 118, requires Amendment, in respect to the provisions for places of Public Recreation and for Allotments for the Labouring Poor.

Monday, 26th April 1869.

Ordered, THAT the Select Committee on Inclosure Act do consist of Seventeen Members.

Committee nominated of—

Mr. William Cowper.
Sir Michael Hicks Beach.
Mr. Knatchbull-Hugessen.
Colonel Barttelot.
Mr. Vernon Harcourt.
Lord George Hamilton.
Mr. Thomas Chambers.
Mr. Knight.
Mr. Leveson-Gower.
Mr. Liddell.
Mr. Pease.
Mr. William Lowther.
Mr. Andrew Johnston.
Mr. Walsh.
Mr. Philip Wykeham Martin.
Mr. Peek.
Mr. Fawcett.

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Wednesday, 7th July 1869.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

PROCEEDINGS OF THE COMMITTEE - - - - - p. vii
MINUTES OF EVIDENCE - - - - - - - - p. 1
APPENDIX - - - - - - - - - - - - p. 125

REPORT,

THE SELECT COMMITTEE appointed to inquire whether the Provisions of the INCLOSURE ACT, 8 & 9 Vict. c. 118, so far as they relate to the LABOURING POOR, have been duly carried out in the INCLOSURE BILLS annually brought before Parliament; and further to inquire whether, in order properly to protect the interests of the Public, the Act 8 & 9 Vict. c. 118, requires amendment in respect to the provisions for PLACES of PUBLIC RECREATION and for ALLOTMENTS for the LABOURING POOR;——Have considered the matters to them referred, and have agreed to the following REPORT:

1. IT appears from a Return made by the Inclosure Commissioners, that 614,800 acres have been inclosed, or have been ordered to be inclosed, since the passing of the General Inclosure Act in 1845, and that three-fifths of this acreage, or 368,000 acres, may be assumed to be waste of a manor, or subject to rights of common, not limited by number or stints, and subject to the provisions of the 30th and 31st sections of the Act of 1845. In the appropriation of public allotments, out of these 368,000 acres, 2,223 acres have been appropriated as allotments for the labouring poor, and 1,742 acres for purposes of recreation for the inhabitants of the neighbourhood. This estimate of three-fifths, it will be observed, is based upon an assumption. The Inclosure Commssioners appear to have kept no separate account from which the quantity of land inclosed, which is subject to public allotment under the Act of 1845, can be readily ascertained. This assumption must, therefore, be regarded as merely a rough estimate.

2. With reference to allotments for the labouring poor, the inclosures in which the Commissioners had power to set out such allotments, and have not done so, have been estimated by Mr. Tremenheere at 89,791 acres. The reasons given in the Reports of the Commissioners, in cases where they have made no allotments are, that the labouring poor have cottage gardens, or that the land to be inclosed is distant from the dwellings of the labourers, is elevated or otherwise unsuitable for the purpose, or that the extent of the inclosure is very small.

3. The questions your Committee had in the first instance to consider were, whether the extent of public allotments so appropriated was sufficient, and whether they have been set out in positions as convenient as circumstances would admit. But these questions could only be determined by ascertaining the wants of the neighbourhood and the qualities of the land in each individual case of inclosure, and would involve inquiries into the number of persons coming under the designation of labouring poor residing, or likely hereafter to reside, at convenient distances, and into the extent of garden ground obtained from other quarters; into the probability of every family being provided with an allotment; into the future capacities of the land after it has been broken up; into the number of people who may be expected to resort to the recreation-grounds, and into other minute circumstances, which are far beyond the means of any inquiry which your Committee could have instituted within a reasonable time. It must be borne in mind that the extent of the diminution of private rights in each case should be taken into account in determining the extent of public allotments. The Commissioners have not fettered their discretion, in each individual case, by laying down any general rule by which the exercise of that discretion could be tested. Your Committee are, therefore, not able to pronounce any general opinion as to the sufficiency or insufficiency of the public allotments which have been made by the Commissioners since the year 1845.

4. The attention of your Committee has been called to some instances in

which only one or two acres have been appropriated for exercise and recreation, as the smallness of the area naturally suggests its unfitness for the purpose intended.

5. Upon one of these cases, that of Withypool, we received the evidence of two of its inhabitants. The Assistant Commissioner, Mr. Wetherell, stated in his evidence that he apart the small extent of an acre, out of the 1,904 acres of common which are to be inclosed, because a larger amount would not be used; because the population never resort to the common for exercise and recreation; Q. 676. because there are other commons where the children and grown-up people can Q. 627. rove about, and because the ground is steep. This recreation-ground he intended specially as a play-ground for the children of the school. On the other hand, the parish clerk and the schoolmaster testified that the common is a general resort of the inhabitants for exercise, for games, and for the meetings of their friendly societies; that there is no other common within five or six miles to which the public are allowed free access; that one acre is not sufficient either for the children or the adults; that seven acres equally suitable are adjoining, and that there is much dissatisfaction among the inhabitants at the small extent set apart for recreation, which finds vent in the remark that when the common is inclosed they will be as badly off as in a town, and will not have even the accommodation Q. 1508. which they would get in a town in the way of recreation-ground. The information obtained by the Assistant Commissioner, and on which he acted, appears to your Committee to have been incorrect. Of the cases included in the Inclosure Bill, No. 1, of the present Session, the only instance in which your Committee have obtained local information as to the special circumstances is that of Withypool; and your Committee are of opinion that the recreation-ground allotted in this case is insufficient, but as no complaints have reached your Committee respecting the other inclosures dealt with in the said Bill, your Committee have not taken evidence in those cases

6. Your Committee would here observe, that in cases where the population of a parish or village have been in the habit of wandering over such a common as that in question, the setting-out of one, five, or ten acres as a "recreation-ground," by no means compensates them for the loss which they sustain by the inclosure. Upon such an allotment games may be played or meetings held; but the people are deprived of other advantages which they derive so long as the common is open. It seems desirable that in all such cases provision should be made by the Inclosure Commissioners to secure to the population such rights of way or other privileges over the common as may, as far as possible, diminish their loss of enjoyment.

7. Your Committee have also inquired into the operations of those provisions of the General Inclosure Act, which relate to public allotments, and into the steps usually taken by the Commissioners and Assistant Commissioners to give effect to them, and are of opinion that some amendments are required. At the meetings held by the Assistant Commissioner to hear objections to the proposed inclosure, and to receive information and evidence, it frequently happens that while those who claim profitable rights in the waste attend, the interests of the public and the labouring poor are not represented, or their claims urged in diminution of the extent of land to be allotted in severalty. This may arise not only from want of care on behalf of the public and the labouring poor, but also from want of effectual publicity having been given to the time and place and objects of the meeting, from want of knowledge of the provisions of the statute, and from an apprehension that persons not having legal rights of common may not be heard in respect to these matters. Your Committee have reason to believe that Mr. Wetherell, the Assistant Commissioner, who appeared before us, has generally put himself in the position of the advocate of the public and the labouring poor, and that he has shown an earnest desire to discharge effectually this as well as the other branches of his duty. Your Committee are, however, of opinion that a full and accurate knowledge of the wants and wishes of the labouring poor, and such local information as would enable him to determine what is required on their behalf, has not always been acquired by the Assistant Commissioner under the present system of inquiry. The Commissioners sitting in London can have few opportunities of obtaining local information by other channels than the Reports of the Assistant Commissioners.

8. Your Committee are of opinion that the Reports of the Commissioners presented to Parliament should contain more precise and minute statements of the information on which they have framed the Provisional Orders, such as the population

population of the neighbourhood, the number of persons attending the meetings, the distance of the waste or common land from the towns and villages within reach, the particulars of any other ground available for recreation, and of other cottage gardens and field allotments, and any other details calculated to enable Parliament to judge of the grounds on which the enactments of the Provisional Orders relating to the public allotments are based.

9. Your Committee also recommend that the notices of meeting given by the Assistant Commissioner should specify amongst the purposes of the meetings that of hearing information or evidence relating to the appropriation of recreation-grounds and of garden allotments for the labouring poor, and that such notices should be posted in other public places besides the outer doors of the parish churches, and should be given by the distribution of handbills where practicable, and that ample time should be given by such notices for the meeting being made known before it takes place.

10. Although no limit has been imposed in the Act on the quantity of land to be appropriated as allotments for the poor, the 30th section restricts the maximum quantity of land for purposes of exercise and recreation according to a scale varying with the population of the parish. This criterion is inapplicable in cases in which the boundaries of the manor are not conterminous with the boundaries of the parish, and in which a considerable portion of the population that resort to the common are resident in a contiguous parish. This restriction must frequently fetter injuriously the discretion of the Commissioners, and your Committee recommend that it be abolished.

11. By the 109th section of 8 & 9 Vict. c. 118, the allotment wardens are restricted from letting the allotment under their management in gardens exceeding a quarter of an acre. It has been suggested that this maximum quantity should be increased to half an acre. Your Committee are of opinion that in many cases this increase would not be beneficial to the labourer, to whom the value of an allotment must depend upon its accessibility and its proximity to his dwelling, and the employment upon it of his surplus labour, and that of his family. An allotment of a size which might tempt him either to neglect his ordinary duties for the sake of its cultivation, or to keep his children from school in order to avail himself of their labour, would often prove an injury instead of a benefit; still, as cases occasionally arise in which a larger allotment than a quarter of an acre may be desirable, and as the tendency of the allotment wardens in this respect is unlikely to be towards excess, your Committee recommend that the maximum quantity which may be allotted by the allotment wardens be extended to half an acre in cases in which the quarter acre allotments are not all appropriated in separate tenancies to the labouring poor. Your Committee also recommend that the Commissioners should have power to order that the expenses of clearing the allotments for the labouring poor should be included in the expenses of the Act.

12. Many cases exist in which the recreation-grounds and the allotments for the labouring poor might advantageously be exchanged for other lands nearer to the dwellings of those who would use them, but the power of exchange can at present be rarely exercised, and your Committee recommend that exchanges may be made in consideration of the quality and value of lands to be exchanged, as well as to their area.

13. In the inclosure of Swaffham Heath, which is close to and surrounds the town, the recreation-ground was placed at a distance of two miles from the town, and the labourers' allotment at a mile and a quarter, because the part of the heath which was included in the Provisional Order, and which is close to the town, was subject to limited and stinted rights, and was not therefore included within the provisions of the 30th section. In order to obviate the recurrence of similar inconvenience, your Committee recommend that in cases of inclosure in which open field lands are comprised in the same inclosure with the waste of a manor, the Commissioners may have powers of exchange, by means of which the public allotments may be assigned in convenient places, without detriment to the rights of the lord or the commoners. The Commissioners should mention in their Reports to Parliament the measures they have taken to effect exchanges of public allotments, and the causes of the failure when such measures have not been successful.

14. It has been given in evidence before your Committee, that the provision of

the Act which orders the allotment wardens to let the allotments to the labouring poor at a fair agricultural rent is frequently disregarded. It has been stated that the rent actually charged often exceeds the fair agricultural rent, and in some cases by three or four times the amount.

15. Your Committee recommend that the Inclosure Commissioners should be authorised to require the trustees of the recreation-ground and the allotment wardens to furnish every three or five years reports of the state of the land, and the rents paid by the tenants under their management.

16. By sections 73 and 112 of the Act of 1845, the residue of the rents arising from recreation-grounds and allotments are directed to be applied in aid of the highway and poor rates of the parish.

17. Your Committee are of opinion that such an appropriation is unsatisfactory, and that such residue might in some cases be employed in improving or fencing the ground, or in hiring or purchasing land, either larger in extent or more conveniently situated.

18. Your Committee, therefore, recommend that further powers should be vested in the churchwardens and overseers, and in the allotment wardens, to enable them to carry out these views.

19. It appears from the evidence, that the assent of the Crown has been given in the case of Llanbadarnfynydd, on a condition that involves the withdrawal from the judgment of the valuer of the question of what should be set out as the allotment of the Crown, and this appears to your Committee to be contrary to the intention and spirit of the 23rd and 33rd sections of the General Inclosure Act.

20. Your Committee also recommend for consideration the propriety of a column being added to the Third Table of the Agricultural Returns of Great Britain, compiled by the Statistical Department of the Board of Trade, showing the acreage employed in cottage gardens and allotments; this information would be useful in many ways, and would render the Statistical Table more complete.

21. Your Committee have directed their attention to the Annual Inclosure Bill, No. 1, and recommend that that Bill should be allowed to proceed, the steps directed by law having been taken by those interested in the Inclosures to which it refers.

22. Your Committee, however, recommend that the two subjoined Inclosures be omitted from the Schedule of the Bill.

1. Wisley Common, the inclosure of which may depend upon the decision of a Committee now sitting upon the question of extending the radius over which the provisions of the "Metropolitan Commons Act, 1866," should be made applicable, and which has been the subject of inquiry before another Committee.

2. Withypool, which your Committee think should be referred back to the Commissioners, for the reasons given in paragraph (5).

23. Your Committee think that no Inclosures should be sanctioned by Parliament in future Sessions, until such of their subjoined recommendations as Parliament may approve shall have been embodied in the Inclosure Act.

24. The general question of the action of the Inclosure Commission has necessarily come before your Committee in the course of their inquiries. Since the passing of the Act of 1845, the large increase in the population of the country, the increased value of land, the acknowledged need for maintaining public rights of way, the still greater necessity for providing recreation grounds and garden allotments for the labouring poor, taken with the large decrease of waste lands, have evidently very much increased the responsibility of this Commission. Your Committee believe that the alterations in the law which are suggested in this Report would affect beneficially the action of the Commission. At the same time they are of opinion that the constant attention of Parliament will be required on the annual introduction of the Inclosure Bill.

7 *July* 1869.

PROCEEDINGS OF THE COMMITTEE.

Friday, 30*th April* 1869.

MEMBERS PRESENT:

Mr. Peek.
Mr. Cowper.
Mr. Lowther.
Mr. Liddell.
Mr. Leveson-Gower.
Mr. Walsh.
Mr. Johnston.
Colonel Barttelot.
Mr. Wykeham Martin.
Mr. Fawcett.
Sir Michael Hicks Beach.
Mr. Pease.
Lord George Hamilton.

Mr. COWPER was called to the Chair.

The Committee deliberated.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 6*th May* 1869.

MEMBERS PRESENT:

Mr. COWPER in the Chair.

Mr. Knatchbull-Hugessen.

Mr. Liddell.	

The Committee deliberated.

DRAFT REPORT proposed by Chairman, read a first time, as follows:

"Your Committee have taken Evidence, and have agreed to the following Report:

"1. It appears from a Return made by the Inclosure Commissioners, that 614,800 acres have been inclosed, or have been ordered to be inclosed, since the passing of the General

Inclosure Act in 1845, and that three-fifths of this acreage, or 368,000 acres, may be assumed to be waste of a manor, or subject to rights of common, not limited by number or stints, and subject to the provisions of the 30th and 31st sections of the Act of 1845. In the appropriation of public allotments, out of these 368,000 acres, 2,223 acres have been appropriated as allotments for the labouring poor, and 1,742 acres for purposes of recreation for the inhabitants of the neighbourhoods.

"2. The inclosures in which no allotment has been made for the labouring poor comprise more than 90,000 acres, and the reasons given in the Commissioners' Reports are that the labouring poor have cottage gardens, or that the land to be inclosed is distant from the dwellings of the labourers, elevated or otherwise unsuitable for the purpose, or that the extent of the inclosure is very small.

"3. The first questions your Committee had to consider was, whether the extent of public allotments so appropriated is sufficient, and whether they have been set out in positions as convenient as circumstances would admit. But these questions could only be determined by ascertaining the wants of the neighhourhood and the qualities of the land, and would involve inquiries into the number of persons coming under the designation of labouring poor residing or likely hereafter to reside at convenient distances, and into the extent of garden ground obtained from other quarters; into the probability of every family being provided with an allotment; into the future capacities of the land after it has been broken up; into the number of people who may be expected to resort to the recreation grounds after they have been adapted for their purpose, and into other minute circumstances, which are far beyond the scope of any inquiry which your Committee can institute.

"4. The Commissioners have not fettered their discretion, in each individual case, by laying down any general rule by which the exercise of that discretion could be tested.

"5. Mr. Tremenheere, while occupied in investigating the beneficial influence of garden allotments on the condition of labourers employed in agriculture, was struck by the apparent smallness of the extent of garden land appropriated to that class out of the inclosures, and endeavoured to apply a test, by considering whether the total amount of garden allotments would suffice for the number of labourers employed in the cultivation of the total extent of the inclosed land.

"6. Assuming that the cultivation of land requires an average of three men per 100 acres, and that a quarter of an acre is required for each man, it would follow that the total amount of land appropriated for garden allotments would be taken up by the actual cultivators of the inclosed land, and none would remain for the use of the rest of the labouring poor in the neighbourhood who were not employed upon that particular land.

"7. But this test is not sufficiently applicable to the case to enable your Committee to draw a conclusion from it.

"8. The attention of your Committee has been called to some instances in which only one or two acres have been appropriated for exercise and recreation, as the smallness of the area naturally suggests its unfitness for the purpose intended.

"9. Upon one of these cases, that of Withypool, we received the evidence of two of its inhabitants.

"10. The Assistant Commissioner, Mr. Wetherell, stated in his evidence that he set apart the small extent of an acre, out of the 1,904 acres of common which are to be inclosed, because a larger amount would not be used; because the population never resort to the common for exercise and recreation; because there are other commons where the children and grown-up people can rove about, and because the ground is steep; and he considered that the recreation-ground should be used by the children of the school.

Q. 676.

Q. 627.

"11. On the other hand, the evidence of the parish clerk and of the schoolmaster testified that the common is a general resort of the inhabitants for exercise, for games, and for the meetings of their friendly societies; that there is no other common within five or six miles to which the public are allowed free access; that one acre is not sufficient either for the children or the adults; that seven acres equally suitable are adjoining, and that there is much dissatisfaction among the inhabitants at the smallness of that ground, which finds vent in the remark that when the common is inclosed they will be as badly off as in a town, and will not have even the accommodation which they would get in a town in the way of recreation-ground.

Q. 1508.

"12. These witnesses did not attend the meeting summoned by the Assistant Commissioner, and it appears that the information he obtained was not correct.

"13. At these meetings, it frequently happens that while those who claim profitable rights in the waste attend, the interests which the public have in the recreation-grounds, and the labouring poor have in the garden allotments, are not represented or their claims urged in diminution of the extent of land to be allotted in severalty. This may arise not only from want of care on behalf of the public and the labouring poor, but also from want of effectual publicity having been given to the time and place and objects of the meeting, from want of knowledge of the provisions of the statute, and from an apprehension that persons not having legal rights of common may not be heard in respect to these matters.

"14. The

"14. The Assistant Commissioner has often to put himself into the position of the advocate of the public and the poor, but finds difficulty in obtaining the correct local information that would enable him to determine accurately what is required on their behalf, and it is not surprising if he should sometimes fail in discovering what is really required; but we have reason to believe that the Assistant Commissioner, Mr. Wetherell, who appeared before us, has shown an earnest desire to discharge effectually this as well as the other branches of his duty.

"15. The Commissioners sitting in London, can have few opportunities of obtaining local information by other channels than the reports of the Assistant Commissioners.

"16. Your Committee are of opinion that the Reports of the Commissioners presented to Parliament should contain more precise and minute statements of the information on which they have framed the Provisional Orders, such as the population of the neighbourhood, the number of persons attending the meetings, the distance of the waste or common land from the towns and villages within reach, the particulars of any other ground available for recreation, and of other cottage gardens and field allotments, and any other details calculated to enable Parliament to judge of the grounds on which the enactments of the Provisional Orders relating to the public allotments are based.

"17. Your Committee also recommend that the notices of meeting given by the Assistant Commissioner should specify amongst the purposes of the meetings that of hearing information or evidence relating to the appropriation of recreation-grounds and of garden allotments for the labouring poor, and that such notices should be posted in other public places besides the outer doors of the parish churches, and that ample time should be given by such notices for the meeting being made known before it takes place. Although no limit has been imposed in the Act on the quantity of land to be appropriated as allotments for the poor, the 30th section restricts the maximum quantity of land according to a scale varying with the population of the parish. This criterion is inapplicable in cases in which the boundaries of the manor are not conterminous with the boundaries of the parish, and in which a considerable portion of the population that resort to the common are resident in a contiguous parish. This restriction must frequently fetter injuriously the discretion of the Commissioners, and your Committee recommend that it be abolished.

"18. By the 109th section of 8 and 9 Vict. c. 118, the allotment wardens are restricted from letting the allotment under their management in gardens exceeding a quarter of an acre, and although in ordinary cases it is not expedient to apportion a larger amount to the garden allotment, yet in a considerable number of cases which have been mentioned in evidence, a larger extent has been beneficially occupied by the garden allotment tenants of private landowners; and your Committee recommend that the discretion of the allotment wardens should be extended to a maximum quantity of half an acre.

"19. Many cases exist in which the recreation-grounds and the allotments for the labouring poor might advantageously be exchanged for other land nearer to the dwellings of those who would use them, but the power of exchange can at present be rarely exercised, and your Committee recommend that exchanges may be made in consideration of the quality and value of lands to be exchanged, as well as to their area.

"20. In the inclosure of Swaffham Heath, which begins close to the town, the recreation-ground was placed at a distance of two miles from the town, and the labourers' allotment at a mile and a quarter only, because the part of the heath which was included in the Provisional Order, and which is close to the town, was subject to limited and stinted rights, and was not therefore included within the provisions of the 30th section.

"21. In order to obviate the recurrence of similar inconvenience, your Committee recommend that in cases of inclosure in which open field land and half-yearly land are comprised in the same inclosure with the waste of a manor, the Commissioners may have powers of exchange, by means of which the public allotments may be assigned in convenient places, without detriment to the rights of the lord or the Commissioners. The Commissioners should mention in their Reports to Parliament the measures they have taken to effect exchanges of public allotments, and the causes of the failure when such measures have not been successful.

"22. Your Committee recommend that the Inclosure Commissioners should require the trustees of the recreation-ground and the allotment wardens to furnish, every three or five years, reports of the state of the land under their management.

"23. Your Committee also recommend for consideration the propriety of a column being added to the Third Table of the Agricultural Returns of Great Britain, compiled by the Statistical Department of the Board of Trade, showing the acreage employed in cottage gardens and allotments; this information would be useful in many ways, and would render the Statistical Table more complete."

Draft Report proposed by the Chairman, read a second time, paragraph by paragraph.

Paragraph 1, *agreed to.*

Amendment proposed, after the last paragraph, to insert the following paragraph:—"This estimate of three-fifths, it will be observed, is based upon an assumption. The Inclosure Commissioners appear to have kept no separate account from which the quantity of land inclosed, which is subject to public allotments under the Act of 1845, can be readily ascertained. This assumption must therefore be regarded as merely a rough estimate"—(Mr. *Vernon Harcourt*).—Question, That this paragraph be there inserted—put, and *agreed to.*

Paragraph 2, amended, and *agreed to.*

Paragraph 3.—An Amendment made.—Amendment proposed in line 5, to leave out from the word "inclosure," at the end of the last Amendment, to the end of the paragraph, in order to add the words: "But in order to give a complete answer to these questions, it would have been necessary for your Committee to have obtained evidence from every locality in which an enclosure has taken place; because your Committee entirely agrees in the opinion expressed by Mr. Tremenheere that the information contained in the Inclosure Bills annually laid before Parliament is so vague and incomplete, that it is impossible, upon such information, to decide whether sufficient land has been reserved as allotments for the labouring poor, and also as recreation-grounds. Mr. Tremenheere has, after carefully examining the whole of the Inclosure Bills introduced into Parliament since 1845, come to the general conclusion that the quantity of land reserved as allotments for the labouring poor is most insufficient, and he has shown by a calculation that the quantity of land so reserved is only just sufficient to give an allotment of a quarter acre each to the people required to cultivate the land inclosed. With regard to the Inclosure Bill now before Parliament, which has been re-committed upon its third reading, with the object of reserving more land as allotments for the labouring poor, and also as recreation grounds, Mr. Tremenheere has expressed a strong opinion that the quantity so reserved is inadequate. Your Committee think that this opinion is confirmed by the enquiries which have been made in reference to two inclosures contained in the aforesaid Bill, viz., those of Wisley and Withypool; these being the only two inclosures with regard to which evidence from the locality has been received. With regard to Wisley, a Select Committee has reported that, if this common is inclosed, ten acres should be reserved as allotments for the labouring poor, and six acres as a recreation-ground. The Inclosure Commissioners reserve no land as allotments for the labouring poor, and two acres only as a recreation-ground"—(Mr. *Fawcett*)—instead thereof.

Question put, That the word "and" stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 4.
Colonel Barttelot.	Mr. Fawcettt.
Sir Michael Beach.	Mr. Vernon Harcourt.
Mr. Chambers.	Mr. Johnston.
Mr. Leveson-Gower.	Mr. Wykeham Martin.
Lord G. Hamilton.	
Mr. Knatchbull-Hugessen.	
Mr. Knight.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Pease.	
Mr. Walsh.	

Amendments made.

Another Amendment proposed, at the end of the paragraph, to add the words: "It must also be borne in mind that the extent of the diminution of private rights in each case should be taken into account in determining the extent of public allotments"—(Mr. *Knatchbull-Hugessen*). —Question put, That those words be there added.—The Committee divided:

Ayes 10.	Noes, 5.
Colonel Barttelot.	Mr. Chambers.
Sir Michael Beach.	Mr. Fawcett.
Mr. Leveson-Gower.	Mr. Vernon Harcourt.
Lord G. Hamilton.	Mr. Johnston.
Mr. Knatchbull-Hugessen.	Mr. Wykeham Martin.
Mr. Knight.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Pease.	
Mr. Walsh.	

Motion

Motion made, and Question put, "That the Committee do now adjourn"—(Mr. *Fawcett*).—The Committee divided:

Aye, 1.	Noes, 14.
Mr. Fawcett.	Colonel Barttelot.
	Sir Michael Beach.
	Mr. Chambers.
	Mr. Leveson-Gower.
	Lord George Hamilton.
	Mr. Vernon Harcourt.
	Mr. Knatchbull-Hugessen.
	Mr. Johnston.
	Mr. Knight.
	Mr. Liddell.
	Mr. Lowther.
	Mr. Wykeham Martin.
	Mr. Pease.
	Mr. Walsh.

Paragraph, as amended, *agreed to.*

Paragraph 4, *agreed to.*

Amendment proposed, after paragraph 4, to insert the following paragraph:—"Your Committee are therefore not able to pronounce any general opinion as to the sufficiency or insufficiency of the public allotments which have been made by the Commissioners since the year 1845"—(Mr. *Vernon Harcourt*).—Question put, That this paragraph be there inserted.—The Committee divided:

Ayes, 8.	Noes, 6.
Mr. Fawcett.	Colonel Barttelot.
Lord George Hamilton.	Sir Michael Beach.
Mr. Vernon Harcourt.	Mr. Leveson-Gower.
Mr. Knatchbull-Hugessen.	Mr. Knight.
Mr. Johnston.	Mr. Liddell.
Mr. Wykeham Martin.	Mr. Lowther.
Mr. Pease.	
Mr. Walsh.	

Paragraphs 5, 6, 7, *disagreed to.*

Paragraphs 8 and 9, *agreed to.*

Paragraphs 10 and 11, amended, and *agreed to.*

Paragraph 12.—Amendments made.—Another Amendment proposed, at the end of the paragraph, to add the words: "Of the cases included in the Inclosure Bill, No. 1, of the present Session, the only instance in which your Committee have obtained local information as to the special circumstances, is that of Withypool; and your Committee are of opinion that the recreation-ground allotted in this case is insufficient"—(Mr. *Vernon Harcourt*).—Question, That those words be there added,—put, and *agreed to.*

Another Amendment proposed, at the end of last Amendment, to add the words: "but the fact that no special evidence to the contrary was tendered in other cases, affords a presumption that the provisions of the Inclosure Act, 8 & 9 Vic. c. 118, so far as they relate to the labouring poor, have been duly carried out by the Commissioners in the Inclosure Bill, No. 1, of the present Session"—(Sir *Michael Beach*).—Question proposed, That those words be there added.—Amendment proposed to the proposed Amendment, to leave out all the words after the first word "but," in order to add the words "as no complaints have reached your Committee respecting the other inclosures dealt with in the said Bill, your Committee have not taken evidence in those cases"—(Mr. *Knatchbull-Hugessen*)—instead thereof.—Question put, "That the words proposed to be left out stand part of the proposed Amendment."—The Committee divided:

Ayes, 4.	Noes, 10.
Colonel Barttelot.	Mr. Chambers.
Sir Michael Beach.	Mr. Fawcett.
Mr. Lowther.	Mr. Leveson-Gower.
Mr. Pease.	Lord George Hamilton.
	Mr. Vernon Harcourt.
	Mr. Knatchbull-Hugessen.
	Mr. Knight.
	Mr. Liddell.
	Mr. Wykeham Martin.
	Mr. Walsh.

Question proposed, That the words "as no complaints have reached your Committee respecting the other inclosures dealt with in the said Bill, your Committee have not taken evidence in those cases" be there added.—Amendment proposed to the said proposed Amendment, to leave out all the words after the first word "as," in order to add the words "No local evidence has been tendered to your Committee in any of the other cases, and without taking such evidence, your Committee are not in a position to offer any opinion on the other inclosures contained in the same Bill"—(Mr. *Vernon Harcourt*)—instead thereof.—Question put, "That the words proposed to be left out stand part of the said proposed Amendment."—The Committee divided:

Ayes, 10.	Noes, 4.
Colonel Barttelot.	Mr. Chambers.
Sir Michael Beach.	Mr. Fawcett.
Mr. Leveson-Gower.	Mr. Vernon Harcourt.
Lord George Hamilton.	Mr. Wykeham Martin.
Mr. Knatchbull-Hugessen.	
Mr. Knight.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Pease.	
Mr. Walsh.	

Amendment, as amended, *agreed to*, and added to the paragraph.—Paragraph, as amended, *agreed to*.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 2nd July 1869.

MEMBERS PRESENT:

Mr. COWPER in the Chair.

Mr. Knatchbull-Hugessen.	Mr. Leveson-Gower.
Mr. Liddell.	Mr. Pease.
Mr. Peek.	Mr. Walsh.
Mr. Lowther.	Colonel Barttelot.
Mr. Knight.	Lord George Hamilton.
Mr. Vernon Harcourt.	Sir Michael Hicks Beach.
Mr. Fawcett.	Mr. Johnston.
Mr. Wykeham Martin.	

Paragraph 13.—Amendment proposed, at the commencement of the paragraph to insert the words, "Your Committee would here observe, that in cases where the population of a parish or village have been in the habit of wandering over such a common as that in question, the setting-out of one, five, or ten acres as a 'recreation ground' by no means compensates them for the loss which they sustain by the inclosure. Upon such an allotment games may be played or meetings held; but the people are deprived of other advantages which they derive so long as the common is open. It seems desirable that in all such cases provision should be made by the Inclosure Commissioners to secure to the population such rights of way over the common as may as far as possible diminish their loss of enjoyment"—(Mr. *Knatchbull-Hugessen*).

Question proposed, That those words be there inserted.—Amendment proposed to the proposed Amendment, in line 8, after the word "way," to insert the words "or other privileges"—(Mr. *Vernon Harcourt*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 4.
Mr. Fawcett.	Colonel Barttelot.
Mr. Leveson-Gower.	Mr. Knight.
Mr. Vernon Harcourt.	Mr. Lowther.
Mr. Knatchbull-Hugessen.	Mr. Walsh.
Mr. Liddell.	
Mr. Wykeham Martin.	
Mr. Pease.	
Mr. Peek.	

Amendment,

Amendment, as amended, *agreed to*, and inserted in the paragraph.—Further Amendments made.—Paragraph, as amended, *agreed to.*

Paragraph 14, amended, and *agreed to.*

Paragraph 15.—Amendment proposed, at the end of the paragraph, to add the words, "and as a fact, except in cases where some appeal is made against the Report of the Assistant Commissioners, no practical revision of their recommendations is exercised by the Chief Commissioners"—(Mr. *Vernon Harcourt*).—Question put, "That those words be there added."—The Committee divided:

Ayes, 4.	Noes, 10.
Mr. Fawcett.	Colonel Barttelot.
Mr. Vernon Harcourt.	Sir Michael Beach.
Mr. Johnston.	Mr. Leveson-Gower.
Mr. Peek.	Lord George Hamilton.
	Mr. Knatchbull-Hugessen.
	Mr. Knight.
	Mr. Liddell.
	Mr. Pease.
	Mr. Lowther.
	Mr. Walsh.

Another Amendment proposed, at the end of the paragraph, to add the words, "The Commissioners sitting in London having no opportunities of obtaining local information by other channels than the reports of the Assistant Commissioners, their functions are consequently limited to controlling the general action of the Assistant Commissioners, and acting as a court of appeal in case of dispute"—(Mr. *Walsh*).—Question put, "That those words be there added."—The Committee divided:

Ayes, 6.	Noes, 9.
Mr. Fawcett.	Colonel Barttelot.
Mr. Vernon Harcourt.	Sir Michael Beach.
Mr. Johnston.	Mr. Leveson-Gower.
Mr. Wykeham Martin.	Lord George Hamilton.
Mr. Pease.	Mr. Knatchbull-Hugessen.
Mr. Peek.	Mr. Knight.
	Mr. Liddell.
	Mr. Lowther.
	Mr. Walsh.

Question put, "That the paragraph stand part of the Draft Report."—The Committee divided:

Ayes, 9.	Noes, 5.
Colonel Barttelot.	Mr. Knatchbull-Hugessen.
Sir Michael Beach.	Mr. Knight.
Mr. Fawcett.	Mr. Liddell.
Mr. Leveson-Gower.	Mr. Pease.
Lord George Hamilton.	Mr. Peek.
Mr. Vernon Harcourt.	
Mr. Johnston.	
Mr. Wykeham Martin.	
Mr. Walsh.	

Paragraph 16, *agreed to.*

Paragraph 17, amended, and *agreed to.*

Paragraph 18.—Amendment proposed to leave out from the word "acre," in line 3, to the end of the paragraph, in order to add the words: "It has been suggested that this maximum quantity should be increased to half an acre. Your Committee are of opinion that in many cases this increase would not be beneficial to the labourer, to whom the value of an allotment must depend upon its proximity to his dwelling, and the consequent possibility of employing upon it his surplus labour, and that of his family. An allotment of a size which might tempt him either to neglect his ordinary duties in its cultivation, or to keep his children from school in order to avail himself of their labour, would often prove an injury instead of a benefit; still, as cases occasionally arise in which a larger allotment than a quarter of an acre may be desirable, and as the tendency of the allotment wardens in this respect is unlikely to be towards excess, your Committee are inclined to recommend that the maximum quantity which may be allotted by the allotment wardens be extended to half an acre"—(Mr. *Knatchbull-Hugessen*)—instead thereof.

Question put, That the word "and" stand part of the paragraph.—The Committee divided:

Ayes, 3.	Noes, 9.
Mr. Fawcett.	Sir Michael Beach.
Mr. Lowther.	Mr. Leveson Gower.
Mr. Wykeham Martin.	Lord G. Hamilton.
	Mr. Knatchbull-Hugessen.
	Mr. Johnston.
	Mr. Knight.
	Mr. Liddell.
	Mr Pease.
	Mr. Walsh.

Question proposed, That the proposed words be there added.

Amendment proposed to the proposed Amendment, to leave out, in line 3, the words "to whom the value of an allotment must depend upon its"—(Mr. *Wykeham Martin*).—Question put, "That those words stand part of the proposed Amendment":

Ayes, 10.	Noes, 2.
Sir Michael Beach.	Mr. Fawcett.
Mr. Leveson-Gower.	Mr. Wykeham Martin.
Lord G. Hamilton.	
Mr. Knatchbull-Hugessen.	
Mr. Johnston.	
Mr. Knight.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Pease.	
Mr. Walsh.	

Another Amendment proposed to the proposed Amendment, to leave out, in line 5, the words "an allotment of a size which might tempt him either to neglect his ordinary duties in its cultivation, or to keep his children from school in order to avail himself of their labour, would often prove an injury instead of a benefit"—(Mr. *Knight*).—Question put, That those words stand part of the proposed Amendment:

Ayes, 10.	Noes, 2.
Sir Michael Beach.	Mr. Fawcett.
Mr. Leveson-Gower.	Mr. Knight.
Lord George Hamilton.	
Mr. Knatchbull Hugessen.	
Mr. Johnston.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Wykeham Martin.	
Mr. Pease.	
Mr. Walsh.	

Amendments made.—Amendment, as amended, *agreed to*, and added to the paragraph.—Paragraph, as amended, *agreed to*.

Paragraph 19, *agreed to*.

Paragraph 20, amended, and *agreed to*.

Paragraph 21, *agreed to*.

Paragraph 22, amended, and *agreed to*.

Paragraph 23, *agreed to*.

Amendment proposed, after the last paragraph, to add the following paragraph:—"It has appeared in evidence before your Committee, that the provision contained in Clause XXXIII. of this Act, giving the right of appointment of a valuer to the majority of the interests, has been occasionally infringed by lords of manors insisting on the appointment of a valuer as the condition of their assent to the inclosure of their wastes of manor, and your Committee is of opinion that this course is unjust in principle, and contrary to the spirit of the XXXIII. Clause"—(Mr. *Walsh*).—Question proposed, That this paragraph be there added—

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 6th July 1869.

MEMBERS PRESENT:

Mr. Cowper in the Chair.

Mr. Knatchbull-Hugessen.	Colonel Barttelot.
Mr. Liddell.	Mr. Knight.
Mr. Peek.	Lord George Hamilton.
Mr. Pease.	Mr. Wykeham-Martin.
Mr. Walsh.	Mr. Leveson-Gower.
Mr. Lowther.	Sir Michael Hicks Beach.
Mr. Vernon Harcourt.	Mr. Johnston.
Mr. Fawcett.	

Proposed paragraph further considered, amended, and added to the Draft Report.

Amendment proposed to add the following paragraph to the Draft Report:

"Your Committee have directed their attention to the Annual Inclosure Bill, No. 1, which contains in the Schedule 12 inclosures, in which the Commissioners were authorised to set out public allotments. In nine of these the Commissioners have set out none. In one case—that of Saxlingham—they have set out no recreation ground, and only one acre for the labouring poor. In another, that of Wisley, they have set out no allotment for the labouring poor, and only two acres for recreation; and at Withypool they have set out one acre for recreation, and five acres for the labouring poor.

"Your Committee are not satisfied from the information obtained from the Reports of the Commissioners presented to Parliament, and from the evidence of the Assistant Commissioner, that further provision for recreation and the labouring poor ought not to be made in the instances of Withypool, Wisley, Saxlingham, Lightwood, Kirton, and Bokiddich, in Llanivet parish; and they recommend that the confirmation of the Provisional Orders in these cases should be withheld for further consideration, and that they should be omitted from the Schedule of the Inclosure Bill, No. 1, now before the House"—(The *Chairman*).

Question proposed, That this paragraph be added to the Draft Report.

Amendment proposed to leave out from the word "No. 1," in line 1, to the end of the proposed paragraph, in order to add the words "and recommend that that Bill should be allowed to proceed, the steps directed by law having been taken by those interested in the inclosures to which it refers; the exceptions are as follows:

"1. Wisley Common, the inclosure of which may depend upon the decision of a Committee now sitting upon the question of extending the radius over which the provisions of the 'Metropolitan Commons Act, 1866,' should be made applicable.

"2. Withypool, which your Committee think should be referred back to the Commissioners, for the reasons given in paragraph 12.

"Your Committee think that, after the passing of the present Bills, no other inclosures should be sanctioned by Parliament until such of their subjoined recommendations as Parliament may approve shall have been embodied in the Inclosure Act"—(Mr. *Knatchbull-Hugessen*).

Question put, That the words "which contains" stand part of the proposed paragraph.—The Committee divided:

Ayes, 5.	Noes, 10.
Mr. Fawcett.	Colonel Barttelot
Mr. Vernon Harcourt.	Sir Michael Beach.
Mr. Johnston.	Mr. Leveson-Gower.
Mr. Wykeham-Martin.	Lord G. Hamilton.
Mr. Peek.	Mr. Knatchbull-Hugessen.
	Mr. Knight.
	Mr. Liddell.
	Mr. Lowther.
	Mr. Pease.
	Mr. Walsh.

Question proposed, That the proposed words be there added.—Amendment proposed to the said proposed Amendment, to leave out all the words after the first word "and," in order to add the words "your Committee having taken no local evidence upon any of the inclosures contained in the Bills now before Parliament except those of Wisley and Withypool, are not in a position, in the absence of such local evidence, to express any opinion upon such inclosures"—(Mr. *Vernon Harcourt*),—instead thereof.

Question put, That the words "and recommend that that Bill should be allowed to proceed," stand part of the proposed Amendment.—The Committee divided:

Ayes, 10.	Noes, 4.
Colonel Barttelot.	Mr. Fawcett.
Sir Michael Beach.	Mr. Vernon Harcourt.
Mr. Leveson-Gower.	Mr. Wykeham-Martin.
Lord George Hamilton.	Mr. Peek.
Mr. Knatchbull-Hugessen.	
Mr. Johnston.	
Mr. Knight.	
Mr. Liddell.	
Mr. Pease.	
Mr. Walsh.	

Question put, That the words "the steps directed by law having been taken by those interested in the inclosures to which it refers," stand part of the proposed Amendment.—The Committee divided:

Ayes, 8.	Noes, 6.
Colonel Barttelot.	Mr. Fawcett.
Sir Michael Beach.	Mr. Vernon Harcourt.
Mr. Leveson-Gower.	Mr. Johnston.
Lord George Hamilton.	Mr. Liddell.
Mr. Knatchbull-Hugessen.	Mr. Wykeham-Martin.
Mr. Knight.	Mr. Peek.
Mr. Pease.	
Mr. Walsh.	

Amendments made.

Question put, That the words "Your Committee think that no inclosures should be sanctioned by Parliament in future Sessions, until such of their subjoined recommendations as Parliament may approve shall have been embodied in the Inclosure Act," stand part of the proposed Amendment.—The Committee divided:

Ayes, 8.	Noes, 5.
Mr. Fawcett.	Colonel Barttelot.
Lord George Hamilton.	Sir Michael Beach.
Mr. Vernon Harcourt.	Mr. Leveson-Gower.
Mr. Knatchbull-Hugessen.	Mr. Knight.
Mr. Johnston.	Mr. Walsh.
Mr. Wykeham-Martin.	
Mr. Pease.	
Mr. Peek.	

Amendment, as amended, *agreed to*.—Paragraph, as amended, *agreed to*, and inserted in the Draft Report.

Amendment proposed to insert the following paragraph in the Draft Report:—"It has been given in evidence before your Committee, that the provision of the Act which orders the allotment wardens to let the allotments to the labouring poor at a fair agricultural rent is very generally disregarded. It has been stated that the rent actually charged often exceeds by three or four times the fair agricultural rent. Your Committee think that a return of the rent charged should be made to the Inclosure Commissioners every three or five years, and that the Commissioners should have the power to interfere if an excessive rent is levied"—(Mr. *Fawcett*).—Paragraph, amended, *agreed to*, and inserted in Draft Report.

Amendment proposed to insert the following paragraph in the Draft Report:—"The rents arising from the allotments and from the recreation grounds are now applied to aid parochial and highway rates. Your Committee are of opinion that such an appropriation is extremely unsatisfactory. The rent arising from the recreation grounds might, generally most advantageously, be employed in improving these grounds, and making them suitable for the purposes for which they are intended. The rent arising from the allotments might, in many cases, be advantageously employed in improving the ground, or in purchasing for the labouring poor, either a larger extent of ground, or ground more conveniently situated"—Mr. *Fawcett*).—Paragraph amended, *agreed to*, and inserted in the Draft Report.

Another Amendment proposed, to insert the following paragraph in the Draft Report:—"The general question of the action of the Inclosure Commission has necessarily come before your Committee in the course of their inquiries. Since the passing of the Act of 1845, the large increase in the population of the country, the increased value of land, the acknowledged need for maintaining public rights of way, the still greater necessity for providing recreation grounds and garden allotments for the labouring poor, taken with the large decrease of waste lands, have evidently very much increased the responsibility of this Commission.

Commission. Your Committee believe that the alterations in the law which are suggested in this Report would affect beneficially the action of the Commission. At the same time they are of opinion that the constant attention of Parliament will be required on the annual introduction of the Inclosure Bill"—(Mr. *Pease*).

Paragraph agreed to, and inserted in Draft Report.

Question proposed, "That this Report, as amended, be the Report of the Committee to the House"—(The *Chairman*).

Amendment proposed, to leave out from the word "That," to the end of the Question, in order to add the words "your Committee having taken no local evidence upon any of the inclosures in the Inclosure Bill, No. 1, now before Parliament, except those of Wisley and Withypool, and having taken no evidence of any sort upon Inclosure Bill, No. 2, the Committee be adjourned, in order to take evidence upon the inclosures included in such Bills"—(Mr. *Vernon Harcourt*).

Question put, That the words proposed to be left out stand part of the Question.—The Committee divided:

Ayes, 10.	Noes, 5.
Colonel Barttelot.	Mr. Fawcett.
Sir Michael Beach.	Mr. Vernon Harcourt.
Mr. Leveson-Gower.	Mr. Johnston.
Lord George Hamilton.	Mr. Wykeham-Martin.
Mr. Knatchbull-Hugessen.	Mr. Peek.
Mr. Knight.	
Mr. Liddell.	
Mr. Lowther.	
Mr. Pease.	
Mr. Walsh.	

Main Question put, and *agreed to*.

Ordered, To Report, together with Minutes of Evidence and Appendix.

EXPENSES OF WITNESSES.

NAME of WITNESS.	PROFESSION or CONDITION.	From whence Summoned.	Number of Days Absent from Home under Orders of Committee.	Expenses of Journey to London and Back.	Allowance during absence from Home.	TOTAL Expenses allowed to Witness.

MINUTES OF EVIDENCE.

Thursday, 6th May 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Knatchbull-Hugessen.
Sir Michael Hicks Beach.	Mr. Liddell.
Mr. W. F. Cowper.	Mr. Lowther.
Mr. Fawcett.	Mr. Philip Wykeham Martin.
Mr. Leveson Gower.	Mr. Knight.
Lord George Hamilton.	Mr. Pease.
Mr. Vernon Harcourt.	Mr. Peek.
Mr. Andrew Johnston.	Mr. Walsh.

THE RIGHT HONOURABLE WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. GEORGE DARBY, called in; and Examined.

Mr. *G. Darby.*

6 May 1869.

1. *Chairman.*] How long have you filled the office of Inclosure Commissioner?—Sir James Graham asked me to fill the office at the end of the Session of 1845, and I have filled it ever since.

2. Will you inform the Committee what are the powers entrusted by law to the Inclosure Commissioners with reference to setting apart portions of the inclosed commons for the purposes of allotments for the labouring poor, and for purposes of public recreation?—The clauses are the 30th and 31st of the Inclosure Act; I think that I can go through them probably without referring to the Act; the land out of which allotments can be set either for exercise and recreation, or for the labouring poor, is the same class of land; that is, land which is waste of a manor, on which the tenants of such manor have rights of common, or land on which the rights of common are exercised at all times of the year for cattle, levant and couchant, or to any rights of common which may be exercised at all times of year, and which shall not be limited by number or stints. those are the only classes of land out of which the Commissioners have power to set out allotments either for exercise or recreation, or for the labouring poor; but by the 30th clause the power of the Commissioners is limited as to the quantity which can be set out for exercise or recreation. If the members of the Committee will look to that clause they will find that that is according to the population, and therefore the Commissioners must limit the amount of exercise and recreation under the Inclosure Act to an amount which is defined in the 30th section; but it very often happens that at a subsequent part of the proceeding, under another clause, namely, the Valuer's clause, at a meeting the majority may direct the valuer to set out a larger amount of exercise and recreation ground than the Commissioners, under the 30th clause, have been able to do by their provisional order. With respect to the labouring poor, there is no such limit, and therefore it entirely rests with the discretion of the Commissioners as to what amount they consider necessary for the labouring poor out of that class of land which alone is subject to having allotments set out for that purpose.

3. Will you state what are the provisions which are made with respect to the money which is derived from the ground set out for the allotments for the labouring poor?—It may be disposed of in several ways; the Act of Parliament requires that a valuer should put a value, which is called a rent-charge, on the land so set out, which is the agricultural value of the land at the time, and in the state in which it was when it was inclosed. That may be disposed of in two or three ways: in the first place it may be sold, and the purchaser becomes entitled to the rent-charge, or any person may take it in whole or as part of his allotment; if not it must be allotted among the proprietors, and that is no doubt very often a question of some difficulty, as there may be a great many allottees, and it is forced upon them; it must be equally divided among those allottees, so that favour may not be shown to any particular one.

Mr. *G. Darby.*

6 May 1869.

4. Have you known in practice that complaints have been made of too high a charge being put upon that land as a rent-charge?—Yes, occasionally; and not only that, but in one late case it was represented to the Commissioners that too high a charge had been put upon it, and the consequence was that a correspondence ensued between the Commissioners and the valuer; but the valuer adhered to his figures, and said that he could get fifty agriculturists to give him more for it; that being the case, we considered our hands tied, and we were obliged to take the rent-charge, and having called the attention of the valuer to it, and he having assured us that he had not set anything like too high a rent for it, because he could get that rent very well in the market, of course our hands were tied and we were obliged to adopt his figures.

5. Who is responsible for paying this rent-charge?—The churchwardens and overseers, to whom the land is allotted, are responsible for it; that is perhaps one of the most complicated parts of the matter; eventually there is power to take possession of the land; it is to be found in the 75th clause of the Act: Provided always, that when such allotment, or any part thereof, shall be let and occupied as gardens under the provisions hereinafter contained, the person for the time being entitled to the rent-charge charged thereon shall not distrain for such rent-charge on the occupiers of such gardens, but the person so entitled may, in case such rent-charge shall be in arrear, give notice to the occupiers of such gardens, and to the allotment wardens, or any of them, and shall thenceforth, until the arrears of such rent-charge, with all expenses occasioned by the non-payment thereof, shall be fully paid, be entitled to receive all the rent which, after such notice, shall accrue in respect of such gardens." I may state, that after the allotment wardens are appointed, they are the parties.

6. So that the responsibility rests with the allotment wardens?—Yes; they give notice to the occupier to pay the rent of his garden to them, which is in discharge of the rent-charge which is due from them after payment of tithes, rates, &c.

7. Supposing that the allotments are not let, and that therefore no money accrues to the allotment wardens, from what fund must they pay the rent-charge?—They must let the land to any person who will take it; of course, we cannot alter the Act of Parliament, but the Inclosure Commissioners have power to make certain arrangements and rules for the letting, which can only last for five years, and then it is out of their hands; practically, having only a limited power, and no means under the Act, of enforcing our regulations, we have never made such regulations; we have thought it more prudent to leave it to the parties, and we have written down for an explanation, when applied to on the subject, although we have hardly had power to do it officially.

8. Are you generally acquainted with the manner in which the ground for allotment gardens is used?—Our jurisdiction ceases; we might, as I said before, make regulations for five years, but we have no power to carry out those regulations.

9. Practically, you do not get any reports or information on the subject?—We have latterly done so, because we have sent circulars round to know how the allotment grounds were used, in consequence of an honourable Member here wishing to know that.

10. I will now ask you as to the practice of the office with regard to this particular branch of their business; will you state whether, when an Assistant Commissioner goes down upon the spot, you give him any definite instructions as to the matters with regard to which this Committee is inquiring?—We do no not give him definite instructions every time he goes down; we have but two Assistant Commissioners, and they know perfectly well that the rule of the Commissioners is, that whenever exercise and recreation ground or allotments can be set out to be available, looking to the quantity of land, and the population, and the state of circumstances, which is exactly what the Act directs, they shall take into consideration the circumstances of each particular case; and the Assistant Commissioners have to go over the land to see what it is, and to make all the necessary inquiries and to report to us; if it happens, as it has happened, that we think that that investigation is not satisfactory, and that it wants further inquiry, we require that further information; and I consider that the Inclosure Commissioners are the parties who are responsible for what is done; they are the heads of the office, and they are bound to see that it is done properly.

11. Then, in the first instance, the Assistant Commissioner, after getting all the information which he can upon the spot, reports to the Commissioners the amount of ground which he thinks ought to be appropriated for these two purposes?—Yes.

12. Does he at the same time give the reasons upon which he comes to that conclusion?—Yes.

13. Therefore, the Commissioners consider themselves responsible for either approving or disapproving of the report which the Assistant Commissioner has made?—Most decidedly; I consider myself responsible, and that if I have neglected that, I have not done my duty.

14. Will you state whether you consider it to be a rule, which should guide you in the amount of the allotment which should be set apart, to have reference to the existing population, or to the population which may come after the inclosure, or to any other matters of that sort?—The circumstances are, the nearness of the population to the land, and the fitness of the land for the purpose. Another thing is where the cottages are so supplied with gardens, that it is very unlikely that those who are so supplied should avail themselves of the allotment. I do not know that the future population, to any great extent, would come very largely into our calculations, and for this reason: I think it would not be a wise thing to set out an enormous quantity of cottage gardens, with the chance of capitalists building a bad class of cottages without a garden, and that those allotments should supply the place of a garden, because you then would inflict a very great injury on the poor, instead of a good. I have taken, I think, 26 or 27 cases, haphazard, of the largest inclosures which we have had, and I have taken from the census the population in 1851, and in 1861, and in the whole of those cases, on the average, there is no increase whatever in the population. I know that to be so. In my own parish, in the 10 years, we have not altered at all in population. In the neighbouring parish of Heathfield, there are 300 less. The agricultural parishes as a rule, as it appears to me, are not increasing in population.

15. Can you give us that return?—There is

Mr. G. Darby.

6 May 1869.

Westbury-on-Severn, in Gloucestershire, where 904 acres were inclosed; the population in 1851 was 2,498, and in 1861 it was 2,501. In Pyston, in Oxfordshire, the area inclosed was 645 acres; the population there was 692 in 1851, and in 1861 it was 705. In Kingsworthy, in Hampshire, the area inclosed was 487 acres; the population in 1851 was 382, and in 1861 it was 359. In Methwold, in Norfolk, the area inclosed was 366 acres; the population in 1851 was 1,669, and in 1861 it was 1,509. In Welland, in Worcestershire, the area inclosed was 800 acres; the population in 1851 was 582, and in 1861 it was 808. In Exford, in Somerset, the area inclosed was 1,040 acres; the population in 1851 was 580, and in 1861 it was 546. In Redwick, in Monmouthshire, the area inclosed was 325 acres; the population in 1851 was 281, and in 1861 it was 289. In Oxton, in Nottinghamshire, the area inclosed was 1,139 acres; the population in 1851 was 850, and in 1861 it was 738. In Goldington, in Bedfordshire, the area inclosed was 1,093 acres; the population in 1851 was 606, and in 1861 it was 609. In Shipton-under-Wychwood, in Oxfordshire, the area inclosed was 1,800 acres; the population in 1851 was 2,958, and in 1861 it was 3,163. In Thatcham, in Berkshire, the area inclosed was 632 acres; the population in 1851 was 4,293, and in 1861 it was 4,129. In North Molton, in Devon, the area inclosed was 2,337 acres; the population in 1851 was 1,982, and in 1861 it was 1,842. In Buckland, in Hertfordshire, the amount inclosed was 778 acres; the population in 1851 was 386, and in 1861 it was 385. In Marshfield, in Gloucestershire, the area inclosed was 298 acres; the population in 1851 was 1,648, and in 1861 it was 1,742. In Horsden, in Yorkshire, the area inclosed was 1,096 acres; the population in 1851 was 5,178, and in 1861 it was 5,209. In Hinderwell also, in Yorkshire, the amount inclosed was 844 acres; the population in 1851 was 1,947, and in 1861 it was 2,805. In Compton Abbas, in Dorsetshire, the area inclosed was 708 acres; the population in 1851 was 465, and in 1861 it was 456. In Maddington, in Wiltshire, the amount inclosed was 872 acres; the population in 1851 was 398, and in 1861 it was 396. In Alnwick, in Northumberland, the area inclosed was 2,684 acres; the population in 1851 was 7,319, and in 1861 it was 7,350. In Hayton, in Cumberland, the amount inclosed was 1,700 acres; the population in 1851 was 1,243, and in 1861 it was 1,256. In Egton, in Yorkshire, the area inclosed was 7,313 acres; the population in 1851 was 1,129, and in 1861 it was 1,256. In Askerwell, in Devonshire, the amount inclosed was 628 acres; the population in 1851 was 224, and in 1861 it was 223. In Droxford, in Hampshire, the amount inclosed was 1,353 acres; the population in 1851 was 2,005, and in 1861 it was 2,194. In Great Missenden, in Buckinghamshire, the area inclosed was 838 acres; the population in 1851 was 2,097, and in 1861 it was 2,250. In Mansfield, in Nottinghamshire, the area inclosed was 2,360 acres; the population in 1851 was 10,667, and in 1861 it was 10,225. In Peirn, in Buckinghamshire, the area inclosed was 1,119 acres; the population in 1851 was 1,254, and in 1861 it was 1,096. In Burstow, in Surrey, the area inclosed was 692 acres; the population in 1851 was 903, and in 1861 it was 927.

16. Mr. *Fawcett.*] Have you the amount of land which was allotted to the labouring poor?—When the question was raised as to the setting out land for prospective population, it was very important to know whether, when the inclosure had taken place, there was likely to be an increased population, and therefore we took 700 acres, 1,000 acres, and 2,000 acres. We took these large cases from different parts of the country, to see what effect the inclosures had upon the population; and the result of that investigation, is that the population in round numbers remains stationary.

17. *Chairman.*] Do you think that the same result would have arisen, if you had taken small inclosures as well as large inclosures?—They are both there, but of course we took some large ones, because the more land you are supposed to bring into cultivation, the larger you expect the increase of population to be, and therefore it would not have been fair, unless we had taken some of the large inclosures.

18. Is the population that of the parish?—Yes, it is the parish census; of course, we take the parish because it is only the parish who come into the allotment.

19. So that this return does not tell us whether there was any population springing up, and residing upon the inclosed land; but it allows us to draw the inference as to the general results of inclosure from the whole parish?—You might take a particular case; you might say that the manor is not exactly co-extensive with the parish, but you will find in nine cases out of 10, if you take the parish as a guide, that it will be right.

20. Should you say on other grounds that the labouring poor are not brought into the neighbourhood of these inclosed lands by the fact of the inclosure?—Honourable members, of course, must draw their own inference; I can only give them the facts; I think that it is very possible that when a common is inclosed the labouring poor may take more regular labour than they performed before.

21. Would your expectation be that these lands which are inclosed, being generally situated in a place which is not very convenient to live in, the land would be cultivated by labourers residing in some neighbouring village?—I think not. It must be recollected that where there is common field land it has been mown in severalty, and so on, and that there are a great many large inclosures which are employed for sheep, and for similar purposes, and that they are divided; but I doubt whether some of them very largely increase the amount of labour. It is a great advantage to the people who are owners, because in the case of men who are careless about their sheep, and who have scabby sheep in the neighbourhood of another man who is careful, of course by division the careful farmer gets a great advantage.

22. Do you mean that grounds upon which allotments have been provided are not generally employed for tillage, but for pasture?—No; of course it depends upon the quality of the land. No doubt the early inclosures inclosed the best land first. What you are coming to now is getting allotments upon land, which although liable to poor allotments would not be set out for poor allotments; who would set out a poor allotment at Dent, or on some of the high land of Westmoreland.

23. The men who are to be employed in the cultivation of this land might require allotments,

Mr. *G. Darby.* 6 May 1869.

might they not?—If they could be procured; on sending circulars to know whether the allotments had been sufficient, 24 cases were returned as insufficient. There were among these Grunty Fen, Chigwell, Royden, Missenden Tudley, Shepperton, Ingoldsthorpe, Sharlingford, Capey, Long Framlington, Prestwich, Car, and Cottesford, which altogether makes up a quantity of 7,284 acres for the places which I have named. Assuming that a great deal of that land is rough land, I, for the purpose of testing Mr. Tremenhere's figures, take his own proposition as to the number of men to be employed, namely, two men for every 100 acres, and that gives a population of 144. There were set out 339 acres for the labouring poor. Thus, for a population of 144 there were set out equivalent to 1,356 quarters of acres, and those were the cases in which it was said that the allotments were insufficient. Therefore, I strongly suspect that a different class of people must take the allotments. We sent circulars to every parish to know whether the allotments were sufficiently set out or not; I have taken those parishes only where they sent word that they had not sufficient. All that was required on Mr. Tremenhere's computation was for 144 persons, at a quarter of an acre each, as the Act of Parliament allows; we have set out land sufficient at that rate for more than 1,300 persons.

24. Mr. *Vernon Harcourt.*] To whom were the circulars addressed?—To the parish authorities.

25. To the churchwardens?—Yes, the strongest case against ourselves is where it has been said that the allotment has been insufficient, and I have only taken the cases where it has been said that the allotments were insufficient, and in those cases where it has been said that we ought to have set out 144 quarters of acres we have set out 1,356 quarters of acres.

26. *Chairman.*] You, upon the calculation of an average of two men for every 100 acres, thought that the allotments were sufficient, but the parochial authorities thought them insufficient?—They complained that they could let more; therefore, according to the Act of Parliament, taking two men to 100 acres, we ought to have set out 144 quarters of acres, but we set out 1,356 quarters of acres.

27. Mr. *Fawcett.*] You say that you only ought to allot ground for people who are employed upon the land; that is not in the Act of Parliament, is it?—I do not say that we ought to allot ground only to people who are employed upon the land, but I take a quarter of an acre to each man employed upon that land.

28. Your answer, as far as I understood it, made it appear to me that you only had the power to allot land to the persons actually employed upon the land; your calculation is based upon the fact of only two persons being employed upon each 100 acres, and that those are the people to whom land should be allotted?—Yes, but instead of allotting 144 quarters of acres, there were allotted 1,356 quarters of acres.

29. Supposing that there was a manufactory in one of these places, the men employed in that manufactory would come under the title of labouring poor, and you would have a perfect power of allotting land to those men, under the Act of Parliament, would you not?—Yes, that is perfectly true; but if the honourable Member asks me such a question, where there is a population of 10,000, I should say at once that I was not justified in taking land from the lord and the commoners, and allotting it to those who ought to find land for their own labourers.

30. But there is nothing in the Act of Parliament to restrict you from allotting land?—No.

31. *Chairman.*] In determining the amount of allotment which should be set out, you have reference to the population; I presume that you have reference to the existing population residing within a certain estimated distance?—Those who can use it.

32. What is the idea of the Commission as to the distance of the residence of a labourer from the inclosed land, which would prevent him from being considered as capable of using it beneficially?—I should say that an allotment which is two miles from a labourer, is perfectly useless to him. I have gone on with the allotments myself for over 30 years, and I am very much in favour of them. I have a regular audit, and the men pay their rent regularly; but unless a man is near enough to his allotment to be able to get to it without a four miles walk after his work, I know that practically it is perfectly useless to him. I find that with my allottees who are in regular work, not one of them can work more than one-eighth of an acre of allotment, and they never try it. I suspect that in some of these cases where it is said that the allotments are not sufficient, particular persons are alluded to. A chicken fattener, for instance, wants a large allotment; he has plenty of dung from his chickens, and this sort of man will take more; but you can never have a labourer with such a large allotment who cannot get his manure to it, and who cannot use spade labour. If he attempts as a labourer to hire labour, it will ruin him; and I say that after upwards of 30 years' experience.

33. Would you consider that the Act of Parliament intended to limit these allotments to persons employed on agriculture, or that those who were occupied as artizans or in trades, might be allowed the advantage of these allotments; and if so, would not they go a greater distance than you have mentioned?—If the Right Honourable Member will allow me to refer to the Act of Parliament, it seems to me that, taking it upon the whole, the Inclosure Act was drawn with very great care (I do not know who drew it), and apparently by persons very well acquainted with the subject. The question is, what construction you are to put upon the words the "labouring poor," and whether, under those words, you are to go to the different tradesmen. It is very well for me, in my private capacity, to let land to any one that I like, but the question is, what you are to do when you come to take allotments for exercise and recreation, and for the labouring poor, for stone quarries, and for schools, and for burial grounds. I doubt the fairness (and I say so openly), under that clause, of saying that you shall go into a large town, and provide out of the property of the lord and commoners for the manufacturing population what, it strikes me, their masters ought to find.

34. Supposing the case of a cobbler, or a journeyman tailor, who lived in a house which would have given him rights of common over the common before it was inclosed, do you not think that when the ground is inclosed that man should get an allotment?—I must leave that for the decision

cision of the Committee, but the fact of the matter is this: the Act of Parliament provides that in setting out allotments for the poorer classes, the valuer is to have his especial attention called to the provision for them, and it is done. You must recollect that there are a great many people in those commons who have cottages and who have allotments, and they have been dealt with most liberally in a great many cases, and beyond the law, in this way. I believe that there is an old statute of Elizabeth, which is repealed, which required four acres to a cottage, and in a great many cases it has been agreed that the cottage allotments, without any right to it, should be dealt with as if they had four acres of ground; that has been the case in a great many inclosures.

35. In your opinion, ought the words "labouring poor" to be exclusively confined to poor employed in agricultural labour. I was putting the case of a man who occupied a house which gave the owner of that house a right of common; and I was asking you, whether the occupier, who was not employed in agriculture, but in some other labour, might not share the benefits of those employed in agriculture?—I think not. I should think that if a man has an allotment of his own, he is not a man who ought to have another allotment at somebody else's expense.

36. I am supposing that he is only a tenant of a house which has a right of common, and that therefore he would not be compensated, but that the owner would be compensated?—No doubt if he had a right of common in respect of somebody else's right, and if he did not receive it, and if the other person received it, he would be just in the same state as if he had no allotment at all, and he would then be *pari passu* with other persons who were entitled to a "labouring poor" allotment.

37. Will you tell us why the words "labouring poor" should be restricted to agricultural labourers, as distinct from other labourers?—I do not profess to draw a distinct line. Nine times out of ten these allotments are in agricultural districts, but I certainly believe that the intention of the Legislature was to give such an allotment to a labouring man.

38. Is it not usual for allotments to be held by men who are not employed in agricultural labour?—I have no doubt that if the truth was got at, from the quantity of allotments occupied in some of these places, it would be found that in some cases they are held by a great many people who are not "labouring poor."

39. Do you not think that a cobbler, who has been sitting all day at his stall, has as much claim, whatever it may be, to the use of an allotment garden, as a man who has been probably digging all day?—The question is not whether he wants it as much, but, to look at the Act of Parliament, there is no doubt that they are the commoners. If they had held it in fee there might be only three who did not want to come into our Inclosure Act, but who wanted to inclose themselves. What the Legislature said was this: "If you choose to come and make use of our Act, you shall make use of it only on one condition, and that condition is, that where there are certain classes of land you shall give a certain quantity of that land, if you are required to do so, for exercise and recreation, and for the labouring poor. If you do not choose to assent to a provisional order with those provisions in it, you shall not make use of our Act of Parliament."

40. Why do you think that when the Legislature made this provision on behalf of that part of the public called in the Act "labouring poor," they had only reference to that portion of labourers who were labouring in agriculture?—For this simple reason: that, in the first place, as a rule, it is probable that the labouring population would be nearer, and, in the next place, you could not provide out of the commons of England for the whole of the persons who wanted gardens. If you went into a town and said that a thousand people must have these things if they could get at them, whereas there were only a hundred acres to do it with, it would more than absorb the quantity. I am not answerable for the discretion of the Legislature, but they seem to me to have said, "Here is a certain contract, which is fair, namely, that if you held all this land in fee, you could inclose your own lands without giving anything, but if you have limited estates in this way you cannot do it, except by a private Act, or by the cheaper process of coming under the Inclosure Act; you shall not make use of our Act without paying for it, and you shall give to the public so much ground for exercise and recreation, according to the population, if you are required, and you shall give to the labouring poor that amount which shall be thought just and meet, according to the particular circumstances of the case. Those are the conditions of the provisional order, and if you do not agree to those provisions, and if two-thirds do not assent to them, you shall not make use of this Act of Parliament."

41. Can you give us any reason why we are to suppose that that enactment on behalf of the public was intended to pick out those labourers in a village who happened to be employed in agriculture, and to leave out the other labourers not employed in agriculture?—I cannot; I suppose that they thought that that was a fair bargain.

42. Mr. *Fawcett.*] Can you give the exact words of the Act which make you suppose that the words "labouring poor" were intended by the Legislature simply to mean the agricultural classes; is that term in the definition clause?—The marginal note of the 31st clause is, "Allotments for labouring poor," and the clause is as follows: "And be it enacted, in the Provisional Order of the Commissioners concerning the inclosure, under the provisions of this Act, of any waste land of any manor on which the tenants of such manor have rights of common, or of any land whatsoever subject to rights of common, which may be exercised at all times of the year for cattle, levant and couchant, as aforesaid, or to any rights of common which may be exercised at all times of the year, and which shall not be limited by number or stints, it shall be lawful for the Commissioners to require and specify, as one of the terms and conditions of such inclosure, the appropriation of such an allotment for the labouring poor as the Commissioners shall think necessary." The Right Honourable Member in the Chair has driven me very close upon this point. I do not say, by any means, that the only persons who have allotments are the labouring poor. For instance, if an Assistant Commissioner went down and found a working saddler without any garden, he no doubt would take it into account; but the Right Honourable Member put to me a

Mr. *G. Darby.*

6 May 1869.

manufacturing population, and I say that I do not think that this Act of Parliament ever intended anything of the sort.

43. *Chairman.*] There is no interpretation, that you are aware of, which would limit the words "labouring poor" to persons employed in agriculture?—There is no specific interpretation. Supposing that a man was working for a saddler, he would not be excluded. But it is very difficult to draw the line. I was first asked as to a town with a manufacturing population. I should say, that if a man worked for a saddler, or for a shoemaker, and had no garden, the Assistant Commissioner would say, "This man has no garden in the village," and that he would set out an allotment.

44. It happens in many parts of the country, in Wales, and in the north of England, that inclosures are made in the vicinity of mines. Should you consider that miners living near those inclosed lands would be entitled to come under the general designature of "labouring poor"?—I do not know any very large inclosure which is now taking in the neighbourhood of mines.

45. Mr. *Liddell.*] May I remind you of Arundale Common, in Northumberland, which is 18,000 acres. Arundale appears to be under the heading of "Applications for Inclosures not yet sanctioned." The application appears to have been made in 1856?—It is abandoned.

46. *Chairman.*] Will you tell us the principle on which you deal with that case, or with a case in Wales, where persons employed in slate quarries are in the vicinity of the land inclosed. Would you consider those miners or quarrymen, as being part of the labouring poor for whom allotments are to be provided?—No; you must take into consideration the amount of land to be inclosed, and what is fair between the parties. For instance, supposing that you brought up a very large mining population close to a common, and said that every one of those men must have a quarter of an acre, would you think that the Commissioners would be acting justly if they absorbed the whole of that common, and took every bit from the commoners, and from the lord, and handed it over to the miners?—These general questions are rather difficult to answer. If you will give me any particular case, in which I am told that the Commissioners have not exercised their discretion rightly, I shall be able to look at the Report, and to see the grounds of what has been done, and shall judge for myself whether I have there exercised a right discretion or not; but when you put a general case of that kind, you might say that there are 3,000 miners with 200 acres of common, and the question is, are you to find a quarter of an acre out of those 200 acres of common for each of those 3,000 miners.

47. Do you think that it would be right, supposing that a very considerable population of miners and quarrymen were living in the neighbourhood of an inclosed land, to exclude them altogether from any share in the allotment ground?—Certainly not.

48. Therefore, the right course would lie between those two extremes?—Yes. If they were living close, or if there were cottages without gardens, I have no doubt that they would be considered, and that the thing would be taken fairly; but you must look at the quantity of land to be inclosed.

49. Will you state the view which the Assistant Commissioner takes with reference to the recreation ground which he is to set apart; what circumstances ordinarily guide him in the selection?—He looks at the amount of the population, and the nature of the ground; he sees whether, if he sets it out, there is likely to be an exchange made for it. We take into account the proximity of the population to that ground, and we are guided by that, but we are limited by the Act of Parliament according to the population.

50. That is to say, that it must not be more than 10 acres?—There cannot be more than 10 acres in any case.

51. Is any money payment derived from this recreation ground?—You can allot the herbage, if you please, but it is generally allotted with the condition that no heavy cattle shall be put upon it.

52. And the management is with the churchwardens and overseers?—Yes.

53. Are they responsible for keeping it in order?—Yes.

54. What funds have they to spend for the purpose of keeping it in order?—They have no funds, except rent for the herbage. The valuer is bound to level it, and to fence it, unless sometimes the parties ask not to have it fenced. There have been cases where they have asked not to have it fenced, and sometimes where there is a requisition of that kind, it is complied with, but the ground is usually fenced and levelled, and made fit for a recreation ground at the expense of the inclosure.

55. Will you state your relations with the Home Office, with regard to this matter. I understand that when you have approved of the Report of the Assistant Commissioner, you make a provisional order?—Yes; we make a provisional order, which must contain, if the land is waste, the amount allotted to the lord; it contains the amount of exercise and recreation ground referring to a map of the place where it is to be; it also sets out the allotments to the labouring poor, and sometimes there is a requirement for a site for a school, or various things; 700 acres have been set out during the operation of the Inclosure Act as sites for schools. The document has to be signed by two-thirds of the parties interested, and when it is signed by two-thirds of the parties interested, it goes in, in a Report to the Home Office, as inclosures sanctioned by the Commissioners. Then that is embodied in a public Act of Parliament, and that Act of Parliament either rejects the particular inclosure as a whole, or passes it. The lord has a veto upon the provisional order, and therefore unless he assents to that provisional order you cannot inclose the waste at all.

56. Has the lord of the manor that veto independently of the copyholders?—Yes; and therefore, unless he assents to the provisions of that provisional order there is an end of the inclosure proceedings. Therefore, as there must be a contract between the lord and the commoners, you of course could not, behind their back, do it without their assent.

57 Has the Secretary for the Home Department any opportunity of making alterations in your provisional order, or is he in any special way responsible for it?—I do not conceive that any person has a right to alter the provisions of the provisional order; for this reason, the lord has a veto, and therefore he says, "I will not assent to this inclosure except upon these conditions," and

and consequently as he has a veto, and he assents upon certain conditions; the principle has always been considered that either those conditions will be fulfilled in the inclosure, or Parliament will say, "We do not sanction these provisions."

58. Practically, after that provisional order has been passed, the only thing which remains, is either for Parliament to adopt and confirm it, or to reject the Act altogether?—Certainly.

59. Do you think that the limit of a quarter of an acre for allotment gardens might be enlarged?—If you mean to give it to the labouring poor, whether you take them as miners, or as any other persons, my firm conviction, from nearly 40 years' experience, is that no man who is really in work can deal with a quarter of an acre; it is impossible, he cannot find manure for it. I had two allotments which I made to two people who were away from the rest, and to whom I let more land; they could not plough or manure the land, and I found that they were doing mischief instead of doing good. Therefore, I am perfectly certain that a quarter of an acre is too much unless a man can get sufficient manure; because he grows cabbages, and those things which require high cultivation, and therefore unless he has the means of getting manure, and can use his labour by way of spade labour, I am perfectly certain after 40 years' experience, that it is of no use for him to have a larger quantity than he can so cultivate.

60. Supposing that the ground had to be exclusively cultivated by an agricultural labourer himself, a quarter of an acre might be ample; but are there not many cases in which a labourer, either agricultural or in another way, has children who are able to aid him to such a degree that practically he gets a very good remuneration from half an acre?—No doubt he has children, but still my opinion is practically that he cannot use a quarter of an acre, because in the first place now, you find it very difficult to get boys at all, they are absorbed; the difficulty is to get boys in most parishes which I know; and, in the next place, those boys ought to be learning a different sort of work, or else they will be worth nothing. If they learn to dig and nothing else they will not be able to earn their livelihood. You must teach boys all sorts of work early, if you ever mean to make them succeed in life afterwards.

61. Do you not consider that working in a garden is very good training for a boy?—To a certain extent. I will take my own county. Supposing that a boy has never learnt to use a billhook, or has never been with his father to see hedging, he is only fit to fill a dung cart, and to be a beggar all his life.

62. Supposing that he only applied his leisure hours in cultivating a garden, would it not be an advantage to him, instead of a detriment?—No doubt of it. We will take a family; we will say that there are five boys. A boy, after he is 15 or 16, is away from his father. According to the present plan, you say that you are not to let boys work till they are 10 years old, and when they are 15 they go away. There is no doubt that if a man has two or three boys, he may be able, if he can find manure for it, to cultivate more land than another man, but that is just the discretion which you require to exercise in letting out your allotments. I do not know how it would be exercised by the allotment wardens, but I know that, practically, in doing it in private, you use your discretion in the quantity of land which you let a man have according to the means which he has of cultivating it; and if you let him have more than he can cultivate, I am quite sure that no good at all will be done.

63. In your report you state, as a reason for not giving allotments, that in many places the labourers are already provided with cottage gardens; have you, in those instances, ascertained that the cottage gardens were of a size which would approach the amount which you give in allotments?—It depends upon the size of those gardens. Where a man builds a wretched cottage, there is hardly any garden; but I have a number of labourers who have large gardens, and they will not come near allotments; they will not take their manure a mile when they can put it on with a wheelbarrow, and get all that they want by high cultivation.

64. Then, may the Committee assume that the Assistant Commissioner has been sent down, not merely for the purpose of ascertaining the fact of there being a garden, but that he has gone into the amount of the garden?—Certainly.

65. Mr. *Knatchbull-Hugessen.*] I gather from your answers that you consider that the action of the Home Office is only ministerial?—The only way in which the Home Office would apply to us would be, that supposing that anybody made a complaint, and wrote up to the Home Office, they would write to us for explanation.

66. When you have issued a provisional order, you require a confirming order, which goes to the Home Office?—Yes; that is entirely ministerial.

67. And in fact, inasmuch as the consent of the lord of the manor is necessary before that provisional order is issued, any alteration from that provisional order, either by the Home Office or by the House of Commons, would, in your opinion, invalidate it, and render necessary the introduction of a new Act, founded upon a new consent obtained from the lord of the manor?—Yes.

68. Are you aware that before the Inclosure Act of 1845 inclosures were made, to a considerable number and extent, of an irregular character?—Some of them were very irregular, because they had to come to us to be set right under one particular section of the Act.

69. Was not the Act of 1845, passed with the view of remedying the extreme irregularities of the system, and also of applying that remedy for the purpose of protecting the poorer classes of the community, whose interests it was considered had not been sufficiently thought of?—Though I was in the House of Commons, I knew very little about that Inclosure Act. I take it that it was done for this reason: in the first place, the inclosures were conducted at an enormous expense, and were very often not finished at all; the expense of an Act of Parliament was about 500 *l.* or 600 *l.* Taking simply the period of the process through the Inclosure Office, up to the time when the private Act of Parliament was passed, in the one case the expense was about 500 *l.* or more, and in the other under 20 *l.*

70. Therefore this Act has been of very great service to the public?—I suppose that it has.

71. When you proceed to an inclosure, do you find certain defined rights; that is, those of the lord and certain persons having certain rights of common?—The honourable Member now confines himself to the waste of a manor. The way in which

Mr. *G. Darby.*

6 May 1869.

which it is done is this: of course in the first instance it is only *primâ facie*; the first thing you have to do is upon an application; there are certain answers which have to be made; there are certain questions as to how many acres there are; the class of the land; who is the lord; how many rights there are, and the nature of the rights, and so on; then you have to send down an Assistant Commissioner, to inquire into the accuracy of those statements, and to say whether inclosure ought to proceed or not. It is his duty to take care that as far as he can find out, one-third of the persons interested have signed the application; it requires one-third in value of the parties interested to sign the application, in order to give the Inclosure Commissioners any jurisdiction to proceed at all.

72. Not one-third in number, but in value?—Yes. When we find that one-third have signed the application, the next process is to send down a provisional order, which embodies the terms and conditions upon which that inclosure is to be sanctioned. Two-thirds in value (that is including the lord's interest) must sign that paper, before the Inclosure Commissioners can proceed to that inclosure. If two-thirds in value, including the lord, do not sign it, then the Inclosure Commissioners are deterred from proceeding any further with the matter. When those two-thirds have signed, that is reported to the Home Office, in the annual report, on the last day of January; and upon that a Bill is founded. After that is sanctioned by Act of Parliament, notice is given on a particular day for the appointment of a valuer. The parties interested in the first instance appoint that valuer. If there is not a majority in number, and interest, in favour of the particular valuer, it falls to the ground, and the Inclosure Commissioners appoint, that is by Act of Parliament, but there is generally some arrangement made. Then when the valuer is appointed, he names the day to receive the claims. Then those claims are investigated, and if objections are made to them (I believe that I am following the Act pretty correctly, but I am speaking from memory) an Assistant Commissioner has to go down to hear those objections; and then there is an appeal against those objections; if the party is not satisfied with the decision, he may appeal against the decision. That is done either by another Assistant Commissioner, or by the Commissioners, but it is usually done by another Assistant Commissioner, because it is usually done on the spot for convenience. When that is done, if a man is dissatisfied with any point of law, upon notice, he can try the question on a feigned issue before a court of law.

73. With regard to the forms and questions which are answered, is it not under the 24th section that you frame them?—Yes.

74. Could you furnish us with those forms?—Yes.

75. The answers to those questions are filled up by persons who have made application to you?—Yes.

76. And I believe that you do not act until you are put in motion by local persons?—Just so; we do not promote inclosures in any way whatever; we are merely the instruments to carry them out upon application.

77. Under this Act you settle between the lords and the public, protecting the interest of the one, and of the other?—Yes, and also the interests of the remainder-men. For instance, we have had a case. If men had a fee-simple interest in what they did, of course they might do what they liked, but we have had cases; it is not very often so, because, as a rule, the lords have been extremely liberal with regard to allotments, and the returns will show it; the Bishop of Winchester I will name as one instance. But we have another thing to protect, namely, a limited interest. Sometimes the commoners claim too much, and sometimes the lords claim too much. I know one instance where so much was claimed by the lord, that we did not think it fair to allow the provisional order with that amount in it, and we stopped that provisional order until it was altered.

78. Is it not the fact that all the rich and poor who have common rights, are invariably satisfied by the Commissioners, irrespectively of the 30th and 31st clauses of the Act?—No doubt of it, and where there is a class they generally appear, and if they appoint one particular solicitor to represent them in their interests, then the Act of Parliament distinctly states that their interests shall be specially attended to, and they always are most distinctly attended to. There is no doubt, that under this Inclosure Act, if a man has a right he can have it in land or money.

79. Are you aware of any complaints since the Act of 1845 by persons who have claimed the rights of common, and have not been satisfied?—I cannot say, because sometimes one man claims something and somebody else objects.

80. Has there been any case of the inclosure of a common, in which you have had practical difficulties in that respect?—I must fairly say that taking it as a whole, considering that there must have been tens of thousands of cases where there could have been appeals, and trials, since 1845, and considering the thousands and tens of thousands of cases in which these questions might have been raised, I cannot conceive of any Act which has worked more smoothly than the Inclosure Act; and the great proof of it is, that where there have been actions, as there have been a few in manors, the great majority of them have been decided in favour of the Inclosure Commissioners.

81. I will separate the two classes of cases; one class is where there are defined rights of common, and the other class is where there are certain undefined rights held, or supposed to be held, by the public. Has the latter class been dealt with under the 30th and 31st sections of the Act?—No, I do not think that there is any question upon that.

82. The 30th and 31st sections do not deal with persons who have these rights of common, because they are otherwise satisfied, are they not?—I think that it was regarded as a matter of public policy to apportion a certain amount of ground for exercise and recreation, and for the labouring poor, and that the Legislature said this: "You now can only get an inclosure at a great expense, you have it badly done; we will give you the means although you have only limited interests, of doing this in a cheap way, and you must take the condition attached to your use of the Act; you must give up such and such things." That is my impression; it may be a wrong one.

83. Those persons who have defined rights of common have been satisfied?—Yes.

84. Then these 30th and 31st clauses were meant to deal with a certain class of people who did

did not come under the category of persons having defined rights of common?—I understood the honourable Member to ask me whether it was to compensate undefined rights, and my answer was that I did not think that the Legislature meant to compensate any rights under it; they said, "We give to you an Act of Parliament which is a very cheap Act of Parliament if you choose to use it; we think that as a matter of public policy it would be very advantageous to set out allotments for the labouring poor, and ground for recreation, and you shall not use our Act of Parliament unless you do that, in the discretion of the Inclosure Commissioners who have to carry it out."

85. With regard to these people with whom the 30th and 31st section deal, whether they be persons having rights at all, or not, are they always persons living in the parish?—No; with great deference, will the Honourable Member allow me to refer to the Act. The 30th clause is an appropriation of allotments for the purposes of recreation for the inhabitants of the neighbourhood; it is necessary that I should refer to the Act, because the words in the two clauses are not the same.

86. The Chairman has asked you, as I understood him, with regard to a person occupying a tenement which had an allotment to it, and with respect to the occupier as tenant having another allotment. Should you not consider it rather unjust that one tenement having been satisfied by this right of common should have a second allotment under the 31st clause?—It would not be so; I understood the Right Honourable Chairman to say this: "If I as a landowner let a cottage, and I put in a right in respect of that cottage, for allotment, and when I get the allotment my tenant has not the benefit of it, would not that tenant, not having the benefit of my allotment, be entitled under the Labouring Poor Allotment Act to have an allotment?"

87. Would not that be giving two allotments?—No. The assumption is that the landlord has one allotment, and that the tenant does not get it.

88. Every allotment which you gave would, of course, be taking so much away from the lord, and those who had rights of common?—No doubt of it; the honourable Members must be aware that there is a great difference; if you ask whether a large population in a town are to be called "labouring poor," because they are not capitalists, it is one question; if you ask me whether a man who has a cottage, and works for a village saddler, on the village green, could not have an allotment, I should say that of course he would.

89. Under this Act, very large discretionary powers are left to you with regard to allotments, are they not?—Yes.

90. Do you think that in these cases full and due notice is given to the public before every inclosure?—That is a very difficult thing; no doubt that is a question; there are a large number of interests, and some of them, perhaps, residing away; you cannot, of course, give individual notice, but the practice of the Commissioners under one of the clauses, I think, in a great measure remedies that, because if any person has not heard of the proposed inclosure, and afterwards wants to put in a claim, we have the power, on his stating the reason why he did not do so before, to allow him to put in a claim afterwards, and that power is exercised most liberally; and for this reason: we think that it is very hard that, because a person has not heard of it, he should be ever afterwards deprived of his property; and therefore we exercise that power as liberally as it can possibly be exercised under the Act, and always have done so.

Mr. *G. Darby.*

6 May 1869.

91. Are you aware that complaints have been very often made, as in a very recent case, of proceedings going on; and can you suggest any way in which more public notice can be given under this Act?—It is advertised in the papers having circulation in the district, and it is put on the church and chapel doors. The greater the publicity, the better I should like it, but unless you gave a notice to each person (and as you do not know who all the claimants are, you cannot do so), I do not know how greater notice can be given; as a rule, I believe that the great body of the people, where an inclosure is going on, always know of it; but the cases in which they do not know of it are those of individuals who may be living at a distance, and through the neglect of a tenant, or somebody of that kind, they are not informed of it. In that case, under the clauses of the Act, we invariably, upon anything like fair grounds, allow those claims to be put in at a late period; and that power is exercised as liberally as it can possibly be consistently with allowing an inclosure to go on; of course, if a man did not put in a claim until the time of signing the award, you must go through the thing again, if you entertained his claim, and you could not do it; but it is always done up to a reasonable time.

92. You were asked a question as to the number of places where allotments had been insufficient, have you not received answers that in some instances they were more than sufficient?—Yes; I received a letter this morning in which the writer asked whether the Inclosure Commissioners would allow the allotments to be sold.

93. Have you completed the inquiries which you sent out?—Yes, we only took notice, I think, of those cases where the parties said that they could have let more; for instance, there is a case where they say that they could let more, where, I think, 250 acres are set out for allotments.

94. I understand that you instituted inquiries as to whether these allotments had been sufficient or not?—Yes, and when it was said that they were insufficient, it was my duty to find out whether it was from the fault of the Inclosure Commissioners, and whether it could be remedied; for instance, in Grunty Fen, 250 acres out of 1,400 acres have been set out for the labouring poor; of course, it has taken some little time to do this, but if any honourable Member will tell me what he wants, if I can possibly extract it from anything in the office, he shall have it.

95. I have understood you to say, that in every case, you consider the wants of the existing population, and do not think it necessary to look forward to prospective population?—That is one of the things which it is rather difficult to define; if you were to speculate upon any amount of population which there might be hereafter, it would be setting out ground under the Act of Parliament for labouring poor who might hereafter exist; and upon what basis would you calculate what in any particular place the population in 50 years might be? I do not mean to say that the Act will not bear that construction to a certain extent, but it must be exercised with caution, and not according to the fancy of the Commissioners setting out the property of other

Mr. *G. Darby.*

6 May 1869.

people upon their own speculations; it requires very great caution, and I think that if honourable Members had to work it they would find it so.

96. As a Commissioner, you are of opinion that if Parliament thought that, as a matter of policy prospective population should be provided for, the Act ought to be made more definite in that particular?—They could not state what that population would be, and therefore they must form some sort of speculation; I therefore suppose that they must limit what the Commissioners should set out. Of course, whatever Parliament tells the Commissioners to set out, they will set out, but it is a very difficult task to say to the Commissioners that where there is a limited number of acres they must calculate what the population will be in 20 years, especially when in 30 cases they find that there is no increase in population at all.

97. You would adhere to the statement that while the population of the whole country has increased so much, still it has not increased in these particular districts?—It has not increased in one of those particular districts; that fully accords with my own experience in Sussex; my own parish has not increased in 10 years. The next parish, namely, Heathfield, has decreased 300, and another parish near me has decreased 200. My own local knowledge coincides with these figures.

98. Mr. *Vernon Harcourt.*] Is it not required by the Act that the Inclosure Commissioners should state, on all occasions where waste lands of a manor have been inclosed, if they have made no appropriation, why no such appropriation has been made; is not that a requirement under the 30th section?—Yes.

99. In Withypool, 1,904 acres of land are inclosed, and one acre is allotted for recreation; what is the view of the Commissioners with reference to the character of the recreation which can be carried on upon an acre of ground; what games do people play in one acre; you have power to give four acres under all circumstances, and here you only give one; why is that?—I think that Withypool is very elevated ground.

100. That may be a very good reason for giving none, but if the population can use the ground at all, why should you only give one acre?—I see that there is one acre for exercise and recreation, and that there are five acres given for the labouring poor.

101. I am now asking your attention to the question of recreation ground. The Act says, in the 30th clause, however small the population is, "in every case, except as aforesaid, not exceeding four acres;" why did the Commissioners give only one acre in that case?—Of course, I shall be very happy to answer the honourable Member, but I am sure that the Committee would hardly expect me, without the report, to give offhand an answer in every case when one has had hundreds of inclosures to deal with.

102. This is the Report presented to Parliament in this Session, and I want to know how far the Commissioners have applied their minds to the consideration of the particular cases?—I believe that every one of the Commissioners (I know that I did, and I believe that my colleagues did), before making the report, went through every single Assistant Commissioner's Report. I went through every Assistant Commissioner's report myself after the thing was drafted out, and I believe that both my colleagues went through every single report of the Assistant Commissioner in every case before sending in the Report; but, of course, I cannot without having the Report before me take any particular case, and give the particular reason. I believe that the case of Withypool is a curious one. I think that Withypool was an inclosure which was made a great many years ago, and that there was a report upon it, and that it was abandoned; and I think that in that case there were two acres given for exercise and recreation, and four acres for the labouring poor, and that when a second Assistant Commissioner went down he gave one acre for exercise and recreation, and five acres for the labouring poor.

103. *Chairman.*] On another occasion will you give the Committee further information upon that point?—Yes; I have no doubt that Mr. Wetherell, whom I understand you mean to call before you, is thoroughly acquainted with the case; he was, I believe, the Assistant Commissioner. I think that Mr. Langworthy reported upon it first, and that Mr. Wetherell reported upon it the second time.

104. Mr. *Vernon Harcourt.*] You told us in the first instance that we were to look to the Inclosure Commissioners as the persons responsible to Parliament for the propriety of the exercise of this discretion vested in them?—Yes, and I say so still.

105. Looking at the Report presented to Parliament in the last few months, are you in a position to tell us upon your responsibility, why one acre alone was appropriated for recreation ground in the case of Withypool; and if you cannot tell us, how can Parliament rely upon this information?—Out of the scores of acts which I have to perform every day with copyhold, and drainage, and tythe, if you take me at a shot and ask me upon any particular thing, without reference to any paper, the only course would be to refer back in order to see what was done; my memory serves me so far that this was an old inclosure which was abandoned. Mr. Langworthy who is now dead, was the Assistant Commissioner in the first instance, and since then I think that it was Mr. Wetherell, and they both came to the same conclusion. I said that I thought that it would be convenient to examine the person who had been on the spot; but if this has been done wrong I hold myself responsible for the error.

106. Then it comes to this, that the person from whom Parliament is to expect the information is not the principal Commissioner, but the Assistant Commissioner?—If the honourable Member desires that I should give him every particular as to this case, without looking at all into it, although it is natural enough that I should desire to see what it is before I answer the question, the only thing that I conclude is (and I daresay it will turn out so), that in that case the Assistant Commissioners probably thought that the poor allotments in that district might be larger in proportion to the exercise and recreation ground than in other districts. Sussex is a great cricketing county; in other counties they do not know the game at all, and therefore the Assistant Commissioners evidently thought that the poor allotments were of more consequence than the exercise and recreation ground. It is a curious thing that the same total quantity is given by both Assistant Commissioners.

107. I see that the allotments for recreation are to be given to the people in the neighbourhood; is there

there any definition which has been practically adopted by the Commissioners of the term "neighbourhood"?—Yes; what you call the "neighbourhood" is, in the classical sense of the term, and the true sense of the term, namely, those persons who are sufficiently neighbouring to take advantage of it; you would not set out exercise and recreation ground for people living four miles off.

108. It has no reference to the parish, or the manor?—Certainly not.

109. But you apply it to any distance which you think may be fairly used by the population?—Yes.

110. I believe that you have power to make exchanges, have you not?—Yes.

111. Have the Commissioners ever acted upon the principle that, where an inclosure was at a distance from the population, it should be a part of the condition of the inclosure that people interested in the inclosure (as for instance the lord of the manor), who had land round the village, and waste land some distance from it, when it was not convenient to give the population the ground at a distance, should exchange it for a portion of land near the population?—Wherever the Commissioners have seen an opportunity of exchange they have embraced it if it has been under the Act, but certainly they have not put a pressure upon the lord of the manor, because the allotment is given up by the whole body. As an Inclosure Commissioner I should feel that I had no right to go outside the Act of Parliament to put the screw upon the lord, and I could not do it, because the commoners and the lord are jointly interested.

112. Have you the power, or not, to effect an exchange if an inclosure is distant from the population; have you the power to set apart a plot of ground, and then to exchange it as against a plot of ground nearer to the population?—Does the honourable Member mean to ask me whether I have power in the Inclosure Act to say, "I will not allow this inclosure to go on unless the lord will consent in the provisional order to exchange some private land of his own"? There is no such power at all.

113. You have said that you understand the words "labouring poor," generally speaking, to mean the agricultural labourers of the district?—It is very difficult to define the expression. If a man is living in an agricultural parish, or in any place of that kind, and has a cottage without any ground near it, and is employed as a journeyman shoemaker, I have no doubt that he would have an allotment; but that is a very different thing from saying that the manufacturing population in a town have such a right.

114. Mr. *Fawcett.*] I think that you are referring to a question which I put. I did not refer to the population in a town, but I referred to an isolated manufactory in a town, for instance, a straw bonnet manufactory or a silk manufactory?—I suppose that there the common would be set out.

115. Mr. *Vernon Harcourt.*] I find that in the last Report of the Commissioners there is the following statement in paragraph 13:—"Lightwood Green and Knolton Bryn, in the parish of Overton, containing about 39 acres. The population being agricultural, and engaged in open-air employment, and the lands being at a considerable distance from the village, an allotment for exercise and recreation has not been required." Looking back to one of the other Reports, I see that it is alleged as a reason for not making an allotment for recreation, that the people are agricultural labourers occupied in open-air employment. Is that the view of the Commissioners?—No; the honourable Member must not separate the two things. You might find that a population was near some place where there was no possibility of getting fresh air, and the people might like to come out to a distance to get that air; but if you get a population who are out of doors all day, and at work all day, and if they have to go three miles to a recreation ground you will never find any of them there. The Commissioners must therefore exercise their discretion.

Mr. *C. Darby.* 6 May 1869.

116. In determining whether or not to set apart recreation ground, is it a part of the consideration that people are engaged in open-air employment. I think that I have seen several cases in which that has been alleged as the sole reason for setting aside no ground for recreation, namely, that the population is agricultural, and engaged in open-air employment; am I right in that?—Two conditions are adhered to, one of which is distance. I say that any man who has all his life been among an agricultural population, and who is engaged in out-of-door employment all day, will get in the evening to cricket, if he can do so, but he will not do so if you make him go three miles to cricket, and therefore I do not think that you exercise a wrong discretion in shutting that out. When the honourable Member talks of air and exercise, he separates that from distance, whereas the two things are combined together.

117. Is it an element in the consideration, that in addition to the distance, the people are persons of an agricultural character engaged in open-air employment?—I refer to persons of an agricultural character at a distance, which would prevent their using the exercise and recreation ground.

118. Is it an additional reason, superadded to the distance, for not making an allotment for recreation, that the population is of an agricultural character?—I say that it is not an additional consideration.

119. It is an element in the consideration?—Yes, but not separate from it.

120. Is it an element in disallowing recreation ground, that the population is of an agricultural character?—I can give no other answer than that which I have already given to the honourable Member.

121. What measures do the Commissioners take to revise the inquiry which is conducted on the spot by an Assistant Commissioner?—The Commissioners receive his report, and when that report is received, sometimes the parties themselves refuse to go on with the inclosure, if they are compelled to set out those allotments; then the Commissioners have said that they cannot sanction the inclosure without it. As far as the Commissioners are concerned, if they think that the circumstances of the case are such as to induce them to believe that any error has been committed, they immediately communicate, and have a full explanation upon the subject.

122. What should lead them to think that any error has been committed, apart from any representation from persons on the spot?—If the report upon the whole is satisfactory, the Assistant Commissioner having been over the ground, the Commissioners adopt it. It is upon their responsibility that they make that assumption;

Mr. *G. Darby.*

6 May 1869.

tion; and if their assumption is wrong, they are responsible for that assumption.

123. Assuming a report to be sent in to you by an Assistant Commissioner, you say that if it appears upon the whole to be satisfactory, you confirm it. What means have you of judging whether it is satisfactory or unsatisfactory?—We know the district of country into which he goes, and he tells us the nature of the ground and of the population. You can only take evidence from a responsible man who has seen the spot. No Poor Law Commissioner in London could go down to see whether his Assistant Commissioner was exactly right as to what he had reported to him. You must judge for yourself from the statements of the Assistant Commissioner whether they bear out the line which he has taken. If I make a mistake in checking the report of the Assistant Commissioner, I am responsible for that mistake. We constantly see him and check his evidence.

124. There are 14 inclosures recommended by the Commissioners to Parliament in this Session?—Yes.

125. How many of those places have been personally seen by the Commissioners?—Not one. If any of the Commissioners had to go down to these inclosures, instead of every letter being answered on the same day it would be deferred for a considerable time. There are College Estate Acts, Copyhold Acts, Drainage Acts, and Tithe Acts; and it would be simply impossible that we could go down to look at the allotments. Mr. Wetherell, who is one of the Assistant Commissioners, is a man of very considerable experience, and who has been in the country all his life, and is perfectly acquainted with property, and I should say that Mr. Wetherell is as fit a man as could be selected; he is a man perfectly acquainted with all those subjects.

126. As a general rule, the Commissioners in no case have any personal acquaintance with the districts dealt with under the Inclosure Act?—Certainly not, as a rule. In one case there was a great dispute, and I think that the late Mr. Mules went down; but as a rule the Commissioners do not go down and personally inspect the places, but they are inspected by an Assistant Commissioner, who reports to them.

127. Then the question whether the inclosure is near enough to the population, or is too far for the purposes of recreation or allotments, depends upon the report of the Assistant Commissioner?—Yes; and when he states what the distance is, the Commissioners draw their inference as to whether or not they ought to give these allotments; but of course we assume that the Assistant Commissioner, when he is upon the spot, exercises a sound judgment.

128. You said, in answer to the Chairman, that you would object to any considerable unappropriated allotments being made, as I understood, for fear that cottages should be built without gardens, hoping to take the benefit of those allotments?—No; I did not say that that was the reason. The Right Honourable Member in the chair asked me a general question as to the difficulties of speculating under this Act with regard to the possible population, and I said that if you speculated upon the possible population, inasmuch as it could not be defined by Act of Parliament what that population would be, some limit must be fixed by saying what portion of any ground should be given for this purpose. That is, I think, what I said. Parties say, "We have allotments; they are a nuisance; have you any provision in the Act enabling them to be sold?" If you set out too much, there is no provision to get rid of it.

129. Do you not consider that in a large part of the agricultural districts of England one of the greatest evils is the insufficiency of cottage accommodation for the labouring poor?—The insufficiency of cottage accommodation for the labouring poor involves the question of houses as well as gardens, and as far as my present experience goes, that accommodation is being very much increased from the force of circumstances. There are very large sums being borrowed for the purpose of building, and then the estate is charged for it. Formerly persons were inclined to keep the cottager out of the parish; I conceive that labour is becoming very much scarcer, and the inducement now is to keep the labour there by giving a man a comfortable cottage, and garden; and in those very places where they were inclined to get rid of those cottages they are building them in order to secure labour to themselves.

130. Do you not think that any system which kept in each parish a reserve of unappropriated land which might be available for the accommodation of the labouring poor, would be a valuable correction to the present restriction, as regards house room for agricultural labourers?—I think that I would not have anything to do with the house room for labourers' cottages. If any class of cottages was built to take advantage of this land, they would be the very worst of cottages to take advantage of those allotments; but when a man builds on his own land, and on his own farms, he builds good cottages, and if you mean to take the bull by the horns you had better get back to the principle of the statute of Elizabeth, and say that no man shall build a cottage without one-eighth of an acre of land being attached to it. It is impossible that you can give allotments as building land; that is out of the question. Then the question is, whether those allotments ensure such cottages as you wish to see built for the labouring poor; I say that they will do nothing of the kind, and in my belief, rather the reverse.

131. I understand from your evidence generally, that in your opinion the inclosures which have hitherto taken place have not tended to increase the population of the districts in which they have been made?—What I have done is simply this: Colonel Leach just took by hap-hazard a certain number of inclosures in certain places, without knowing how they would turn out, and he then went into the population returns, and the result is that the population has remained stationary in those places.

132. Generally speaking, what is the view of the Commissioners with reference to the inclosures; do you think that you are bound to make an inclosure upon the application of sufficient parties, according to the Act, setting aside such portions of land as you think requisite?—Yes; unless there is some reason against it. The Commissioners have always held (and I think that they are right), that the Act of Parliament is a beneficial Act of Parliament; and in no case have the Commissioners interfered to ride roughshod over the parties interested. The Act of Parliament requires one-third for the application, and it requires two-thirds for the sanction, and if those conditions which we think are required by the Act

Act of Parliament, were embodied in a provisional order signed by those two-thirds, I should not allow any caprice of mine as a Commissioner to interfere.

133. Therefore, whatever was the character of the common, so long as it was not within the prohibition as to distance, by a particular statute, the Commissioners would think themselves bound upon certain terms to recommend its inclosure?—What does the honourable Member mean by the character of the ground?

134. I mean if it was a ground which was much frequented by the public generally, and much used as a place of enjoyment; as I understand you, if the requisite applications were made by one-third in number of the Commons, the Inclosure Commissioners would still be bound to recommend that inclosure, setting aside a small fraction for the purpose of recreation and allotments?—The Act of Parliament describes what it is; if parties have any claim, they have power to put in their claim, and to have it treated as a right.

135. I am not putting a case of right, but a case of ordinary public enjoyment; supposing that a place was much frequented by the general public, the Commissioners would recommend its inclosure upon the application of a certain proportion of the commoners?—If it has been near the place, the Commissioners have always sanctioned it; for instance, there have been cases where the parties have given portion of grounds to a Local Board; wherever there is anything of that kind, the Commissioners give facilities, but in order to carry out a particular view of their own, they would not feel justified from any general opinions of their own, in interfering with the right of parties who could try these rights in a court of law.

136. Supposing that the Commissioners make an appropriation of which the lord of the manor does not approve, can he absolutely veto the inclosure?—Certainly.

137. As a general rule I see that you give the lord of the manor about one-fifteenth or one-tenth of the common?—I think that the honourable Member is about right, but in looking at these reports, honourable Members will see that the cases are varied, and unless their attention is called to the distinction, they will not understand the difference; for instance, there are certain commons as to a large portion of which there is a right to shut it up for seven years, for the growth of timber, that is not disputed.

138. I am only asking as to the general rule?—The general rule would be to give the lord of the manor one-fifteenth or one-sixteenth.

139. Does it not seem to you rather a strange thing that the party who is recognised as only having one-sixteenth of the right, should have a veto against all the rest; I understand that two-thirds in number are sufficient to carry the Inclosure Act, but two-thirds being enabled to carry the Inclosure Act, a man who has one-sixteenth may put a veto upon the whole thing; upon what principle is that justified?—The honourable Member should rather ask those who framed the Act; but I can suggest a principle, namely, that the lord is the entire owner of the soil.

140. If his right is limited upon the inclosure to one-sixteenth, upon what principle is he to override the two-thirds?—That is not for me to state.

141. Can you suggest any principle upon which such a rule can be defended?—If I had the honour of still being a Member of the House of Commons, I, perhaps, might give my opinion; all I do is to carry out the Act; unquestionably, the original right was in the lord. And according to the custom of the manor he may approve with consent of the homage; it is done every day; the lord may approve; the commoners have an undoubted right of pasturage; the lord may have very serious rights of minerals and timber, and various things on the common, and unquestionably he was the original owner, with the grant of the pasturage. The Legislature has thought fit to give him that veto, and it is for the Legislature who has given him that veto to state its reasons for doing so.

Mr. *G. Darby.*

6 May 1869.

142. Therefore, practically speaking, if the lord does not approve of your giving a certain allotment for the labouring poor, or for recreation ground, he can stop the inclosure against the will of the whole of the rest of the commoners?—He can; but I think that I am pretty nearly correct in saying that the objections to allotments come much more from little commoners than from the lord; if you had the veto in the other way you would have much less recreation ground. It is not the lords who object to it so much as the commoners, and we have had a great many cases where the lords would not assent until more was given.

143. What is the meaning of these tables in your Report presented to Parliament; the first table purports to be a "statement of the proceedings which have taken place since the inclosures have been sanctioned"; does that apply to inclosures which have been sanctioned by the Board since the year 1845; what does this table mean; I refer to the table at page 6 of your Report?—These are all inclosures from the date which is given; these are the proceedings. The next act which takes place on the sanction of an inclosure, is the valuer's appointment; in Itton Moor he was appointed on the 29th of August 1848; the valuer's report was received on the 18th of September 1866. The meeting to hear objections was on the 1st of December 1868, and for some reason or another that award does not seem to have been confirmed. If you take all the cases in that way, you will see what has been done; there is the appointment of the valuer, and the next thing which comes to the Commissioners is his report; the next thing is to hear objections to his report, and the next thing is for the award to be confirmed.

144. Does this table contain a complete list of all the inclosures which have taken place since the appointment of the Commissioners?—No.

145. I take it that the Commissioners have some object in presenting this table to Parliament year after year, and I want to know what is the meaning of the table?—These tables have been presented year after year, and they are not presented exactly in the same form as they were. I have not got the old Reports here.

146. I can give you some in previous years?—Have you them back to 1845?

147. Mr. *Vernon Harcourt.*] No; only for the last five years.

148. *Chairman.*] Here is one in 1862 (*handing the same to the Witness*).

149. Mr. *Vernon Harcourt.*] What is the object in presenting this table to Parliament; I see that in the Report of 1865, Itton Moor is stated

Mr. *G. Darby.* 6 May 1869.

to be in the county of Devon; estimated number of acres 185; then there is given the date of valuer's appointment. In one Report it is stated to be 31st August 1846, and when we get down to another Report it is stated to be 29th August 1848?—It is just possible that if the valuer first appointed did not go on there may have been a fresh appointment.

150. I want to get from you the object of presenting this table to Parliament?—This Report is not one required by the Act at all in this shape; it is simply done to give the fullest information which can be given.

151. *Chairman.*] Will you refer to the last column; do you not find that all the cases included in this Return are cases in which the award has been confirmed during the year 1868; therefore is not this a Return either of those cases which have been confirmed?—Yes; in some cases the inclosures have hung fire, and therefore you have to go back; here is an inclosure which is not done with, and an objection is raised. Here is another which was confirmed in 1868. Those are all the inclosures which came in for that particular year up to 1868, and then you get to 1869.

152. Any inclosure of which the award was confirmed before 1868 is not in this Return?—No; all the inclosures which have once appeared in a report, as confirmed, are afterwards omitted.

153. Mr. *Vernon Harcourt.*] The heading is "Statement of the Proceedings which have taken place since the Inclosures have been sanctioned." Will you kindly furnish the Committee with a complete list of all lands which have been inclosed since the Act of 1845?—The honourable Member means that he wants a complete list of the reports.

154. No, because the reports will not show us that; I want to have a tabulated form such as this would be if it was a complete list of inclosures which have taken place since 1845?—We commenced in 1845, and you want a set of the inclosures, as if every inclosure had not been entered twice over, but had been entered from 1845 down to the present time.

155. Yes, I want to see how many inclosures have taken place, and what they have consisted of?—That I can tell the honourable Member at once.

156. I do not mean the gross total, but a tabulated statement showing such inclosure separately?—There is no difficulty, if that Return is moved for, in making it out, because in the office we have every annual report from 1845 down to the present time. It will of course, take some time to do it, but out of the annual reports from 1845 down to the present time, you can have every single inclosure which has been dealt with from the passing of the Act down to the present moment.

157. I want to ask you the meaning of the next table, at page 12: "Applications for inclosures not yet sanctioned;", those, I understand, are the cases of all inclosures under consideration which have not yet obtained the confirmation of Parliament?—Yes.

158. That means, not sanctioned by Parliament; that would include applications which you, the Commissioners, had sanctioned?—Yes.

159. What does this table represent; does it represent inclosures which have received the approval of the Commissioners, or which have not?—Yes; it represents inclosures which have received the approval of the Commissioners.

160. Is what you mean by the heading, "Applications for Inclosures not yet sanctioned," that you have not yet obtained Acts of Parliament?—If the honourable Member will forgive me, I believe that, with great deference to him, the word "sanctioned" is the proper word to use; it means sanctioned, not by the Commissioners, but by Parliament. We shall be most ready to make any alteration, but we have used the word which is used in the Act of Paliament.

161. There is a column headed "Allotment for exercise and recreation," and there is another column headed "Allotment for the labouring poor"; are those the allotments which have been approved by the Commissioners?—Yes.

162. And they would not be there unless they had been approved by the Commissioners?—No.

163. May I take it for granted that, in the cases where in those columns there appear no allotments for exercise and recreation, and no allotments for the labouring poor, the Commissioners intend to make none?—Of course; because you will observe the words, "consents to provisional order received." That shows it has been allowed without those allotments.

164. I want to know what is the meaning of those columns; do those columns of allotments headed "Allotments for exercise and recreation," and "Allotments for the labouring poor," represent the judgment of the Commissioners?—Yes. there are consents to the provisional order; they are chiefly "ditto" all the way down.

165. Do those marks under the word "abandoned" mean "ditto" all the way down; do they mean that every application for inclosure on that page has been abandoned or not?—At page 12 there are the applications for inclosures not yet sanctioned; out of those there are several abandoned.

166. Are the whole of them abandoned?—No; there is one at Tir Abbot Ucha which is not abandoned. There are 13 in which there have been no provisional orders.

167. Do those marks under the word "abandoned" mean "ditto"; in the last column on page 12; do they mean that all the applications on that page have been abandoned?—Yes; they are abandoned as far as we know, but they may be taken up again.

168. This document is to me utterly unintelligible, and I want to know whether you understand it any better than I do; are all those applications abandoned or not?—Where the marks follow the word abandoned. There has been a provisional order at Tir Abbot Ucha, and the consent to the provisional order was given on November the 3rd.

169. That has not been abandoned?—No; there has been a provisional order. Then you come to Woodham Walter, and a provisional order there has been issued, but without any consent to it. Then you come to Kempsey, where there has been no provisional order. The first inclosure in that list which has been abandoned is at Pelsall, in the county of Stafford. Then you come to Tagston, in the county of Pembroke, upon which case there has been no meeting. In the case of Woodham Walter there has been a provisional order; that provisional order has gone out of the office, but it has never received the assent of the two-thirds.

170. When do the Commissioners make their decision as to the amount of land to be allotted?—Before

—Before the order goes out. It is one of the provisions of the provisional order for assent to that inclosure, and therefore every provision must be embodied in that provisional order, to know whether the two-thirds will consent to it or not. The reason is this: there is a meeting fixed for the consents to the provisional order, and unless two-thirds sign that provisional order, it falls to the ground.

171. Wherever in these tables it appears that there has been a provisional order, and that there has been no allotment for exercise and recreation, or for the labouring poor, may I take it for granted that the Commissioners have decided to make none?—Decidedly. Wherever you see "Date of provisional order," you may assume that that provisional order contains the conditions, and that that is the shape in which it will come to Parliament, whether it specifies any allotment or not.

172. Will you kindly supply us with a return, showing the inclosures which have been made since 1845, showing the number of acres inclosed in each inclosure, and stating, with reference to each inclosure, the amount of the allotments for recreation and for the labouring poor, which have been made?—Yes; but perhaps the honourable Member will allow me to mention that unless you take (and we shall have some difficulty in that; we might get it by the next Session of Parliament) the quantity of land which is liable to allotments, and the quantity of land which is not liable to allotments, you get no true comparison between the allotments and the quantity of land out of which they can be taken.

173. Do you mean to say that the Inclosure Commissioners would not have in their possession any tabulated form which could tell them in a few days how much land had been inclosed in a certain number of years, and how much of that land had been allotted to the poor?—The honourable Member assumes that no question arises; questions arise every day; there are constant disputes as to whether the land is the waste of the manor or not; I have taken out 25 of these cases, which I will explain to the Committee. The reason for stating in these Returns whether the land was waste of the manor, or partly waste of the manor, or was not waste of the manor, was this. When the Return was first made to Parliament no lands, except waste of the manor or land upon which the rights existed, which rights were without number or stint, required the sanction of Parliament at all.

174. Surely a clerk has nothing to do but to go through these annual Reports and to take out the cases. In the Report of this year the quantity of each inclosure is stated, and it is stated whether it was or not subject to appropriations, and whether that appropriation was made or not?—If the honourable Member will be kind enough to pay attention to what I have stated, he will find that it is exactly to his point. I know exactly what the honourable Member wants, and I will explain it if he likes.

175. *Chairman.*] Will not this information be given by a Return which you are now preparing for Parliament?—No, because the Order for that Return does not ask for it. I have taken out 24 inclosures. Those inclosures were partly liable to allotments, and part partly not; but when an inclosure is partly liable to allotment and partly not, when you come to allot it, perhaps a man who has a right gets a piece for convenience on the common field land, and therefore for the purpose of carrying on the inclosure, these things are not set apart; but in the report of the Assistant Commissioner, it is stated how much is common field land, in order that we may judge what portion of it is liable to have allotments set out, and what portion is not liable. In these 24 cases there are 36,135 acres of common field, and 8,213 acres of waste; so that if you had taken the 36,135 acres, plus the 8,213 acres, you would have thought that allotments ought to have been set out on our inclosing the commons; whereas we could only have set out allotments under the Act of Parliament in respect of the 8,213 acres.

Mr. *G. Darby.* 6 May 1869.

176. Mr. *Vernon Harcourt.*] If there is a complex case of that kind, why is it not set out in the report?—I will frankly tell the honourable Member why it ceased to be so. The reports kept lengthening and lengthening; before the year, I think, 1852 or 1853, when the Amendment Act was passed, nothing but the two sorts of land which were subject to these allotments required the sanction of Parliament at all. With respect to the other land, you had, I think, to give 30 days' notice after the provisional order. The matter was found so difficult, and the legal difficulties were so great, that in order to obviate those difficulties, by the Amendment Act of 1853, all land was required to have the sanction of Parliament, whether common field or not. Then the distinction ceased to be drawn in those reports between the two descriptions of land. Before that time it used to be said, "Part waste of a manor;" "Part common-field rights of all the people round;" and so on. But in the reports after that period, inasmuch as Parliament had to deal with every single inclosure, that Return was discontinued. But when an inclosure goes on, where the land is partly one and partly the other, the valuer allots it according to convenience, taking it as a whole.

177. Will you direct one of the clerks in your office to give us an abstract of the 24 annual reports of the Inclosure Commissioners, which will show the following particulars: the amount of land inclosed under the Inclosure Act of 1845, from the commencement; the allotments for the labouring poor; and the allotments for recreation. Your Assistant Commissioner's report in each case would state how much was waste of the manor?—Unquestionably. I will give every possible information with the greatest pleasure. If the honourable Member will send me a clerk, who will go through the files since 1845, and who will go through the Assistant Commissioner's reports, in the course of a very short time, I can only say that I shall be very glad to have the assistance of his clerk. I understand the honourable Member for Oxford to have asked for the particulars of 570,700 acres, involving some 1,200 cases, in which the reports of the Assistant Commissioners are to be referred back to.

178. You have presented to Parliament 24 Reports, which are very short, none of them exceeding three pages, and most of them not exceeding two. These Reports profess to give the acreage of the land inclosed, and to show the amount allotted. I only want an abstract of those Returns, subject to such corrections as you think right?—I am very sorry that I have been misunderstood. Take for instance Milton, in Oxfordshire, where there are 1,960 acres, a certain portion of that amount is excluded in the report

Mr. *G. Darby.*
6 May 1869.

of the Assistant Commissioner; 650 acres of those are waste, and of course cannot be dealt with at all. The Committee might fall into egregious error without a proper explanation.

179. Parliament is placed in a very false position, if it cannot get that information. Cannot the Commissioners supply that information?—Of course the Commissioners can give the information, because the Commissioners in settling what amount of land shall be given for exercise and recreation, and for the labouring poor, invariably know the land which is liable to have those allotments set out in respect of it.

180. You have told us that the information supplied to Parliament does not furnish Parliament with the means of comparing the amount of inclosure subject to allotment, with the amount of allotments made. It is the bounden duty of Parliament to see what the amount is, and the object of this Committee is to ascertain whether the allotments made bear a proper proportion to the land which is subject to allotment?—I perfectly understand the honourable Member, and there is no doubt that we can go to the means of information, and can get that information. As far as I can judge, I think that it will turn out that about three-fifths are liable to have poor allotments and land for recreation set out, and that about two-fifths would be found not to be so liable.

181. Until we have these figures accurately, we cannot perform the functions for which this Committee was appointed. Therefore, how far do you think that the Commissioners can furnish the Committee with that information?—The moment that I go back I will look into the matter, and inform my colleagues and see, taking it in the most rapid way, how long it will take to do it.

182. Mr. *Fawcett.*] It seems to me that the Return which I moved for, and which is incomplete, might be made in a few weeks, because I merely moved for a Return of the amount of land inclosed, and I cannot now get it?—You asked for the amount of land allotted. In these large districts it is very often the case that the estimated acreage is wrong. I think that in Dent 5,000 acres were wrongly estimated. It is done before the maps are scaled. After the maps are scaled, the right quantity allotted is ascertained. You have to get these maps from the land after it has been dealt with by the valuer, and the quantity is scaled in our office, in order to get the amount of the allotments. Out of that quantity you would have to take roads, and therefore the only true answer to the Return is the actual amount allotted after the valuer's map is sanctioned in the Survey Department, but that is not what the honourable Member asked for.

183. Mr. *Liddell.*] When an application for the inclosure of a common is sent up, do the Commissioners send down an Assistant Commissioner to the spot, to satisfy himself as to the circumstances, and does he institute a local inquiry?—Yes.

184. How are the interests of the labouring poor represented before that Assistant Commissioner; the law says, that upon the inclosure of a common a certain portion of the common should be appropriated to the labouring poor; I want to know how the interests of the labouring poor, as a matter of fact, are represented before that Assistant Commissioner; who is the person who represents them?—There are clauses in the Act for that purpose, and all sorts of things are provided for in the Act. Does the question as to the interests of the labouring poor apply to allotments?

185. Yes, wholly apart from the question of recreation. I want to know how the interests of the labouring poor, with regard to their right to allotments, are represented, and, for the most part, by whom. I speak apart from the common rights?—The common rights are very well represented. Apart from the common rights, the clergyman often interests himself, and various persons, but after all we are responsible. I do not say that we have never committed an error; but, speaking generally, I believe that we have most faithfully fulfilled the intention of Parliament.

186. Is it incumbent upon the Assistant Commissioner, either under the instructions issued by the Commissioners, or by any section of the statute, to satisfy his mind that the interests of the labouring poor have been consulted?—Most unquestionably, and he is bound to go and see the land and to see whether it is fit for that purpose; he generally has somebody to meet him, and he goes over the land for the purposes of inclosure. He sends up the map up to the Commissioners and says, "Four acres for labouring poor at or near the spot marked A," and perhaps he says, "Two acres at A for recreation, and three acres at B." All that is sent up, and marked on his map.

187. Are you of opinion, that if the interests of the labouring poor are overlooked, it is the fault of the Assistant Commissioner, or that it is the fault of an inadequate representation of those interests?—As far as I can see, I think that there are always parties where it can be done, who will urge the question of the labouring poor, and the land for exercise and recreation; but while I say that, the ultimate responsibility no doubt rests upon the Commissioners. The Assistant Commissioner is bound to make an entire investigation and to see the land, which he does; and he makes inquiries, and sees the cottages, and nobody could do so who was not on the spot.

188. You have been asked a good deal with regard to assigning allotments prospectively. Has it ever occurred to you that it would be practicable to get anything like a correct estimate of the prospective population?—I have no means of arriving at it at all.

189. I presume that you have no rules to guide you in that respect?—None.

190. And, therefore, I presume that the office looks upon that as a hopeless undertaking?—It is not for me to dispute that statement; persons may take the common view that, for instance, everybody has a right to take such and such an amount out of the common. The Commissioners are guided by the Act of Parliament, and all that I can say is, that our instructions to every Assistant Commissioner have been to take a liberal view with respect to the exercise and recreation ground.

191. I am dealing entirely with the appropriation of allotments?—I thought that you alluded to both, the same instructions are given as to both.

192. Supposing that you made a liberal allowance in the shape of unappropriated allotments, until those allotments were taken up and appropriated, what would happen to a large piece of ground left vacant; might not anybody squat upon it, and would it not be occupied by persons having

having no right to it?—It would be very difficult to say what would become of it. We had a case the other day in which, although we had set out the ground, nobody would take it, and at last with great difficulty they got some farmer to take it, and to level it, and manure it. Directly that was done the people there said, "We should like to have it"; and we said, "We cannot interfere, but we will have to give it up."

193. In whose custody would such an unappropriated allotment be?—The allotment wardens ought to take it under Act of Parliament.

194. Then they could prohibit squatters settling there, or they could prohibit nuisances being created there?—I presume that the allotment wardens would have the authority, if they chose to exercise it. In point of fact, except in a very few instances, the allotment wardens do not seem to act a great deal in that matter.

195. Do you know of cases in which there are large portions of unappropriated allotments not taken up?—We have had several cases of that description. Within this week we have had two cases, in which we have been requested to sell the allotments, but we have said that we have no such power.

196. How many years would you allow to elapse before taking such a step as that?—Until the end of time; we have no such power. Directly the award is confirmed, the only power which we have is to make some regulation for five years which we cannot enforce, and after that we have nothing to do with it. The incumbent, churchwardens, and two ratepayers are to manage the labouring poor allotments. It is quite clear what is intended. When a man has gone to reside a mile out of the parish he cannot have an allotment, and he must give it up if he has had it before.

197. Am I to understand that the Commissioners regard the labouring poor only to include agricultural labourers?—No; as I say, I believe that in practice it is very difficult to draw the line; I misunderstood the honourable Member's question when he talked of a manufacturing population; he said he alluded to people working at bonnets, and so on; I should conceive that they would have that right; and where there was a population of that kind, no nice distinction would be drawn as to what they were employed in; a man would not be asked "Do you hedge and ditch; or do you do so-and-so"?

198. What do you consider so great a distance from any particular cottage, or tenement, as to debar a man from having an allotment?—When you get cottages over a mile from the place, and when you get to two miles, I am quite sure that you cannot get anybody to take the allotment; for instance, my allotments are only a pound an acre, and I pay the rates and taxes upon them, and the men have a dinner when they pay their rent; and I know that no man after his day's work will walk a mile and a-half to dig an allotment.

199. What is the greatest distance at which people have allotments?—I do not suppose that any one of them is half-a-mile off.

200. What would you consider the greatest distance available for the purposes of recreation?—These are very speculative questions, and, therefore, if I give an opinion upon them, the honourable Member must consider it merely as an opinion; as I told the honourable Member for Oxford, if you find persons who have no fresh air at all, the people want to come out to the allotments; so that we must consider the inhabitants who are so situated; but if you get your village green or your cricket ground two or three miles away, the labouring population will never use it, except on Sunday; you must use a discretion in the particular case; but I think that if you get exercise and recreation ground set out at such a distance that it is never used, instead of its being a benefit it becomes a very great nuisance to the parish.

201. Mr. *Vernon Harcourt.*] I see that in the Report for the year 1868 there is the inclosure of a place with which I am very familiar, namely, Harpton, in Radnorshire; that is the place where Sir Cornewall Lewis lived?—Yes.

202. Will you let me see the Report of the Assistant Commissioner upon which you founded the statement that the ground was at too great a distance for any of the inhabitants?—I have a note of that.

203. Mr. *Johnston.*] You have put the case of a manufacturing population, or a *quasi* manufacturing population, and the chairman put the case of a mining population; according to your system of calculation, allotments should only be set out for two men for every 100 acres, each having a quarter of an acre, that makes half-an-acre; do not you think that allotments for 60 men would be a correct calculation?—The honourable Member I think misunderstood me; I said that taking the result of the allotments as set out, that is assuming that the whole land which is liable to these allotments is fit for them, the result of that calculation is to give a quarter of an acre to two men for every 100 acres.

204. You were considering what population wanted allotments, and you said that you allowed two men a quarter of an acre for every 100 acres?—Mr. Tremenheere's report says that you ought to allow two men a quarter of an acre for every 100 acres, and I was trying to find out the result of what had been done from 1845 till now under the Inclosure Act; in each case the Act of Parliament says, that according to the circumstances of that particular case, the actual figures shall be arrived at; the result is, that, assuming that there was not a bit of high ground in the country, but that every part of the ground was fitted for allotment, we have set out very considerably more than at the rate of a quarter of an acre to each man for 100 acres.

205. With reference to the subject of exchanges, under section 92 of the Act, have many exchanges been carried out, as indicated by that section; that is to say, that in cases where a common is too far from the population to make any allotments, the Commissioners have the powers given by that section to exchange; have those powers of exchange been exercised?—Yes; I cannot state the number of cases, but there have been several cases where the parties have agreed; but there is one difficulty in that section, because where the site is charged on the land to be inclosed, you must give the same quantity, and therefore a more valuable piece cannot be given, because it is quantity for quantity.

206. That is a difficulty?—Yes; but you can do it after the award is confirmed. There have been many cases in which we have either changed the site of the allotment, or have exchanged it during the course of the inclosure.

207. That is to say with anybody willing to do it?—Yes.

Mr. *G. Darby.*

6 May 1869.

208. Can you state in what proportion to the whole number of inclosures any such exchanges have been made?—No; but I do not think that they have been very frequent.

209. Where do you find in the Act that it says quantity for quantity?—I think that I am right; after the award is confirmed what I have said does not apply, but I was speaking of the valuer while the inclosure was going on; exchanging one allotment for another. After the award is confirmed it does not apply.

210. You said, in answer to the honourable Member for Oxford, that the Commissioners would not feel justified, from any opinion of their own, in interfering with any inclosure?—I said that under the Act, I do not conceive that I have a right to go to a man and say that he shall give up a bit of his land, or he shall not take advantage of this Act; I say so distinctly.

211. I understood the honourable Member for Oxford to ask you whether you considered yourself bound to watch over indefinite interests, or public interests, and that you replied that you would not feel yourself justified in interfering to protect any such interests?—I do not remember any such question or answer.

212. Mr. *Vernon Harcourt.*) Supposing that an assistant commissioner should be of opinion that Parliamentary assistance ought not to be rendered to the inclosure of a particular common, on account of its value to the general public, should you think yourself justified in recommending that that Parliamentary assistance should be given?—Supposing that the lord had a piece of land which we thought was a proper piece for allotment, where there was not a proper piece for allotment in the land to be inclosed, I understand the question to be whether we would stop the inclosure, unless the lord would agree to its being made a condition of the Provisional Order that he should make that exchange; and I said that I thought that we had no such power.

213. There is another question to which the Member for Essex is referring, which is this; supposing that the Commissioners in their judgment considered that a particular waste was one so available for the general enjoyment of the public, that it was not advisable that any assistance should be rendered by Parliament towards its inclosure, would the Commissioners recommend that no such assistance should be rendered?—I think that there have been two or three cases where we have advised it not to be done, and in which it has not been done; but that is a very uncertain question.

214. Mr. *Johnston.*] I understood your original answer, in your examination in chief, to be that the Commissioners would not feel justified, from any opinion of their own, in interfering with any inclosure: I wish to call your attention to section 27 of the Act, which contains the following words, "That if on the Report of the Assistant Commissioner, or after any further inquiries, they shall think necessary in relation thereto, the Commissioners shall be of opinion, having regard as well to the health, comfort, and convenience of the inhabitants of any cities, towns, villages, or populous places, in or near any parish in which the land proposed to be inclosed, or any part thereof, shall be situate, as to the advantage of the proprietors of the land to which such applition shall relate, that the proposed inclosure would be expedient, the Commissioners, by provisional order under their seal, shall set forth the terms and conditions on which they shall be of opinion that the inclosure should be made"?—That is a difficulty; I believe that that has been done. If we thought that the inclosure interfered with the health of the inhabitants, and so on, we should recommend the land not to be inclosed; and it has been so. One question follows the other, and they are almost linked together. The first question of the honourable Member for Oxford was as to the matter of convenience, and I answered it. His first question was, whether we would stop an inclosure if a person would not give up land which was more convenient for recreation, and I said, no; but if it was injurious to health, we certainly should feel justified in stopping it.

215. You do recognise the public convenience?—Yes.

216. As a matter of fact, are legal notices of intended inclosures posted up anywhere except on the church doors?—They are posted on the church doors, and in chapelries, and they are also inserted in the newspapers which have the greatest circulation.

217. But they are not circulated generally about the parish?—No. The notices required by Act of Parliament are carried out.

218. Mr. *Peek.*] Am I to understand that the quantity of recreation ground to be reserved is limited by the Act of Parliament?—Certainly.

219. And that the quantity to be set apart for allotments for the purposes of the labouring poor is left to the discretion of the Inclosure Commission?—Yes.

220. Do the heads of the office thoroughly father what is done by the persons who are sent down before settling the terms of inclosure; do you abide by whatever they do?—Certainly not. I should certainly not think of adhering to what an assistant commissioner did if I thought it wrong.

221. Do you assume the responsibility of the correctness of everything which the assistant commissioner who is sent down does?—No, and that is the reason why we do not like to produce the report of an assistant commissioner, because a person may see his report, and may take it as a thing settled, whereas it often happens that we may consider the thing to be doubtful. If we doubted the decision of the assistant commissioner, we should say, "You must reconsider that point." I am not in the habit of holding to what a man says, if I am responsible for it.

222. You assume the responsibility of your servant?—We should certainly assume that a man who has been on the ground, and has had full instructions to deal with these questions was *primâ facie* right; but we take care to read his reports before we settle the matter.

223. Supposing that a parish was evidently increasing in population, say, in consequence of a railway or large works coming into the neighbourhood, would the Commissioners consider such probable increased requirements, or would they merely decide upon the quantities to be reserved, considering the then state of the parish?—It must depend upon the quantity.

224. Suppose that a railway is coming, and that the foundations of a manufactory are laid, so that you may fairly say that there will be an increase of population in a couple of years?—It is very difficult on the moment to answer every possible suppositious case, and to say how you would exercise your discretion in every conceivable

able case which can be put; however I will attempt to answer the question as well as I can; I conceive that what would be done must very much depend upon the amount of land to be inclosed. Supposing that a railway company comes and erects cottages, and by so doing doubles the value of the land, or quadruples the value of the land of the proprietors, the other people, who perhaps are small proprietors, have common rights. If you inclose that common land, it increases the value of their land in the same ratio. The question is whether you are to hand over all the common to the persons the value of whose land is increased, by being trebled or quadrupled, without providing gardens, and whether they are to say, "We will not provide any gardens out of the increased value of the land. but you shall provide for them out of the 100 acres of common"; that is partly what you must consider; I am sure that honourable Members must all know that to answer every conceivable case which may be put is a very difficult thing to do.

225. I put a case where you can see with your own eyes, that within 12 or 18 months the neighbourhood will be much more densely populated? —I do not know of such a case coming before me; I think that it is very possible that it would be said, "Here is a large space of waste ground, and it will be right to appropriate more of it"; but the Act of Parliament says that you are to consider all the circumstances which surround the case; for instance, supposing that a man has a small quantity of very valuable land, and that a person comes down and, by a railroad, raises the value of land there, you must consider whether you are going to take land of a man whose property is made worth four times as much, and who has no interest in the railroad; in those cases, I must use my discretion when they come before me.

226. In your opinion, the majority of the best land available for tillage has been long since inclosed, leaving merely the rougher quality now to be dealt with?—As a rule, I believe that the better land has been inclosed, and has been dealt with first; for instance, taking where there are fells, and particularly in Wales, they have inclosed the land up to a certain point, and having inclosed that as the most valuable property, they have afterwards perhaps dealt with a very different class of land where there is very little population.

Thursday, 13*th May* 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Liddell.
Mr. William Cowper.	Mr. Lowther.
Mr. Fawcett.	Mr. Philip Wykeham Martin.
Lord George Hamilton.	Mr. Knight.
Mr. Vernon Harcourt.	Mr. Pease.
Mr. Andrew Johnston.	Mr. Peek.
Mr. Knatchbull-Hugessen.	Mr. Walsh.

THE RIGHT HON. WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. GEORGE DARBY, called in; and further Examined.

Mr. *G. Darby.*

13 May 1869.

227. *Chairman.*] CAN you now inform the Committee of the circumstances relating to Withypool, which led to the setting apart of one acre for recreation ground?—Yes. It is in the recollection of the Committee, that I stated from memory that there had been two reports, first, by one assistant commissioner, and in consequence of the inclosure not going on, there was some years afterwards a report by another assistant commissioner; and that inclosure was recommended for the sanction of Parliament after looking at both those reports of the different assistant commissioners. The first report of the assistant commissioner described Withypool as having a very small population; I think, 259, and as being very much scattered, and on the edge of open ground; and he stated that, though it was not proposed to set out any such allotments, he recommended two acres to be set out for exercise and recreation, and four acres for the labouring poor. Mr. Wetherell went down several years afterwards, and he described it pretty much as the first assistant commissioner had done. The population was described by him as being 300, instead of 259; and in his report, it was stated, I think, that the recreation ground would not be used, and that the population was a very scattered one; but he set out one acre for exercise and recreation, and five acres for the labouring poor. So that the two assistant commissioners, without any communication with one another, going down at different times, had come to the same conclusion as to the amount to be set out for public allotments; but one Commissioner had given two acres for exercise and recreation, and four acres for the labouring poor; whereas, the next assistant commissioner has given one acre for exercise and recreation, and five acres for the labouring poor. In point of fact, there is no chance of the ground being used for exercise and recreation; I have since had a conversation with Mr. Assistant Commissioner Wetherell, and I find that, practically, the exercise and recreation ground is set out for school children, and I do not understand that there is any objection to the five acres for the labouring poor.

228. Mr. *Peek.*] I understood you to say, at the rising of the Committee last Thursday, that those waste lands which are of the best quality, have some time since been inclosed?—Of course you must take it as a general thing. I say that it has generally been the case that it has been most worth while to inclose the best lands first, and they have been inclosed, perhaps, up to high lands; and I should say that, taking it as a general rule through the country, the inferior lands remain to be inclosed, and the better lands have been inclosed.

229. And that land which now comes before the Commissioners is of an inferior quality?—I should say so, as a rule; there may, of course, be exceptions.

230. Can you give any idea of the use to which the land inclosed is generally put; is it highly cultivated, and does its inclosure give rise to the employment of much labour, or is it as a rule simply used for pasture?—It is very difficult for me to say how the land all over England is used, but I have not the slightest doubt that it is used agriculturally; a great deal of it would be so used, it must depend upon the nature of the agriculture in the particular place; if it is inclosed where pasturage is used, I suppose the pasture is improved; if it is good corn and root land, I have no doubt that a great deal of it is ploughed up, but no doubt at this moment, as far as my knowledge goes (I was at one time pretty largely engaged in farming pursuits), where land is sufficiently stiff, and not too light to bear grass, the inclination is to have grass land rather than ploughed land, where it will make good grass land.

231. Do you know that in many cases that part of a common allotted to the lord and the larger commoners is used as park lands or pleasure grounds?—When once a man has his allotment, of course it is no business of ours to inquire how he uses it, it is his private property.

232. You said, in answer to the Chairman, that you should not consider it fair to make allotments to a large labouring population of a town near the common, would not the proximity of such a population be a reason for not entertaining the question

question of inclosure at all?—I must ask some indulgence from the Committee, for this reason: the Act of Parliament requires that we should look into the particular circumstances of each case; it compels us to particularise, and it is difficult when questions are put to me to generalise, because I have to look at each particular case according to the Act of Parliament, and to consider the particular circumstances of that case, and to use my discretion in that case. After that discretion is used, Parliament has to say, before it sanctions the Bill, that I and my colleagues have or have not used a proper discretion in the matter. If an honourable Member will put to me any particular case which I have dealt with, and will ask me why I dealt with it as I did, I can answer him very easily. The Act of Parliament compels me to particularise, and the Committee require me to generalise, and it is a very difficult thing to do so, because if I give them an answer, it might be quoted to me that I was abandoning the principles which I had laid down; and therefore it is rather a difficult question to answer.

233. Does the one-third in value which is stated by the Act to be necessary to proceedings under an inclosure, include the interest of the lord of the manor or not?—It includes it.

234. You have said that it would be unwise to set aside allotments for the labouring poor with a view to an increase of the population; does this objection appear to you to apply with equal strength to allotments for recreation?—The same principle must be involved in both cases. What I stated before was this, that if you ask me to speculate upon future population, I cannot make anything like a safe speculation, unless you give me some basis upon which I am to ground my speculation. All the information which I have derived is that in agricultural districts the population has not increased; if it had increased in a particular ratio for so many years, that would have been a basis by which I might have calculated a future increase, but if it remains stationary I am left without a basis; and therefore I say that if you ask the Commissioners to speculate, you ought to be able to speculate in an Act of Parliament, so as to direct the Commissioners, or else you ask the Commissioners to do almost an impossibility.

235. I am asking what you would do if the land to be inclosed was in the neighbourhood of a large population and an increasing population?—I must consider all the circumstances of the case, because you will recollect that if you give ground for exercise and recreation, and for the labouring poor, you are giving it to persons who really originally had no right in the common whatever, and who have no right, and as I said before you are giving it for this reason; you say that the lord and commoners having limited estates shall not make use of your Act without submitting themselves to certain conditions, but those conditions must be reasonable; and therefore if you say, "Here are 100 acres of common, and we think that they will be wanted for exercise and recreation," if I am to hand over those 100 acres from the lord and commoners to somebody who has no interest in the land, it is a price which they will not pay.

236. You have said that a quarter of an acre is too much for an allotment, as being beyond the labour at the labourers command; have you known any instances where the allottees have united to work the allotments on the co-operative principle?—I have not known any case where they have united to work the allotments on the co-operative principle; but I must speak with some caution when I answer off-hand, and must say, that if you mean forming a partnership, I do not think that it is within the Act of Parliament, it was never intended for anything of the sort, and I think that it would be a very unwise thing to have a partnership of that kind, and to introduce an element into the matter which was never intended by the Act of Parliament.

237. Would the allotment wardens encourage such a mode of working the allotments?—I really cannot tell what the allotment wardens would do; and perhaps I may draw the attention of the Committee here to what I admit to be an important defect in the Act of Parliament as regards these poor allotments, it is the defect in the Act, and it is this: we are constantly receiving letters on the subject, I had three on one morning, one was to say that one churchwarden had let the recreation and exercise ground, which he had no right to do, and the other two letters stated that an extra rent had been put, which there was no right to do; in other cases the allotment wardens had not been appointed at all; we have power to make rules for five years, but it is an absurd thing to make rules which you cannot enforce; it is only placing yourself in a false position. Therefore I say that there is no sufficient power to enforce the proper maintenance of the exercise and recreation ground, or to compel the appointment of allotment wardens, or to make them carry out the intentions of the Act of Parliament with respect to the allotments; and I am convinced that if you were to go through all those places where inclosures have taken place, you would find in a great many cases that the interests of those persons had been neglected by the want of proper rules, and also by the want of the proper appointment of allotment wardens, and from the churchwardens and overseers not exercising a proper supervision over the exercise and recreation ground. I have no doubt that in many cases it is well done, but that in other cases it is not well done, and there is no way of compelling it.

238. In the first Report of the Commission on the "Employment of Children, Young Persons, and Women in Agriculture," it is stated that out of 320,855 acres inclosed, subject to allotments under clauses 30 and 31 of the Inclosure Act, only 2,119 were assigned as public allotments for the labouring poor?—That is in Mr. Tremenheere's report.

239. In your opinion is that statement correct?—We found that it did not exactly represent what Mr. Tremenheere would have represented if he had had the exact facts before him. In the first place, you must tell me whether, in Mr. Tremenheere's report, he separated the land from which you can allot from that from which you cannot allot? I do not know where Mr. Tremenheere gets his 320,000 acres, but he does not state what portion is mountainous or anything else, and that is a very important element. Supposing that three-fifths of the land inclosed were subject to have allotments set out, that would not represent the quantity out of which you could set out allotments. Therefore I think that Parliament showed its wisdom in stating that you must set them out according to the particular circumstances of each case, because, if

Mr. *G. Darby.*

13 May 1869.

you say generally, "Here are so many acres," whether they are fit or unfit for the purpose, and whether they are at the top of mountains or at the bottom of valleys, you will come to a very wrong conclusion.

240. Do you consider all the labouring inhabitants of a manor equally eligible for allotments with those living within the area of the particular parish in which an inclosure might be made, or must the allottees be residents in the parish within which the inclosure is made?—When I left the Committee on the last occasion, I took an analysis of all the clauses which relate to this subject, and, if it is convenient to any Member of the Committee, I will state it. These allotments are vested in the churchwardens and overseers of the parish.

241. A manor, as you know, will frequently extend over several parishes?—Certainly, but I think that the mistake has arisen in this way: a poor man who has a right to cut a piece of turf, has just as much a right to his allotment, as having an interest in the common, as the man who has the largest quantity of land in the parish. But, in the case of the poor, it becomes a parochial right by Act of Parliament, because the land is vested in the churchwardens and overseers, and the Act of Parliament says that when a man has an allotment, and goes to reside a mile out of the parish, he shall give up his allotment.

242. If there were but a limited quantity in all to be inclosed, and if there were a disproportionate demand for allotments, should you not think that a reason for leaving the waste land *in statu quo*; if there were a small common to be inclosed, and if a large number of people wanted allotments and recreation grounds, should you not consider that a reason for letting it alone?—I do not understand the honourable Member; the honourable Member must recollect that Members of the House of Commons have a great advantage over me, and over the Commissioners in one respect, because they can entertain any opinion which they like as to the law, whereas, if I choose to entertain an opinion which is not law, I am met by feigned issues, and am responsible to a court of law. It is said that in strict law, if a commoner goes on to a common except to exercise his rights he is a trespasser. If you say that I am not to inclose a common because I cannot give sufficient allotments, leaving it open would not give allotments at all.

243. Can the lord of the manor absolutely veto a scheme, or must the lord and the homage join in such veto?—The lord can veto a scheme; Parliament is responsible for it, but in all the cases which I have ever found upon the subject, the lord can veto it, unless he has lost his rights by particular custom. The lord has a superior right to the common, and he can sink shafts, and can win minerals, and he can build a house.

244. Without the consent of the homage?—I believe so; but even the homage does not consist of the whole of the commoners; it is only at a court.

245. You said that a man could not do justice to a full quarter of an acre: in your opinion what should be the average area to do the best, both for the allottee himself and for the land?—My own opinion is this, I am afraid of being misunderstood in my answer; I said that a person who was a labourer in regular work, in my experience, could not cultivate a quarter of an acre as he ought to do; but there are other circumstances to be considered; you must tell me the distance, and whether he has taken his dung up hill or down; in practice with a poor man that is a most important element.

246. If an irregular inclosure, made prior to 1845, were now to come before you to be "set to rights" (using your own words) should you make inquiry as to, and enforce the rights of the poor as now recognised?—Of course if we came to finish an inclosure under an old Act of Parliament, we could not engraft it on this Act of Parliament by our own absolute will, but we must act according to the law as it then stood; we should have no power to set out allotments under a private Act.

247. I think that that is hardly an answer to my question; if an irregular inclosure, made prior to 1845, were now to come before you to be set to rights, should you make inquiry as to, and enforce the rights of the poor as now recognised: you used the term "irregular inclosure," and you also used the term "setting it to rights," and you said that the law prior to 1845 was different from the law subsequent to that date?—I may have used the words "irregular inclosure," and I suppose that I did use those words. There is a particular power in this Act of Parliament to allow you to carry out and remedy defective proceedings under inclosure Acts. I perhaps used the word "irregular," but I should have used the word "defective." The 153rd clause says, "And be it enacted that where, under any local Act of inclosure, the powers and authorities orignally vested in the Commissioner or Commissioners acting under any such local Act, or any such power or authority shall not have been fully executed according to the intent of such local Act, and shall have been lost or become incapable of being executed, by reason of the neglect or omission to execute the same or to take some proceeding necessary to the due execution thereof within the time limited in that behalf by such local Act, or from any other cause whatsoever, it shall be lawful for the Inclosure Commissioners for England and Wales, by any order under their hands and seal to authorise the Commissioner or Commissioners appointed by or acting under the authority of such local Act to execute and to carry into effect the powers and authorities originally vested in such last-mentioned Commissioner or Commissioners, or in any previous Commissioner or Commissioners under such local Act, in the same manner as if such powers and authorities had not been lost or become incapable of being executed, or as near thereto as lapse of time and other circumstances may permit." So that, in point of fact, all that we can do is to carry out the powers originally vested in the Commissioner under the local Act; we cannot go beyond those powers.

248. The new Act in that case would give way to the old Act; the mode of procedure under the old Act would be carried out, although it might be improved by the new Act, and the inclosure finally settled?—The new Act simply gives us the power to execute the powers which existed under the local Acts, but not to impart the powers under this Act into the local Act, because the local Act has been already passed and probably nine-tenths of the work has been done.

249 You said that the law before 1845 and the law since 1845 differed materially?—The Acts

Acts were all local Acts before 1845, except the Statute of William with respect to open fields; and it was to get rid of the expense of local Acts, and the imperfections of procedure under them, that this Act was passed; by which, instead of getting a private Act of Parliament, you have a public Act for several inclosures together without expense.

250. Would the case of commons within the 15-mile radius in any way come before you?—Previously to the Metropolitan Commons Act they would have come before us like any other common, only that we had to report to Parliament the distances at which they were from the metropolis.

251. Do you mean to say that now they do not come before you?—They now sometimes bring them in a different shape before us under the Metropolitan Commons Act.

252. Supposing that you found that from time immemorial the public had gone from one point to another across a common, as by an ordinary road, would you, in the interest of the general public, reserve any right of way?—If the public had a right of way from one terminus to another terminus across a common, it would not require to be reserved, because if you inclose it, if it was a public right of way, and did not legally stop it up, the public would still have a right to break down any fence, and to use their old right of way.

253. You have said that any one of the public going on the common having no right on that common, would be a trespasser; therefore, for the last 500 years people would all have been trespassers?—Pardon me; a right of way is a perfectly different thing.

254. You said that all persons having common right have allotments assigned them, independently of section 31; what evidence of such rights do you require; do you require strict legal evidence, or do you give allotments in respect of reputed common rights?—In consequence of a difficulty with regard to the poor people putting in claims, Mr. Wetherell, the assistant commissioner, who is here, represented to the Commissioners that it would be much better if there was a general form of putting in claims, which any poor man could put in for himself; and we got a clause for this purpose introduced into an Amendment Act, in order to prevent the necessity of a poor man going to a legal man; so that he can now put in his claim in general words before the valuer; and that claim is to be heard by the valuer and determined. If there are objections they are to be heard by an assistant commissioner, and if the parties are not satisfied with his decision they can have an appeal, and can carry the case before the court of law.

255. In the one-third of value required by the Inclosure Commissioners, in order to entertain an application, is the lord's interest reckoned?—Yes, it may be.

256. You gave the classical definition of the term, "neighbourhood," and instanced a distance of four miles; do you not think that a railway which would take the population eight miles out in about 20 minutes, materially and practically alters what formerly might have been the case?—I take the word *inhabit*, for instance, what they call "trippers," in Scarborough, coming from York, I should not say were inhabitants of Scarborough.

257. If no one in the interest of the labouring poor appeared before the assistant commissioner who is sent down, would the Commissioners in London consider themselves as it were *ex officio* guardians of such poor people?—I consider myself equally bound, as far as I can possibly do it, to look to the interests of everybody, small or great. When the honourable Member uses the expression, "labouring poor," does he mean merely those who are entitled to garden allotments, or cottagers who have a right to cutting turf and so on?

Mr. G. Darby. 13 May 1869.

258. I mean both?—Then, as far as my experience goes, both the assistant commissioners and the valuers give every possible facility to the poor people to put in their claims; in a late case our valuer employed a gentleman to let them know; that is what we expect every assistant commissioner, as a gentleman, to do, namely, to take care that no poor person is left out; and I do not think that our assistant commissioners would dream of doing anything else.

259. Does the assistant commissioner when he visits a district, for which an application for inclosure has been made, hold a formal inquiry; does he sit like an ordinary court, and does he receive evidence?—He gives notice that he will hold a meeting on such a day for a particular purpose, and then he goes down and hears the parties.

260. Are the minutes of evidence which are taken at these sittings capable of being produced for the information of this Committee?—I am really unable to say whether or not the minutes of evidence taken at the first meetings can be produced, because general statements must very often be made, when it afterwards comes to objections and appeal, it must be of a much more formal character; Mr. Wetherell is here, and he can answer these questions much better than I can, but I have no doubt that he hears everything which is desired to be stated by any person in the room.

261. The questions and answers before this Committee will be read 12 months hence; are the minutes of the evidence which are taken at the sittings in the country capable of being produced?—The honourable Member talks of sittings in the country; they are sittings of a very different character. In some cases witnesses are called, and their evidence must be specifically reduced into writing, and in other cases witnesses are not called, and the assistant commissioner satisfies himself. In the first instance, he can only take the interest *primâ facie* for this reason; it is not until the valuer is appointed that the claims are definitely determined; the assistant commissioner can only take it *de bene esse*, and as a sort of *primâ facie* right.

262. Mr. *Martin.*] You said on the last day of our meeting that 144 quarters of acres ought to be set apart, and that 156 quarters had been set apart?—I ought not to have used that expression; that calculation had nothing whatever to do with what the Commissioners considered it right to set out. It was merely this: Mr. Tremenheere made certain statements, and it was simply to answer his statements.

263. In answer to Mr. Hugessen you said that any alteration of the provisional order by the House of Commons would invalidate it?—What I said was, that, as regards the provisional order, there is a veto of the lords and a power of dissent in the commoners. If they agree to the terms on which we insist, it is, in point of fact, a bargain, and they agree to that for

Mr. *G. Darby.* 13 May 1869.

which we ask; but the lord could in the first instance say, "I will not agree to those terms." If that provisional order comes to the House of Commons they cannot, behind the back of both the lord and the commoners, alter their agreement, but they can say, "We will not consent to your agreement, and will not pass the Act." That is what I meant. Of course Parliament have a full right to do that.

264. Mr. *Fawcett.*] You have, I believe, stated very often that you find it difficult to answer general questions, but that you will answer questions relating to any particular case?—Yes; I wish to state most distinctly to the Committee that I will answer as to any particular case, but I say that after Parliament has sanctioned and adopted an inclosure Act, I think that my responsibility ceases with regard to that particular matter.

265. Will you take the Report of the Inclosure Commissioners for the present year, and I will go through it with you, *seriatim*; what is the first inclosure referred to in that report?—Skyborrah Hill.

266. Will you read to the Committee how many acres are reserved in the case of that inclosure for allotments and for recreation ground?—There are none reserved.

267. Will you state the reason why none are reserved?—Yes, the reasons are stated in our report; it contains about 497 acres. "Most of the cottages in the parish lie at a distance from the hill, and on this account, as well as from the great steepness of the hill sides, it is considered that an allotment for exercise and recreation or for labouring poor would be useless; the few cottages near the hill are already supplied with ample gardens."

268. Do not you state, as a ground for the inclosure, that it is eminently suited for agriculture?—No; the report says, that part of the land can be converted to arable cultivation, and the remainder for sheep-pasture.

269. If part of it is fit to be cultivated with the plough, why should not a portion of that part be fit for allotments which are cultivated with the spade?—My answer to that question is, that if a man has to cultivate with the plough, neither the distance nor, in a certain measure, the steepness is of the same importance, because he can have his manure on the spot just as we do on the South Downs; but nobody would set out an allotment on the South Downs up a hill for a man to pull his manure up to.

270. Then you think that a ground can be so steep as to be cultivated by the plough, but not by the spade?—If a man has to take his manure up anything like an incline for a distance, it is a perfect farce to expect him to cultivate the ground.

271. You say, with regard to that inclosure, that most of the cottages have gardens; you do not say that all of them have?—I beg pardon; what is stated is that those cottages which are near the hill are supplied with ample gardens, and the others at a distance, and therefore they could not use them.

272. But the distance is not stated, is it?—It may be stated in the report of the assistant commissioner; I have that report before me, which is more full. It says, "There are only seven or eight cottages near to the hill, but some of these lie at a distance apart, and the bulk of the cottages in the parish lie three or four miles away."

273. Is that printed?—No; this question has been mooted before. If we were to print the assistant commissioner's report *in extenso*, as there are a great number of inclosures, I believe that it would cost a great deal for printing, and I expect that a great many honourable Members, when they saw that bulk, would not read it.

274. In the case of this particular inclosure, is the distance at which the cottages are situated from the inclosure stated or not?—As regards myself, as a Commissioner, I have stated to Parliament what is in this report, and if they want more they can have it *in extenso*; but it is stated.

275. It is stated to you, but is it or is it not stated to Parliament?—Of course nothing more is stated to Parliament than is thus printed. It is said in our printed report "most of the cottages in the parish lie at a distance from the hill, and on this account, as well as from the great steepness of the hill sides" (which is one in eight or nine), "it is considered that an allotment for exercise and recreation, or for labouring poor would be useless; the few cottages near the hill are already supplied with ample gardens." There is nothing more in our report than I have read to the honourable Member.

276. After reading that, will you say whether or not the particular distance is stated?—It answers itself, because I have read the whole to the honourable Member.

277. Then it is not stated?—It is not.

278. Will you read the particulars of the next inclosure?—"Shrewsborough Castle Common, in the parish of Highbray, containing about 177 acres. These lands are waste of a manor. The common lies nearly three miles from the village, where there are only a very few cottages, all of which are provided with gardens; the common is, moreover, in a high and exposed situation, and unsuitable for either an allotment for exercise and recreation, or for the labouring poor. The inclosure will lead to the draining and improvement of the lands, a large portion of which is suited for cultivation."

279. There the distance is stated?—Yes.

280. What is the next case?—Stoke Moor, which is subject to limited rights.

281. And that common you cannot have?—You cannot.

282. What is the next case?—Huntley, in the county of Gloucester. "On a recent inclosure in the parish, sufficient allotments for exercise and recreation, and for the labouring poor, were set out."

283. In that case Parliament is not informed how much land was considered by the Commissioners to be sufficient to set out, or what the portion was?—But Parliament had already the information; it was recently inclosed, and there it was stated what had been set out.

284. What is the next case?—Harrietsham, in the county of Kent.

285. What are the particulars there?—"Fairbourn Heath, in the parish of Harrietsham, containing about 39 acres waste of a manor; owing to the distance of the heath from the village (nearly two miles), the unsuitable nature of the ground, and the fact that the cottages are already provided with gardens, no allotments for either exercise and recreation, or for labouring poor, have been set out. The soil of the heath, though not

not very fertile, is sufficiently good for arable cultivation."

286. Mr. *Martin.*] The report says that the village of Harrietsham is situated two miles off, but are there not other houses very much nearer?—Yes, it says so; the cottages nearer have good gardens.

287. Mr. *Fawcett.*] In the printed paper it is simply stated that the cottages have gardens; you do not say that the gardens are large enough?—There was one case in which it turned out that almost all the cottages had fields to them.

288. With regard to the printed report, Parliament has no means of ascertaining, with regard to this particular inclosure, what the size of the gardens is?—No.

289. What is the next inclosure?—Hunston, in the county of Sussex.

290. What are the particulars with regard to that inclosure?—There are only 12 acres, and there are very few inhabitants; nobody ever comes on the common, and they are amply provided with gardens.

291. That is stated in the printed report?—Yes.

292. What is the next inclosure?—Laniret, in the county of Cornwall; there are 97 acres; there is a large village green, and the few cottages near the common have gardens annexed. It is not, I suppose, very good land, because the report speaks of its being fitted for planting, as well as for cultivation.

293. But in the printed report it is not stated in this case what is the size of the gardens?—No; but the village is a mile and a-half off.

294. But there are a few cottages nearer the common?—Yes.

295. What is the next case?—Tir Abbot Ucha, in the county of Denbigh; we could not put fuller particulars in the printed report, because a question of right arises. In that case there are 2,550 acres, and I believe that, as far as it has gone, only about 18 acres are waste.

296. Parliament, as far as the printed report has gone, could not tell, as to this inclosure, whether land could be reserved for allotment or not?—No; but this is stated in the report, "None of these lands are fit for allotments for exercise and recreation, or for gardens for the labouring poor, and there are no inhabitants living near the wastes to avail themselves of such allotments if they were to be set out."

297. Why is this ground going to be inclosed; is it likely to be cultivated when it is inclosed?—No; there is a very serious question arising which may go to a court of law, whether in point of fact the common is exercisable at all over a great part of it.

298. But that is not mentioned in the printed report?—No; because we could not mention that.

299. It is not stated in the printed report whether the land is fit for cultivation or not?—No; the reason of the proceeding is to settle the disputes; they want the disputes settled by an inclosure.

300. But in the printed report nothing is stated as to the quality of the land?—No, except as to its being unfit for allotments, or exercise and recreation.

301. But when it states that it is unfit, it does not state the reason?—That is not stated in this printed report.

302. What is the next inclosure?—Withypool.

303. In Withypool 1,904 acres were to be inclosed?—Yes.

304. Will you read the particulars of that case?—"Nearly the whole of this large tract of land could, after inclosure, be profitably converted to arable cultivation, whereas at present it lies in a neglected state, and is impoverished by the paring and removal of the surface."

305. In that case you have reserved one acre for exercise and recreation, and five acres for the labouring poor?—Yes.

306. The reason for this inclosure is, that it will bring almost the whole of the 1,904 acres under cultivation, is it not?—Yes.

307. That is stated?—Yes.

308. If that is the case, will it not require some people to cultivate it?—Of course, if it is under cultivation it will require some people to cultivate it.

309. According to the estimate which you gave us at our last meeting, you said that two men were required for 100 acres?—I took Mr. Tremenheere's statement.

310. Then to cultivate this ground you would require something like 38 men?—That is assuming that it is all cultivated.

311. But does not the report state that it is nearly all fit for cultivation?—Yes.

312. You have made no provision for the future population as far as regards reserving land for allotments for the labouring poor?—Five acres are reserved.

313. But that is for the existing population?—In Withypool the population is 300.

314. Does not it appear to you that if you bring nearly 2,000 additional acres into cultivation, you would require more people to cultivate them?—One would certainly have thought so, but it turns out to be the fact that it is not so.

315. It turns out as a fact that the assistant commissioner has made no provision for an increased population?—No; it turns out to be the fact that where you have had inclosures for years and years, there is no increase to the population.

316. So far as this case is concerned, no provision is contemplated for allotments for the people who will be required to cultivate this large tract of land?—It would take 25 or 26 people.

317. Reckoning a quarter of an acre each, they would require six acres, would they not?—Yes; if you assume that every man is to have a quarter of an acre of ground, and that every cottage in the parish has not a garden. I confess that I do not quite take the view of the case, that you are to assume that every single cottage in a parish has no sufficient garden, and that that being so, it is to be supplied, as a matter of course, out of a particular common.

318. No provision is contemplated for the future population?—No.

319. You have stated that this one acre which is reserved for recreation ground is intended as a play-ground for a school?—Yes.

320. Do you think that one acre is sufficient for that purpose?—Yes, it is plenty for a school.

321. Do you think that the boys can play the usual games on one acre?—Yes.

322. What is the next case?—Wisley, in the county of Surrey.

323. Will you state what is said in the report about

Mr. G. Darby.

13 May 1869.

about recreation ground and allotments?—There is exercise and recreation ground set out.

324. Two acres?—Yes.

325. How much is set out for allotments?—None.

326. Will you state the reasons?—The population is 166 by the returns; the reasons are that "the parish is very thinly populated, and the cottages lie dispersed, each of them has a garden annexed to it."

327. Are you aware that it has been proved in evidence before a Select Committee of the House of Commons, that these cottages in the parish of Wisley were so anxious to have allotments, that they rented them in a neighbouring village?—No; my recollection was that Lord Lovelace's steward said that Lord Lovelace had allotments, and that some of his labourers in that parish had allotments in Ockham.

328. Are you aware that in the case of this inclosure, in which the assistant commissioner states that the cottagers require no allotments, they thought allotments so important that they took the trouble to rent them in a neighbouring village?—It might be a neighbouring village, but it might be nearer their own homes.

329. Are you aware that that was given in evidence?—That is not the impression upon my mind.

330. Are you aware that the Committee, after hearing that evidence, unanimously decided that 10 acres in the event of Wisley Common being enclosed, should be reserved as allotments for the labouring poor?—I did not know for which purpose it was for.

331. Are you also aware that the Committee unanimously decided, that instead of two acres being reserved as a recreation ground, six acres should be reserved?—Yes; but I am also aware that the conclusion of the Committee might have been drawn from other circumstances, because I see that there is evidence there that people went to pick flowers, and so on, and had a sort of prescriptive right to the common.

332. Are you aware that the Committee unanimously decided that 10 acres should be set aside as allotments (the Commissioners saying that none should be set aside) and that six acres should be set aside as recreation ground, whereas, the Commissioners had said that only two acres should be set aside as recreation ground?—Of course, the Committee are a very high authority, but at the same time, the assistant commissioner, Mr. Wetherell, was on the spot. I have very great confidence in his opinion, and I must beg to decline to judge between the assistant commissioner and the Committee.

333. In the case of Wisley Common, a Committee of the House of Commons decided that in the case of one common, and that by no means the largest, introduced in the present Session before Parliament, more land should be reserved for allotments, and for recreation grounds, than the Commissioners proposed should be retained in the whole of the inclosures contained in the Bill?—If the Committee drew the conclusion that we were wrong, because in one inclosure they thought more land should be reserved than was retained in the rest of the inclosures, which might be totally and absolutely differently circumstanced, the Commissioners being desired to look at the circumstances of the particular case, it would rather shake my confidence in the decision of the Committee.

334. Are you aware that a Committee of the House of Commons decided that with regard to one inclosure, by no means the largest, more land ought to be reserved for allotment and for recreation ground than you proposed, as a Commissioner, should be reserved in the whole of the inclosures contained in the present Bill?—In the first place, they have done that which we could not do, for they have chosen as a Committee to recommend, which we were debarred from doing by the Act of Parliament. With respect to the allotments, the Commissioners can set out that which they think right, but if the Committee set out more for the exercise and recreation ground than is allowed by the Inclosure Act for the population, all I can say is, that the Committee differ from the Parliament who passed the Act.

335. In the Act of Parliament no limitation, I believe, is placed with regard to the amount which should be reserved for allotments for the labouring poor, that is, as I know, a limitation with regard to the recreation ground?—That is perfectly true.

336. Are you aware that a Committee of the House of Commons has decided in the case of one inclosure, that more land should be reserved as allotments for the labouring poor than the Commissioners recommended in the whole of the inclosures contained in the present Bill?—I have not added it up; I will take the honourable Member's figures as right.

337. Do you know how much land is proposed to be allotted in the present Bill?—Thirteen acres; the object has been to carry out the intentions of the Act of Parliament by considering each case separately; perhaps you may find another case where an enormous quantity has been set out, take Swaffham for instance, where the amount is 250 acres; the honourable Member says, add up these figures, and take them as a lump; I say that the Act of Parliament tells me to do no such thing; it distinctly tells me to consider each separate case; it may turn out in a particular set of inclosures a smaller quantity is set out; if you take a certain number of inclosures which you pick out, and add up the acres, and say that we have only set out so many acres, I say, on the other hand, that the Act of Parliament desires me to do it separately, and to consider the circumstances of each particular case. If you take cases where a small number of acres are set out, you ought also to take cases where a large quantity of acres have been set out; and if you add up all the cases together you will find that we have set out a large number of allotments.

338. In the present Bill 13 acres are reserved for allotments: a Committee of the House of Commons has decided, in a case in which the Commissioners recommended that no land should be reserved for allotments, that 10 acres ought to be reserved; are you aware of that fact?—That is the result of the decision of the Committee.

339. Are you aware that, in the case of Wisley, it was stated before the Committee that not more than one of the persons who were interested in these allotments for the labouring poor gave any evidence?—They did not put in a claim.

340. Then when the Commissioners say that the allotments are not required by the labouring poor——?—The honourable Member must excuse me; it is just the change of that single word which makes the whole difference. "By" is not the word

word which is used; the words are, for the labouring poor, and not by the labouring poor, and that is an important distinction.

341. Then we may generally assume that your opinion has been arrived at without the labouring poor appearing before the Commissioners?—The labouring poor as a rule would not appear before the Commissioners, because they have not put in claims. The honourable Member asked me whether I had been down to all these cases; the Act of Parliament is explicit; I am perfectly ready to give every information in my power, but if the honourable Member wants to know the practical proceedings at these meetings, he may get that information much more accurately from the person who holds them.

342. Will you take the next inclosure?—Cowdown in Essex.

343. What is the next?—Saxlingham, in Norfolk; there is there a village green of seven or eight acres.

344. What does the Report say about allotments?—There are four cottages.

345. What is stated in the printed Report?—One acre is given for allotments.

346. Does it state why one acre, and no more, is given?—No, because the Act of Parliament says that the reason is only to be stated where none is given.

347. It is stated in the Report that one acre is given, but it does not state why more is not given?—No, for the simple reason, that the Act of Parliament says, that where no exercise ground, as allotments for the labouring poor, is given, the Commissioners must state their reasons for not giving it; but they do not state their reasons where it is given.

348. Therefore, as far as the printed Report is concerned, if only one acre is given, Parliament has no means of ascertaining whether one acre or fifty acres ought to have been given?—Just so.

349. What is the next case?—Leighwood green, in the county of Flint; in that case, "the population being agricultural, and engaged in open air employment, and the lands being at a considerable distance from the village, an allotment for exercise and recreation has not been required, and the cottages are already supplied with gardens."

350. But the Report does not state what the "considerable distance is"?—No.

351. It does not state what the population is?—No.

352. What is the next case?—Kirton Marsh, in the county of Lincoln. We have had a great deal to do with that case. It is a place where an embankment had broken down before. The printed report says, "Kirton Marsh, in the parish of Kirton, containing about 750 acres. As the bulk of the parishioners live about two miles and a-half from the marsh, and as the few cottages near to it are provided with garden ground, no allotment for exercise and recreation or for the labouring poor has been set out. Owing to the flow of the tidal water over the surface, the marsh can at present only be used for sheep pasture, but when the water has been excluded by an embankment the entire tract might be profitably converted to arable cultivation, in like manner to the adjoining marsh, which is now under tillage." There has been one embankment, but I believe the water came over again, and they are now going to do it in a better way.

353. There again it is not stated how much garden the people have who live close to the marsh?—It is utterly unfit for it; the water has been over it.

354. Would it not be fit when it is drained?—An embankment would have to be made first.

355. You stated in your former evidence that you had selected a great number of the largest inclosures?—I did not say the largest, but I said some of the largest.

356. And you stated that in those cases you had found that the population, since the inclosure, had decreased, and that there had been no general increase?—I said that upon the average it had been stationary.

357. Then if you estimate the prosperity of a village by its increase of population, these inclosures have done no good to the people of the district?—I do not estimate the increase of prosperity necessarily by the increase of population. I estimate the prosperity of a parish by the increased comforts, and the improved habits, much more than by increased population, because you will get a large population at the edge of a common, which everybody knows is the most lawless population which you can have. And more than that, I believe that, as a rule, from all my inquiries, the poor people are not against inclosure, and that the great thing with which we have to contend is, that persons with capital will purchase land to build houses and villas, and they are the people who very often want to get certain things which perhaps they cannot have, and they are the persons who raise objections.

358. Have you any specific information with regard to the parishes in which there has been a decrease of population since the inclosure, as to whether the condition of the people has or has not improved?—I can speak not to these inclosures, but I can speak to parishes with which I am very intimately acquainted. If, where the population is stationary or has slightly increased, I find in two or three parishes that, in spite of that, those parishes are flourishing, and that agriculture is improving, and that the state and the comforts of the people are improved, I at least may draw the inference that in other cases, where the population is also stationary, the same thing would happen.

359. But with regard to these special cases which you have enumerated, you have no specific information?—No.

360. With regard to the procedure, the assistant commissioners frame these reports, and they send them up to you three Commissioners?—Yes.

361. Is it a usual or a very unusual thing for you to alter their reports, or as a general rule are they introduced to Parliament in the form in which the assistant commissioners send them to you?—We should not alter the report of an assistant commissioner; if we wanted further information we should send down for it. The honourable Member was talking to me of Swaffham; in that case a memorial was sent up to us saying that the nearest land was one-third of a mile off, and that it would be useless for the poor. We set it out. The next thing was that they complained that the rent-charge was too high. As the honourable Member has asked me the course which we take, it would be this: here is the case of a memorial; we sent down that memorial

Mr. *G. Darby.*

13 May 1869.

morial to the valuer to know what he thought of it, and he wrote to us in reply.

362. The assistant commissioner, as I understand, sends the provisional order to you?—No, the assistant commissioner does not send to us the provisional order; we prepare the provisional order, and send it down to the parties.

363. But you prepare it entirely upon the evidence taken before the assistant commissioner, do you not?—As regards the poor allotments, and exercise and recreation ground, we prepare it upon those statements after they have been looked at by us, and have satisfied us.

364. With regard to allotments and recreation ground, have you ever said to the assistant commissioner, "We do not think that the amount which you have reserved as allotment or recreation ground is sufficient," or "We think it too much"; or do you accept absolutely the arrangements of the assistant commissioners?—I remember one gentleman who was formerly an assistant commissioner: when he began he did not take quite my views with regard to exercise and recreation ground, but he always yielded to me; when this work commenced we have often done so; and more than that, when persons have refused to give the allotments, we have said, "You shall not have the inclosure without then."

365. I want to get at the relations between you and the assistant commissioners: take the present Bill; you have, of course, looked at that Bill, and the proposed inclosures in it; did you, or any of the commissioners, make any objections to the assistant commissioners as to the amount of land reserved as allotments, and for recreation?—I cannot say that we did; and unless I had the files I could not say. With respect to Swaffham, there has been a very long correspondence about it.

366. That is, between the parties and the Commissioners; but in the absence of your securing a memorial from the locality, do you, as a matter of course, accept the recommendation of the assistant commissioner?—No, Mr. Wetherell and Mr. Wood know our positive views upon the subject, and I know that Mr. Wetherell, as a country gentleman, entertains the same views himself, he would probably take my views of the matter; but with regard both to him and Mr. Wood, I should not for one moment hesitate to communicate with them.

367. As a matter of fact, during, for instance, the last five years, have you ever suggested to the assistant commissioners that either more or less land should be reserved for allotments?—One does not like to bind ones self, but I should think it more than probable that in the last five years there has been correspondence with regard to the allotments. Mr. Wetherell is very often in the office, and therefore without a correspondence I have no doubt that the matters have been discussed.

368. But you cannot positively recollect?—If the honourable Member asks me whether I can recollect the details of all the inclosures, it is impossible for me to do so; there are 20 or 30 Acts of Parliament worked in our office, and when one thing is done with, to go back for five years to recollect whether or not I had a correspondence as to that particular inclosure, though my memory is pretty good, is what I could not do. In one case in Norfolk, in early days, I recollect that they said that they would not go on with the inclosure; and if the files were searched, I have no doubt that it would be found that there had been correspondence.

369. You do not recollect any such thing as I have put to you in these cases?—No.

370. As a matter of procedure, the Inclosure Bills are introduced by the Home Office simply as they are received from you, are they not?—It is not our business to draw the Bill, but, as a matter of fact, I believe that it is done in the office; there is only one clause in it.

371. As a matter of procedure, the Home Office never alter the provisional order?—I take it that the Home Office have no sort of power to do so; they simply have the report sent into them to lay before Parliament.

372. Then the Home Office are not responsible for these Bills; they are only introduced by them?—Not in the least.

373. When you speak of the labouring poor, you mean all those who live by toil in the parish, or the manor in which an inclosure takes place, do you not?—No, I do not mean in the manor, because the Act confines it to the parish.

374. What clause of the Act does so; will you read that clause?—It is the quarter of an acre clause, namely, the 109th clause: "And be it enacted that the allotment wardens shall from time to time let the allotment under their management in gardens not exceeding a quarter of an acre each to such poor inhabitants of the parish for one year, or from year to year, at such rents payable at such times, and on such terms and conditions, not inconsistent with the provisions of this Act, as they shall think fit."

375. Does it say the parish in which the inclosure takes place?—It must mean the parish; what else can it mean? And more than that, a subsequent Act says that if a man goes for a mile out of the parish, he is to give up his allotment.

376. Then you define the "labouring poor" under the inclosure Act, as meaning all those who live by daily toil in the parish in which the allotment takes place?—The Act of Parliament defines the parish; I should say that "labouring poor" are those men who are poor enough to be obliged to gain their livelihood by labour.

377. Without any reference to the particular branch of industry to which they are employed?—It is a beneficial Act, and I do not see that you could say that you should take no one but a man employed upon a farm, and I think that I was rather misunderstood on the last occasion as to that matter. I misunderstood the honourable Member; he asked me as to a great manufacturing town and so on, and if I had said that that population could be included, I am afraid that I might have been understood as saying that if there was a common it might be set out for the people in a manufacturing town. It is very difficult to answer all these questions.

378. You have suggested a very important improvement in the Act so far as regards the appointment and powers of allotment wardens?—Yes.

379. From your long experience, can you make any other suggestion as to an improvement in the Act?—I think that certain powers ought to be given where trespassing is going on during the inclosure itself; that is to say, where people are interfered with. By mistake a word or two have been left out; the words are not sufficiently general

general. Of course the honourable Member must recollect that I am only making a suggestion. There is a power also to make regulated pastures after an application for an inclosure. I am not quite sure whether it would not have been as wise in the first instance to proceed to make it a regulated pasture. You must now go through the process of an inclosure, to ask to have it turned into a regulated pasture, whereas there might be an original power for that purpose, without applying for the land to be inclosed.

380. Do you think that it is as well to make absolute allotments of a quarter of an acre each, or that it might not be left to the allotment wardens and the church wardens?—If you are to keep the words "labouring poor" in the Act, I think that it is much better to keep in the words "a quarter of an acre," it would prevent the allotment wardens or those parties, from making an improper use of it; for instance, they might wish to let it to a man who was not a poor man; it is a very important question.

381. Do you think that it would be well that some central authority, say, the Inclosure Commissioners, or some other authority, should retain more power over the land after it has been once allotted, so as to see that it is not misappropriated?—I am myself rather sensitive about the powers of commissioners; I do not like them to ride roughshod over people, and therefore under no circumstances have we ever asked for additional powers. The amendments for which we have asked have been for the better exercise of the powers which we have. But I think that Parliament would do well to consider the question to which I have referred, of taking care that the allotments should be properly dealt with; and it is for Parliament to say what central authority should have the power of carrying that out.

382. You think that there ought to be some central authority controlling the matter?—Yes.

383. At the present time, cannot the rent of these allotments be given to the rates?—In the case of letting the herbage of the exercise and recreation ground, the surplus goes to the surveyors of the highways. The surplus of the poor allotments goes to the overseers of the poor for parochial purposes, in reduction of the rates.

384. Have you any suggestion to make as to a more beneficial appropriation of these allotments?—I am hardly prepared to say that I have; I think that it is a very fair appropriation of the surplus to apply it to the rates; it is in the parish for the parishioners, and the land out of which it arises is in the parish, and therefore it seems natural that any surplus should go to the use of those persons who live in the parish out of which the rent arises.

385. Lord *George Hamilton.*] You have said that a meeting is always held by an assistant commissioner previously to an inclosure of a common?—Yes.

386. Is that meeting held after the meeting which is held by the valuer?—No, the valuer has not then been appointed; this is the form which is prepared (*producing the same*). By the Act under the 25th section, the matter must be referred to an assistant commissioner, and he is bound to inspect the land, and to report in writing on the expediency of the inclosure, and on what terms the land should be inclosed, and whether he is of opinion that ground for allotment for the labouring poor or for recreation, should be set out; he must view the ground and make a sketch of it; that is a duty imposed by the Act of Parliament and on the assistant commissioner, and not at all upon the Commissioners.

387. At the meeting which is held by the assistant commissioner, I suppose that any one can ask to be examined, and in fact, can insist upon giving evidence?—Yes; the assistant commissioner gets all the information which he can; during the inclosures, within my recollection, I have never heard of anybody complaining that the assistant commissioner would not hear him.

388. As regards the veto, is the veto which the lord of the manor has power to make, often exercised after two-thirds of the persons interested in the proposed inclosure, have made an application?—No, because in order to prevent difficulties we generally find out whether the lord of the manor will assent; for this reason, that it would be putting the parties to a very unnecessary expense if they had gone on to a certain point, and were then turned round and could not proceed.

389. Mr. *Walsh.*] You have said that the valuer is appointed at a public meeting by a majority of the interests?—A majority in number and value.

390. Is he always so appointed?—He must be appointed by a majority in number and value, according to the terms of the Act; and if they cannot agree in number and value, then the Inclosure Commissioners under the Act have to appoint him.

391. Does the lord of the manor never reserve the power to appoint the valuer as a condition of his assent?—If I knew it I should not allow it; if it is done it must be between the parties themselves.

392. Are not you aware that the Commissioners of Woods and Forests, on the part of the Crown, invariably make that condition?—Is the honourable Member referring not to the Inclosure Act, but to the Disafforesting Acts; they are two very different things; under the Disafforesting Acts, the Commissioners of Woods and Forests appoint one valuer, and we appoint another. I think that the honourable Member must be mistaken, because in Wales where the Crown has property the valuer has been appointed by the parties themselves, but there may be cases where they have been at variance with the Woods and Forests. Supposing that parties go down to a meeting for the appointment of a valuer, if the Commissioners of Woods and Forests go to the parties interested, and say, "You shall not have the inclosure, unless you vote for our valuer," I cannot, of course, help it.

393. Are you or not aware that that is the case?—The only condition which can be imposed as between the Crown and the parties is in the provisional order, and that provisional order must be made the subject of an Act of Parliament before the valuer is appointed at all; and then we call a meeting to appoint a valuer, a notice is given, and that meeting is held to appoint a valuer. If the parties then choose to make their own arrangements with the Crown, in order to get on with the inclosure, I can know nothing about that; there is no legal understanding. The honourable Member refers to the time when, before any inclosure, they had to set out certain lands.

394. Colonel *Barttelot.*] Is it not important that these inclosures, which are now before Parliament should be either completed or rejected as soon

Mr. *G. Darby.*

13 May 1869.

soon as possible?—Certainly; and there is the case of an embankment, which is a most serious question.

395. Taking No. 14, namely, Kirton Marsh, is it not of importance that something definite should be known at once with regard to that inclosure, or else the embankment could not be made this year?—Yes; and that has been represented to us.

396. Let us go back to the original question; is not the lord of the manor, as a matter of course, the owner, more or less, of the soil?—According to the ordinary law on the subject the lord is considered superior to the commoners, unless by grants, the commoner has the advantage of the lord. As a rule it is laid down by all the courts, to which, of course, all our proceedings are subject, because we try a feigned issue upon every question of law, that the lord is the superior; he has, *primâ facie*, a right to the timber, and to the minerals, and to work the minerals.

397. And is not that mainly one of the reasons why the lord has his veto to say, aye or no, to the inclosure of the common?—I can only assume that Parliament, when it passed that Act, and gave the lord the veto, meant to hold as between the lord and the commoners, the same title and rights as they had had before, and that they were not to be affected by the Inclosure Act; that is the inference which I have always drawn.

398. Cannot the lord on any inclosure now cut down the timber?—Yes.

399. And in many inclosures the lord can inclose certain portions of the waste lands so as to allow timber to grow again?—He can. If timber is allotted, it must be, under the Inclosure Act, valued by the valuer, and the allottee must pay for it, and if he objects to pay for it, within a certain time, the lord can cut it down.

400. Prior to any inclosure, cannot the lord go and cut upon the waste land all the timber there situated?—Yes.

401. Mr. *Fawcett.*] Are you correct in saying that; he cannot go and destroy every stick of timber, can he?—I believe that he can cut down every stick of timber which is upon the land. If it is allotted, when the allottee has got it, he must pay the value of that timber which is set upon it by the valuer, and if within a certain time he objects to pay that money, the lord can come and take the timber, that is in the Act of Parliament.

402. Colonel *Barttelot.*] For all these reasons, naturally, the lord has a veto?—That is what I assume.

403. The fact of his only having one-sixteenth allotted to him has nothing or little to do with it?—No; the one-sixteenth depends very much upon circumstances.

404. The old proceedings, I think, were that if the commons were held in fee a private Act could be obtained?—No, if the commons were held in fee, they need not have a Private Act at all; they could inclose by deed; I know one very valuable common which has been so inclosed.

405. But supposing that that was not the case, according to the old custom they had to obtain a private Act?—Yes.

406. Did not that private Act usually cost from 700 *l.* to 800 *l.*?—It depended entirely upon circumstances.

407. It cost a large sum of money?—Yes.

408. Then Parliament stepped in at that time, and this Act of 1845 was passed?—Yes.

409. And the great object of this Act was, that the inclosures should be more cheaply made?—No doubt; and in point of fact there has only been one inclosure under a private Act since; it was objected to, and it was said that that sort of thing would probably never be allowed again; the then Lord Worsley objected to it, but it was carried.

410. You have no doubt that, when the Act of 1845 was passed, the intention of Parliament, although reserving recreation ground and certain allotments for the poor, was, that justice should be done both to the lord and to the copyholders of the manor?—Certainly; you must consider the amount of land to be inclosed: Parliament said, "You are to take into consideration all the circumstances of each case." Though the large owners could object to it, they have constantly assumed that there are four acres to the cottages, when there is nothing of the kind, and I know that the Commissioners have always endeavoured to induce the large owners to take a liberal view of the question.

411. Instead of saying the lord and the copyholders, I should have said the lord and the commoners?—As a general rule, the "commoners" would be the proper word.

412. We have heard a great deal about the population, and I want to put a case of this kind: one of the freeholders of a manor has one acre of ground, of course that acre would entitle him to an allotment?—Yes.

413. If he covers this one acre with cottages, and builds on this acre 10, 12, or 20 cottages, I want to know whether you think that it would be fair and just to the rest of the poor that that freeholder, not having given his cottages any gardens whatever, while the other cottages had gardens, should expect that each of his cottages should have a quarter of an acre allotted to it out of the waste of the manor?—If such a thing has occurred, it justifies my saying what I did on the last occasion of my appearing before the Committee; because my statement was, that if you put out a large quantity of cottage garden ground prospectively in a parish, and if people chose to speculate in constructing bad cottages, it might lead to the erection of an inferior cottage without sufficient garden ground. But unquestionably, in all those cases, whether it is the case which the honourable Member has put, or another, I say that it is the duty of the Commissioners to do justice between the largest and the smallest parties to the best of their power, and they must look to the particular case, and see whether any injustice will be done in that case by what is proposed.

414. You have large experience in these country cottage properties; is it not the fact that a small man who comes out of a town, and buys a small piece of land, and builds cottages upon it, runs up a most inferior description of cottage without a garden, or with a very small garden, lets it at a much higher rate than the rate at which the other cottages are let by the other people in the neighbourhood?—That is certainly so, because I have seen instances where the brickwork is of such a character as that the water flows inside in winter. With a large garden and a cottage with three bed-rooms and everything else, my tenants pay me 3 *l.* 18 *s.* a year, and perhaps these other parties get nearer 5 *l.* for a cottage without a garden.

415. Is it not the case in some instances that these

these are the very people who, not having provided gardens for these cottages, come and make the disturbance about the allotments for the labouring poor?—I can hardly answer that question, because until the question has been raised elsewhere, we have not had the complaints. The complaints which have arisen as the inclosure has been going on, in one or two instances, have been by some person who wanted a great deal more than he had a right to; and because he could not get it, he, perhaps, went to some Member of Parliament to get up a case, but as a rule I do not know that complaints have been made; they have not come to us. We sometimes have the poorest people, who can hardly sign their own names, who write to us, and the letter is always inquired into, and answered, just as much as if it came from the largest owner in the parish, and with the same consideration.

416. So far as your experience goes, is it not, as a general rule, the wish of all those who are interested in the welfare of the agricultural population that there should be allotments, and liberal allotments, throughout the whole country?—My opinion is that the great proportion of the country gentlemen, as far as I know of them, are in favour of allotments; but I think that those who have been in the habit of dealing with them, and who practically know what will succeed and what will not, differ a little from those who form their opinion without that experience.

417. Is it not also a fact that when allotments have been granted, not from an inclosure but by the owner of the property, it has been found for some time past that instead of more people wishing to take allotments, those allotments have generally gone into fewer hands; that is to say, that where there were 20 men when the land was originally allotted, there are now only 10?—I am not at this moment aware of any such case, and therefore I should not like to answer that question. If you mean to deal practically with this question, I think that the Committee, in any alteration which they make, would be very wise to look at it in a practical point of view. You must see how far an allotment is from the place. What is the use of putting an allotment for a man to take up manure to it upon an inclination of 1 in 6, or 9, or 18, or 20? It cannot be done.

418. You say that you look at every allotment, and take it upon its own grounds?—Yes, we look at every case *per se*.

419. Taking Mr. Tremenheere's report, and taking the allotments which you have made since the Inclosure Act was passed, is it not a fact that there are more acres allotted than Mr. Tremenheere says are necessary, taking two men to every 100 acres?—The honourable Member for Brighton, supposing that we had made use of that calculation as he supposed, took a fair objection to it. The honourable Member said that if you take two men to 100 acres inclosed you leave out the rest of the land in the parish, and I saw the force of that at once; but we said, "You, have made a mistake in your figures," which I believe he will admit; then I say that taking the whole of the land, subject to allotments, and giving two men to every 100 acres of that inclosure, and taking off one third or whatever it may turn out to be of that land, which, from its state or character, though subject to allotments, it would be ridiculous to set out allotments on, the figures show that on the whole, since the passing of the Inclosure Act, the provisions of that Act have been fairly and properly carried out.

420. As a practical man do you not think that the inclosure and cultivation of this land has been for the general benefit of the country, as well as for the population resident there?—If you ask me as to the effect of an inclosure of a waste of that kind, both in population and in respect of every other social purpose, I have no doubt of the benefit of it. If you see the stock on the common, you will observe that the sheep and the stock are of the most wretched description, and on the other hand every man practically knows that the population close to these commons are the poorest population in the world; they depend upon what they can get, or take what does not belong to them; and both in habits, and in social condition they fall below the regular class of labourer, who is actively engaged in agriculture or other work.

421. With the increase of population in the towns, must it not be for the benefit of the nation that these commons should be employed for the production of food for the people?—There is no question that it would be a great gain to that extent.

422. Is it not also a fact that many of these commons have been inclosed, because the people who are living on the borders of these commons have stolen and taken in large portions of the common to which they had no right?—There is no doubt that in some places in Wales, the principle of squatting has prevailed, and that to stop it, and to stop the destruction of property, has been the object of the inclosure.

423. Is the size of the recreation grounds as named in the Act of Parliament amply sufficient, or not?—I should think that those which are named in the Act of Parliament, where you can give them, are sufficient.

424. As a matter of fact, is not the quarter of an acre which is mentioned in the Act of Parliament, quite as much, if not rather more, than any labouring man can properly cultivate?—I think so, and I said to the honourable Member for Brighton, that I should feel very cautious, for many reasons, in enlarging that amount.

425. If that quarter of an acre could be given, but if it was to be one mile from where a poor man lived, you would then say that it would be of no use whatever to him?—Not the smallest use.

426. I think that there are some little improvements which you would suggest in this Act, and one of them is, that there should be a little more power in your hands to enforce the proper observance by the churchwardens and overseers, and the allotment wardens, of the provisions of the Act?—I do not say where that power should be, but I am sure that it should be in somebody's hands, and I believe that that is the principal defect in this Act at present.

427. Is there any alteration in the Act, which you would suggest, with regard to the letting of these allotments to the poor people?—There is one thing which I forgot to mention; I should not like to offer an opinion, because perhaps my colleagues and myself might differ about it, but it is with respect to the rent-charge. I myself should not be in favour of getting rid of the rent-charge altogether, but I very much doubt whether I should not put it at some proportion of the absolute value of the land at the time. I think that there should be a margin. For instance,

Mr. *G. Darby.*

13 May 1869.

stance, in the Swaffham case they complained of its being too high for the poor; it was only 15 *s.* an acre. We had a long correspondence with the valuer upon it, and he said, "I will get you 50 farmers who will give it."

428. With these two or three exceptions, do you think that the Act has worked well?—I think so, because otherwise we must have had complaints. There is not power sufficient in the valuer to prevent interference with his work by trespassers during the time that he is going on. That is merely as to the wording of the Act; he can do certain things, and cannot do others.

429. With regard to the rights for the future, in looking at an inclosure, you look at it as it is at present, but so far as the Act goes, have you any right to look at it for the future?—There seems to be a difference of opinion upon that point. I do not think that the Act intended to provide for the future, but it is just possible, in the opinion of some, that you can put a construction on the Act as to the future. Then I say that you must give me some basis upon which I can make my speculation. If you give me no basis, I am left at sea; I can do nothing; and if you cannot in an Act of Parliament define what is to be the case, you cannot expect me to do it.

430. I am alluding more particularly to the question of the honourable Member for Surrey; he asked whether, if a common was within 8 or 10 miles of a town, and if a railway could take the people out, you ought not to consider that state of circumstances?—He asked me as to inhabitants.

431. Do you not think it a monstrous case that a man should speculate and build up every available place in a town, and then should expect to get for the benefit of that population which he had created a common to which they had no right?—Of course, that is a question for the Legislature, I must, as I have said, look at what I am bound to do by law: if you can say that I can build up every spot of ground, and not leave a breathing hole, so as to make the most of my ground, and then that if accidentally a railway goes for 20 miles, I can avail myself of it so as to make the most of my property, and that I am to take your ground for exercise ground, of course, I have nothing to say to it.

432. You would think that a great injustice?—I do not think it very fair.

433. *Chairman.*] Your attention has been called by an honourable Member to a case in which the owner of a small piece of land might build so many cottages on it that he might be unable to provide gardens; and the inference arose that allotment gardens should not be provided for those cottagers for the mere purpose of encouraging such speculation; is not it the duty of the Commissioners to take into consideration the wants of the labouring poor, without inquiring whether the owner of those cottages was, or was not, justified in erecting them without gardens?—Certainly; if there was a very large space of ground, it would become a matter of indifference whether you had so many acres more or not; but if a man built up a lot of cottages, having no interest in the ground, and if there were men having rights upon the common who were poorer than the men in those cottages, it would not seem right to deprive those poorer men of the ground for the sake of the others; it must be a matter of justice in each case.

434. In your way of reading the Act, I suppose that you consider that the allotment gardens are to be regulated by the wants of the men who live in the cottages, without any reference to the owners of those cottages?—Certainly.

435. Mr. *Liddell.*] You were asked just now an utilitarian question, namely, whether the inclosure of commons was not a very important question with reference to the increase of the supply of food, and you answered in the affirmative; does not the whole value of the allotments which is assigned to the poor man consist in your affording to him a supply of food?—There is no question of it.

436. Then, looking at the matter in an economical point of view, it is more important to increase the supply of food to those who want it than to those who, comparatively speaking, do not want it?—I did not understand that the question was put to me with that view at all, but I understood it to be, generally, whether the inclosures had effected good or not. It strikes me that whether a supply of food went straight to the cottager from his garden or went to the market, there would, so far as the country was concerned, be that supply of food. It might be better that the cottager should have the means of supplying himself, but whether that food is grown by the cottager or by anybody else, it is of so much value to the country.

437. Supposing that it turns out (as I have no doubt that it will turn out) that the possession of a quarter of an acre of ground by a cottager, which he could cultivate, would keep him off the rates, would not it have a very important bearing upon the matter in an economical point of view?—Yes, we have very few able-bodied labourers upon the rates, except in case of sickness. I do not wish to be at all misunderstood; I have been for years and years in favour of poor allotments, as being beneficial to the poor; if those poor allotments are let to them with discretion, and if a man is not so overdone with working at his allotment that he injures himself and injures the man who lets it to him; as long as you let it to him, so that he can cultivate it properly, and can get the produce from it properly, without preventing his gaining his wages, I have not the slightest doubt that those allotments are most beneficial, and I myself have done everything to encourage them.

438. Did I rightly understand you to say that there was no power of appointing allotment wardens?—I said that there is a direction how they are to be appointed under the Act, and then I said that there is no superior power, if they are not appointed, to compel the appointment, nor, if appointed, which can interfere to make them do their duty.

439. If there is no specific power to compel the appointment, would it not follow, as a natural inference, that their regulations cannot be enforced by law?—The Commissioners are empowered to make rules which are to last for five years, which I at once admit that they have never done, because it is an absurd thing for a man to make a rule which cannot be enforced; every man who would carry out our rules, would just be the best man to make his rules, and to carry out the letting of the allotments, whereas if he would not do it, he would disregard our rules, which we have no means of enforcing.

440. This bears, as it seems to me, in a most important

important way upon the unappropriated allotments?—No doubt it does.

441. Supposing that the directions of the Act have not been complied with, and that allotment wardens have died out, or have not been appointed at all, might not unappropriated allotments become nuisances?—In one case, the people have not paid any rent, and they have said that the land is theirs; I heard of one case yesterday.

442. Will you state what that case is?—I cannot at this moment tell you, but the statement was from a person who had been very largely engaged in valuing; I asked him what he had seen of these allotments, and he said that in some cases the allotment wardens had not been appointed.

443. Will you, on another day, furnish the name of that place?—Yes, we have letters which I can place before the Committee; for instance, I had yesterday morning one letter in which it was stated that the overseers had chosen to let a recreation ground to a man who turned on heavy cattle. Several said, "We do not like this, how can we stop it"? and they wrote to us. I said, "I have no power to interfere."

444. Mr. *Martin.*] That is in defiance of the Act?—Yes; my question is, how you are to enforce the Act; I have no doubt that the result is that in some cases the clergymen and others have had it carried out, but in many other cases, if you made inquiry, I have no doubt you would find that it had not been properly carried out.

445. I understand that by the 108th clause of this Act, the incumbent of the parish for the time being, one churchwarden, and two ratepayers, are in all cases directed to be the allotment wardens?—Yes.

446. Then it is not very easy to understand how a common inclosure should be without allotment wardens, because there must always be a clergyman, and there must always be a churchwarden, and there must always be two ratepayers?—Yes; but there may be a clergyman who will act, and a churchwarden who will not act, and two ratepayers who do not like it.

447. Then the deficiency arises from these persons not being willing to discharge their duties?—Yes, or forgetting their duties under the Act of Parliament; I daresay that it has many times happened from neglect without any wrong intention.

448. There is no power of forcing these persons to discharge their duties?—None; if we hear about the allotments, I think that generally these cases are brought to our notice by the incumbent.

449. Mr. *Pease.*] Under the 34th section of the Act, is there not a power in the meeting which is held for the appointment of a valuer, to give instructions to the valuer relative to the amount of land to be appropriated under the allotments?—Certainly.

450. Have they often given such instructions?—Yes, I think that 700 acres have been given for the sites of schools, and other land for burial grounds, and for sites for churches. In one case they will give, perhaps, a site for the Wesleyans, and in another case for a Church school.

451. I want to know more particularly with regard to the allotments for the labouring poor?—Yes; I remember an early case in Cambridgeshire where they gave considerable allotments.

452. And you have never thought it right to limit those recommendations?—No; people generally take care of their own interests.

453. Since you have been an Inclosure Commissioner have you often had visits from Members of this House who have been interested in these matters, before the proceedings were laid on the table of the House?—We have had Members calling upon us, and we have had other people. Whether a man is a Member or not, if he is interested in the inclosure, he may come to inquire how it is going on.

454. Have you had four Members, as representing their constituents, complain of the quantity of land reported on by the Assistant Commissioner for the purpose of these allotments?—I do not remember any.

455. If you had had any such representation, would you have deemed it your duty to have looked into the matter?—Certainly.

456. Generally speaking, do you find that there are cottages with gardens attached to them?—Yes; you will find in some places cottages with gardens and orchards. At Withypool they have cottages with fields attached to them.

457. Then the fact is, that the powers of this Act are rather to make up for the laches of the proprietors?—Yes.

458. With regard to the district in which I am more particularly interested, supposing that you found that there were neither cottages nor people in the neighbourhood of the moor which was about to be inclosed, but that there was a mine being sunk there, would you consider it a case in which you should make allotments for the labouring poor?—You mean if the mine would succeed.

459. I am supposing that the mine would in all probability succeed?—You could hardly reserve land under this Act for the labouring poor when there were not any; it would be reserving it for persons who did not exist.

460. Twenty or thirty men might be working, and there might be a tremendous amount of lead ore at the outset?—I find that there have been miners with cottages and insufficient gardens, and allotments have been set out for that purpose.

461. Did you ever know the lord exercise a veto because of the large amount set out for allotment gardens?—No; as a rule it is unquestionably the case (and every Inclosure Commissioner will tell you the same thing) that it is much more likely to be the other way, and that the lord exercises a veto because sufficient is not set out. It is natural enough that every little man who has his little should look to it, but as a rule there is no question that the liberality of the allotments is on the side of the lord, and not of the commoners.

462. I will take a case where there are two townships in different manors, but in the same parish; one has a large town in it, and the other has hardly any population; the town is on the border of the parish: in such a case would you consider that the townspeople in the one parish were entitled to allotments in the next manor?—If the honourable Member takes allotments conjointly, namely, for exercise and recreation, and for the labouring poor, I must beg him to divide the question, because the law is different upon them. The exercise and recreation ground is set out for the inhabitants; the allotments to the labouring poor are confined to the people in the

Mr. *G Darby.*

13 May 1869.

parish, and if a man goes a mile out of the parish he must give up his allotment.

463. I refer to the case of two manors in one parish?—Then all the poor in that parish would be entitled, if they were fit objects for it, to allotments in respect of the labouring poor; because, although in two separate manors and in two separate inclosures, yet, as far as regards a person who has an actual right in the common, it would probably be in respect of the lands in the manor; but as regards the people who are to be benefited by the Act, by hiring allotments, it does not matter whether they are in the manor or not, but it does matter whether or not they are in the parish.

464. Mr. *Johnston.*] In section 15 of the Act there is a provision that the village green may be held to be a substitute for a recreation ground?—Yes.

465. Is it not the case that common rights over such greens have not been extinguished, as in the case of inclosures, and still exist; and that there is a destruction or deterioration of the green as a recreation ground?—The only restrictions and powers under the Inclosure Act with respect to a village green, are, first, that no village green shall be inclosed; but, of course, that fact does not interfere, and ought not to interfere with the common rights which are exercised over it. The clause alluded to says that an inclosure shall not deal with a village green; and then it goes on to say that it may be taken as part of the recreation ground, or you may take more. The Act of 20 & 21 Vict. c. 31, s. 12, prevents nuisances from being put on village greens.

466. Do not you think that where a village green is held to be a substitute for a common, there ought to be a power to extinguish and compensate common rights over that green?—I do not know why that should be the case, because there is a power in the Act to let the herbage of exercise and recreation grounds.

467. From your experience in the country, do you think that the benefit of allotments for the labouring poor is as great in purely rural districts as it was 30 years ago, and that they do as much good as they did 30 years ago?—Speaking for myself, where the land is near enough for people to get to it, and to get their manure to it, and where they have not more than they can cultivate, I do not find that whenever I have a bit of land to let somebody will not take it. Of course the population has not increased; but at the same time as they do more by what we call job work, and get higher wages, it is very doubtful whether they will continue the allotments. That I do not know; but I do not think that the time has arrived when they will give up those allotments.

468. Mr. *Fawcett.*] You stated, in reply to Colonel Barttelot, that great benefit had resulted from the inclosures, both socially, morally, and economically?—I think so.

469. In reply to me, when I asked you what effect the inclosures had produced in many cases which you enumerated, those cases being selected as illustrating that there had been no increase of population, you said that you had no specific information upon which you could base an opinion?—The distinction is quite clear. If you ask me what particular advantage has accrued in parishes A., B., C., D., E., and F., I may know of no particular advantage; but as knowing country matters locally, and more generally, I can undertake to say that where commons have been inclosed I see a very great improvement. Let any man go to Framfield Common, and he will see the face of the country is altered.

470. Mr. *Peek.*] You entertain the frequently expressed opinion that the general public has no legal common rights, though that general public may for centuries, and unmolested, have walked and ridden upon, and even more substantially availed itself of the advantages of a common?—That just changes the question. Taking the question, which the Honourable Member previously asked me, if there were two termini, and the public had gone from one point to another, that is to say, had exercised a public right of way, if you inclosed the common 50 times over, and did not give notice to shut up that public way it would still exist, and you could not deprive the public of it under the Act of Parliament. But if the Honourable Member refers to persons wandering anywhere over a common, I can only refer him to decided cases where the judges have answered the question.

471. Do you not think health to consume food of equal or greater importance than a small increase in the total production of food?—I think that health is certainly very important, and the question is how that health is to be obtained. If you obtain health for the public, it strikes me, in common honesty, that it should be at the public expense, and not at the expense of one individual. If the health is required by the country, in my opinion, you should do as you do in a gaol, you should say that for the sake of public health something must be sacrificed. I should say, in the case of ground for a gaol, "You must sacrifice your property, and must be compensated for it."

Mr. John Bailey Denton, called in; and Examined.

Mr. *J. B. Denton.*

472. *Chairman.*] What profession do you practice?—I practice the profession of a Valuer, and also of an Agricultural Engineer.

473. Have you had much experience as a valuer under the Inclosure Act?—I have had some considerable experience, having acted as valuer, I think, for 10 inclosures since 1845, and as a Commissioner of Inclosures previously to 1845.

474. Will you state how the valuer should value the allotments which are set apart for the labouring poor?—The Act prescribes that it shall be according to the productive farming value.

475. So that the duty of the valuer is to take the complete farming value, according to the best opinion which he can form?—It is so.

476. Will you state how you fix the amount of rent-charge which is received upon the allotments for the labouring poor?—Positive instructions are given by the Inclosure Commissioners with regard to the public allotments for recreation and for gardens for the labouring poor; and the valuer, to the best of his ability, sets upon the latter a value which becomes a rent-charge, which is either disposed of by sale, to pay expenses, or forms an item in the general allotment.

477. Has an inconvenience sometimes arisen from the amount of the rent-charge being so small as to involve a good deal of trouble in paying it, and has it also produced an inconvenience by the parties who pay it considering that the rent-charge

is too high in proportion to the value of the land?—There is considerable difficulty in certain instances in consequence of the rent-charge being too small; that is proved by the fact that a rent-charge, when sold, realises only 15 years' purchase; I do not know of any rent-charge which has reached 20 years' purchase; whereas the land would sell for 30 years' purchase at the same rental The farming rent being fixed upon the land, if the rent-charge is sold it will only realise 15 years' purchase, which is half of what the land at the same rental would realise in the market.

478. Does it occur to you that it would be desirable to make any change in the law regarding the rent-charge of those allotment gardens?—I have traced the procedure in three inclosures which I have had to deal with, and having heard the evidence of Mr. Darby, I think that if I give the facts the Members of the Committee will arrive at something like a practical conclusion; I will take, for instance, Ashwell, on the borders of Hertfordshire; the total quantity in the parish is something about 4,000 acres, of which 2,506 acres were dealt with under the inclosure, of which only 116 acres were waste, and therefore subject to public allotments. In Meppershall in Bedfordshire, about 2,000 acres was the total quantity in the parish; 874 acres were commonable land, of which 33½ acres were waste. In Stotfold, also in Bedfordshire, there were about 2,500 acres in the parish, of which 1,840 acres were commonable lands, and 225 acres were waste; but out of that quantity I think some portions were Lammas and Midsummer ground, and therefore not subject to allotments for public purposes. I am not quite distinct upon the quantity of waste. These figures show how very small the proportion of the waste land subject to public allotment was to the whole of the land dealt with under the inclosures. I have also traced the procedure in the parish after allotment in those three cases. In the case of Ashwell three acres were allotted for gardens, and the land is let to the labouring poor in 48 allotments of 10 perches each. The rent-charge which I fixed upon those three acres was 30*s.* an acre, making 4*l.* 10*s.*, or 2¼*d.* per pole; the rents now obtained are 3*s.* 6*d.* per plot, or nearly 4¼*d.* per poll; and if I am correctly informed the surplus is paid to the surveyor of highways, which is very irregular. The surveyor of highways can have, under the Act, the surplus arising from the herbage in the case of recreation grounds, but I do not know that he has anything to do with the surplus in the case of garden allotments. In the case of Meppershall the allotment ground was five acres, and is let in 47 allotments of 16 poles each; the rent-charge was 6*l.* per annum, or 1⅞*d.* per pole, and the occupiers pay 4*s.* for each plot, or 3*d.* per pole. The surplus, after payment of the tithe rent-charge and poor rates, is handed over to the overseers, unless there are repairs of gates and fences to do. In Stotfold the land is let in plots of from 10 to 20 poles each, and the rent obtained from the occupiers is 4⅛*d.* per pole, or 50 per cent. more than is paid as rent-charge, and the surplus is laid out every Christmas for coals, for the benefit of the poor. I give these three cases, bnt I can multiply the cases if the Committee should desire it.

479. Then we may take those cases as samples of a great many other cases?—Yes; there are very diversified uses of the surplus; for instance, from Hampshire I have a communication, which states, "The allotments set out for the labouring poor in most cases have not yet been of much service. The allotment wardens have had much difficulty to let the plots as directed by the Act, and are obliged, in order to pay the rent-charge fixed on the land" (there is no surplus there) "to let some portions of the land in plots of one or two acres."

480. Are you aware of the character of that land, whether it was particularly bad for spade cultivation?—I believe that in that case the land was at a distance from the cottages; and I hold, from some experience upon the subject, that if allotment gardens exceed a distance from the cottages of half-a-mile, they are of very little value.

481. Are you aware how that land which you have last spoken of was cultivated?—I am not. There is another case, in Huntingdonshire, and my correspondent says, "The proceeds are directed by the order to be laid out in fuel, and given amongst the poor."

482. By what order?—I do not know what he means. He also says of another case, "The surplus, after payment of rates and other charges, is handed amongst the common right owners."

483. Then are we to understand that in these cases the rent-charge was apportioned by the provisional order as an allotment to some individual or other; but that from the smallness of the amount, or from some other cause, which you are not able at present to state, it has no longer been paid to the person entitled to it, but has been diverted to some *quasi* public purpose?—Not so; the rent-charge fixed upon the allotment gardens is not fixed by the Inclosure Commissioners, but is left to the valuer, who exercising his judgment puts a value upon the allotment. It either becomes a rent-charge to be disposed of, with the approval of the Inclosure Commissioners, by sale, towards the expenses of the inclosure, or it is allotted to certain individuals who have allotments to receive; they receive, in fact, a part of their allotment in the shape of a rent-charge, instead of land, but as a valuer I have never carried out that proceeding. I have sold rent-charges; and I have myself bought rent-charges at 15 years' purchase; I have in Hertfordshire, or rather my son has, at the present moment, a rent-charge which it is most difficult to get. I bought another rent-charge at Stretham, in Cambridgeshire, of 40*l.* a-year, and I gave 600*l.* for it; and I have no difficulty in getting it. The overseer, in the first case where my son is the owner, requires a small percentage for transmitting the amount which he sends, perhaps once in three years.

484. Will you explain what are the causes which have led to these rent-charges being so little coveted?—It arises from the difficulty of collecting them, and the fact that there is no tangible property in them beyond a simple rent-charge.

485. Mr. *Martin.*] You mean, I suppose, the difficulty of procuring the interest?—There is a considerable difficulty in procuring the annual amount should it be resisted.

486. *Chairman.*] Have you known instances where the allotment wardens have not acted?—I have endeavoured to ascertain who has acted in the several cases which I have had before me, and I do not understand that the two ratepayers prescribed by the Act have been appointed. The

Mr. *J. B. Denton.* 13 May 1869.

Act prescribes that the incumbent shall be one allotment warden, that one churchwarden, if there be more than one, shall be a second allotment warden, and that there shall be two ratepayers elected, making four allotment wardens. I do not find that those two ratepayers have been elected.

487. Mr. *Martin.*] Does that only refer to these three cases, or does it refer to all your cases?—It refers to all the cases that I have inquired into.

488. *Chairman.*] These two wardens ought to be elected at the same time, and in the same manner, as the overseers of the parish are chosen?—Yes.

489. But, as far as your experience goes, those wardens have not been elected?—No; or if they have been elected they have not acted; it has chiefly rested with the churchwarden or the overseer, and the clergyman of the parish.

490. Have you reason to suppose that the wardens have had a difficulty in collecting the rents from the labouring poor who hold the allotments?—I think that in certain parishes there has been difficulty.

491. Are you also aware of cases, in addition to the one which you have mentioned, in which the ground set apart for allotments for the labouring poor, is not used by the labouring poor?—I am not. Where unsuitable land has been used for gardens, there has been considerable objection and difficulty in letting them. In my own parish of Stevenage, before the land was underdrained, there was a part of the allotment garden lying waste; since it has been drained, the land has been eagerly sought.

492. Have you any suggestion to make to the Committee as to an alteration in the law regarding the rent-charge in cases under inclosure?—No; but I hope that the Committee will give me an opportunity of explaining, having a great interest in the welfare of the agricultural labourer, and being myself a large employer of labour, or, rather, directing a great number of labourers, that though there has, no doubt, been some failure in carrying out the intentions of the Legislature under the Inclosure Act, after the allotments have been handed over to the parish authorities, still there is something like a basis in the proceedings which might be made a means of dealing with allotment gardens generally throughout the country; that is to say, in this way: the law directs that the valuer shall put upon the land dealt with for allotments a purely farm rent; but the rent paid by the cottager is almost always double that.

493. When you say "almost always," are you alluding to a private owner's allotments, as well as allotments under the Inclosure Act?—No. I will take these three cases which I have given you, and I can show you that whereas the farm rent is a little above 2 *d.* per pole, the rent obtained from the occupier of the land is 4 *d.* or 4½ *d.*; but I know of much higher rents being obtained, although, no doubt, the intention of the Act was, that the occupiers of the land should have the land as nearly as possible at the rate of the rent-charge; still the amount of the rent actually paid by the labourer is very considerably more, and the suggestion which I would lay before this Committee is, that inasmuch as the rent which the agricultural labourer pays is not more than he is willing to pay, and is able to pay, although it may be double that which the rent-charge would give, there is a difference between the two which might be made available for an extension of the allotment garden system in parishes. I will take as an instance five acres of land allotted as gardens for the labouring poor, they will pay in the shape of rent-charge, 30 *s.* per acre, that is, 7 *l.* 10 *s.*; the tithes, rates, and taxes will perhaps amount to 10 *s.* an acre; that is, 2 *l.* 10 *s.*, making together 10 *l.*, which is equal to 2 *l.* per acre, or 3 *d.* per pole. The number of cottage labourers in rural parishes, probably on an average, will reach 70; of which half, 35 may require full gardens, they will readily pay from 4½ *d.* to 6 *d.* a pole, and while young and able, they can well afford to do so. If in an allotment of five acres, there are as many as 35 plots of 20 poles each, which allows 100 poles for roads and waste, and 6 *d.* per pole is charged for 18 plots, and 3 *d.* for 17 plots, the rent realised will be 13 *l.* 5 *s.* This would yield a surplus of 3 *l.* 5 *s.*, which by the law, is now disposed of as the churchwardens may direct in aid of the rates. This 3 *l.* 5 *s.* difference would be in the hands of the allotment wardens, wherewith to lease more land, and upon a like application of the land so taken, there would be again a surplus in the same way. In this illustration I have divided the total number of plots into two portions, taking double the rent-charge as rent for 18 plots, and the simple amount for 17, because I have considered that in all populations, half at least will be young and able, and capable of paying the 6 *d.* a pole, whereas there may be half the population of men who would not be so able, and to whom it would be an act of kindness and justice to let them have the land at what the allotment wardens have paid for it: namely, 3 *d.* a pole. If I make myself understood to the Committee my proposition would be to this effect, that as the rent-charge placed upon allotments for the labouring poor under inclosures is fixed at the farming value, the same principle might be adopted in parishes irrespective of inclosures, and land might be obtained by garden allotment wardens at its farm rent, and let in the same manner as the allotment wardens (acting in the case of an inclosure) let the land under their control. They let the land at an increased rent, and so might the parish authorities, who might lease lands in cases where no inclosures were concerned. They might let the land so as to derive a profit rent, which profit rent might be employed in taking more land under lease, and so extending the system, thereby providing for an extension of the population, as well as meeting the requirements of the existing population.

494. Mr. *Martin.*] You say that the allotment wardens let these gardens at double the rent; I want to know how they do that, because it must be in direct violation of the Act: the Act says in the 109th clause that the gardens to be let shall "once, at least in every 10 years after such first letting, be valued by a competent person to be appointed by the allotment wardens for that purpose, who shall estimate the full rent which the same would be worth to be let by the year for farming purposes, all tithes or tithe-rent charges, rates, taxes, and assessments, being borne by the landlord"?—I am quite aware of that clause, and I believe that it is done in violation of the law, though it is hardly to be wondered at, seeing that the Act itself deals with a surplus, and by the 112th section directs how a surplus should be employed.

495. *Chairman.*]

495. *Chairman.*] Is there anything in the Act which controls the discretion of the allotment wardens as to the way in which they may dispose of any amount of rent which they may receive, and which is not necessary to pay the rent-charge; are they at liberty to use it for any parochial purpose which they like?—The Act is precise. As I understand it, such surplus is to be applied towards the parochial rates.

496. And your suggestion would be, that instead of handing it over to the parochial rates, the authorities might be empowered to employ that money in hiring other land to be let out to the labouring poor for allotments?—Decidedly so: and it would meet any increase in population which might occur, though my own investigation of the matter enables me to corroborate what I heard Mr. Darby say, namely, that the population of agricultural parishes is in certain instances rather on the decrease than on the increase.

497. Will you tell the Committee what is your opinion, from your experience, as to the quantity of land which may be advantageously held by a labourer for the purpose of an allotment garden?—I think that it should not be less than 20 poles; that is to say, that a plot of 20 poles should be the unit in the allotments. Old men, when they get a little disabled from work, can garden, and can do justice to a greater quantity of land than able-bodied men in full work. I refer to men who are a little on the decline as respects physical power.

498. May not the children of a labourer advantageously do a good deal of work in the garden, and so enable him to cultivate beneficially a quarter of an acre, or more than a quarter of an acre?—He may certainly do so under those circumstances.

499. With regard to men who are employed in sedentary occupations during the day, and not in agriculture, such as village saddlers, or cobblers, would not that class of persons advantageously use more than a quarter of an acre?—That is possible.

500. Are we to understand you to say that, on the average, taking all the cases together, you would think that one-eighth of an acre was the right amount?—Yes, decidedly, as the unit of division; but I think that, under certain circumstances, it may be doubled.

501. As you have travelled a good deal about England, have you formed the opinion that there is a considerable deficiency of allotment gardens for the labouring poor?—Yes, there is a great deficiency; but I have also known of abuses of garden ground. I know of one instance, which I cannot mention by name, where allotment gardens were set out by the owner of a large property near a considerable town, and it has been ascertained that there has been such improper traffic amongst the occupiers of the garden land, that the system is about to cease, and the allotments, I believe, will be discontinued.

502. I presume that the allotment wardens would prevent such an abuse as that in the land under their care?—I presume so, if they did their duty.

503. Mr. *Martin.*] What do you mean by traffic in the allotments?—For instance, one man will be holding three or four plots by a private arrangement made amongst the occupiers without the knowledge of the owners.

504. *Chairman.*] We have found, in some of the reports of the Inclosure Commisssoners, that the fact of having a garden is stated as a reason why the labouring poor do not require allotment gardens; considering the great variety in the sizes of the gardens, should you think that the mere fact of there being a garden was a sufficient circumstance to render an allotment garden necessary?—It depends upon what the size of that garden is. On the best managed estates in England that I know, it is considered that 20 poles of land within a distance of half a mile, and five or six poles at home, are the best quantity and the best arrangement.

505. Is it not common among the cottages in England, to find gardens near them which are too small to provide any considerable quantity of vegetables?—Yes; in villages it is hardly possible to give to each cottage occupier 25 poles of land. On Lord Pembroke's estate, the practice is to give 20 poles at a short distance from home, and five or six poles at home; the five or six poles produce a few lettuces or smaller vegetables, while the 20 poles at a distance produce potatoes, and cabbages, and onions.

506. Have you formed any idea of the value which a labourer can get out of a garden of 20 poles cultivated for vegetables?—I have gone into the calculation, and I have found that, after payment of rent and seeds, about 4*l.* profit may be got out of a quarter of an acre; that is a rood of land. If we adopt 20 poles of land as the unit, the occupier would obtain rather more than after the rate of 4*l.* per rood.

507. Is that an estimate of what the produce of the garden would be worth to him, or has it reference to what he would be able to sell in the market?—It has reference to what he would pay if he had to buy the vegetables which he grows.

508. So that his garden might often pay the rent of his cottage, and also provide a considerable part of his food during the year?—I have always considered that the profit of the garden would pay his rent.

509. Is it your idea that every agricultural labourer in the country ought to be provided with, at least, 20 poles of land?—I most distinctly think so.

510. Turning your attention to the recreation grounds which are to be provided under this Act, what do you think is the smallest extent which would be convenient for the recreation or for the games which persons would wish to carry on?—It depends upon what the games are; cricket, for instance, ought to have, at least, five acres, and they ought to be in a square block.

511. Those five acres would be necessary for cricket, whether the population in the neighbourhood were large or small?—Exactly so, if there are two elevens to be made up in the parish.

512. It is not the extent required for the spectators, but for the players?— Spectators and players together.

513. Lord *George Hamilton.*] In that case, would not one acre be actually sufficient for the ground in which they play, because they could stand round; the five acres are not worn, but it is only the actual part in which the wickets are; and therefore would not one acre be sufficient if there was ground around them on which they could stand?—It is part of the duty of a valuer, in setting out a recreation ground, to inclose it, and the fencing is paid for out of the public expenses; and, therefore, that assumes that there

Mr. *J. B. Denton.*

13 May 1869.

is no space beyond the recreation ground which could be used by the spectators.

514. Mr. *Lowther.*] From your experience in the country, do you think that the benefit of allotments to the purely labouring poor is as great as it was 30 years ago?—I think so; the population is not now what it was then, and necessarily, as the population has increased, the requirement of ground for garden allotments has increased.

515. Is it not the case that there is more piecework, and less superfluous labour, in rural districts than there was 30 years ago?—I am not prepared to answer that question.

516. Mr. *Martin.*] Are you aware that under the present Act the levelling of a recreation ground is paid out of the inclosure, but that the levelling of allotments for the poor is not?—It is so.

517. Do you not think that it would be very desirable to amend that Act, and to have the allotments levelled at the expense of the inclosure?—I do not think that any valuer would set out an allotment for garden ground where it would require levelling, but it might be so by necessity.

518. You have told us that you know of a case where the allotments by traffic got into such few hands that the allotments were about to be abolished; these cottagers get a benefit by trafficking with their brother cottagers; is there any reason against that?—The owner in the case which I have mentioned considers so.

519. It was the opinion of the owner, and not your own opinion?—Just so.

520. You perhaps agree with me that it is not a sufficient reason for abolishing the allotments?—I have not considered it in that light.

521. Mr. *Fawcett.*] In the case of the three inclosures which you have mentioned, where three, five, and six acres, I think you stated, were allotted; do you think that if more had been allotted to the labouring poor, they would have derived advantage from it?—No doubt.

522. Do you know, from your experience of inclosures, whether it would have been advantageous if more land had been reserved for the labouring poor?—Being myself a great advocate for garden allotments, I consider that there are very few instances in which there might not have been advantageously an increase of quantity.

523. You have referred to Lord Pembroke's estate; you are probably aware that in that case every cottage has a garden, but in addition to that every cottager is obliged to have an allotment, is he not; is not that almost the rule on the estate?—I believe so.

524. Then, if you read an Inclosure Bill, and found that all that was contained in that Bill was that the cottagers were provided with gardens, without stating the size of those gardens, you would not, without further information, think it a sufficient reason for refusing allotments to them?—I am afraid that I shall hardly answer your question directly. In my experience of the proceedings under the Inclosure Commissioners, I have always found so much care taken to arrive at facts, that I cannot anticipate a case where an insufficient amount of information has been obtained to guide the Inclosure Commissioners.

525. I am referring to the information which is given to Parliament. In the present Inclosure Bill it is stated that the labourers have gardens, and that therefore there is no need that they should have land as an allotment. Supposing that you were a Member of Parliament, do you think that upon that principle alone, you would be justified, in deciding that no allotments should be granted?—I do not distinctly understand the question.

526. An Inclosure Bill is introduced into Parliament, and the whole information which Parliament has to guide it is the Bill, and not the information which the Inclosure Commissioners have: I see that in this Bill it is repeatedly stated that no allotment should be reserved because the cottages have gardens; should you think yourself justified in saying that no allotments should be granted until you knew what the size of those gardens was?—Certainly not. If the gardens did not reach in extent to 20 or 25 poles, I think that additional land might be advantageously allotted.

527. And is it your experience generally that in the cases of which you know more land might have been allotted?—Yes; and having regard to the three cases to which I have referred, where three, five, and three acres, I think, were allotted, no doubt a larger allotment would have been advantageous.

528. Is it the fact that in the case of the inclosures which you have described, taking the demand for allotments for the labouring poor, the size of the allotments is only about half what you think it ought to be?—As I have stated, the quantities vary from 10 poles to 20 poles.

529. You have mentioned cases where the average is, I think, one-sixth of an acre?—I think that the average would be one-sixth of an acre in those three cases.

530. Mr. *Knatchbull-Hugessen.*] In considering the value of the allotments to these labourers, do you take into consideration the distance from the labourer's residence?—I think that no garden allotment ought to be above half-a-mile distant.

531. Are you aware of the allusion to this particular point in the Report of the Committee upon whose report the Act of 1845 was founded?—I am not.

532. Mr. *Fawcett.*] Does not the Inclosure Act give the Commissioners the power of facilitating an exchange of land?—Yes, after an allotment is set out for the labouring poor, if it is not suitable, it may be exchanged for other land which is suitable.

533. Is that power of exchange often exercised?—I have not known it.

534. Do you not think that it might be exercised most advantageously?—I believe so.

535. Might it not be often exercised in the cases in which it is stated that the ground is too far from the village; might not that ground in some cases be exchanged for land close to the village?—Possibly so.

536. And in that case you would get advantageous allotments?—Yes.

537. Mr. *Knatchbull-Hugessen.*] Would not it depend upon the willingness of the proprietors who had advantageous land to exchange?—Of course.

538. You would not, I suppose, compel an exchange to be made?—Certainly not an exchange, but I should be very glad to see some positive means of acquiring land near villages for allotments.

539. Is it not the case that when you are exchanging a given allotment for any land of greater advantage nearer a village, you take a less quantity of land near the village, it being of greater value, and are not obliged to give quantity for quantity?—I should certainly so act myself.

(Mr.

(Mr. *Darby.*) The simple thing is this, where the subject matter of exchange is a part of the land to be inclosed, and where that is done under the Act, it must be quantity for quantity; but where you are exchanging a part of the land for old inclosure land belonging to a private individual, it must be value for value.—(Mr. *Denton.*) No doubt.

540. *Chairman.*] Supposing that an attempt were made by the Government to get a satistical return shewing the quantity of land which has been set apart under inclosures for allotments for the labouring poor, and the manner in which that land is at present used, do you see any difficulty in getting an accurate return of those facts?—I do not think that there would be any difficulty; I asked four questiens of the correspondents, to whose letters I have referred, and I got very distinct answers to each question. Perhaps the Committee will allow me to explain what I mean by using the surplus between the bare farming value, and the rent obtained from the occupiers; if land used as allotment gardens is within the distance which I have said it ought to be, namely, half-a-mile, the land then becomes of an accommodation character; there is not only the farming value attached to it, but there is a value attached to position. We know that the proximity of a garden to a cottage is a very great element with an agricultural labourer; he has been at work all day; he cannot afford either strength or time to go a long distance from home to labour at his garden, and position is a very great element in value. Now, I think, that by some legislative means in all the parishes land should be obtained for gardens for the labouring poor; it might be held by lease from the landowner, because it is very desirable that the landowning element should be retained; then, if the original rent paid by the parish authorities, as lessees to an owner, was a farming rent, and if that land was re-let in plots as garden ground, at such an increased rent as a farm labourer could afford to pay, there would be the difference between the two to apply to the taking of fresh land on lease, which would meet the question of increasing population and provide land for extending the allotment system to the present population, if it was desirable to do so. Knowing the interest which you, sir, take in that question, I am most anxious to be understood upon this point, because I know that it can be worked, and I think that it would be a wise step to adopt.

541–2. Do you see any disadvantage in the clergyman and the churchwarden being the persons to take land on lease, and to let it out on lease to labourers, and take the rent, would it be an onerous duty from which they would shrink?—I think that there are several objections to the clergyman and the churchwarden being the sole acting parties; there are Dissenters in all parishes, and there are Dissenting labourers in all parishes, and whether it was so or not, there would always be an impression that favour ruled in the breast of the clergyman; I personally do not think that it would apply, but that would be the feeling with many. And again the churchwardens are generally the largest employers of labourers, and I need not say that there is a great prejudice abroad with some employers of agricultural labourers against allotment gardens, from the belief that when the labourer is wanted on the farm he will go to his garden, and that it lessens his physical power when engaged upon the farm.

Mr. *J. B. Denton.* 13 May 1869.

543. What parochial authority would you suggest which should have the management these allotments?—I think that that is of the most difficult question attached to the subject.

544. Mr. *Liddell.*] You have very clearly and ably described to the Committee the point from which you have just passed; would not the difference between the agricultural value and that which you properly term the accommodation value be practically a tax levied upon one set of labourers for the benefit of another, under the system which you propose, namely, that the surplus should be applied to leasing other lands for the same purposes?—I cannot see it in that light.

545. If you are to take an advanced value which you call an accommodation value over and above the agricultural value, and to charge that higher value to the occupier in the shape of rent charge, for the purpose of purchasing hereafter further lands to be applied to a population, which is a prospective population, does not it practically amount to a tax upon the existing occupier?—It does.

546. Is that just?—I think that it is just, for this reason, that the labourer is very willing to pay the increased rent, and he can derive a considerable advantage by doing so.

547. But that is an assumption; would he not be much more willing to pay a lower amount?—Of course he would, and he would be very willing to have the garden for nothing; but I happen to know that something like from 6 *d.* to 8 *d.* a pole is a rent which an agricultural labourer considers a fair rent, and one which he can well afford to pay. I have known them readily pay 1 *s.* a pole, and to be thankful to get the land.

548. Mr. *Peel.*] The fact is that they have no means of getting such small quantities of land as a quarter of an acre at the wholesale price; it is taken wholesale, and is parcelled out retail, and, as I understand your proposition, whatever profit was made, would go to create another operation for the benefit of those people who were to come afterwards?—Yes, or such an arrangement as that might be carried out in another way; for instance, when steady, respectable men get old they might have land at the rent which the parish authorities pay for it; but, as regards those labourers who are willing and able to pay, they should pay for the land such an increased rent as would supply a fund for the extension of the allotment system.

549. Colonel *Barttelot.*] You at once admit that you would have two distinct classes of people, namely, able-bodied, who are to pay most, and those who are not so able-bodied, who are to pay less?—Yes.

550. Did I not rightly understand you to say some short time ago, that a person who was not so able-bodied was better able to cultivate his garden, and could cultivate it to better advantage than an able-bodied man could after a hard day's work?—Yes, though that is the exception and not the rule; there are men of good character in the decline of life who cannot get employment every day in the

Mr. *J. B. Denton.*

13 May 1869.

the week, and who find employment at certain seasons.

551. You are making two distinct classes of people, and those two classes would be conflicting classes in the same parish, and would not that have a very bad effect instead of a good effect?—I think that in working out the system practically, you would find that when men were partially disabled, and found employment only at certain seasons, they were able to take two plots, and to work those two plots favourably. Then I would suggest that in order to show consideration for such men, they should have two plots at the same rent as that at which an able-bodied man should get one.

552. I understood you to say that you objected to the clergyman of the parish being one of the committee?—No, I do not say that, but as it now operates, I believe that the clergyman and the churchwarden or overseer of the parish have the sole rule in a great majority of cases; and, I think, for the reasons I have stated, that there is objection to the churchwarden, inasmuch as he not only represents the Church, but is himself generally a great employer of labour.

553. Is it, or not, a fact that taking the rural districts, the clergyman is the person who interests himself most in these allotments for the labouring poor?—Yes; I most emphatically support that view; I know it myself; in my own parish the clergyman is the person who has found land out of his own glebe for the garden allotments.

Thursday, 3rd June 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Knatchbull-Hugessen.
Sir Michael Hicks Beach.	Mr. Liddell.
Mr. Thomas Chambers.	Mr. Lowther.
Mr. William Cowper.	Mr. Philip Wykeham Martin.
Mr. Fawcett.	Mr. Knight.
Mr. Leveson Gower.	Mr. Pease.
Lord George Hamilton.	Mr. Peek.
Mr. Andrew Johnston.	Mr. Walsh.

THE RIGHT HON. WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. NATHAN WETHERELL, called in; and Examined.

Mr. *N. Wetherell.*

3 June 1869.

554. *Chairman.*] FOR how many years have you filled the office of Assistant Commissioner under the Inclosure Act?—About 24 years. I was appointed immediately after the passing of the Act.

555. Do you take any particular portion of England, or do you go generally according to the applications?—When the Act was passed I think that there were as many as 12 assistant commissioners, and they generally took certain districts; a great many of the assistant commissioners have died; in fact, I think that there are only two of us now left. I take the south and west of England, and the other assistant commissioner lives at Liverpool, and takes the northern district.

556. Will you inform the Committee what are the preliminary steps taken by the assistant commissioner previously to the report which he sends to the Commissioners in London: first, I would ask what notices of your coming are given?—I think that I should state that the assistant commissioners initiate no proceeding upon an inclosure, and that every matter upon every inclosure is specially referred to them; they have no power to originate any proceedings themselves. At the commencement of the inclosure the Commissioners forward to the assistant commissioner the form of application, and request him to fix a day for holding a meeting. Then the assistant commissioner informs the Commissioners of the day on which it will be convenient to hold the meeting, and they give notices.

557. Will you refer the Committee to that portion of the Statute which regulates the proceedings of the assistant commissioner, as distinct from those of the Commissioners?—The section is the 25th; it states, "That any persons interested in land subject to be inclosed, and proposing to inclose the same under this Act, may make application to the Commissioners according to the form which may have been circulated as aforesaid by the Commissioners to sanction such inclosure, or to certify in their annual general report the expediency of such inclosure, as the case may require; and, in case the Commissioners shall, on the statements contained in such application, think that the inclosure of such land or of some part thereof, may be found to be expedient, they shall refer such application to an assistant commissioner, who shall inspect the land proposed to be inclosed, and inquire into the correctness of the statements in such application and otherwise into the expediency of the proposed inclosure; and such assistant commissioner shall hold a meeting, or meetings, to hear any objections which may be made to the proposed inclosure, and any information or evidence which may be offered in relation thereto, and may adjourn such meetings respectively, and shall cause notice to be given on the church door of the parish in which the land proposed to be inclosed, or the greater part thereof, shall be situate, and also a like notice, to be given by advertisement, of the time and place of every such meeting 14 days at least before every such meeting (meetings by adjournment only excepted): Provided nevertheless that it shall not be lawful for the Commissioners to refer such application to the assistant commissioner, nor for the assistant commissioner to take any further proceedings upon any such application, unless it shall be made to appear to them or him respectively that the persons making such application represent at least one-third in value of the interests in the lands therein proposed to be inclosed." That section refers to notices to be given by the assistant commissioner; but the Commissioners always take charge of them; they always send notice to some party in the parish, to be affixed to the church door, and they always take care that it is advertised in the public papers.

558. The public papers being, I presume, the local papers? — Those papers usually circulated. There is a section referring to the mode in which notice shall be given. I think that the words are, "The journals usually circulated in the neighbourhood."

559. Is there practically any other notice given beyond that which is required by the section?—No other notice is given.

560. The notice which is required to be given on the church door is not, I suppose, habitually placed upon any other part of the parish or district

Mr. N. Wetherell. 3 June 1869.

trict than the church door?—Yes; I think that I may say that it is always placed on chapels. I have known it placed on Dissenting chapels and Roman Catholic chapels; and if the land lies in two parishes it is placed on both parish churches, and generally on one of the inns. I have frequently seen it on one of the inns in the parish, being the place where the meeting is to be held.

561. After the notice, the assistant commissioner holds a meeting; I should like to ask you whether the assistant commissioner considers it to be his duty, on those occasions, to sit as a judge to hear any evidence that may be tendered, or whether he takes an active part in inquiring and ascertaining evidence for himself upon the points on which he thinks it desirable to obtain evidence?—I always make it a point to go through all the questions myself, and then, if any gentleman wishes to make any observations or to tender any evidence, of course I hear him; but I find it essential to go through the matter myself in order to see that no point upon which the Commissioners desire information is missed.

562. Are any minutes taken of the proceedings and of the evidence?—Yes; I make minutes on all the matters which are referred to me by the form of application.

563. And that is a document which you can produce at any future time?—Yes; of course the minutes are very short; a great deal depends upon an inspection of the land; we are bound to inspect the land; we have to look round many of the parishes to see what cottages and gardens there are, and to see the character of the land, so that I acquire a great deal of information on my inspection, and that is noted down on paper, without anything formal about it, but, generally speaking, I have all the information.

564. In cases where persons tendered evidence who had no special *locus standi* in respect of rights of common defined by law, should you consider it right to hear them?—Certainly, because it might affect the legality of the proceedings; the Act of Parliament says that we shall not proceed at any meeting unless it shall be made to appear that persons representing one-third in value have assented to the application, and, therefore, it is of course necessary to ascertain what the extent of the rights of common is; I have known an inclosure stopped by there being a deficiency of 6 *d.* in the rateable value; we have to take the rateable value; I remember a case in Cornwall where three parties were interested, and it so happened that the parties were short of one-third by 6 *d.*, and it stopped the inclosure.

565. Supposing that any person came forward to give evidence declaring that he had no right whatever in the common which could be defined by law, but that he represented the public interest, do you think that he would have a right to be heard, or not?—I have always inquired whether there are any public rights over the common, and I report to the Commissioners if there are any public rights, or *quasi* public rights; for instance, supposing that races have been held, though not legalised, or supposing that fairs have been held, or supposing that targets for volunteers have been placed on the common, I always report that to the Commissioners, so that, perhaps, a future arrangement may be made in that respect.

566. With reference to those provisions of the Act which are intended to secure a recreation ground for the public, and allotment gardens for the labouring poor, should you consider that you were bound, as assistant commissioner, simply to hear any evidence which was tendered with regard to those provisions, or should you take an active part and get up the case of the public, on the view that the public had no proper representative attending before you?—I certainly consider that the Commissioners, by the assistant commissioner, represent the public, and I feel bound in every case to inquire specially, first of all, as to the requirements of the parish, and then as to the quantity of land which is necessary to meet the requirements of the parish. I inspect the land and take evidence from various persons. In numerous cases the incumbent of the parish is present, and he fights the battle for the poor in 99 cases out of 100. If he is present, the poor are sure to have a good advocate in him.

567. Though the assistant commissioner inspects the land, it may be assumed that he would hardly have time enough to ascertain personally the circumstances of the labouring poor who might require these gardens, or of the public who might require a recreation ground, and he must rather rest upon evidence given to him by other people, than upon any personal inquiries of his own?—I think not. Generally speaking, in 99 cases out of 100, I see the spots to which the parishioners generally go for recreation, and I ascertain the distance of the common from the village, and the amount of the population, and I think that I get almost all the elements which are necessary to enable me to form a tolerably good judgment. With regard to cottage gardens, the overseer generally attends; he can tell me how many cottages there are in the parish, and how many cottages are without gardens, and what is the extent of the gardens. The incumbent also can give evidence, and the farmers can give evidence. I have never found any difficulty about it, or any mis-statements upon that point.

568. Will you inform the Committee what are the considerations which it is the duty of the assistant commissioner to take in view in determining what recommendation he will make as to the recreation grounds and the allotment gardens, first, as to the population; does he consider what the population is within the parish, or within the manor, or within a certain area of distance from the land which is to be inclosed?—By the Act of Parliament, we are obliged to determine the question of extent by the population within the parish, but when the ground is set out, the Act of Parliament defines it, not only for the inhabitants of the parish, but for the inhabitants of the neighbourhood, so that the number of the inhabitants in the neighbourhood may, to a certain extent, determine us in setting out the quantity, though we cannot exceed the limits of the Act, we may set out a full allotment if there are many inhabitants surrounding the parish, although not living within the parish.

569. In some cases in which you have reported that recreation ground was not required on account of the paucity of the population, would you, in making that statement, have reference only to the population in the parish, or should you extend your view wider than the limits of the parish?—I should certainly go wider, because the Act of Parliament directs that ground to be set out, not only for the parish, but for the inhabitants of the district, although the population of

of the parish determines the amount of ground to be set out, I have considered that those persons who are outside the parish are equally entitled to the allotment, if there is sufficient population to render it desirable to set it out.

570. Is it within your inquiry, to consider to what extent the waste lands to be inclosed are used at present by the public for the purposes of recreation?—I invariably do so.

571. Should you take into consideration the advantages which railways afford in bringing persons residing at some distance to these inclosed lands?—I think not; I do not know that I have ever done so, excepting in the inclosures near London, and I do not see any case where it would be necessary to consider that point; a very large number of the inclosures are now in rural districts, and they relate to lands which in former times would not have paid the expenses of inclosing; a great many inclosures in Wales, and in Shropshire, and in the north, are waste lands of thousands of acres, with a very scanty population.

572. In determining whether recreation ground is necessary or not, you would consider the population which is likely to use that recreation ground?—Yes.

573. Should you think yourself shut out from considering that population who reside at a distance, which, by the road, would be too great for them to use the recreation ground, although they might very conveniently resort there by means of a railway?—I remember one case, especially, at Cowbridge, where I set out an allotment, because I was informed that people came from Cowbridge to play there, and a fair allotment was set out. In the case of one of the parishes, which includes a common comprised in the last Report, namely, in the parish of Hunston, there was another common inclosed in the same parish, four miles from Chichester, and there I specially inquired whether any persons came from the town. I examined the mayor of Chichester, and he informed me that the people of Chichester were never known to come to that common. I inquired specially, because it was near a large city, and I reported to the Commissioners to that effect.

574. In construing the term "labouring poor," as used in the Act, do you consider that it is restricted to those persons who labour in agriculture, or that it applies to those who earn their livelihood by other sorts of labour?—I make no distinction; small shopkeepers are oftentimes objects of greater charity than labourers, and I make no distinction whatever.

575. Will you state how you proceed after you have made your investigation; do you then report to the Commissioners in detail the facts and circumstances which have led you to make the recommendations which you send up to them?—Yes; I report to the Commissioners on all the points mentioned in the form; I inquire whether the statements in answer to the questions in the form are correct, and I report *seriatim* on all the points, and I then state the reasons why I consider the inclosure expedient.

576. Will you state what the division of responsibility between yourself and the Commissioners is as to those details; would the Commissioners feel themselves obliged to exercise their own opinion as to the correctness of your recommendations with regard to these two particular clauses which we are speaking of, namely, the recreation ground and the allotment gardens?—Most certainly they would; there have been cases in which I have been led to consider, for the reasons which I have stated, that no allotments should be set out, and the Commissioners have overruled my report, and have directed allotments to be set out.

577. The Commissioners, I suppose, have some means of ascertaining the facts of the case, independently of what you report to them?—They may have a different opinion as to the user which has taken place, and may decide differently as to an allotment for recreation, on account of its being near or far from the village.

578. Did you report upon all the cases which are appended to the Inclosure Commissioners Report of this year?—Not on all; I reported upon all but two, I think.

579. Did you report upon Wisley Common?—I did.

580. Will you state to the Committee the particulars upon which you framed that report with regard to the matters now under discussion in this Committee: I observe that, in the Report of the Inclosure Commissioners, they say that "the parish of Wisley is very thinly populated, and the cottages lie dispersed; each of them has a garden annexed to it, and an allotment for the labouring poor has therefore not been required"?—Yes.

581. Will you state, a little more in detail, the grounds upon which you made the recommendation which is embodied in this report?—First of all, the common is not suited for garden allotments; I have no doubt that a few acres have, from time to time been broken up and cultivated, but it is not suited, and would never be cultivated for gardens; all the cottages were represented to me to have ample gardens; there are very few cottages in the parish, and there are other allotments lying just outside the parish, if the cottagers ever wish to resort to them.

582. How did you ascertain that the cottagers did not require allotments: it has appeared, since that report was made, that some of the cottagers living in Wisley, who were supposed by you not to require an allotment in this inclosed land, were actually at that time paying rent for allotments in the neighbouring parish?—Yes.

583. If that fact had been brought before your notice, should you not have modified your report, and suggested that allotments should be provided for them out of the inclosed lands?—I might possibly have done so, but of course it would depend upon a variety of circumstances; I might have done so if that fact had been brought to my knowledge, but it was not; I only ascertained it from the Report of the Committee of the House of Commons upon Wisley Common. Only three persons attended the meeting, and the fact was not brought to my knowledge.

584. It appears that at Wisley very little attention was drawn in the neighbourhood to the fact that any inclosure was contemplated; are you aware of any reason why they were not as much aware of the fact at Wisley as in other cases?—No; not a word was said at the meeting with regard to any public rights, and I was certainly very much surprised when I saw the report which alleged that public rights existed upon the common, no mention of it being made to me; I believe that there is not a common which we have inclosed in the neighbourhood of any village which has not been ridden over as much as Wisley.

Mr. *N. Wetherell.*
3 June 1869.

585. Have you any doubt that the land of Wisley Common, if cultivated by spade husbandry, would be profitable for a labouring man to use as a garden?—I think not; I do not think that any labouring man would take any part of it unless it was brought into tillage for him, and broken up and levelled; it is a rough piece of land.

586. The report states that it might be profitably converted into arable cultivation?—Yes; I have had to deal with thousands of acres which undoubtedly will be cultivated, and some have been cultivated, but they are wholly unfit for gardens.

587. Has it been found that that is not a soil which, when cultivated by the spade, with a sufficient amount of manure which a labouring man might be able to provide, might be brought into profitable cultivation as a garden?—In time it might be brought into profitable cultivation, but it takes a long time to do it.
